DAISY HUNTER—ANTONIO were put down in ragweed, and every one felt that both dogs must do their level best, as mistakes on either's part would be fatal. I will detail this heat fully, so that the reader may judge for himself as to the justness of the award. Ranging into pines Daisy was the first to find, hunting in her usually confident manner, and going right bang to her game and never too far from her handler. Hunter put up the bevy, shot, dog steady. Antonio meanwhile was some distance away, and Daisy was held up and we went to look for Antonio, who was found on point in oaks, but nothing came of it. Making a cast or two he pointed again, but nothing found; afterward, some distance off, a single was flushed by the fence by a horseman. Instead of Antonio being brought back to Daisy to follow her bevy, she was brought to the dog, and a move made to other ground just near the Model Farm buildings. This move in Antonio's favor availed him nothing, for it is all the same to this Daisy Hunter; she is independent, and while Antonio put ahead behind him with seemingly little purpose in view, Daisy hunted out the high sedge in bottoms by a wood, where she stiffened to a quivering point and held it finely for seven minutes, when, as Avent was sighted, having been called to bring his dog up to back, which had been ranging way off, a single flushed wild. Daisy steady. This piece of good work on Daisy's part elicited ejaculations of praise from every one. Moved on into woods and dogs then held up at 2:35. By this time Daisy had clearly shown her superiority to the other dog, and there should have been no delay in the decision; but judges were not satisfied, and ordered them down in corn patch toward where Antonio had been ranging when called up to back. Down in a ditch by bridge in the road leading to Model farmhouse Daisy pointed in thick briars, and Antonio coming in ahead, pointed, drew on, pointed again several times, till finally the bevy flushed wild as he stopped. Meanwhile Hunter, thinking birds were ahead of Antonio, called his bitch on and she roared after the dog. Mr. Short, after the decision was given, went to the bridge and put up some birds out of the thicket, so evidently the bevy had split and Daisy was right after all. The dogs were called up after the bevy flushed to Antonio's point, and in a few minutes their decision was announced to be in favor of Antonio, who thus won the Champion Stake of 1891. This decision deprived Daisy Hunter of honors which she had justly earned by good sterling work, as shown in her intelligent range, skillful manner of handling her birds and consistent attention to the gun throughout her heats. In contradistinction to this Antonio, while a fast and wide ranger, had little system and simply galloped on, paying little or no attention to his handler, whose arm and whistle were going all the time nearly. The decision was condemned by every spectator present except those directly interested in Antonio's winning, and that such a decision should have been given by men of their experience is perfectly unaccountable and will certainly do much to injure the Eastern Field Trials Club in the minds of handlers and owners.

The heat was worked entirely in favor of Antonio, and the bitch was pulled from one place to another to follow him. After she had found her bevy why was she not allowed still further to clinch the good work by putting the other dog with her on the scattered birds? It was advanced that Daisy Hunter is not such a high-class dog as Antonio. This class business seems to be overdrawn. If "high-class" means getting away from the handler as far as possible and being under next to no control then she is not. High-class in our mind means work by a dog that can be made a pleasure to the hunter to see and feel that his dog is hunting with systematic judgment and making its casts in likely places and at the same time acknowledging that it is working for the man with the gun, not entirely for itself. This Daisy Hunter did and Antonio did not. There is no intention of impugning the integrity or honesty of the judges in the above remarks, but my wish is to show that the circumstance was an unpleasant ending to an otherwise enjoyable meeting.

Summary, Champion Stake.

(Open only to winners of All-Aged Open Stakes at recognized field trials in America.)

First Series.

J. M. Avent and Bayard Thayer's Chance
with
J. H. and J. A. Hunter's Daisy Hunter.
B. M. Stephenson's Tribulation (pointer)
with
Charlottesville Kennels' Rip Rap (pointer).
J. M. Avent and N. T. Harris's Antonio (setter) a bye.

Second Series.

Daisy Hunter with Antonio.
Antonio won first money, \$925, and a cup, value \$100.
H. W. L.

THE MERCED MEET.

[By a Special Correspondent.]

MERCED, Cal., Nov. 13.—The second meeting of the Inter-State Coursing Association commenced here on Tuesday, Nov. 10, having the largest entry for a coursing stake ever made in America—namely 56 dogs—all from within the State with the exception of one, Prince Rupert, and owned by H. C. Lowe, of Kansas; and certainly a finer lot of greyhounds, take them all in all, were never sent to slips in any country.

The attendance was much larger than that of last year and much more enthusiastic—if such a thing was possible. The weather was all that the most "glorious climate" of the Golden State is noted for and all conditions seemed to favor the "sport of things," and as a consequence the pleasure of the three or four thousand people present was great indeed.

Much disappointment was caused by the non-arrival of California's judge—her own "Johnny" Grace. As soon as it was learned in consequence of business arrangements Mr. Grace could not be present a gloom seemed to spread over all, and for a time there seemed but little hope of the appearance of the "silver lining." So thoroughly has Mr. Grace ingratiated himself with the coursing men of California that it is difficult for any of them to believe that his place can be filled by any other. No wonder then that the whole of the coursing men gathered at Merced looked and felt disappointed. However, the committee of management appealed to Mr. Wm. Fahey, of Fresno, to come to their assistance. Mr. Fahey, though suffering from a recent illness, proved himself in every respect the best substitute for Mr. Grace that could possibly be found among all the coursing men present.

The coursing field is situated some sixteen miles from here on what is known as the Nevada Bank estate, and this distance is certainly a great drawback, as the road to the grounds is anything but a pleasant one.

The famous grounds were reached about 9 o'clock Tuesday morning; and a few moments afterward Flag Steward J. R. Dickson began to marshal the crowd into position, and called out the first pair of dogs. Mr. Dominick Shannon, the president of the field, then stood up in his carriage, and

after addressing the assemblage on the great success of the meeting so far, referred in a few well-placed sentences to last year's meeting and its happy and successful termination, and the boom that great success had given coursing in the State. "I am sorry," said Mr. Shannon, "that I must inform you that honest John Grace cannot on this occasion be present, through the necessity of his business engagements; but Mr. Fahey, of Fresno, has kindly consented to take his place, and I trust when the meeting is closed I will be able to say of him as I did of Mr. Grace last year, that to our judge was due the great and unalloyed pleasure of the meeting."

Exactly at 10 o'clock the first pair of dogs were handed to the slipper.

Catharine Hayes and Dandy Jim.—M. Tiernan's Catharine Hayes and T. Cooney's Dandy Jim were the first brace. In a few moments a regular flyer jumped from his "lair," and instantly the eager beauties strained on the leash, but they were in the grasp of a master hand, and not until the proper moment did the leash fly open, and the first course of the great meeting commenced. It was a long and trying one, and fleet as seemed the pair of beautiful hounds, the little ball of bluish gray seemed bounding along as if made of rubber. But every race has an end, and eventually the namesake of the queen of song went to the front by three lengths and scored first honors, placing her opponent for a point; the bitch again came in for two or three more points, and then in a straight run picked up puss and won a grand course.

Juno and Warm Belt.—J. Byrn's Juno and W. J. Heney's Warm Belt then made their bow. The former had all the fun to herself in fully a mile course, driving the hare into a squirrel hole and of course winning.

Al Farrow and Molly S.—J. J. Rademaker's Al Farrow (last year's winner) and T. W. Steehan's Molly S. trotted out for the next course, but the champion soon settled matters and easily won the shortest course of the meeting.

Whip and Tom Schaap.—J. Cranston's Whip and Kallahan and Kennedy's Tom Schaap were scarcely in slips when a flyer went away ahead of them, and going as if the north pole was his destination—and if he kept a straight line he should be now north of Alaska. Whip got the course.

Sundial and Twilight.—D. Shannon's Sundial and W. E. Wadam's Twilight had a pretty course at first, but the latter was altogether too clever for the former and won after a very long chase.

Tyrant and Bessey.—Jas. Byrn's Tyrant and J. Eagan's Bessey went away to a circling hare, and after some pretty work Bessey won handsomely.

Moonlight and Dan C.—T. A. King's Moonlight and D. D. Roache's Dan C. had a griller, and after the first few points the hare broke away, pushed closely by Moonlight, who eventually lost his game but won the course.

Glen Farron and Queen Bess.—M. Tiernan's Glen Farron and T. Cooney's Queen Bess. The former led, took two turns and then let in the Queen for two points, when Glen Farron again took command, and after a chase of a mile killed and won the course.

Johnnie Rex and Dan O'Connell.—T. P. McInerney's Johnnie Rex and T. J. Cronin's Dan O'Connell had a rattling spin after a good hare, the former getting the run up and turn. Then Dan had a go in for a couple of points; then the hare went for a straight run, but Rex brought her around again and won a fine course.

Headlight and Native Son.—W. E. Wadam's Headlight and H. M. Spring's Native Son. The former led, took first turn and let in the Son; he then went a "cropper" and was in it no more.

Ben d'Or and Dark Rustic.—R. Canovan's Ben d'Or and P. D. Nolan's Dark Rustic went to a flyer; the former led and got first turn and then drove the game before him, but after a few hundred yards died away and Rustic took command, did some pretty work and won.

Blanco and Joe McAuliffe.—P. F. Canovan's Blanco and T. Hall's Joe McAuliffe were no match, the latter winning a heavy course all by himself.

Pride and Sacramento Girl.—T. Farrell's Pride and J. O'Brien's Sacramento Girl had a long run before either of them showed in the lead. The Girl eventually held out the longest and got the turn; there was not much more in it, as the hare was by far the best of the three. The Girl won.

Sea Shell and Laurelwood.—D. Shaanon's Sea Shell and J. McDonald's Laurelwood had a sharp and short course, on the decision of which there was some little unpleasantness, but which was easily settled when the judge explained the running. Laurelwood won.

Snowflake and Monarch III.—McCallahan & Kelly's Snowflake and J. F. Carroll's Monarch III. had the closest and prettiest course of the day. For over three-quarters of a mile they ran as if in the leash, and both dogs being white it was impossible to distinguish them at so great a distance. Snowflake got the course.

Governor and Great Expectations.—John Eagan's Governor and J. E. Watson's Great Expectations had a very long course, out of sight most of it. Governor won.

Mountain Hare and Skyrocket.—D. D. Roache's Mountain Hare was no match for P. Curtis's Skyrocket, who won easily, doing all the work, but lost the hare.

Dairy and R. E. Lee.—B. Dougherty's Dairy and Fred Neary's R. E. Lee had a fine course, in which a large amount of work was done by both dogs, Lee getting the course eventually.

Depend on Me and Prince Rupert.—T. J. Cronin's Depend on Me and H. C. Lowe's Prince Rupert had a scorching. It must surely have been over three miles, and both dogs being very much alike in color it was impossible to distinguish which was which. The former got the course. Both dogs were completely exhausted when picked up.

Short Stop and Fly.—S. Millikin's Short Stop and T. Collins's Fly had a long run and little work; the hare got away and Short Stop won.

Tom Fitz and Dexter.—T. P. McInerney's Tom Fitz and John Hough's Dexter were slipped to a demon flyer. Fitz had to do it all, and in his efforts to kill his game came near killing himself.

Sam Nash and Jennie G.—James Cox's Sam Nash and T. J. Cronin's Jennie G. had a flyer in front of them for over a mile and a half, but Sam had the best of the course all through and won one hand.

Wolf Jane and Fanny.—B. Grogan's Wolf Jane and John Baker's Fanny had a long stern chase, but the former out-paced and out-worked his opponent by several points and won a fine course.

Carbine and Scout.—T. Cooney's Carbine and P. D. Nolan's Scout were slipped to a circling hare. The latter was much the faster dog, but he could not turn worth a cent, and with a working hare was nowhere when he made a rush and killed and lost.

Natty and Nellie Bly.—B. Nolan's Natty and James Byron's Nellie Bly caused some excitement as they went to slips, both dogs being known to be fast and clever. On getting off Natty led and got first turn and again served himself. The hare then made a break, but after a sharp run Nellie got the lead and the turn and followed it up with two or three points more, then died away and Natty took command, but before he could reach the hare she got into a hole and Natty lost.

Dazel and Madame Blavatsky.—Fred Neary's Madame Blavatsky was no match for T. P. McInerney's Dazel, who won all of a long and hard course.

Zulu and Silverton.—Robert Boyd's Zulu and D. Shaanon's Silverton were the last pair on the first round of the card; the former would not work in slips and of course got the worst of the go, but once the African saw the game he

made up lost ground and handsomely won a long and hard course.

No greater day's coursing than this was ever seen in any country. There were but two of the courses under a mile, and many of them would no doubt measure three; there were no more than four hares killed, about one-half of them got clear away and the rest got into holes. The ground in many places was hard and the grass dry and chippy, causing much injury to many of the hounds. The twenty-eight courses were run in exactly five hours. Mr. Fahey's judging gave good satisfaction all round, and Mr. Wren, our great slipper, surpassed himself; his work was simply splendid.

SECOND DAY.

Wednesday morning found the men of the leash all ready and anxious for the fray, and about 7 o'clock many of them were on their way to the field. The coursing of the previous day had, however, shown that the ground was altogether too dry, and many of the dogs even in the first courses of the second day were limping. The morning was lovely, such a one as can scarcely be found out of California at this season of the year, not a cloud appearing to mar the lovely beauty of the skies. All being in readiness at 10 o'clock, the first pair of dogs were called to slips for the

First Ties.

Catharine Hayes—June.—This pair had a rather short slip, and instantly closed on their game, the former getting the run up and turn; some pretty close scoring was then done by both dogs, but Hayes had always the lead in running and working, and eventually drove the hare into a hole and won the course.

Al Farrow—Whip.—Many thought this would be a great course, but the former dog was in it all through, and won a heavy course without much assistance.

Twilight—Bessy.—This also was a one-sided affair, the first-named dog outworking his opponent at all points. A long course.

Moonlight—Glen Farrow.—In this course Moonlight ran a bye, his opponent being drawn in consequence of injuries sustained in his first course.

Johnnie Rex—Headlight.—This course was a great proof of Rex's wonderful speed and working power, for he unquestionably met a good dog and defeated him with ease; yet so desperate was the trial and so hard was some of the ground over which the dogs went, that when Rex was picked up it was found that the pads of his forefeet were literally torn away, and his owner gave notice that he was withdrawn.

Dark Rustic—Joe McAuliffe were slipped to a flyer. Joe made the run, but in making his drive to kill went a terrific "cropper" over and over again, and it was thought by not a few that he must have been killed. In the meantime Rustic had his game all to himself and pressed it hard, and when Joe saw his game once more almost in the teeth of his enemy he forgot his troubles, and after a long chase came into play again, and after some two or three great efforts succeeded in out-working Rustic, and eventually won one of the finest courses of the meeting.

Dolly Varden—Sacramento Girl.—This was a long course in a great measure hid from the spectators, many of whom thought when they saw the flag go up against Dolly that the judge had made a great mistake; but afterward when the course was explained it was evident that the decision was a correct one.

Governor—Skyrocket.—The latter dog won this easily, the former quit.

Laurelwood—Snowflake. The latter won the course from top to bottom.

R. E. Lee—Depend on Me.—The dogs sprang at once to the front and made things hot for puss, though she was a fast one once she made up her mind to travel in a straight line. However, she was brought round, and the latter dog began to have something to do in the game, but just at that moment a harbor of refuge hove in sight and Master Jack gave a couple of short turns that gave him a few yards more advantage, and in an instant the buried himself as deep as possible from his foes, evidently caring little which of them had the best of the play. R. E. Lee won.

Short Stop—Tom Fitz.—Tom was a hot favorite for this course, ten to one being offered about him. But "men propose," etc., he was never in the game; he was beaten from the start.

Sam Nash—Wolf Tone.—This was looked upon as an easy thing for Sam, and so it proved; but immediately on the finish of the course another hare jumped up, and so terribly cut up was Sam when he finished with him that he had to be drawn from the stake.

Nelly Bly—Scout.—Nelly got a bye, Scout being drawn lame.

Dazzle—Zulu.—A very sharp course; the latter dog winning with some points to spare.

It would be waste of your valuable space to attempt to describe the remaining ties, mostly all the dogs being more or less injured, and causing byes right through, as will be seen by the summary.

Many of the dogs were very unfortunate, while some others, notably Nelly Bly, was on fortune's side—having no less than three byes—two accidental ones and one natural, but in her last she suffered so much that she fell an easy prey to R. E. Lee in the next.

The winner, Joe McAuliffe, had but one bye in the whole match, and strange to say it was the only course in which he was really tested. He is a handsome black dog weighing about 55 lbs., and when extended to his game looks every inch a greyhound, moving with the ease of a piece of machinery and never loses an inch of ground when coming round with his hare. His blood is rich with all the old stock of California. He was bred on Aug. 11, 1889; is by Irish Boy out of Banshee, Irish Boy by Pat Maloy out of Banshee (close inbreeding). Banshee is by Templeton out of imp. Tempete. Pat Maloy by King John, by Thornton out of Fanny, both imported from Australia.

SUMMARY.

M. Tiernan's w r bitch Cath. Hayes beat T. Coony's bl w dog Dandy Jim.

Jas. Byrne's f bitch Juno beat W. J. Heney's w br dog Warm Belt.

J. Rademaker's br dog Al Farrow beat T. W. Sheehan's w bl bitch Molly S.

J. Cranston's bl w dog Whip beat Callahan & Kennedy's blk dog Tom Schaap.

W. E. Windam's blk w bitch Twilight beat D. Shannon's blk w bitch Sun Dial.

John Eagan's w blk bitch Bessey beat Jas. Byrne's br w dog Tyran.

T. A. King's w r dog Moonlight beat D. D. Roache's blk dog Dan C.

M. Tiernan's f dog Glen Farron beat T. Coony's blk w bitch Queen Bess.

T. P. McLanery's blk w dog Johnny Rex beat T. J. Cronin's w f dog Dan O'Connell.

Jr. W. E. Wadman's blk w dog Headlight beat H. M. N. Spring's w dog Native Son.

P. D. Nolan's blk w dog Dark Rustic beat P. F. Canovan's br w dog Ben O'R.

Thos. Hall's blk w dog Joe McAuliffe beat P. F. Canovan's w dog Blanco.

D. D. Roache's blk w bitch Dolly Varden beat H. M. N. Spring's bl dog Duke of Milpitas.

John O'Brien's br w bitch Sacramento Girl beat Thos. Farrell's blk bitch Bride.

Jas. McDonald's br w dog Laurelwood beat D. & R. Shannon's blk w bitch Sea Shell.

Callahan & Kennedy's w f dog Snowflake beat J. F. Carroll's w blk dog Monarch III.

John Eagan's bl dog Governor beat J. E. Watson's blk w dog Great Expectations.

Perry Curtiss's blk w dog Skyrocket beat D. D. Roache's bl w dog Mountain Hare.

Fred Neary's w blk dog R. E. Lee beat B. Dougherty's blk w bitch Daisy.

T. J. Cronin's blk w dog Depend on Me beat H. C. Lowe's w blk dog Prince Rupert.

S. Miliken's br w dog Short Stop beat T. Collin's br w bitch Fly.

T. P. McLanery's blk w dog Tom Fritz beat John Hough's w br dog Dexter.

Jas. Cox's w bl dog Sam Nash beat T. J. Cronin's blk bitch Jennie G.

B. Grogan's br dog Wolf Tone beat John Baker's bl w dog Fanny.

F. D. Nolan's blk w dog Scout beat T. Coony's br dog Carbine.

J. Byrne's f bitch Nellie Bly beat B. Nolan's bl dog Natty.

T. H. McLanery's blk w dog Dazel beat Fred Neary's w blk bitch Madame Blavatsky.

Robt. Boyd's f bitch Zulu beat D. Shannon's f dog Silverton.

First Ties.

Catharine Hayes beat Juno. Snowflake beat Laurelwood.

Al Farrow beat Whip. Skyrocket beat Governor.

Twilight beat Bessey. R. E. Lee beat Depend on Me.

Moonlight, a bye. Short Stop beat Tom Fitz.

Jennie Rex beat Headlight. Sam Nash beat Wolf Tone.

Joe McAuliffe beat Dark Rustic. Nellie Bly, a bye.

Sacramento Girl beat Dolly Varden. Dazel beat Zulu.

Second Ties.

Catharine Hayes beat Al Farrow. R. E. Lee beat Skyrocket.

Twilight, a bye. Short Stop, a bye.

Joe McAuliffe beat Jennie Rex. Nellie Bly, a bye.

Snowflake beat Sacramento Girl.

Third Ties.

Catharine Hayes, a bye. R. E. Lee beat Short Stop.

Joe McAuliffe beat Snowflake. Nellie Bly, a bye.

Fourth Ties.

Joe McAuliffe beat Catharine Hayes. R. E. Lee beat Nellie Bly.

Final.

Joe McAuliffe beat R. E. Lee.

Winners.

First—Joe McAuliffe. Third } Divided } Nellie Bly.

Second—R. E. Lee. Fourth } Cath. Hayes

Snowflake, Twilight and Short Stop, \$20 each.

The first prize was \$500, the second \$250, the third \$100. The meeting was a splendid success, with the exception of the accidents to the dogs in the third and fourth ties. At the close of the meeting President Shannan made one of his happy speeches, thanking all for their excellent conduct, and calling for three cheers for Mr. Fahey, the judge, which were given with a will, and then for each of the officers of the field, all of which were responded to in the happiest and most cordial veins.

It took exactly ten hours to run off the fifty-six courses—a feat which has never before been surpassed on any open coursing ground on this continent, and seldom, if ever, in any place.

There is a movement on foot at Medera, thirty-five miles south of Merced, on the S. P. R. R., to get up a meeting early in March next, to which the people will give \$500 or \$600 added money. The amount was practically placed Saturday night. The grounds are very fine for coursing, of a sandy loam, and perfectly safe for dogs. There are thousands of acres just near the town, and any quantity of game; there are also a number of good hotels in the place.

J. R. DICKSON.

BRUNSWICK FUR CLUB'S TRIALS.

Editor Forest and Stream:

Your correspondent "Bradley" in your issue of Nov. 19 gave a very good account of the first three days' trials of the club, but as he did not stay to the finish, of course he did not see the final run of the All-Aged classes nor hear the awards of the judges.

On Thursday, the 13th, the hounds were cast off in East Princeton. A fox was seen on a ledgy hill and the hounds put in. They all got off well, running at a furious clip down through heavy timberland. Soon Mr. Perry's Clinker could be heard far ahead of the pack, and in each circle of the fox he increased his lead. Finally the fox broke for high ground again and ran through the line of hunters, Mr. Harrington, of Worcester, wounding him but not checking his speed. Clinker was close on him, running for a kill, and in a few seconds he was heard baying the fox, having him backed against a tree. Two hunters coming up the fox started to run, when Clinker jumped on him, soon finishing his existence. The rest of the pack were well bunched, coming into the death about 5m. afterward.

The puppy class was run off on Friday, a good race being obtained, showing the nine youngsters to be the best class ever run at the trials.

The judges were Dr. Heffenger, chairman, Mr. F. G. Stewart and Mr. E. C. Gill.

The final awards were as follows:

Hunting.

1. R. D. Perry's b w t bitch Slip.
2. R. D. Perry's b t dog Clinker.
3. L. O. Dennison's tan and blue ticked dog Trimmer.

Trailing.

1. A. B. F. Kinney's b w t dog Trim.
2. R. D. Perry's b t dog Clinker.
3. R. D. Perry's b w t bitch Slip.

Speed.

1. R. D. Perry's b t dog Clinker.
2. E. J. Bates's red dog Leads All.
3. R. D. Perry's b w t bitch Slip.

Endurance.

1. A. B. F. Kinney's b w t dog Trim.
2. R. D. Perry's b t dog Clinker.
3. R. D. Perry's b w t bitch Slip.

Barking.

1. O. F. Joslin's b w dog Rover.
2. A. B. F. Kinney's b w t dog Trim.
3. L. O. Dennison's tan and blue ticked dog Trimmer.

Style.

1. R. D. Perry's b t dog Clinker.
2. A. B. F. Kinney's b w t dog Major.
3. A. B. F. Kinney's b t dog Lancaster.

Puppy Class.

1. Knight & Given's b w t bitch Beauty.
2. A. G. Hall's b t dog Rover.
3. E. J. Bates's tan and blue ticked bitch Spottie.

Special Prizes.

R. D. Perry's Clinker, highest general average medal and American Field cup.

A. B. F. Kinney's Trim, endurance medal, given by Mr. J. H. Baird.

Knight & Given's Beauty, steel engraving "A Promising Litter," given by Mr. R. D. Perry.

The fourth annual meet of the club will be held in February next, probably near Brunswick, Me.

A. C. HEFFENGER, Vice-Pres. and Sec. pro tem.

PORTSMOUTH, N. H.

IRISH SETTER CLUB.—At the meeting of the executive committee of the Irish Setter Club, held Nov. 19, Mr. Child resigned from the field trial committee and Dr. Jarvis was appointed in his place. The field trial committee was authorized to manage the trials and pay the prizes.

—G. G. DAVIS, Sec'y.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

NATIONAL BEAGLE CLUB FIELD TRIALS.

NANUET, N. Y., Nov. 23.—The running in the second annual field trials of the National Beagle Club was to begin here to-day, but a heavy northeast storm has prevented all field work. Among the club members and sportsmen present are: W. A. Power, Boston; F. W. Chapman, Melrose, Mass.; Dr. Edwin Field and T. S. Field, Red Bank, N. J.; H. F. Schellhass, New York; John Bateman, Gravesend, L. I.; C. S. and D. C. Wixom, Covert, N. Y.; H. L. Kreuder, Nanuet; A. Parry, Franklin Park, Mass.; Wm. H. Hyland and Edwin Beck, North Tarrytown, N. Y.; George Laick, Tarrytown, N. Y.; Wm. H. Ashburner, Philadelphia; Harry Twyford, Bay Ridge, L. I.

The bench show was held in the morning. The judging began at 11 o'clock in the new building of the Rockland Kennels. Pottinger Dorsey, of New Market, Md., and W. S. Clark, of Linden, Mass., who are to judge the dogs in the field, officiated in the ring. Among the beagles entered are many well known on the bench, and the quality of the dogs as a whole is fully equal to that seen in our large shows. The awards were as follows:

DOGS.—15IN. AND UNDER—CHALLENGE CLASS—1st, Rockland Kennels' Racer, Jr.—OPEN CLASS—1st, Forest Beagle Kennels' Hunter; 2d, F. F. Ogier's Fleetwood; 3d, Rockland Kennels' Roy K. Very high com., Edwin Field's Fairy's Lee.

BITCHES.—15IN. AND UNDER—CHALLENGE CLASS—No entries. —OPEN—Equal 1st, Forest Beagle Kennels' June Rose and Rockland Kennel's Fanny Racer; 2d, Rockland Kennels' Belle of Rockland; 3d, Forest Beagle Kennels' Gypsy. Very high com., Forest Beagle Kennels' Lady Lee.

DOGS.—13IN. AND UNDER—CHALLENGE CLASS—1st, Hornell-Harmony Kennels' Royal Krueger.—OPEN CLASS—1st, Bradford S. Turpin's Clyde.

BITCHES.—13IN. AND UNDER—CHALLENGE CLASS—1st, Hornell-Harmony Kennels' Ava W.—OPEN CLASS—1st, Bradford S. Turpin's Belle Ross; 2d, W. H. Ashburner's Judy; 3d, Hornell-Harmony Kennels' Nibs. Very high com. and com., Glenrose Beagle Kennels' Toxy and Romp C.

PUPPIES.—1st and 2d, Rockland Kennels' The Pasha and The Czar; 3d, Glenrose Beagle Kennels' Romp C.

The entries for the trials have filled well. There are but two beagles absent, Midge and Jumbo; the latter may arrive to-morrow. The drawing in the various classes resulted as follows:

CLASS A.

Ring (Glenrose Beagle Kennels) against Hunter (Forest Beagle Kennels).

Tricotrin (Hornell-Harmony Kennels) against Roy K. (Rockland Kennels).

Tony Weller (Wm. H. Child) against Stormy (Pocantico Kennels).

Bill Nye (Wm. H. Hyland) against Racer, Jr. (Rockland Kennels).

Fairy's Lee (Edwin Field, M.D.) against Fleetwood (F. F. Ogier).

Sedgewick (Hornell-Harmony Kennels), a bye.

CLASS B.

Fanny Racer (Rockland Kennels) against Lady Lee (Forest Beagle Kennels).

Flora K. (Rockland Kennels) against Dora (Pocantico Kennels).

Nellie (Hornell-Harmony Kennels) against Gypsy Forest (Forest Beagle Kennels).

Belle of Rockland (Rockland Kennels) against Countess Juno (F. F. Ogier).

Tone (Glenrose Beagle Kennels) against June Rose (Forest Beagle Kennels).

CLASS C.

Royal Krueger (Hornell-Harmony Kennels) against Clyde (Bradford S. Turpin).

CLASS D.

Belle Ross (Bradford S. Turpin) against Judy (W. H. Ashburner).

Toxy (Glenrose Beagle Kennels) against Ava W. (Hornell-Harmony Kennels).

Romp C. (Glenrose Beagle Kennels) against Nibs (Hornell-Harmony Kennels).

CLASS E.

The Pasha (Rockland Kennels) against Jumbo (Paul C. F. Hoffman).

The Czar (Rockland Kennels), against Romp C. (Glenrose Beagle Kennels).

IRISH SETTER CLUB TRIALS.

HIGH POINT, N. C., Nov. 23.—The "red" men, as they are facetiously termed down here, began to come in last night, and this morning's train brought the balance. Those who are here and entered in these trials as handlers and owners and judges are Messrs. L. W. White, Thomasville, N. C.; J. R. Howse, Trenton, Tenn.; H. B. Anderson, Glenview, N. J.; E. I. Martin, Wilmington, Del.; George E. Gray, Appleton, Minn.; W. T. Irwin, Hutchinson, Kan.; John White and S. C. Bradley, Thomasville, N. C.; George McClintock, Bicknell, Ind., and Dr. G. G. Davis, who is here alone to represent the Irish Setter Club and arrange matters. It is unfortunate that there are not more owners of Irish setter kennels present to countenance the trials. At 9 P. M. this evening the draw for the Derby took place and an unexpectedly good entry filled. They were drawn as follows: Nelson McMurdo's Maid of Borstal with L. A. Van Zandt's Squaw, W. H. Child's Leigh Done Vi with E. B. Bishop's Finglas, George E. Gray's Elcho's Maid with Coleraine, George H. Kendal's Rose of Claremont with B. M. Vaughan's Bessie Mavourneen, F. H. Perry's Pride of Patsey with H. E. Richards's Adonis, H. B. Anderson's Nugget a bye. The start will be at Blair Farm to-morrow at 8:30. The handsome trophy given by the Philadelphia Item is on view in the office and is an object of especial attraction, as it is a handsome large silver punch bowl.

HIGH POINT, Nov. 23.—The wind is blowing a gale and the rain coming down in torrents this morning, so it is not very likely that there will be much, if any, running to-day. By a late train last night Dr. W. Jarvis, Claremont, N. H., came down from the North, and the presence of this well-known breeder of Irish setters lends additional interest to the meeting.

[Special to Forest and Stream.]

HIGH POINT, Nov. 23.—The weather cleared about nine o'clock, but did not start with the Irish Setter Trial till afternoon to allow the ground to dry out. The heat between Maid of Borstal and Squaw was not very good, neither showing range, but Squaw did fairly on birds. Finglas proved a better dog altogether than Leigh Done Vi, ranging and showing a fair style, though he flushed birds. Elcho's Maid and Coleraine heat was the best of the lot, both ranged with speed and vim. Coleraine best on birds, showing good nose. Adonis had the best of Pride of Patsey in the next heat, though neither ranged very much. Bessie Mavourneen and Rose of Claremont ran indifferently and neither good enough for second series. Nugget near dark ran a good race, finding two beavies and hunting ground out well. The second series will contain Squaw, Coleraine, Elcho's Maid and Nugget. In reserve, Finglas, Maid of Borstal and Adonis.

H. W. L.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Bird Shooting," which will be mailed free on request. The book is pronounced by "Nanik," "Glean," "Dick Swiveller," "Sybilene" and other competent authorities to be the best treatise on the subject extant.

NOTES AND NOTIONS.

WAS there ever an attempt at explaining why worthless, shiftless men are so commonly fond of dogs? I do not mean the brutal ruffian of the "Bill Sykes" type, or the knave of the "dog sharp" class, but the easy going, amiable specimen known to us all, but best delineated by Mrs. Stowe in "Sam Lawson." The ruffian and the knave are usually fond of dogs only as instruments for the furtherance of their vicious purposes, but why the lazy man should allow horses at his blacksmith shop to go unshod, while he is looking after some dog (a la "Sam Lawson"), is not very discernible. I fancy part of the explanation lies in such a man being a bit of the poet in his way, given to taking the pleasure in life that offers itself free to the hand with the least exertion, and philosophically leaving the world's work to others of sterner mould. This leads to the suggestion that the common remark that so and so is a devoted dog lover, is a very foolish, as well as bald, statement, much like the glorification of some candidate for office in having been a "good soldier." The man of honest and high purposes, clean in his walk and thoughts, may well look with satisfaction on the added merit of good soldiery, and the man who has made his mark in the world's work, be he Prince Bismarck or the honest laborer who has done his honest meed of daily work, adds another leaf to his chaplet by an honest love for the dog, but by itself the latter counts for nought. Too many idlers who cumber the path of progress, as well as some scoundrels and knaves, have been both dog lovers and good soldiers. THE ONLOOKER.

DOG CHAT.

ON Thursday evening it was given out that W. W. Titus had purchased from Mr. J. Shelley Hudson the celebrated field and bench show winner Bohemian Girl, and this will materially strengthen his kennel. The price given was \$1,500.

The Lorillard medals at the Eastern field trials were judged on Thursday evening at 8 P. M. by Major J. M. Taylor. Mr. F. R. Hitchcock's Roi d'Or repeated his last year's victory in the dog class for dog showing best bench show form in the trials. That sterling good bitch Daisy Hunter received her deserts this year, winning the medal for best bitch. Her body and legs are excellent, and it will be remembered we spotted her for first last year.

Farmer Nortin, of Mt. Carmel, Conn., advertises in the local paper: "I will deliver, free of expense during the month of October, fifty bushels of good apples to deserving poor families, providing the members of those families do not use intoxicating liquor or tobacco or keep a dog."

Changing one's mind is erroneously said to be a woman's privilege, but it seems to be one equally shared by men. We are pleased to see that Mr. E. B. Bishop thought better of his intention to withdraw his dogs from the Irish setter trials, and on Friday night we were surprised to find W. T. Irwin in the hotel office, looking pretty tired, having been four days and three nights on the road, from Hutchinson, Kan. He has Coleraine and Finglas along with him, and their running is looked forward to with much interest.

Mr. Chas. M. Tucker, of Stanton, Tenn., will now take charge of Mr. Pierre Lorillard, Jr.'s kennel. Mr. Tucker is a veteran in field trial work, and Mr. Lorillard has made a good choice. The winner of third in the All-Aged Stake at High Point, Antevolo, was handled by Mr. Tucker. The kennel will be at Stanton, Tenn.

On Thursday night an important deal was consummated by the transfer, for a consideration of \$1,500, of the noted field and bench show winner Bohemian Girl, from the kennel of Mr. J. Shelley Hudson, Covington, Ky., to the new kennel formed by Messrs. F. J. O'Connell, Coal Grove, O., and W. W. Titus, West Point, Miss. This new kennel will be situated at Coal Grove, O., where kennel buildings are now in course of erection, and with such an experienced man as Mr. Titus at the helm their dogs should soon command attention. By purchasing this good bitch they have made a wise selection. She will most likely be bred to Dick Bonduh. They have already a number of well bred young stock to commence on. Mr. Titus is well known and appreciated, and from what we have seen of Mr. O'Connell, whom we met at the Lexington, Ky., show, this gentleman will be welcomed into the ranks of kennelmen.

The Farmers' and Sportsmen's Game Protective Club is an organization that has just been formed and incorporated under the laws of North Carolina by the following gentlemen: O. W. Bright, New York City, N. Y.; S. C. Bradley, Greenfield Hill, Conn.; J. B. Stoddard, Kouts, Ind.; L. W. White, Thomasville, N. C.; F. R. Hitchcock, New York City, N. Y.; John White, Fredericksburg, Va.; H. Merriam, Boston, Mass.; P. H. O'Bannon, Sperryville, Va.; P. Lorillard, Jr., Jersey City, N. J.; at Thomasville, N. C., with the object of securing the co-operation of the farmers of Thomasville in particular and Davidson county in general in the work of stocking the farms with quail and protecting the same. The capital stock is not to exceed \$5,000, and the par value of each share is \$25. The dues are \$25 per year, and each member will be provided with a badge, which will have to be worn when on the club grounds. Guests of members will be allowed the privilege of the club on application, and must pay \$2 for their badge which entitles them to one day's shooting.

Major J. M. Taylor has been busily engaged the past two years in compiling a book, which will be published about next February. It contains full records of field trial winners, etc., from their inception at Memphis, 1874, till the present year. It will also contain a complete record of all bench show and prize winners, name of owners, etc. The standard of all recognized breeds will also be given; in fact the work will be as comprehensive as it is possible to make it and will be invaluable as a reference for every dogman in the country. As may be imagined the work has entailed an immense amount of careful labor, but there is little doubt but that such a book will be thoroughly appreciated.

Among the new announcements in our ad columns are those of deerhound puppies, Hillside Kennels; St. Bernard pups, H. D. Littlefield; pointers, Box 179; closing out sale, Moorefield Kennels and M. Musgrave; cocker spaniel wanted by C. Hunter; the Menthon Kennels and New York St. Bernard kennels offer St. Bernards at stud.

Mr. Angus Cameron, who it will be remembered came over here with Mr. Heywood Lonsdale's dogs last year, arrived last Monday from England, and his appearance at the trials at High Point on Thursday last was a surprise to many of us. Mr. Cameron intends locating in this country, and he will be an acquisition to the ranks of first-class handlers. For this he certainly is, as those who saw his work with the dogs he trained and brought from England last year can testify. Mr. Cameron is open for engagement to take charge of a setter or pointer kennel, and we have little doubt that he will not have to wait long for an engagement.

We have learned that the person who advertises under the name "Oak Grove Kennels" is the F. C. Fowler, of Moodus, Conn., who in 1880-'81 advertised as "Frank Fowler," "F.

C. Fowler," "F. A. Chester," "W. A. Howard," "B. H. Hammond," "M. A. Gleason" and other aliases. Information respecting this individual and his dog dealings was given in our issues of Feb. 13 and Sept. 1, 8, 15, 22 and 29, 1891. Had we known of Fowler's connection with the "Oak Grove Kennels" the advertisement would not have been allowed to appear in the FOREST AND STREAM. It has, however, been promptly excluded.

The elegant display of Spratts Patent manufactures in Spaldings' window, on Broadway, this city, is consistent with the quality of their goods. We are pleased to note that Messrs. Spalding Bros. are making a leader of these goods.

The New York St. Bernard Kennels received another addition to their recent importations, the rough-coated St. Bernard Refuge II, having joined the immense Princess Florence and the beautiful headed Keeper, Jr., at the kennels in Harlem. He arrived from England last Friday, looking none the worse for a rough voyage, his beautiful color and glossy coat fairly shimmering in the sun. Refuge II. has won over forty prizes on the other side, besides the medal at Agricultural Hall last March for the best stud dog in the show. Among the most noted of his progeny may be mentioned Refuge, Young Refuge, Recluse II., Baron Clevedon and Highland Chieftain, all of whom have competed with great success in England. Refuge II. is a son of the great Plinlimmon, from Recluse, the latter being responsible for the enormous Lord Melrose and his sister Lady Melrose, both prize winners on this side.

ENGLISH SETTER BEN'S PEDIGREE.—*Editor Forest and Stream:* I purchased of Mr. W. Tallman, of this city, in August last, the English setter Ben, said to have been whelped July 22, 1888. Mr. Tallman got him from Mr. W. N. Howell, of Lancaster, Pa. Ben is in every way just what Mr. Tallman represented him—a very satisfactory dog. His head is black, with a white stripe down the center. He has a round black spot about 5 in. in diameter on his back directly over his hindquarters, otherwise he is white with small black spots here and there. Mr. Howell got him in November, 1889, from one P. J. Criste, of Milton, Pa. Criste represented him to Mr. Howell as being a grandson of champion Roderigo. After purchasing Ben I wrote politely to Criste asking him for the dog's pedigree. He wrote a rude reply, saying, "You know a pedigree don't help a dog hunt," and declined to give his pedigree. It is more than doubtful whether he ever knew anything of the dog's pedigree, but as Mr. Howell informs me, Criste gave him to Mr. H. for breaking a pointer dog to retrieve, and was anxious to get Howell to accept the dog instead of the money he had promised him for performing that service, he probably drew largely on his imagination. I have tried through a newspaper published in Milton, Pa., to get Ben's pedigree, but having failed in this, I write to say I shall be very thankful to any brother sportsman who could give me any facts shedding light on this matter.—ROBERT MILBANK (154 West Forty-eighth street, New York.)

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Fulton Kennels. By Adolph Isaacson, New York, for his kennels of fox-terriers.

Victoria Kennels. By A. G. Hooley, Plainfield, N. J., for his kennels of English setters and pointers.

BRED.

Prepared Blanks sent free on application.

Alma—Ben Ormonde. J. F. Hall's (Philadelphia, Pa.) rough St. Bernard bitch Alma (Barry—Fulhi) to his Ben Ormonde (Marquis of Salsburgh—Haela), Sept. 24.

Lady Ormonde—Ben Ormonde. J. F. Hall's (Philadelphia, Pa.) rough St. Bernard bitch Lady Ormonde (Monte Rosa—Theon) to his Ben Ormonde (Marquis of Stafford—Haela), Nov. 8.

Lalla Rookh—Dan O'Connell. H. L. Hilsendegen's (Detroit, Mich.) red Irish setter bitch Lalla Rookh to his Dan O'Connell, Aug. 27.

Biddy Clare—Dan O'Connell. L. N. Hilsendegen's (Detroit, Mich.) red Irish setter bitch Biddy Clare to his Dan O'Connell, Aug. 27.

Graphic's Lady—Beppo III. G. W. Batchelder's (Weston, Mass.) pointer bitch Graphic's Lady (Graphic—Bloomer) to Jas. L. Anthony's Beppo III. (Priam—Meally), Sept. 28.

Flurry II.—Christopher. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Flurry II. (Blue Sk.—Flurry I.) to their Christopher (Metchley Wonder—Peggie II.), Oct. 30.

Rosalind—Christopher. G. Frazier's (Philadelphia, Pa.) collie bitch Rosalind (Maney Trefoil—Roslyn Parole) to Chestnut Hill Kennels' Christopher (Metchley Wonder—Peggie II.), Nov. 4.

Luella—Christopher. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Luella II. (Rex or Strephon—Mavis) to their Christopher (Metchley Wonder—Peggie II.), Oct. 5.

Maiden—Christopher. H. Harding's (Philadelphia, Pa.) collie bitch Maiden (Smuggler—Lady Scott) to Chestnut Hill Kennels' Christopher (Metchley Wonder—Peggie II.), Oct. 5.

Lassie—Christopher. J. Yewdall's (Philadelphia, Pa.) collie bitch Lassie (Scottilla—Gem) to Chestnut Hill Kennels' Christopher (Metchley Wonder—Peggie II.), Sept. 3.

Roslyn Primrose—Christopher. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Roslyn Primrose (The Squire—Wanda) to their Christopher (Metchley Wonder—Peggie II.), Sept. 2.

Jess—Christopher. McEwen & Gibson's (Byron, Ont.) collie bitch Jess to Chestnut Hill Kennels' Christopher (Metchley Wonder—Peggie II.), Aug. 13.

Roslyn Sable—Christopher. L. Barber's (Winona, Minn.) collie bitch Roslyn Sable (Dublin Scot—Flurry III.) to Chestnut Hill Kennels' Christopher (Metchley Wonder—Peggie II.), Aug. 8.

Lady Moll—Christopher. F. Carswell's (Wilmington, Del.) collie bitch Lady Moll (David—Jean) to Chestnut Hill Kennels' Christopher (Metchley Wonder—Peggie II.), Nov. 14.

Flora Kay—Bob Obo. Rideau Kennels' (Ottawa, Ont.) cocker spaniel bitch Flora Kay (Obo, Jr.—Princess Tiney) to their Bob Obo (champion Obo—Nellie), Oct. 22.

Rideau Flossie—Obo, Jr. Rideau Kennels' (Ottawa, Ont.) cocker spaniel bitch Rideau Flossie (champion Obo—Gipping Floss) to their Obo, Jr. (champion Obo—Nellie), Oct. 30.

Jennie—Obo, Jr. P. J. Keating's (Toronto, Ont.) cocker spaniel bitch Jennie (Bob Obo—Nelly) to Rideau Kennels' Obo, Jr. (champion Obo—Nellie), Nov. 3.

Edy—Gem of the Season. W. Tonje's (Fairfield, N. J.) greyhound bitch Kitty to A. W. Purbeck's Gem of the Season (Ivanhoe—Fly II.), Nov. 15.

WHELPS.

Prepared Blanks sent free on application.

Dora Deane. L. Gardner's (Mount Vernon, N. Y.) English setter bitch Dora Deane (Count Paris—Nellie Cambridge), Nov. 8, eleven (seven dogs), by his Galt (champion Galt's Mark—Gladette); two dogs since dead.

Wellesbourne Mabel. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Wellesbourne Mabel (Edgbaston Fox—Edgbaston Bess), Sept. 2, four (two dogs), by their Christopher.

Golden Flirt. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Golden Flirt (Prince Charlie—Hera), Sept. 10, five (two dogs), by their Mandy (refoil (The Squire—Scotch Pearl).

Roslyn Dora. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Roslyn Dora (Christopher—Roslyn Torrida), Sept. 13, ten (nine dogs), by J. F. Lumsden's Gladie (Sir James—Merry Fan).

Quida. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Quida (Dublin Scot—The Lilly), Sept. 9, eleven (seven dogs), by their Christopher.

Roslyn Flora. H. S. Harvey's (Philadelphia, Pa.) collie bitch Roslyn Flora (Dublin Scot—Flurry II.), Oct. 7, eight (five dogs), by Chestnut Hill Kennels' Christopher.

SALES.

Prepared Blanks sent free on application.

Doctor. White, black and tan spot on face English setter dog,

whelped Dec. 30, 1888, by Pride of the Plains out of Minka, by J. K. Boyd, Hempstead, N. Y., to W. J. Blodgett, New York City. *Ben Ormonde.* Orange, with white markings, rough St. Bernard dog, whelped Aug. 17, 1889, by Marquis of Stafford out of Haela, by J. F. Hall, Philadelphia, Pa., to Swiss Mountain Kennels, Germantown, Pa.

Rattland Jock. Collie dog, by Lake View Kennels, Worcester, Mass., to Mrs. A. M. Hallock, Columbus, O.

Gladys B. Red Irish setter bitch, whelped May 30, 1888, by champion Tim out of Lady Edith, by R. H. Burr, Middletown, Conn., to F. C. Fowler, Moodus, Conn.

Red River Glencho. Red Irish setter dog, whelped Dec. 1, 1886, by champion Glencho out of Lyda Belle, by R. H. Burr, Middletown, Conn., to C. M. Chapin, Englewood, N. J.

Onota Belle. Red Irish setter bitch, whelped Oct. 4, 1887, by champion Chief out of Blzreena, by R. H. Burr, Middletown, Conn., to F. C. Fowler, Moodus, Conn.

Red River Glencho—Onota Belle whelps. Red Irish setters, whelped Aug. 16, 1891, by R. H. Burr, Middletown, Conn., a dog and bitch to G. T. Lord, Turnerville, Conn., and a dog each to S. B. Taylor, Colchester, Conn., and E. W. Cole, Ashley, Pa.

Blaze—Gladys B. whelps. Red Irish setters, whelped April 12, 1891, by R. H. Burr, Middletown, Conn., a dog to A. Neff, Higganstown, Conn., and a bitch to E. W. Cole, Ashley, Pa.

Red River Glencho whelps. St. Bernards, whelped July 29, 1891, by W. H. Brown, Middletown, N. Y., an orange dog to W. F. Brown, New York City, and an orange and white bitch to J. B. Wideman, Scranton, Pa.

Seminole. Setter bitch, by Seminole Kennels, Philadelphia, Pa., to F. C. Fowler, Moodus, Conn.

Hunter's Pel. Black, white and tan beagle dog, whelped July, 1891, by Cnabb out of Mystic II., by E. H. Bragg, North Sidney, Me., to A. A. Wainfield, Mass.

Doctor. Silver fawn pug dog, age and pedigree not given, by Eberhart Pug Kennels, Cincinnati, O., to G. D. Chapin, New York City.

Missie. Fawn pug bitch, age and pedigree not given, by Eberhart Pug Kennels, Cincinnati, O., to Mrs. Clara B. Noble, Council Bluffs, Ia.

Rifle Range and Gallery.

THE REVOLVER CHAMPIONSHIP.

It fell to the lot of Alex. Stein, of the New York Pistol Club, to fire the first shot in the competition for the Winans trophy emblematic of the Amateur Revolver Championship of this country. The firing took place in the gallery of the club, No. 12 St. Mark's Place, on Saturday evening last. It was the regular club meeting night for practice, but on this occasion the shooting for this important trophy took precedence, and in place of the reduced Hinman target generally employed, the battery of fine revolvers owned and used by the club men were pointed at the 5 in. discs used in the shoot-off of the championship. The gallery was a very lively place during the shooting, and the two ranges were very busy with the carefully aimed bullets traversing them. The contestants found out that it was no easy task to stand up and in clear off-hand work fire thirty shots in a match where one single error might mar an otherwise fine score.

The time consumed in sending the targets up and down the range prolonged the work, and it was near midnight before the first half dozen men had closed up their records and placed 30 neatly-punctured disks into one of the waiting envelopes, there to be sealed to await the measuring up, which will promptly follow the final shot in the match. In order to give opportunity for other members of the New York Pistol Club to shoot, the gallery will be open for a further making of scores in this contest on Saturday evening, Dec. 5. At that time President Henry Oehl, of the club, will probably shoot, and any other revolver expert, whether a member of the club or not, who may present himself as a contestant on that occasion will be accorded the courtesy of the ranges and have opportunity to shoot a record.

On the first evening the majority of the shooters preferred a 2 in. bullseye, and in one of Geo. Jantzer's shots a clean plumb center was made, while the black caught the majority of the shots in each shooter's score. There was the usual chapter of mishaps. Mr. Bishop got off his 5 in. disk with his 12th and 13th shots, or more strictly, the last shot of his second and the first shot of his third round. This puzzled him, but an inspection of his revolver showed that in placing it down after the 11th shot the rear right bar had been struck and had slipped about 1-16 in. in its slot. The error corrected brought the next shot back in the black, but two rounds had been irretrievably ruined. Barney Walther, merriest of marksmen, made a record, and Alex. Stein played in bad luck with some irregular ammunition. Dr. Louis Bell shot very even, and his steadiness ought to bring him to the front, either as first or as a subsequent holder of the trophy. Mr. Jantzer also has a good arm and handles it in fine style.

With the opening of the match comes the good news of encouragement to the contestants. It was purposely made a no-entry-fee match, so that no one need be debarred from shooting. There is no sweepstake feature about it, but as soon as the idea of making a special offer to the winner of the trophy was suggested to the well-known revolver making firm of Smith & Wesson, came the response as follows:

SPRINGFIELD, MASS., Nov. 21, 1891.—*Forest and Stream Publishing Co.:* Replying to yours of the 20th, we beg to say: Yes, we will offer a prize to the winner of the Winans Trophy and Amateur Revolver Championship of the United States. Same to be one of any of our models of revolvers that you may select, handsomely gotten up, with a morocco case, etc.—SMITH & WESSON.

FOREST AND STREAM will supplement this by the offer of \$100 in cash to go to the second, third and fourth place men in the opening record of the trophy in purses of \$50, \$30 and \$20 respectively. Other firms specially interested will probably come in, and so in addition to the honor of holding the championship trophy will be the substantial benefit of the prizes in merchandise and money. We repeat the simple conditions of the competition:

CONDITIONS.

Open to any citizen or permanent resident of the United States. Any revolver, maximum length of bore, including cylinder, ten inches. Any trigger pull. Any sight, both sights to be on the barrel or forward of the grip of the pistol hand. Any fixed ammunition. Cleaning allowed only between scores of six shots. Distance, 20 yds. Position standing, free from any artificial support, the revolver held in one hand only with the arm free from the body and unsupported in any way. The rear sight shall not be nearer to the eye than twelve inches. Target—Ready measurement disks, one shot on each disk and the measurement to be taken by mechanical Vernier scale from center of disk to the center of the shot hole. Scores—Aggregate of best three in five scores, each score to consist of six consecutive rounds. The five scores to be fired consecutively. Amateur Standing—The standing of a contestant as amateur and professional to be determined in each individual case by FOREST AND STREAM rules.

Where not in conflict with conditions herein, the rules of the Massachusetts Rifle Association for revolver competitions to hold. The decision of FOREST AND STREAM to be final on all points.

SEA-SICKNESS.

TEN years ago I published in the pages of the *Lancet* (December 17, 1881), a paper on this subject, in which I ventured to propose a new hypothesis of its etiology. That hypothesis has never, I believe, been criticised or contradicted, and though I cannot therefore say it holds the field, I may well be excused if I venture once more, through a different medium, and with further explanations, to make a statement of my views. The question is one that possesses so little interest for the great majority of men and so much more for the mass of the traveling and particularly the sea-going public; its effects are so extensively felt and appreciated; the knowledge of physiology, thanks to the continued efforts of Professor Huxley and others, is becoming so very widely diffused, and the study of sea-sickness, which is essentially a physiological study, is so well within the range of ordinary comprehension, I feel I hardly require an excuse for bringing the matter before the public.

We know that sea-sickness is but seldom due to one individual cause, but most commonly depends upon a combination, a concatenation, of causes; and it seems to me that one of its principal physiological conditions is the one that I have already suggested, viz., a rarity of the pulmonary atmosphere. Speaking roughly, and for our present purpose, the pneumogastric nerve (which I denominate the key of the position) supplies the larynx, the lungs and the stomach, though these are not at all the only organs that it does supply. We know too well enough, what reflex action means and how it happens; it occurs in consequence of intimate nervous connection. We know also that sensations are not always felt and do not always produce effects where they originate or where they may occur, but often in some near or distant part of the economy, but always in a part which is more or less closely and intimately connected with it in respect of innervation. We can therefore well believe that irritation or distress affecting a branch or branches of the pneumogastric may be reflected therefrom, and so produce irritation and distress elsewhere. As medical men we know it for a fact.

The first effect of the vessel falling is a sense of apprehension, which causes us instinctively, intuitively, automatically, involuntarily, and almost unconsciously, to close the glottis and to hold the breath, so as to be ready by fixing the chest for any great or small or sudden exertion. The constant and continued repetition of this provokes and irritates the laryngeal branches of the pneumogastric nerve, and is of itself sufficient in my opinion to upset the movements of the stomach, and so produce nausea and vomiting. The next effect of the continued fall is the descent of the large abdominal viscera, which draw down and drag upon the diaphragm, and so extend and elongate the thoracic cavity; that the pulmonary atmosphere becomes attenuated. This produces an effect upon the principal filaments of the pulmonary branches of the pneumogastric nerve (as we find in the *mal des montagnes*) which also, being reflected to the stomach, adds fuel to the fire, and results in sea-sickness. It will thus be seen tolerably clearly and conclusively how and why it is that in sea-sickness, pure and simple, I am disposed to throw the blame upon the pneumogastric nerve, and I put it forward as a rational and tangible physiological explanation of the phenomenon.

Accept this merely as a hypothesis. What shall we expect to follow?

1. The good effect of certain drugs administered upon a rational basis, and after certain methods, but always under medical advice, and which for obvious reasons cannot be discussed here. The homeo-paths, however, and still be comforted when they hear that some of the drugs may be taken mimetically.
2. The only, yet the almost universal, inclination, to lie down and do nothing, and the great relief from lying flat upon the back.
3. The occasional failure of the adoption of this method, for even then the laryngeal spasms may continue.
4. The greater frequency and severity of sea sickness in man than in the lower animals, and in the erect than in the recumbent posture.
5. Its dependence mainly on the lengthwise and jumping, jerking motion, rather than on the lateral.
6. The almost invariable ultimate accommodation of the system to the motion, when once this susceptibility to fear and apprehension, which is only natural, has been subdued by use and wont.
7. Its occasional continuance in those who cannot control their apprehensiveness, correct their intuitions, or accommodate them-

selves to the movement, in other words those who are preternaturally sensitive; and its occasional return in the case of old and practiced sailors who have been too long ashore.

8. Its frequent occurrence even in the case of seasoned sailors, when they leave a steamer for a sail boat, or vice versa, by reason of the change in the character of the motion. Or when the system becomes disordered, and other things combine to produce nausea.

9. The extraordinary effects that occur on landing when, the motion having ceased, the sensations continue; in this respect impressions on the pneumogastric nerve form no exception from the rule of other nervous sensations.

10. The good effects of abdominal pressure when properly applied.

11. The relief experienced on bending low when the vessel falls, and more particularly by drawing the deepest possible breath whenever the vessel begins to fall.

12. Occasional immunity.

I may say here that when a boy I found the latter plan (of No. 11) effectual whenever I felt sea-sick; it seemed to come to me intuitively, but I could not then explain it. I have often felt sea-sick, but never was so, unless indeed one calls that sea-sickness when, 21 hours after leaving London by boat for Leith, I was literally awakened in the morning by a most abominable stench in the berth in which I was, and rushed up on deck to relieve myself. I doubt if any amount of inspiration could have prevented that, for the sickness then depended on the sense of smell. But I can explain it now, in the way I have done; and again, some people are sick at sea, because they think they are sea-sick, and the obvious explanation of the facts and one that is worth consideration.

I do not claim it as the only cause, for, as I have said, probably many causes combine to produce it. That varieties exist I cannot doubt; but would you call that sea-sickness when you catch a sea-bird with a baited hook and the moment it is hauled on board it vomits on the deck? I call it the vomiting of extreme terror. Do you call that sea-sickness from which old seamen are said to have suffered lately on board the fast cruiser, H. M. S. *Latona*? I call it the sickness of excessive motion. Is that sea sickness which is said to have caused firemen in overheated stokeholes to jump overboard? I should call it the insanity of drink, provoked by intense heat and severe toil. Or would you apply the term to what once occurred within my own knowledge in an open boat, when there was not a ripple on the surface and hardly any movement to be felt, yet some were sick? It is not worthy of the name, and is due entirely to mental and sympathetic influence. Why is civilized man alone unable to swim without practice, and why does he drown when he falls into the water? He may be handicapped with clothes; but that is not the reason, for he is not always clad. The answer is because he thinks he cannot; he is handicapped with fear; he loses courage and forgets to try. Again, some people are sick at sea, because they think they will be; then they feel so, and therefore are so (it is wonderful how frequently ideas beget sensations, and such sensations actions). But sickness such as this is hardly worthy of the name; I call it phantom sickness. Professor Rosenbach, of Breslau, who has lately written on the subject, truly says it is questionable if they are cases of sea-sickness. I am at one with him in thinking that visual perception is not an essential factor in the case; for if it were, it would not happen in the dark so much as in the light, with the eyes closed as when they are kept open; the position of the body and the direction of the motion would not so much affect it, and it would be comparatively easy to control it. But I differ from him if he thinks that the determination of the moment at which the disturbance occurs, which was pointed out by Herbert Mayo 60 years ago, affords any explanation whatever of the phenomenon. I admit, and always have admitted, the co-operative influence of special sensation, and of common sensation in the shape of passive motion and what is called the muscular sense; I make due allowance for unstable equilibrium, for mechanical disturbance of the stomach, disturbed relation between the fluids and solids of the body, the cerebrospinal and sub-arachnoid fluids, and even the labyrinthine lymph; and I acknowledge the effects of sympathetic and of mental, nay, even of moral, influence, but still I look for something more.

To return now to the action of the glottis. I was passing along Buchanan street the other day when I saw a hansom cab going down the street in which the horse had slipped its bit. Instinct urged the driver to check his horse by tightening the rein, but the

more he pulled the faster went the horse, until at last some good Samaritan seized the bridle and stopped it. Had the driver checked his instinct by the lessons of experience, he would probably have slackened the rein, and the horse would have stopped of its own accord; apprehensiveness, however, prevented this. So we often find that instinct and intuition have to be guided by experience. The former, as I have said, usually lead us to close the glottis and to fix the chest when the vessel falls, whereas the latter, viz., experience, supported now by reason, teaches us to leave the glottis open and to breathe freely. The infant dangled in its nurse's arms (Bell upon "The Hand") "will be at rest as it is raised, but in descending it will struggle and make efforts." The little child, tossed up and down in its father's arms, may feel secure, but objects to too much roughness, and fears the same attention from a stranger. The downward movement causes apprehension.

There is in this, as in most other affections, a certain amount of predisposition or the reverse to be considered. The man who goes on board ship with an overloaded stomach, a system goaded by freedom at the table, and an indolent life, will here be called upon to pay the penalty, to yield a tribute, for his quondam pleasure: while one who has been temperate in the satisfaction of his appetite, and has led an active or laborious life, is likely to prove a comparative good sailor. This accounts for the comparative freedom of the very old and very young; if affected at all, they are troubled less, the system is sooner habituated to the change, and the attack soon passes off. In all my experience I very rarely, if ever, found that one who had risen from the bed of sickness, especially that of any wasting disease, was as much affected as one who had led what is called a "pleasurable" life. Here at least, if nowhere else, the poor and sick come off comparatively well, and Lazarus is often spared the sufferings of Dives.—J. R. Stocker, M.B., M.R.C.P., in *Nautical Magazine*.

IO.—We have lately obtained the following dimensions of Io the cutter which defeated the 25-footer Needle:

Length over all.	28ft. 6in.
L.W.L.	23ft.
Beam, extreme.	8ft.
Draft.	5ft. 10in.
Least freeboard.	1ft. 10in.
Ballast—iron keel, including floor and bolts.	5,200lbs.
Head room.	5ft. 9in.
Mast, fore side of stem.	8ft.
Deck to cap.	25ft. 9in.
Deck to sheave.	37ft. 9in.
Bowsprit outboard.	25ft.
Boom.	25ft.
Gaff.	17ft.
Perpendicular.	38ft.
Base.	45ft.
Sail area, S. C. Y. C. (about).	900sq. ft.
Corrected length (about).	26.5ft.
Mainsail.	420sq. ft.
Sailsail.	78
Jib.	154
	652
Working topsail.	140
	792

A FITTING MEMORIAL.—Messrs. W. D. and A. James, the former gentleman being the owner of the fine screw yacht *Lancashire Witch*, have purchased a large piece of land at East Cotes from Lord Gort, reported at a cost of £200. The ground adjoins the field recently presented by Lord Gort to the inhabitants of East Cotes for a recreation ground. The land has been purchased for the purpose of erecting a large building to be used as homes for aged seamen, and will be endowed by these gentlemen as a lasting memorial to the memory of their late brother, Mr. F. E. James. Plans have already been prepared and we hear that the building will be commenced at an early date.—*Lancashire Witch*. [Mr. F. E. James, former owner of *Lancashire Witch*, was killed by an elephant some two years since while hunting in Africa.]

PROPOSED SAIL PLAN FOR SINGLEHANDER.
20FT. 6IN. OVER ALL, 16FT. L.W.L., 4FT. BEAM, 1FT. DRAFT.

CANOE YAWL "MADCAP," SAIL PLAN AND DETAILS.

COOPER'S POINT CORINTHIAN Y. C.—This club has ordered three 16ft. racing boats from Mr. James Collins. Four cabin yachts and three tuckups have been added to the fleet and the membership is rapidly increasing.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price \$2.00. Canoe Handling. By C. B. Vaux. Price \$1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneak-box. By N. E. Blake. Price \$1.50. Canoe and Camp Cookery. By "Seneca." Price \$1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

RIGS FOR SMALL CRUISERS.

Editor Forest and Stream:

For two summers I have been locked up, so to speak, in an inland town, and have done little yachting or sailing, but I have enjoyed none the less the weekly arrival of the FOREST AND STREAM, and have done always a little sketching and designing from time to time. This last summer my camp has been pitched on the shores of one of the great lakes, and I took the opportunity to rig up a little cruiser which, while not all I could wish owing to lack of time and money, has performed so remarkably well that I think a description of her main characteristics may be interesting to some of your readers.

Looking about for something in which to disport myself, I at last found a 16ft. x 32in. x 14in. skiff with two fine, well-modeled ends, both alike, which *faute de mieux* I bought ready made and proceeded to deck in for some \$75. forward and 4ft. aft, with a 9in. waterway all around. I rigged her with two leg-of-mutton sails, one right in the eyes and one smaller one aft, much after the fashion of the modern sailing canoe, except that both are plain leg-of-muttons without battens, and about as effective and handy sails as I have ever used. The centerboard is a "drop" plate of 3/16 in. iron weighing 90lbs. and is an embodiment of the value of low weights. I tried a light wooden board for experimental purposes and found that in light air there was no perceptible difference in speed, while in a breeze the heavy board kept her on her feet and to windward in a remarkable way.

Finding that the boat carried a strong weather helm, and being averse to carrying a jib, I conceived the idea of putting on a very large and heavy rudder, and got one cut out of a 30 in. boiler plate weighing about 90lbs. The success of the experiment was complete, the big rudder acting as ballast, steering apparatus and after deadwood all at the same time and I recommend it, considered fast, and thus not only in light air and smooth water, but in fresh breezes and pretty heavy chops, and with only her skipper on board on the weather rail. Her stiffness is remarkable, as is also her steadiness in running off the wind in lumpy water, due to the power of the big rudder. For the hull I should prefer something with a little more deadrise and with overhanging counter like the FOREST AND STREAM cruiser you figured three or four years ago; but for rig and equipment I can scarcely suggest any improvement except in putting a batten across both sails about 18 in. up to aid in quick reefing.

I hope next summer to carry the same governing ideas into a slightly larger craft of better model. I have been very much pleased with Mr. Dyer's design for a deep canoe, and think her depth and rockered keel are a great step in advance, but I hanker myself after a little more beam.

My chief interest is in single-handers of a more comfortable type than the standard 30 in. canoe. There are many like myself, who are fond of sailing and like to have an occasional tussle with another boat, but we don't care to balance ourselves outboard on a crazy sliding seat 3ft. outside the wale, and we look for something in which we can smoke our pipes in comfort and still keep the fast fellows in sight.

My friend Mr. Tyson thinks his flying proa, with a little attendant canoe sailing alongside and keeping him from turning bottom up, is the true solution of the difficulty, and will fill the required void, but while admitting the excellent qualities of the proa, I see several drawbacks, among which are the awkwardness of the outrigger in coming into the house, the drag on the lee side on one tack and on the weather side on the other, making it impossible to so place the center of effort that the boat shall at all times carry an easy weather helm. I prefer on the whole the catamaran to the proa, but I think a properly modeled boat of 4 1/2 beams or so, a perfected and enlarged "Mersey canoe," will fill the bill for a perfect single-hander much more nearly than either.

HENRY K. WICKSTEED.

COBURN, Ont., Nov. 1.

[The single-hander sketched by Mr. Wicksteed is very similar in sheer plan to the latest type of English canoe yawl, such as Snake and Torpedo.]

A. C. A. MEMBERSHIP.—Atlantic Division: Newell Martin, R. L. McDuffee, Wm. D. Hobart, Hugh Stevenson, New York; A. Schroeder, Evert D. Newman, Brooklyn.

CANOEING ON THE PACIFIC.

Editor Forest and Stream:

The Seattle C. C., of Seattle, Washington, was reorganized and incorporated on Oct. 19 with a capital stock of \$1,500; divided into 100 shares of \$15 each. From the board of trustees the following officers were elected: Com., Geo. B. Riley; Vice-Com., R. T. Engelbrecht; Secy., W. N. Redfield; Purser, H. M. Lawrence. Have our own house, situated on Lake Washington, on the terminus grounds of the Madison Street Cable Railway Co., two story house, 30 x 50 ft., containing large club room, dressing room, lockers and work room up stairs; down stairs the entire floor is devoted to canoes; a large veranda projects from each floor overlooking the lake, have now 25 members, and at the present rate of application will have our full quota by spring. Lake Washington is 28 miles in length, varying in width from one to five miles, it is fresh water and partly inside the city limits; 3 1/2 miles from club house, and also connected by Black River with the lake is Puget Sound, a fine body of salt water for the cruising canoe man, with its 2,000 miles of shore line. With such natural advantages we are confident of a large and flourishing club. The courtesy of the club is at all times extended to A. C. A., W. C. A., and Pacific coast canoe men.

SEATTLE, Wash., Nov. 7.

GEO. B. RILEY.

CANOE AND CANOE-YAWLS.—The racing of the season at Hendon again showed that, lengths being equal, the 30 in. beam canoe, with small sails, can hold her own with canoe-yawls of 4ft. to 5ft. beam, especially when the crews are equal; but the decisive test which was hoped for in the competition between the Snake (yawl) and the canoes, and in which it was by some expected that the past experience would be upset, unfortunately did not come off. There is little doubt to our mind that a canoe-yawl, such as Snake, of 18ft. length, 5ft. beam, and 160ft. of sail, manned by a crew of two men, ought to beat a canoe of 18ft. length, 2ft. 6 in. beam, and 122ft. of sail, manned by one man, in almost any weather; and it is hardly fair racing to cause them to sail in the same race without time allowance. The two boats would rate respectively 0.5 and 0.3, and on the 6-mile course the yawl would give a time allowance of 4m. 25s. under the Y. R. A. scale.—*Field*.

PHOTOS OF THE MEET.—Mr. Stoddard has now ready a very handsome collection of 55 views of the 1891 meet at Willsborough Point. As his visit was made on two very windy days the views show some rough water, and made excellent pictures. The great Sea-voy Serpent shows to good effect in one view. No edition of the "Glimpses" will be issued this year.

New Publications.

THE LABRADOR COAST.

THE LABRADOR COAST: A Journal of Two Summer Cruises to that Region, with Notes on its Early Discovery, on the Eskimo, on its Physical Geography, Geology and Natural History. By Alpheus Spring Packard, M.D., Ph.D. N. D. C. Hodges, New York, publisher.

This book is attractive reading at this time, when a popular interest in Labrador has been awakened by the return of one of those anomalous students' expeditions which for the past thirty years have periodically visited that repulsive region during summer vacations, in the character of explorers. But beyond this it is especially valuable and important because it covers scientifically, as aptly set forth in the title, a field of analytical investigation which has long been neglected or overlooked. The economic possibilities of the country are, moreover, duly weighed and presented. The distinguished author has modestly entitled his work "The Coast of Labrador," but it really includes abundant information about the interior as well, with its flora, fauna, minerals, natural products and resident peoples, much of which, of course, has been known to laymen for three centuries or more, as attested by a voluminous bibliography of no less than 198 titles printed at the end of his volume, besides 24 charts and hydrographic surveys, not including ancient maps and charts of early voyagers, dating back to the year 1503.

Critical readers, to whom considerable portions of Labrador have become familiar by personal acquaintance, might take exceptions because the professor does not sufficiently recognize otherwise than incidentally, perhaps, the value of the contributions to the general fund of information which many writers have made since long ago; and they may reasonably marvel why the observations of old wood runners and voyageurs should be set aside in order to give place to the so-called "discoveries" of recent investigators who happen to have a scientific tag attached to their credentials. By some such discrimination the credit of the discovery of the courses of the Mississippi River has been awarded to Henry Schomburgk, when the identical regions had been traversed over by Allan Morrison, his guide, for more than thirty years previous. But, of course, it is the official stamp which gives value to the guinea. The halo of the discoverer gives the glory to the discovery.

As a matter of fact Labrador was one of the earliest discovered parts of the continent. Its streams, watersheds, mountain ranges, forests and coast lines were pretty thoroughly traced more than two centuries ago, while many of its natural features were known in detail. Cartier Espejo, Jeffers and Hackitt, in the fifteenth century, and Fathers Lauré and Albanel, in the sixteenth, traced most of its interior water courses and divides. In the seventeenth the navigators Chabert, Charlevoix, Coats and Cook, added much to what was already known of the coast. André Michaux, the botanist, looked it over in 1793. The Moravian have occupied the northern coast for one hundred and twenty years, and David Cranz, their historian, wrote voluminously and accurately of Labrador and its peoples from 1765 to 1789. The Hudson Bay Company have trapped all over it for a still longer period, and Peter Cartright and John McLean, two of its officers, added a great deal to the current fund of information during their incumbency of sixteen and twenty-five years respectively. It was John McLean who discovered the High Falls of the Northwest River (which empties into Hamilton Inlet), in 1883. In 1817 Dr. Edward Chappell wrote very fully of the Indian

tribes. In 1813 Davies described the Hamilton Inlet, which is also known by the several names of Groswater Bay, Eskimo Bay, and Mouktoke Inlet. In 1869 Dr. Elliott Coues contributed a list of 164 birds which he collected in that year, and Charles Hallock furnished a series of photographs of the coast and interior for *Harper's Magazine*, giving portraits of the Montaignais Indians and Eskimo found at Hamilton Inlet, with a full ethnography of the former, and contributing many interesting utensils and relics of the tribe to the museum of the Long Island Historical Society in Brooklyn. In 1863 Prof. Hind presented extensive researches throughout the interior, and from 1880 to 1891 Prof. Packard, the author of the book under review, has made Labrador his especial study, describing not only its mammals and avifauna, of which he finds twenty-eight and one hundred and ninety-eight species respectively, but its insects, invertebrates and its glacial and drift phenomena, as fully set forth in the text. Mr. John Macoun, the Canadian naturalist, has also compiled a catalogue of some 3,000 plants reported by various travelers as growing on the coast of Labrador. In 1853 Mr. Joe Gundy, who was for half a century a voyageur in the service of the Hudson Bay Company, traveled from Fort Nasquapee in central Labrador to fort Garry (now Winnipeg), a distance of 2,400 miles, on snow shoes. He and Antoine Michélet, another employee, were unrelenting explorers. In 1860 H. M. Surveying steamer Bulldog, under the celebrated navigator Capt. McClintock, charted Hamilton Inlet, throughout its entire length of 120 miles, going up as far as the Nor'west River post, and into the Grand of Hamilton, and Tom Liscom rivers at the head of the Bay, a region which has been a rendezvous and principal fur entrepot of the Hudson Bay Company for the southern district of Labrador since the beginning of the century. During the period extending from the year 1874 to date by the Dominion Survey of Canada, under Dr. Robert Bell, has covered the greater part of the interior of the province, the water sheds and timber belts, of which the principal one was discovered to have a width of 800 miles, and finding spruce trees 4ft. in diameter where only a stunted growth was suspected.

From these abundant facts it may be concluded that Labrador is neither a desert nor a *terra incognita*, for a country cannot be wholly inhospitable to support such an abundance and variety of plant and animal life; and it seems strange to an old traveler who read in the published newspaper reports that a party of students from Bowdoin College are credited with having discovered a race of Indians "hitherto unknown to white men," as well as a high fall whose existence has hitherto been problematical. I am therefore surprised to see that Prof. Packard has dignified the work of this party by the title of "The Labrador Expedition," and that they have achieved "the most important geographical discovery which has been made in the interior of Labrador." Of course due importance must attach to accurate measurements, and all that. It is the impression, however, of Dr. Robt. Bell, chief of the Dominion Survey, of whom I have made inquiry, that the falls cited by these gentlemen were really the High Falls of Nor'west River, and not of the so-called Grand River, which is locally known as the Hamilton River, the description of the chain of lakes, the portages, the distances, and the tracking, answering quite accurately to the former, which is the route annually traversed by the fur brigade in July. There is no analogous chain of lakes on the Hamilton River, though there is a high fall some fifty miles from its mouth. The high falls of the Nor'west River post are just off the regular thoroughfare from Nor'west River to Fort Nasquapee, at the Heights of Land, and a detour of twenty miles has to be made by the brigade to flank them. The distance from Fort Rigoleto to Nasquapee is 300 miles. No less than twenty falls and rapids are passed on the journey, and the trip occupies a month.

Doubtless the fur collectors and the wood runners (*coureurs des bois*) of the Hudson Bay Company acquired a very intimate knowledge of the interior of the country. That this knowledge was not imparted to cartographers is due to the reticent policy of the company, as well as to the fact that the interior Indians (Montaignais) were naturally jealous of intrusion upon their trapping lines. With the exception of agents and employees at the posts, no white men were allowed to trespass on the Indian territory, and therefore no whites ever visited the interior except upon business emergency. Settlers along the coast held no communication with the interior beyond the edge of the timber belt to which they resort for shelter in winter. The Nasquapees are strictly coast Indians, but have often been confounded with the Mountaignais. Eskimos are seldom seen south of Rigoleto, in latitude 55deg. The Red Indians are extinct since thirty years ago. The entire Indian population of Labrador is about 6,000.

CHARLES HALLOCK.

*The fur product of Labrador is of itself worth \$300,000 per year to the Hudson Bay Company.

ANSWERS TO CORRESPONDENTS.

F. R. S., Boston.—A collection of all the best "cat poems" in the English language is now being made by Mrs. Graham R. Tomson. It will be illustrated.

T. W. L., Fond du Lac, Wis.—A thin mixture of white lead and turpentine is used for waterproofing canvas. The addition of lamp black would make it black without injuring its other qualities.

Kennedy Smith, well known to sportsmen as the man who has done much to develop the sportsmen's resorts in the Dead River region, has in his possession an old powder horn, the history of which if known would doubtless be as interesting as a fairy tale. It is finely carved by a rude but nevertheless artistic hand, in designs of birds, fish, deer, a full rigged ship, etc., and bears the following words: "John Shanahan, his horn. Made at Ticonderoga, Sept. 22, 1760." The horn was found in an old deserted house in the Dead River region, near the spot where the bullets were found this fall, and which, it was supposed, were left there by Benedict Arnold's expedition. Many think that this old horn was left behind by some soldier of Arnold's army. To look at it would be to easily believe that it had seen service in the Revolutionary war at least and may have furnished powder to kill not only Britishers, but redskins as well.

ABBEY & IMBRIE,

Manufacturers of All Grades of Fishing Tackle,
 18 Vesey Street, New York.

The population of the earth is divided into two classes of people

CLASS 1. Those who have learned to transact business and make purchases at a distance with the assistance of catalogues, railroads, express companies and the post-office department, intelligently, quickly, satisfactorily and (this is the key) profitably.

CLASS 2. Those who have not (we are after such of these people as may happen to inhabit the Western Hemisphere and know how to read and write).

We have taught nearly three millions of people how to join Class 1. Many persons belong to Class 2 simply because they do not comprehend how simple a thing it is to graduate. As chief missionaries and proselytes for the cause, we ask to be given a chance to show the easy way. The Buyers Guide (15 cents pays postage and expressage) tells all about it.

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understood of the people.

BY G. TRUMBULL.

Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history. — *Troy Press*.

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it. — *Boston Evening Traveller*.

The book should find its way to a choice place in every sportsman's library. — *Chicago Inter-Ocean*.

There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should he meet it in the woods or on the water—is not compelled to shut the book, drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means. — *New York Herald*.

	ANSWERS TO CORRESPONDENTS.

AN ENLARGED "FOREST AND STREAM."

WITH the issue of Jan. 21 next, which will be the first number of its thirty-eighth volume, the FOREST AND STREAM will be permanently enlarged from twenty-eight to thirty-two pages.

This change has been made necessary by the growth of the special interests to which the paper is devoted, and by the corresponding requirement of more space for their adequate presentation. The enlargement is to be taken as an earnest of our purpose to increase the interest, usefulness and value of the FOREST AND STREAM; and by means of the better opportunities thus afforded, to maintain for it the character it has so long enjoyed as the representative sportsman's journal of America.

Each of the departments will be benefitted by the change—Sportsman Tourist, Natural History, Game Bag and Gun, Sea and River Fishing—and, in particular, our news columns—the Kennel, Yacht and Canoe, Rifle and Trap. The generous amount of space now given to Kennel will be maintained, and the room devoted to Trap Shooting will be so enlarged as to make the department the most comprehensive and the best arranged contemporary record of that sport.

Since this journal was established eighteen years ago, the popularity of sports with the rod and the gun has advanced with giant strides; and in the development of

those manly recreations the FOREST AND STREAM has taken no unimportant part. With their growth it has kept equal pace in worth, in influence, in circulation and in generous public recognition. What it has been it will be. The record of the past contains the abundant promise for the future.

In 1892 and the years that shall follow, as in 1891 and the years that have passed, the FOREST AND STREAM will stand for all that is best and truest in field sportsmanship; and it will strive to merit from its growing hosts of friends a continuation of that warm appreciation and indorsement with which it is now favored.

One word remains to be said. The paper will be enlarged to thirty-two pages, but the price will remain unchanged; \$4 per year.

OUR NATIONAL PARKS.

CONSIDERABLE space in Secretary Noble's annual report, just issued, is devoted to the subject of our national parks. These are four in number, and of them the Yellowstone Park is by far the largest, and, from all points of view, the most important. The others, of recent establishment, we owe to the wisdom and far-seeing policy of the Secretary of the Interior, to whom also must be given the credit for the setting apart of the large forest reservation adjacent to the Yellowstone Park, which practically, though not in name, adds about 1,500 square miles to the area of that reservation.

The report with regard to the Yellowstone shows a very favorable condition of things there. Game in the Park is continually increasing. The buffalo are quiet and contented; small herds are often seen, and some of these are accompanied by calves. The estimates of their numbers vary from two to four hundred, the latter being, in our judgment, the nearest to the truth. We have often called attention to the great numbers of elk to be found in this region, and now "the most conservative estimates place their numbers at 25,000." Mountain sheep, deer and antelope are numerous, tame and increasing. There are a few moose in the Park. The overflow of all this game into the adjacent territory will furnish good hunting to those who visit the region.

The effort to stock waters of the Park before barren with game fish appears to have been very successful. Six different species of fish have been planted in as many different lakes, and of these at least five appear to be doing well.

Mr. Noble calls attention again to the urgent need of legislation for the Park, and alludes to the dangers that threaten the National pleasure ground in the following words:

It is to be much regretted that there is an entire absence of law to punish depredations there, as they affect the forests, the game, and the wonderful formations. The attention of Congress has often been called to the necessity of such a penal statute, and it is now again recommended as necessary. The measure known as the "Vest Bill" has repeatedly passed the Senate, but in the House, while always favorably reported, it has unfortunately been accompanied by an amendment foreign to the bill, granting a right of way through the Park to a railroad. This was the case in the last Congress, and, as on former occasions, those who had been instrumental in urging the bill thought it better that it should fail than pass with this provision.

The Secretary's opinion, as hitherto expressed, has been that a railroad would be detrimental to all the purposes for which the Park was set apart. It is earnestly hoped that Congress will not give up to a private enterprise any part of what it has set apart for the education and enjoyment of the whole people. If one such railroad franchise is granted, it will result in the practical abandonment of that region as a forest and game reserve. Each year demonstrates the wisdom of Congress in setting apart this magnificent domain and the necessity of keeping it under Government ownership, free from private or corporate intrusion. It embraces one of the largest forest-bearing districts in the Rocky Mountains, and contains the headwaters of some of our greatest rivers. The importance of preserving such tracts as affecting the water supply of the country has already been discussed in this report. * * *

There should certainly be no hesitation or difficulty on the part of Congress in providing means by which the regulations made by the Secretary of the Interior for the protection of the Park may be made effectual. As it is now, the Park is placed under the care of the Secretary, and he is authorized to make rules and regulations for its government; but as no penalties are provided, there is no way in which such regulations when made can be properly enforced. No punishment can be inflicted for acts which should really be denounced as crimes; such, for instance, as the firing of the forests, the destruction of the game, and spoliation of the objects of interest within the Park. All that

now can be done is to turn the offender out of the Park, and thus give him an opportunity of returning and renewing his malicious acts.

The forest reservation which was set aside by Presidential proclamation last March is in charge of the Secretary of the Interior, and he has extended over it the same rules and regulations which govern the Park, and has directed the Superintendent of that reservation to protect it. This was necessary because this reservation is a hunting ground both for whites and Indians, and the forests which cover its mountains are in constant danger of fire from these wandering and often careless invaders.

The Yosemite Park contains some of the most wonderful scenery on the Continent, as does also the Sequoia Park. In both of these is found also a little game. In these parks the most important objects which are in danger of destruction are the giant trees, of which each park contains some. These are now being protected, but much more remains to be done, and a further knowledge is needed of the exact conditions which prevail in each park.

It is gratifying to see that the Federal Government is taking hold of this matter of National Parks in a way so much more intelligent than could have been hoped for a few years ago. For this wise action we have to thank Mr. Noble, and while at present but few people comprehend the importance of what he has done, the day is not far distant when he will receive from the general public that measure of gratitude which his action deserves.

SNAP SHOTS.

THE final joint meeting of representatives of the U. S. Fish Commission, the Fish Commissions of New York, Michigan, Pennsylvania, Ontario and Quebec, delegates from the Anglers' Association of the St. Lawrence River, the Cheaper Food Fish Association of Rochester, and other bodies interested in the protection, preservation and propagation of food fish in the Great Lakes, has been called for Tuesday, Dec. 8, in the City Hall, at Hamilton, Canada. The call is signed by R. B. Roosevelt, chairman, and A. D. Stewart, secretary, of the Joint Convention. The object of the meeting is to consider the report of a sub-committee, which met at Rochester, Nov. 10, and to make recommendations to the Governments and State Legislatures concerned looking toward the harmonizing of the laws of the States and Canada upon the subjects mentioned. It is admitted that the States must surrender to the General Government their jurisdiction over the waters of the Great Lakes for the purposes above named if any advantageous and binding agreement is to be reached with Canada looking toward the accomplishment of a worthy end.

The Red Star steamer Rhynland, which sailed from New York for Antwerp yesterday, carried from the U. S. Fish Commission 500 catfish consigned to the Belgian Government. Request was made for these fish several years ago, but the Government was not prepared to rear them until recently. Belgium has extensive areas of sluggish water suitable for the American catfish, and now without fish. The shipment includes 100 spotted catfish (*Ictalurus punctatus*) and 500 of the common horn pout (*Amiurus nebulosus*), a few of the latter being of the marbled variety. On Nov. 13 Commissioner McDonald was informed by Herr Max von dem Borne of the safe arrival in Berneuchen of the following American fishes, sent in the care of the chamberlain's son: Three hundred and twenty-three sunfish, 76 catfish, 80 minnows, 2 dogfish (*Amia calva*), 6 calico bass, and 1 white perch. Only 15 fish died on the steamer and 5 on the railway journey from Antwerp to Berneuchen. This is the most successful trans-atlantic shipment known. Our brilliantly-colored sunfishes and crappies attract most favorable notice in Germany, where no fishes of the family are native.

Clinton Gilbert, who died in this city last Sunday, in his eighty-fifth year, belonged to the "old school" of sportsmen. He was for many years a member of the New York Association for the Protection of Game. In 1877 he succeeded Royal Phelps in the presidency of the society, in which office he was succeeded by Robert B. Roosevelt.

The sportsman in the field who in badly broken English attempts to control a half-broken dog is not likely to make an unbroken success of it.

The Sportsman Tourist.

WINTER SPORTS IN NORTH CAROLINA.

II.

I AM delighted with my selection of Newbern as a headquarters for my winter campaign among the fish and wildfowl, and more than convinced of the wisdom of my choice. Had I come here as a star invalid in search of a sovereign balm and spicy breezes, the extraordinary cold snap of the 16th to 19th would have set me back discouraged. As it was, the cold wind from the north-northerly and from the east-easterly, only had the effect to drive the whole assembly of ducks, geese, brant, swans and shore birds, which had been dallying along the sedges of the River St. Lawrence and about the rice lakes of Iowa and Wisconsin, down into Currituck and the North Carolina sounds, and that delighted the sportsmen. It would seem as if everything that could fly scooted before that intensely cold and bitter blast and came down here into the neighboring waters. They had to fly that far to find comfort and rest, nay more, they found the finest food in the land, clams, fish, valisneria, that succulent delight of the canvasback and redhead ducks; and seeds of grass and rice from the garnered fields, with sheltered coves and alternate points of land to suit, and sand dunes piled upon the beaches, where the gulls and petrels play bo-peep with the surf. Vast flocks of crows came careering on the blast bound for the upland and pine woods. Herons, gulls, terns, sandpipers and cranes huddled together among the marshes, and the hovering buzzards sought shelter behind the favoring lee of some deserted negro quarter. Right here within the city limits old Bill Taylor, a colored man, killed a blue heron by Trentside, which measured 6ft. from tip to tip of extended wings, and offered to sell it for a quarter, with no buyers. It was a beautiful specimen, which collectors might have envied. Then the black ducks got together on the river, right in front of town, and a venturesome sportsman picked up a few. An expert gunner who did not begrudge the time might have filled a boat, but Newbern is a busy community, and there are no gentlemen of leisure here except those of color. It is hard for the latter to get a move on themselves; but the cold snap made them hustle. More than half the population of Newbern is black.

I met one of them, a middle-aged ducky, on the morning of the seventh day, the 18th, I think, when I was trying to warm myself by a lively constitutional before breakfast; or rather, he overtook me as I walked. I had heard him shuffling briskly behind me for a couple of blocks, with that peculiar "dot and go one" gait which every native recognizes; and by a forced sprint he made a lap on me.

"Right cold day, boss!" he said, forging half a length ahead.

I told him in the happy vernacular of the country that it "certainly was."

"Mighty hard on us, boss," he continued, "coming so sudden, and so warm the day before."

That is what I thought to myself it must have seemed to the poor people of the Northwest where the heft of the blizzard struck. As it was, we in Newbern were only on the outside edge; we were comfortable by comparison. The coming of the cold wave was heralded by a dense black cloud which overcast the northern hemisphere about sundown. At noon, previously, the thermometer had marked 71 degrees; at 8 o'clock the next morning it indicated 27 degrees. And great Eolus! how the ducks did drive before the stress of weather, and even now they are huddling, as I have mentioned, between the mainland and the outer beach. The North Carolina sounds are full of them. The regular packet steamers which ply hence to Norfolk and Elizabeth City bring almost daily reports of them.

But this peculiar advantage in the location of the landlocked waters of this State as a winter home for wildfowl, and the easy accessibility of Newbern to every important commercial point within 200 miles, constitute but a modicum of the reasons why it seems the most desirable headquarters on earth for the sportsman.

From Newbern to Morehead it is only an hour and a half by rail (Southern schedule time). Beaufort, which is a charming watering place with an excellent modern hotel, hobnobs with Morehead; clustering islands lie between. Across Bogue Sound is the outer beach, with the illimitable ocean washing its seaward line. The salt water flows through Bogue and Topsail inlets into the Sound, which is as prolific with fish life as Indian River in Florida, and without its sand flies. Within this sheltered reach of water sailboats may travel securely and indefinitely, north and south. Here the counter currents from the tropics and the arctic meet. Here all the varieties of the fish fauna of the two antipodes cross fins. Whales and hair seals disport with the angel fish and cero, shad and porgies with hogfish and baracouta. All the peninsula lying between Core Sound and the river Neuse is cut up into estuaries and intricate channels which only experienced guides can navigate intelligibly. The uplands swarm with turkey, partridge (quail), deer, bear, coons, opossums, foxes, hares and squirrels, and the swamps and "pocosins" with water fowl and shore birds.

From Newbern to Washington, N. C., there is steam transportation via Pamlico Sound and river, with duck, goose and brant shooting all the way; and from Washington there is rail and steamboat for fifty miles northward into Albemarle Sound, which is the focus of another as fine sporting ground as can be found anywhere, with no end of rivers emptying into it, and bars and islands and shoals choking it, and canals and railroads leading through cypress swamps and grass marshes and pine forests back into the more densely and more civilized parts of the country. From Newbern there is also ready access by steamboat with Roanoke Island, famed for sport, war, colonization, and succumbent grapes, since the first advent of Sir Walter Raleigh; and three miles from the northeastern seldge of the island is the famous watering place hotel at Nag's Head, with sand dunes which shift with every violent storm, sometimes piled to a height of 200ft., and often burying groves and hamlets out of sight as they shift and form in cumulative drifts. There is no better shooting for geese, ducks and swans than can be found at Roanoke Island right now, and if any of your readers care to try it, they have only to take

the Old Dominion Canal Line or the Southern Railroad at Norfolk and run down there; and they will find Spence Daniels at Manteo, ready to take them out or board them at very moderate prices. He has a little coterie of New York, Baltimore and Norfolk friends who are always regular customers in the shooting season, and some of them come down in their own private launches and enjoy themselves right royally.

From Newbern there is also transportation by rail and boat to Kinston, 50 miles up the Neuse River, and thence to Goldsboro and the up country; and all the intermediate farms and woods are full of game in great variety. Last week I saw the proprietor of a lumber camp only 12 miles up the Kent River, above Newbern, who is cutting timber for the Prettyman mill, and he told me that his boys got five wild turkeys one morning which they had flushed and located the evening before, and they were only rough log-cutters and not sportsmen at all. Quail can be had for the trouble of walking them up anywhere outside of the city limits, and if one is going deep into the woods he may as well carry heavy ammunition for bears.

Now, Mr. Editor, I have never seen any such categorical statement printed anywhere of the attractions of the Eastern Counties for sportsmen as I have just now given, and mine is meagre enough, because I have to be concise. Later on I shall give you much of it in detail, if my health is spared and my plans do not miscarry. These localities, I fancy, are not visited by strangers, because the proper points of departure are not familiar to the public. For example, there is direct semi-weekly communication from Newbern by sailing packet with Hyde and Dare counties, which are so swampy, and so interspersed with jungle, lake and bayous, as to be fit for hardly anything but hunting. There is more game in Hyde and Dare counties than there is in the whole of New York State and Maine put together. The run of 90 miles from here to Swanquarter can ordinarily be made in ten hours by boat, or one can go by land, crossing the Neuse River at this point and the Pamlico River at Wakely. There are good accommodations at Swanquarter at \$1.50 per day, with no end of turkeys, quail, deer and bear within gunshot. Thence there is a good wagon road to Fairfield, and steamboat twice a week from there to Norfolk, as your intelligent correspondents Dr. Capehart, of Avoca, and Frank Heywood, of Norfolk, have mentioned. I happen to be boarding with the gentleman for whose pretty little daughter this river steamboat is named. A week is ample time for a round trip, returning from Norfolk to Newbern by the regular routes.

Ten miles across Croatan Sound from Roanoke Island is Stumpy Point, whose people live by fishing and hunting. They drink yupon tea and never shave. An impenetrable swamp cuts them off behind. The broad sound lies before them. They never see strangers, and the only company they have is the momentary presence of passing steam craft. Perhaps I may head an expedition to visit this isolated community and carry them some looking glasses and Yucatan gum. Capt. Southgate, of the steamer Newbern, runs close by on his regular trips from Norfolk, and will drop off passengers who have provided skiffs to take them ashore, and receive them aboard again by appointment.

Certainly this is the very time of year to enjoy sport in this section, from this on to January, and even a month later. Ordinarily, duck shooting is but cold comfort at the best, for it is when the wintry blasts are keenest that the duck shooter gathers his heaviest bags, and often noses get blue and fingers and toes grow numb while the patient sportsman watches his stools. Yet here in November, and up to Christmas, yea, all winter long, there are balmy days when the soft tints and the ruddy tints of the morning light in themselves, and the exciting whirl of rapidly succeeding flights and the splash of those that pitch headlong into the waters as they settle near the decoys, add a zest to the sport of duck shooting which only an enthusiast can appreciate or describe. Here it scarcely ever snows. Killing frosts, so called, seldom occur. Roses persist in putting forth their blooms despite the recent freeze, and there is winter foliage enough to give the landscape an agreeable tropical cast. Blows and high winds are rare, and the lapsing days alternate between light breezes and intervals of calm. The skies are fickle, sometimes overcast, but bright and sunny for the most part. They say the climate is more equable than that of Florida. I have in mind some desirable quarters for sportsmen, right on the river front, at the home of the postmaster, whose sister is a professional taxidermist and whose brother has a sharpie of approved pattern.

CHARLES HALLOCK.

IN MAINE WOODS.—II.

IN CAMP, Piscataquis County, Me., Oct. 26.—In a recent letter I gave some personal experience in regard to illegal game killing in this county. I know that the experience of one man is not enough for the basis of a thoroughly reliable generalization, but in saying that I am convinced that in the southern and more settled part of this county at least, the greater part of the illegal killing is done by the natives of the county or the State, I am supported by the opinions of all whom I have asked about the matter on the spot. Of instances in point I could give dozens, but with some little account of what I have seen on this present trip I am willing to let the statement stand.

I had not visited this region for two years. I had engaged a guide, who had built a good camp on the shore of one of my favorite lakes where I have camped many a time, where game and fish were plenty and where heretofore I could be reasonably sure of quiet and rarely a visitor. Formerly it could not be reached in less than forty-eight hours from Boston and with good weather and good luck at that.

But I am saddened by many a change. This lake can now be reached in twenty-four hours from Boston. A steamboat now takes us swiftly over ten miles of the trip where formerly we paddled our canoes. A new railroad penetrates the wilderness, and mills and clusters of houses have sprung up where once was only wilderness. Think of it, you reader of FOREST AND STREAM, who have been so blessed as to see Onaway Lake in the olden time—one of the very loveliest and most secluded sheets of water in Maine. A hamlet has sprung up at its foot and there the morning express train on the Canadian Pacific Railroad stops and the passengers breakfast.

It seems incredible and unbearable sacrilege, but it is the actual and the irrevocable. How good a chance think you there is now for caribou on Benson Bay? How long will Barren Mountain and Chairback be their retreat? During the past year some one has been minutely describing in letters to FOREST AND STREAM the waters about Monson; and I have trembled lest my old lakes and hills should be written up; but lo! the railroad itself is here, and I see that "the jig is up," I perceive that "I have lived;" that already I belong to "a former generation."

Well, we came to our camp. There was the dear old lake; and the grand old mountains, right and left, looked down on it; but the sound of many rifle shots greeted us before we emerged from the forest. To-night, including our party of three, there are eleven men in the camp, and ten Winchester and a shotgun or two complete the arsenal. Three deer, two of them does, were hung up; and another large doe was shot the next morning—all of them driven into the lake by dogs. Two dogs are in the camp.

Not one man besides myself of the whole party belongs outside this county. The dogging goes on unmolested. The warden was here a while ago; but he cannot be everywhere, you know, and his movements are as well known and timed as are those of the policeman on his beat by those who wish for any reasons to shun his attentions.

A net has been set in the lake. Here is one morning's haul: 24 suckers, 1 pickerel, 8 huge togue (lake trout), 1 muskrat and 1 loon.

Time and again since I stepped from the train have I been importuned to permit the use of a dog for my benefit. It is the very simplest thing in the world to obey or to break the law. Any one can get a deer here any day in twenty or thirty minutes by use of a dog. It is an absolute certainty. These men will go home with their deer; and their wives and children and neighbors will admire their prowess, but the only hardihood it required was in disregard of the law and the only skill was that of the butcher. There was not even "the music of the hounds upon the hills" to enjoy or boast of. An occasional yelp in the thicket, that was all. Any kind of a cur that can follow a deer track and can bark will do.

Now, let me freely admit that, for the poor man who needs meat for his family, the killing of a deer in this way is, the law aside, the surest, quickest and most humane way. There is no danger of the deer going off wounded to suffer and die in the woods. Then, too, he is shot just where he is wanted and can be best handled, and all the meat can be saved. This is, however, butchery, the "fall meat killing," not hunting, not sport—heaven save the mark! Of the matching cunning with cunning, and protective instinct with skill and endurance and nerve, there is nothing at all. But the men who dogged the deer and set the fish net were not the needy dwellers in the wilderness. They were men who were here for "sport," for "a good time," and considered that in this way they were having it.

Now as to the law. Though, as I said in a previous letter, I thoroughly condemn the view taken by so many otherwise good men who break the game law, I can thoroughly understand it. I know just what its weak point is, but it is there, and I know how plausible it appears to them. Who is "the State," any way, that it should interfere with what they and their fathers before them have always done? They have never seen "the State." But they like to range the woods and lakes and they know venison and moose meat to be good.

To whom does the game belong if not to them who live here? Why should they hold their hands in September or January in order that strangers from outside of Maine (here "the State" for a few moments dimly shows its outline—when it is needed as a witness) may come in October, November and December to share with them the desirable things of the country?

Then the warden! Who does not know that he is merely "Bill Smith" or "Sam Brown," a fellow who has himself broken the law scores of times, and has no right to turn about and for the mere incentive of pay prevent others from doing the same thing? No. He is the common enemy, and we will outwit him every time we can and make his work as difficult as possible. Moreover, the "man from outside the State" often brings money in his pocket, and is willing to pay well for what we can show him, and it is but natural and right that he should have a set of horns to take out with him for his pains.

Something in this way the matter appears to many of these men—mingled sometimes with the feeling that the law is made by men who do not know the true merits of the case and more for the benefit of strangers than the people who should be first consulted. With all this there is an inability to realize that the big game of the country is almost gone, and that it will vanish from these woods just as surely as it has (while we were looking on and before we were aware of it) vanished from areas a hundred times as large, unless instant and stringent methods are adopted for preserving it.

Piscataquis county has a noble situation for preservation of game. The Canadian poacher does not affect the southern part of the county. His operations do not, I think, to any appreciable extent, affect this county, unless it be in the northernmost townships. It is a great county, nearly 50 miles wide from east to west and over 100 from north to south. It reaches from Millinocket to Moosehead and contains three-fourths of the surface of the latter lake. It contains Katahdin Mountain and Chamberlain, Chesuncook and Allegash lakes, and hundreds upon hundreds of other lakes, and almost all the great rivers of the State head there or derive most of their water from it. As a natural home for deer, caribou and moose it cannot possibly be surpassed, and all these animals are here. I believe Piscataquis county contains at this moment the best moose ground in the United States.

But unless something is done to stay the hand of slaughter this region will soon be as barren of moose as is Massachusetts, Ohio or Mississippi.

I recognize the truth of what one of your correspondents said, viz., that he who points out an abuse is bound, if he can, to point out the remedy.

If he can! I have thought of it much and almost ever since I began to hunt.

It is evident that present State laws unaided will not work the change. Miss Hardy, the person best informed on the subject, has left no doubt of her own almost despairing view of it.

One thing seems to me evident, viz., that united action

on the part of all who hunt is needed. Is even a faint approach to such a thing possible?

THE "ROUND ROBIN" PLAN.

The following is the best I can suggest. I cast it into the discussion for what it is worth. If it could be followed out successfully in a single community the example might make it easier in others and in time we might arouse a firm, intelligent sentiment throughout the whole State which would not only take care of all lawless tendencies on the part of residents, but would effectually deal with the detestable "sport" from abroad, whether he proved to be a Boston policeman, or a Pearl street merchant or a professor in Yale College.

"The Round Robin Plan" is a name which I suppose will, to most persons, be self-explanatory, but for the sake of any one who may not know its origin I will say that "The Round Robin" is a form of signature by several persons to a document which makes it impossible to tell who was the first signer and therefore shields all alike from what may be dangerous or invidious prominence in the matter. The names radiate from a center like the spokes of a wheel. In thinking of this plan I have had in mind the case of this particular community. It presupposes that at least some one man could be found with sufficient public spirit and willingness to sacrifice something to the cause to make the initial move.

My idea would be to have such a man, who should be a man of known interest in game matters, attempt by persuasion and discussion to induce one or two others to join with him in a league to which members should be added as fast as the right men could be secured.

The object of the league should be to fairly consider the whole fish and game question, to discuss the pros and cons, its past and its future as well as the present, to get data in regard to destruction of game and its successful preservation, and then, and not till then, to formulate a pledge. I would not care even to dictate the pledge. I do not think I know enough to make one thoroughly wise and politic. Its first essential should be that it should be one which, all things considered, was likely to be kept. The league should by all means include in its membership the very men whom I have described as good men in other respects, but yet men who had again and again broken the game law. Unless these men can be led to see the folly of the present course and can be induced to join in some effort at regulation of the evil, the evil will go on to the one sure result which we know.

The league should be formed by men who are willing to stand up among their fellows and own that they had been law-breakers in this matter and who therefore had no stones to throw at any one else and no claims of special virtue to make for themselves. But they should be men who were willing now to make effort to preserve for their region and community the advantages which they have come to see are in danger.

What these men should agree upon would be a matter of altogether secondary interest. The main point would be to get an agreement which they themselves had made and which they were willing to live up to. They might differ from the State law as to close time, number to be killed per individual or the manner of killing. I would not much care. Anything to change to system, instead of the go-as-you-please recklessness of to-day. This league should agree to let "by-gones be by-gones," to start anew, and to give fair warning to all that from this time on it meant, by every means in its power, to restrain evil doing in respect to what it had decided upon as evil doing. There would be the special ones who would not join and whose refusal would involve trouble. Neighborhood grudges and old scores and jealousies would stand in the way. All this I know; yet I believe patience and wisdom, and, when necessary, united and sustained force, would bring about an improved public sentiment and a better order of things.

If it were thought best that the State law as it stands should be made the means of help, then, till a better law could be passed, the league could see to it that the law was enforced, and the odium that now attaches to informing against a neighbor, be he never so mean and despicable, would not be felt. The previous warning and the weight of the organization would sustain it.

An organization is the first desideratum. Hence I have called it the "Round Robin Plan," by which I intended to indicate the way to secure to the aid of such a scheme the very men who now help to make it a necessity.

BOSTON, Mass.

C. H. AMES.

Natural History.

THE SONG OF THE HERMIT THRUSH.

Editor Forest and Stream:

Your correspondent Julia M. Hooper in FOREST AND STREAM for Oct. 22 tells of a new bird song. I had often heard the same song and supposed it to be music of the male sparrow until last spring.

Among my wild pets there is a song sparrow, a male, with an interesting history. Years ago I named him "Wabbles."

I cannot relate any part of his history without betraying confidence, as I have sold it for publication. So will simply say that last spring "Wabbles" persuaded his little mate to nest in the woods near my cabin.

Early in the spring I heard this female sing the new song. There was no chance for a mistake. I could tell the birds apart, and, too, I frequently heard both songs at the same time.

In late fall and early spring the male song sparrow warbles by the hour. The song is very low but musical and tender. I have listened to it with delight when the thermometer has marked 3° below zero.

Your correspondent tells of another song and credits it to the brown thrasher. She makes the time the middle of March, and I feel assured that she has erred either in bird or time. It certainly must be an uncommon thing to find a brown thrasher in Massachusetts as early as the middle of March. It seems that she did not see the singer; therefore, I suggest that she heard the song of the hermit thrush. The song which she has translated into the words *tu-lee, tu-li-lee* is the same that I hear every spring, the last of March or first of April. It is the song of the hermit thrush in migration. It is a beautiful strain—the winding of a silver horn, but it is only the pre-

lude. The true song is seldom heard away from the summer home.

To me the song of the hermit thrush is the sweetest sound in nature. It is not a plaintive, pensive or tender strain, but satisfies the senses and clings to the memory like the recollection of some great joy.

I shall never forget a song I once heard in the woods of northern Maine. I was in a bark-peeling camp at the time. A rainy day had sent the crew to their homes in the settlement until the next morning; and I was left alone.

The rain poured down in torrents. The wind howled and roared through the treetops, flinging great sheets of water on to the bark roof of the camp. My spirits were depressed and gloomy. Financial troubles, the loss of a cherished home, had disheartened me, and life seemed hardly worth living.

Just before night the rain suddenly ceased. The sun burst through the clouds and the wind completely died out. Save for the sound of dropping water, the forest was silent and solemn. A glowing sunset, painting all the clouds of the western sky, aroused me from my miserable thoughts. Just then the song of the hermit thrush floated up from a neighboring swamp. Clear and pure the flute-like notes slowly echoed through the silent woods. The moist and hollow atmosphere magnified the slightest sound, and I could distinguish the fine trills which form a part of this famous song, *O, phoe-re-al, phoe-re-al!* represents the strain as near as I can give it in words.

I would that I were able to express in fitting language the feelings with which I am inspired when I listen to the song of the hermit thrush. It satisfies my sense of the beautiful as no other song can. And yet I am never quite satisfied. There is something I do not understand. Something beyond me, a shadowy mystery. After I have listened to the strain, and while its memory still lingers, I find myself longing to know the whole secret of its charm. However, years ago I settled the matter in my mind and note-book, as the following entry will show: "The song of the hermit thrush is the Spirit of Nature chanting the mystery of life. When the mystery is solved we shall understand the song."

Day faded into twilight, and twilight into night, and still that exalted anthem solemnly pealed through the forest. It was after 10 o'clock when the strain died out in a few broken notes.

Thanks to the hermit thrush, my thoughts were turned into a new and healthy channel: I fell asleep that night on my fragrant bed of fir boughs, at peace with the whole world.

CAPE ANN, Nov. 27.

LIFE HISTORIES OF BIRDS.

ORNITHOLOGISTS and others interested in birds from a more popular standpoint have for years been hoping that Captain Charles A. Bendire, one of our most able and experienced field naturalists, would give to the world the results of his studies of American birds, and for a year or two past it has been known that he was engaged on such a work. Captain Bendire is perhaps best known as an oölogist, and it has generally been supposed that his work would be nothing more than an oölogy, a description of the nest and eggs and of the breeding habits of the species about which he might write. Such a work was greatly needed, for there is now nothing satisfactory on this subject, but Captain Bendire was not willing to confine his work within the narrow limits which such a title would enforce. His wide and long experience, which extends from ocean to ocean and from Arizona to Canada, has furnished him with a knowledge of our birds equalled by few or no students of bird life in this country, and the results of this experience are soon to be given to the world.

We have recently had the privilege of looking over the proof sheets of the first volume of Captain Bendire's work. The title of which is "Life Histories of North American Birds, with Especial Reference to their Breeding Habits and Eggs." This is a well-chosen title, and is broad enough to allow the accomplished author the scope required to give a vast fund of observation from the very full field notes which he has accumulated.

The first volume, which is now practically completed, contains 414 pages of quarto text and 12 colored plates of eggs. In it are given the life histories of the turkeys, grouse, quails, pigeons, hawks, eagles, vultures and owls, a fund of interesting, new and valuable information which will surprise and delight ornithologists and sportsmen alike, when they see the volume. This superb work will be published conjointly by the Smithsonian Institution and the United States National Museum, and in the character of its execution it will be the worthy compeer of anything that has been issued by them. The matter which it contains will be a source of pride to its author, and satisfaction to all students of North American birds.

At the present time it would be premature to say more about this work, but before very long the sportsmen of America will have an opportunity of judging for themselves as to the interest of the life histories which are so charmingly given in its pages.

"THE FATE OF THE FUR SEAL."

Editor Forest and Stream:

There is no danger of being drawn into a personal controversy with me, for the simple reason I never have, as yet, weakened any writing of mine by indulging it. I state the facts as to the physical data, which Mr. Dall at first declared "a gross exaggeration." He says now, in the face of my statement, that he will wait for other evidence. Of course he will; but fur seals have been, and will continue to be as long as they exist, very constant subscribers to my table of measurements, and that places them on the ground to-day just as securely as it placed them sixteen years ago.

That group of fur seals in the United States National Museum is mounted in exact accord with my views, but not as an example of a harem as it lodges on the rookery; it contains a number of young males up to four years, and all the individuals of the group are widely separated one from the other, so as to give every point of each animal free inspection by the visitors. This is the first group of fur seals ever mounted in something like their natural shape, and the desire to permit a full view of every portion of each animal's body caused me to scatter the group.

I don't doubt that Mr. Dall bought seal skins at St. Michael's, Alaska, for 12½ cents apiece in 1866; that is not the point. I have seen seal skins sold on St. Paul's Island in 1874 for 45 cents apiece to visitors, when they were worth \$10 at that time in London, and sold at that quotation.

HENRY W. ELLIOTT.

ROCKPORT COTTAGE, Cleveland, O.

WOLVES IN FLORIDA.—Clifton Springs, New York.—*Editor Forest and Stream:* In answer to your or Mr. Chapman's note about "Wolves in Florida" I would say that I purchased winter before last the skin of a very large black wolf, as black as any bear, killed near Fort Mears, south Florida. I sent it to the National Museum, Washington, and last winter a skin dealer in Jacksonville had another one, very dark (but not black), killed down in Lee county, south Florida.—GEO. A. BOARDMAN.

BUFFALO CROSS BREEDING.—Mr. Samuel B. Duryea, of Brooklyn, has just received a four-year-old buffalo bull, which will be the nucleus of a stock of cross-breeds. Mr. Duryea promises to conduct experiments in the lines laid out by Buffalo Jones.

SCIENTIFIC MEETINGS FOR DECEMBER.

THE various scientific societies of New York city will hold during the month of December meetings at the dates and places given below. The members of each society are invited to attend the meetings of all the societies, and visitors who may not be members but who are interested in the subjects announced are welcomed at all the meetings of the societies. The dates of meetings and papers to be read at the meetings of each society will be found under the proper headings below:

THE NEW YORK ACADEMY OF SCIENCES.

Regular meetings will be held on Dec. 7, 14 and 21, at 8 P. M., in Hamilton Hall, Columbia College. Dec. 21.—Popular lecture course. Lecture by Prof. H. L. Fairchild, of Rochester University, on "Mountains, their Origin and History," illustrated by lantern views.

THE TORREY BOTANICAL CLUB.

Meetings will be held at 8 P. M. in Hamilton Hall, Columbia College. Dec. 8.—Papers on the "Flora of the Catskill Mountains," illustrated by specimens and lantern views. Dec. 30.—Lecture on "Friendly Bacteria," illustrated by the lantern.

THE NEW YORK MICROSCOPICAL SOCIETY.

Regular meetings will be held on Friday evenings, Dec. 4 and 18, at 8 P. M., at the Mott Memorial Library, 64 Madison avenue.

THE LINNEAN SOCIETY OF NEW YORK.

A meeting will be held at 8 P. M. at the American Museum of Natural History, Eighth avenue and Seventy-seventh street, on Dec. 16. Subject: "Remarks upon the Birds of Corpus Christi and Nueces Bays, Texas," by Messrs. Geo. B. Sennett and F. M. Chapman.

Next to the Turkey.

NEW LONDON, N. H., Nov. 29.—*Editor Forest and Stream:* Next to the turkey, I can truthfully say that nothing gave me more genuine satisfaction on Thanksgiving Day than the receipt of the dear old FOREST AND STREAM. I read it each week from A to Z, and find between its covers a host of joy and comfort.—BYRON.

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price \$2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price \$1.50. Shore Birds. Price 15 cents. Woodcraft. By "Nessmuk." Price \$1. Trajectories of Hunting Rifles. Price 50 cents. Wild Fowl Shooting; see advertisement.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

NEWFOUNDLAND CARIBOU.

OF a recent trip to Newfoundland Mr. Wakeman Holberton writes:

Col. Cecil Clay, his son and I returned from our long but successful trip to Newfoundland, after an absence of over five weeks. Our programme was carried out without any hitch or disappointment from beginning to end; notwithstanding the fact that, owing to a change in the law allowing caribou to be killed after September 1, a number of professional hunters had shot for the market over the ground back of Hall's Bay, we found caribou sufficiently plenty for sport, and we might have killed twice as many as we did. Col. Clay killed five, his son one, and I four, and I refused five easy shots. I missed two shots, but they were moving at long range. The four I killed dropped dead at the shot, and my new Winchester (.40-65) turned out to be a perfect weapon. Col. Clay secured several fine specimens for the National Museum. The weather, as usual, was very bad, but he succeeded in taking a number of photographs. We saw two wolves and 145 caribou during the trip, and shot a number of willow grouse which were just changing color. In regard to the caribou, I do not understand how it is that Capt. Kennedy and others whom I read about have such trouble in killing them. I rather think it comes from careless aiming. Last year our party killed twenty-two without losing a single one wounded and without any great trouble. I believe that if these sportsmen would only be particular to aim at the shoulder they would find that nine out of ten of these great deer would rarely go fifty yards, and a .40-65 is abundantly heavy enough. If they shoot at the whole beast regardless of any particular spot, they will generally hit too far back and their game will go for a mile or more, even if the rifle carries a 50-caliber ball.

I regret to say that on my return I found my great dog Pete (Rory O'More stock) had been either stolen or killed. He was six years old, beautiful in color, excellent in the field, and a gentle and true companion for over six years. We all miss him as we would a dear friend, and we shall never see his equal.

W. HOLBERTON.

THE ONLY THING THAT I DO KEEP SECRET is the exact locality, for the ground is becoming better known each year, and we find that our shooting is interfered with by so many strangers. They really do not kill much game, but they get round the lake and bang away at the ducks and geese so that they go elsewhere. We have always made it a point to do no shooting near the lake, considering that as neutral ground where the birds can rest in peace.—X, Y, Z.

ST. VINCENT'S ISLAND.

Editor Forest and Stream:

There is but a small part of that portion of the world comprised by the United States that has not been well trodden by the hunter, and few are the streams and waters that the enterprising fisherman has not poked a rod over and dropped a fly on their surfaces; but I think I have struck a fresh field, where there are worlds to conquer—game that was never shot and fish that were never caught.

I had occasion recently to visit Apalachicola, on the west coast of Florida. The name is familiar enough to all, but of that region's resources for game and fish as little is known generally as of the interior of Africa.

At the invitation of a gentleman owning an island about twelve miles from the town, I visited the place (which is easy of access by sailboat or tug) to see what it might bring forth in the way of sport. The island, comprising an area of 11,000 acres, was recently acquired by its present owner with a view to making it a game preserve, being the resort of a great variety of wildfowl, deer, etc.

It seemed especially intended by nature to be a game resort, having a linked chain of fresh water lakes, some fifteen or twenty, of all sizes, some covering several acres, surrounded by rushes, forming capital blinds from whence to shoot over decoys, then intervals of marsh, the grandest kind of snipe ground, as proven by the hundreds that arose as our boat was paddled along near the shores.

To a sportsman accustomed to tramping over a soft marsh, leaving a boot now and then in the ooze, it may seem a sybaritic tale that I tell, when I say that, sitting in a skiff in an arm chair, all I had to do was to load and fire as fast as the operation could be performed. The greatest bother was to decide whether to shoot at the dozen snipe in a bunch on the right or the pairs on the left, for there were snipe to the right, to the left, in front and rear. It was unnecessary to send a dog to put them up. They got up of their own free will and accord, and it was unnecessary to move a step from my position. All I had to do was to sit in my arm chair and shoot. What a dude, to go snipe shooting in a boat and an arm chair! Let me qualify the accusation by explaining that a pet rheumatism took this special occasion, of all times, to afflict me; and locomotion in gum boots through a marsh was impossible, hence the arm chair, with a negro to paddle the boat, and by the same token act as retriever, and quite as well as a dog; but then the marsh ground was so clean and clear of weeds or high grass, that every dead bird could be seen from the boat, and none were lost. I shall not enumerate my bag, as some fellow who never misses his bird would say, "Mighty few birds," "pears to me, for such an opportunity;" but then he has not experienced what a twinge a sudden turn for a shot gives a fellow rellow rejoicing in a rheumatic attack in shoulder and back. Even a good shot would not get every bird fired at. It would have been inhuman slaughter to have killed as many as could have been bagged; being, as it were, a case of how long you would keep it up. For a change, Dick suggested ducks; so we drove the boat into a little opening in the rushes, constituting a partial screen or blind, and every few moments along came a flock of teal or a pair of mallards—just often enough to make it interesting and not let the gun get too hot.

The young man in charge of the island was all this time apologizing for the paucity of the morning's sport by saying that, owing to the extremely warm and pleasant weather, the birds had not yet arrived, and he was praying for a storm at the North and extending South, that would bring along the usual flight—declaring that he had never in his years of residence on the island seen so few birds at this season—never known game so backward in its flight—owing, as he asserted and as was potent to any observing man, to the drought, for it has been as great South as North, and summer weather has prevailed, which is not (as we all know) favorable for game.

I know I shall be called to account by some skeptic, and the exclamation of "Oh, what a whopper," at the perusal of what I assert, that in paddling through the narrow bayous not once did we fail to return with two, three or four, and not infrequently half a dozen, mullet that jumped into the boat. To one who is not familiar with the habits of this excellent fish my story may sound fishy. When frightened they leap from the water in every direction, and generally toward the object one would suppose they would avoid. They are quite as likely to jump entirely over or across the boat as into it. At night it is only necessary to put a light in the boat to get it half filled with fish, weighing from $\frac{1}{2}$ to $1\frac{1}{2}$ lbs.

At St. Vincent's Island and around its entire shores, comprising thirty or forty miles, every bayou and bay is fairly alive with mullet, and even in the fresh water of the bayous and ponds they are so numerous that at one throw of the cast net our colored man Dick dumped out as many as two dozen, all the net would contain. At a point further down the bay, where a regular fishery is located, at one haul so many were taken that the forty men employed in curing them could only take care of less than half the catch; and the hundred barrels of dead and wasted fish were cast forth upon the waters. The bay was covered with them for miles—a shameful destruction.

St. Vincent not only affords every species of wildfowl shooting, but deer and wild turkeys. The latter are more abundant on the main land, but deer are plentiful, and a good hunter has no occasion to return empty handed from a stroll through the tall pines and palmetto trees that cover the area of the island not occupied by the ponds and marshes.

This island seems to be favored with every requisite for a game resort, being some miles distant from the mainland, except at one point where a long point makes out from the main shore, and deer swimming over in great numbers, especially when hunted by dogs, as they are in the season, and as no dogs are permitted to run them on the island, they find immunity from the hunters, and as the feed is abundant, they make it their breeding ground and multiply.

As an additional attraction, the waters surrounding the island are teeming with a great variety of fish—the silver and spotted sea trout, the latter running in weight from 1 to 20 lbs.; sheephead, bass and tarpon. The last are seen in large numbers in the channel in front of the island and would afford great sport to the skillful fisher-

man. No one has yet had the skill to take one here; in fact, no effort has been made, as Apalachicola does not as yet boast of the science necessary. Not being provided with the proper tackle to handle this gamy fish, I did not sport; but they are there, and in great abundance, and are only waiting for a Lorillard or a Hecksher to "come down" like Captain Scott's coon, when such skilled fishermen essay their capture.

With a view to test the question of the fine red snapper and grouper fishing as claimed, I accepted the kind offer of Captain Whiteside, agent for the owner of St. Vincent Island, to take a sail outside the bar in the local pilot boat, and one pleasant morning we sailed out about eight miles to the banks, where rumor said these fine fish were to be caught. With a favorable breeze we reached the banks in an hour's sail, and hauling jib to windward let the boat drift, dropping our heavy lines over the side, and almost instantly a big red snapper was hooked, and gave the young man handling the line a lively tussel, ending in losing the fish alongside. It was but a moment, however, before three other lines had each a fish, and each man after a severe tug landed a fifteen-pound grouper on deck, and for an hour this lively sport continued until we were really ashamed to take any more. The deck was literally covered with these great handsome fellows, for the grouper is handsomely colored, a dark red with tiny white spots along its sides, and is greatly esteemed as an edible fish.

The proposition to drop a few miles further out to the red snapper banks, for a change, was vetoed on the ground that we had done quite enough fishing for one day outside, and a second proposition to run in and try the silver trout was accepted instead. Drawing the jib and heading for the bay, we soon reached an old wharf, built at a distance out from the shore, and having tied up to it, we changed our tackle for lighter fish, and in just an hour we caught (there were seven fishing) two hundred and ten silver trout, one of the most beautiful fish of the Southern waters, its sides shining in the sun like burnished silver. The head of this fish is a counterpart of our brook trout, hence its name; but it bears no resemblance beyond. It runs from $\frac{1}{2}$ to $1\frac{1}{2}$ lbs.; those we caught would very nearly average the latter weight. The next question was, what was to be done with our catch. Our consciences were, however, set at rest by a suggestion to distribute our fish among the shipping lying near loading lumber. Our donations were thankfully accepted, as some of the vessels had just arrived from foreign ports after a long voyage, and after diet of salt junk, old Jack welcomed the toothsome contributions with great unanimity. So we had the satisfaction of knowing our catch had found a welcome market, and no wastage resulted.

It is a well-known fact that good fishing on the lower Florida coast is becoming scarcer every year, but the waters of Apalachicola Bay, where so little fishing is done, have apparently experienced no diminution, and the field is still ample. To those cruising on the west coast of Florida in their own yachts, as is becoming each year more common and extended, it is but a short run as far west as Apalachicola, where fish and oysters abound to such an unlimited extent, and it is only necessary that this fact be known, presumably, to induce yacht owners to visit it. St. Vincent is the only island on the coast, however, that affords such superb shooting, as all the others are mere sand islands, containing no fresh water ponds or marshes, and have consequently no game. And although the present owner had not in contemplation when purchasing the island the formation of a club, but more a view to private uses and stock raising (there are already on it some 400 head of cattle and a large number of wild hogs), he has, as I learn, consented to the organization of a club, should a sufficient number of gentlemen be found desirous of availing themselves of the opportunity presented thereby for good shooting and fishing.

It would be particularly desirable to a few men of means for private ownership for this purpose, and as good sport of the kind is becoming scarce and mostly absorbed by clubs, an island possessing such attractions is not likely to remain long unappropriated.

The rush of tourists to Florida increases every winter, and so much shooting (every man nearly takes his gun) is rapidly diminishing the game all through the country.

The time was, and only a few years ago, when every bay and lagoon was teeming with birds, but when the fashion demanded that every woman's bonnet should be decorated with some kind of a bird or its feathers, men were sent to Florida to procure them, and one expedition returned, it is said, with one hundred thousand bird skins, shot during one winter. Such destruction is now felt, and although the authorities have now prohibited the slaughter, it is like locking the stable after the horse is stolen.

On the Apalachicola River wild turkeys and ducks are shot wantonly from the decks of the steamboats, and alligators all along the banks come in for a fusillade from the rifles of the passengers. On my recent trip on this river I saw numbers of turkeys shot as they were running along the banks, that were of course wasted, as the boat could not stop to pick them up; and every flock of ducks that rose was fired into, killing or maiming more or less of them. Not only on the ground of wanton cruelty should the owners of these boats prohibit the use of firearms, but it is a great annoyance to many passengers to have rifles and shotguns banging away around them, to say nothing of the danger to life from careless use of guns by mere boys, as some of them were. It is a theme the FOREST AND STREAM might properly bring to the notice of the proper authorities (the owners of the steamers) in the cause, and enter a protest against such wanton destruction of such rare game as the turkey, as well as every other bird coming in for slaughter, as is now the case on the river boats on the Southern rivers.

R. L. O.

ST. LOUIS NOTES.—The cold wave of the first part of the week sent the temperature down in this State to 12 deg. above zero. Numerous fishing and hunting parties encamped along the rivers in south Missouri had a tough time of it during the week. During the blizzard-like storm last Tuesday a flock of wild geese was stranded on the hills in the western suburbs of this city, and the small boy, in the person of Ray Bennett, was on hand, and with the aid of his dog caught one of the geese alive, which he saved for his Thanksgiving dinner. Wild turkeys must be plentiful this season; Union Market is burdened with them.—ABERDEEN.

GROUSE NEAR NEW YORK CITY.

LAST Saturday a week ago I had a very pleasant day with the partridges of Murray Hill, N. J., about twenty-three miles from New York city, on the line of the Delaware, Lackawanna & Western Railroad. Two of us secured five nice birds, and by way of variety added a beautiful specimen of the gray fox to our game bag.

Such a result was far more than I had even dreamed of, as the locality is easy of access, and I found the place actually crowded with gunners. On the cars you could scarcely make a move without rubbing against a sportsman or stepping on a dog in the baggage car. I saw one man on the Summit platform who roused my ire. He had a highly polished gun in one hand and was holding a dog by a chain with the other. The dog was restless and somewhat difficult to manage, and once I saw the man give him a cruel kick under the jaw with his heavy boot. I tried to "hoodoo" that man, and if the "spell" I breathed upon him worked, he had most infernally good luck that day. I hope it did. There should be no good luck for the man who abuses his dog.

Mr. Udo Bender, son of Mr. Bender of the *Maritime Register*, upon whose invitation we made the trip, met M. and the writer at the Murray Hill station about 8 in the morning. M. is no shooter, and when Udo and I took to the woods he laid a course for the house, where we found him in the afternoon well fed and cared for. Stuart Toms, a local gunner, joined us at the station, and said he knew where to find some partridges, and he did.

While walking through a patch of briars on the sunny side of a piece of woods we started a fox. Udo saw the fox sneaking off through the tall grass, but Toms and I being between him and the fox he could not shoot. I climbed the fence and got into the woods, and in a few minutes somebody yelled, "Look out," and bang! bang! went the guns. The idea of jumping another fox out of that bunch of briars never occurred to me, and while I was looking for a rabbit to break cover out came a fox about 20 yds. away. The first barrel of No. 8s knocked him over, but up he got and was legging it in great shape when I caught him in the side of the head with the other barrel. That settled him. On examination we saw where both foxes had been lying in the briars, and although we had walked within ten feet of them only one fox, the female, got out at first. Later in the day we met a party of gunners who had killed the female.

The woods looked hardly dense enough for partridges to my eyes, and the first one to get up was such a surprise that it got away in safety. A little further up the hill two more jumped from a clump of cedars, giving Toms a shot, but he failed to score. Then a rabbit scooted from under a brush heap ahead of me and I heard the patter of his feet on the dry leaves after he was out of sight; a tree had caught my charge of shot. A partridge got out from the side of an old road and gave me such a pretty shot that I could not help killing it. While standing with the bird in my hand I heard another one jump to the left, and then followed two reports, but the bird came sailing at full speed over the tops of the scrub oaks. It was a long shot, but down she came, and it made me feel quite proud of my little 16-bore. The next bird fell to Udo's gun, and after that we had quite a walk before another was flushed. Again I was the lucky man, getting a beautiful open shot.

Finding no more birds in that piece of woods we walked to the house and got outside of a substantial lunch Mr. Gus Schultz prepared for us. He is running a bachelor establishment, with two big St. Bernard dogs and a few cats for company. I sampled some of the finest butter I ever tasted, his own make, he told me. Then Udo and I started out to give the birds another shake, M. joining us. We only raised three birds, two we only heard the flutter of their wings, but the third got up near Udo and he promptly downed him. Five partridges and a gray fox is not a bad bag for a place as thickly settled as Murray Hill, and within 23 or 24 miles of a city of 2,000,000 of inhabitants.

W. L. HALL.

"THE SAGINAW CROWD."

SAGINAW, Mich., Nov. 12.—"The Saginaw Crowd" returned Oct. 24. Of course we had the best time yet. Every one was well pleased with the trip, and found as much game as usual, though more hunters there after it. We could count thirty-five foreign sportsmen staying with the farmers at this one little prairie town. I inclose a clipping taken from the local paper:

The hunting party of which Messrs. Bond, Barnes and Paddock were members returned to their homes in Chicago on Sunday evening, after a stay of nearly four weeks at the pleasant home of Mr. and Mrs. J. D. Williams, in New Yorktown. These gentlemen have been in the habit of making this place their headquarters for several years for a season of water-fowl shooting, and have almost come to be considered as members of Mr. Williams' family. They are thorough gentlemen—of great prowess and superior marksmanship, as is evidenced by their score this season, showing a mortality of 3,600 birds, 3 deer, and 1 antelope.

Reads almost like slaughter. Over 3,600 birds; and after all these people were there a month and had a party of about half a dozen.

Under date of Nov. 8 I have a letter from Harry, our teamster, saying that the weather has been nice ever since we left, and lots of game. He said that about a week before he wrote two of the farmers there went out and shot sixty geese in one afternoon. It was blowing hard and made the shooting good. The next day one of the party went on another field and killed fifty single-handed in two hours. Again two men on a barley field stubble in one afternoon killed sixty greenhead mallards. In fact we found the mallard shooting over decoys on the stubble to be about the nicest sport yet; great big greenheads and what a fine bag they made. Sharp-tailed grouse were also plentiful. A party of three would get from twenty-five to thirty-five in a day's shooting, which we considered excellent as we had no dogs with us. We found more snipe than usual. The writer bagged thirty-nine in one day's shooting, besides ducks and other game.

If I can find time to get at it, will write up the incidents of the trip, making another chapter for FOREST AND STREAM relating the seventh pilgrimage of "The Saginaw Crowd."

W. B. MERSHON.

A NEW BULLET IMPLEMENT.—The Ideal Manufacturing Co., of New Haven, Conn., have just received letters patent on a new and useful implement for sizing bullets.

CHICAGO AND THE WEST.

CHICAGO, ILL., Nov. 28.—It is customary for the city press of Chicago to fall over itself a good deal every year by way of eulogizing the annual game dinner given by Mr. Drake, the proprietor of the Grand Pacific Hotel. I have mentioned it myself before now, the more willingly because it is a Chicago fixture 36 years old—older than the Grand Pacific Hotel by many years. This time I wish to mention it in order to give a chance for the descriptive writer who was detailed for the dinner by one of the morning dailies here. The account begins as follows:

There was never anything like it before. All the fowls that cleave the clouds from the lakes to the gulf, all the beasts that ruminate over the broad plains of the Southwest, or run wild in the rocky fastnesses of the Sierras contributed to the feast. Reed birds and rice birds from the dank marshes of the sunny South; quails, prairie chickens, jack snipes, plovers and partridges from the Illinois meadows; blue-winged teals and butterball ducks from the crystal lakes of Wisconsin and Minnesota; brants from the far north, sage hens from the Colorado plains, wild turkeys and gray squirrels from the forests of the Northwest, a whiff of Northern pinelands, a reminiscence of magnolia blooms from Southern forests—all these were there.

The heavily accentuated plurality of the pluralness of the quails, snipes, plovers, teals and brants of this story speak well for the abundance of the wherewithnesses of the repast, but very ill for the acquaintance of the his-

general property of the people, the special property of him who is man enough to reduce it to possession. They treat wild game as if it were poultry. But which of that crew, to whom South Water street ministers and upon whom it depends—which of them ever bought a setting of eggs to keep up the stock of poultry? The man who sins through love of sport I can easily forgive, but what pity should any of us have for the vendors of game, who knowingly, deliberately and by wholesale magnitude of method set about destroying that which does not belong to them, and that which they are expressly forbidden by law to touch? In these late game law cases, prosecuted this summer, there came to be some fear that "public sentiment" would be antagonized if the prosecution was carried on till it became "persecution." I know that when Mr. Abner Price counted out 132 prairie chickens, the so-called "property"—which he could not own—of B. Aaron & Son, and when Justice White confiscated them (Aaron buying the lot back in for \$10), it was said by some, including Justice White, that this was punishment enough, this fine of \$30 that was imposed for twelve other birds, and that it would be "persecution" to try to get Aaron & Son fined for the possession of the 132 birds. A few, however, seeing the opportunity to teach a lesson where it has so long been needed, forbore the spontaneous pity at the agony evinced by Mr. Aaron in

summer. This is a little hard on Mr. Aaron—to look forward to 132 suits, or say even 20 or 30 of them—but it'll be the makin' of the pup.

Two days ago a Madison street restaurant, in this city, hit upon the sensational and disgusting idea of decorating its plate glass front with dead quail. I counted 24 strings, reaching from top to bottom of the great window, and made a rough average of 45 birds on each string. This would make at least 1,080 dead quail in one window. It was a sad sight. But now, where do the quail go? Who kills them? Why are they killed? Who invites their killing?

There is some unwritten history in the records of the Palmer House which causes the management of that hotel to weep convulsively, when it looks thereon in bitter meditation. This dates back till last June, at the time of the great tournament of the Illinois State Sportsmen's Association. It may be remembered that the Possum Club gave a banquet at the Palmer House, to which everybody was invited. The guarantee, however, did not fill, and a deficit of \$66 was after several months found remaining, for which the hotel had succeeded in getting no settlement, as the Possum Club seemed to exist only when it happened to feel like existing. In short, this \$66 remains a debt upon Chicago sportsmanship to-day. It will never be settled until the Possum Club holds a meeting

W. TOWNSEND
1891.

AMONG THE WILDFOWL.—XIII.

ON THE CELERY BEDS.

torian with good sportsmanlike usage in the matter of speaking about game. I presume the "elks" and "deers" will be found further on. But that isn't what I wanted to get at. I don't even want to be so sensitive as to point out that the "Illinois meadows" no longer supply either partridges or quails, let alone prairie chickens and jack snipes, and I wouldn't for the world say a word about the wild turkey supply of the forests of the Northwest, because Southwest may have been intended. But I do just wonder whether all those very plural birds mentioned as coming from Illinois did really come from Illinois? If so, unless Mr. Drake was fortunate enough to have his quails, prairie chickens and partridges given to him by admiring friends, he broke the game law of Illinois, which forbids their being sold at any time.

Doubtless Mr. Drake purchased of South Water street, and knew nothing of where the game came from. It is on that street that the game laws are violated most dangerously to the welfare of sport. Catch South Water street and you save the bird. The individual violator, the country shooter or city shooter, who is not familiar with the mazes of the conflicting laws, may err and be easily forgiven, the more so as his crime is petty and not grand. The sinning finger is not the one that pulls the trigger—some poor devil hard put to it to support a family, perhaps—but it is that of the dealer who quotes a price per head on this property of the people. The dealer is the chief *particeps* in this crime. If no money could be obtained for game, if it were unlawful and impracticable to sell it, we could afford to be without open and close seasons, could afford to shoot the year round, each man as he liked, take humanity as it runs, and still we should have more game than we have now.

It's cold in a duck blind, and my market-shooter goes out of it when he sees no dollars drawing in over his decoys. His legs tire of tramping the "Illinois meadows" for quail at nothing a dozen. It's not the Esau sons, but the great spawn of Jacob, the unsportsmanlike, unmanly, stomach-conscienceless, gulping part of this mixed people of ours that is getting away with this wild game, the

parting with \$30 through his ignorance of the law, and caring little for a public sentiment that never helped sport or sportsmanship one iota, remarked: "Why, then, let's persecute."

Accordingly Game Warden Bortree swore out five informations against B. Aaron & Son, for having in possession for sale five pinnated grouse, making a case for each bird. The prosecuting attorney for this district construes the clause, "each bird shall constitute a separate offense," to bar an action for a total number. It is the intention to bring suits for a few birds at a time, a case for each separate bird, until the 132 birds shall be exhausted, or B. Aaron & Son be driven to drink. The first of these cases was set for trial before Justice White this week, but was continued till next Wednesday. The plea of defense is *res adjudicata*, or a thing already in judgment, they setting up that these birds, having been confiscated by due process of law, could not be brought again into court. The State, by its warden, represented by F. S. Baird, attorney, in its brief sets out that this confiscation clause is simply a temporary and necessary process to dispose of contraband game, and has nothing to do with having such game for the purpose of sale; that the fine imposed was for birds not included in or found with this lot of 132 birds; that no information was ever sworn out for these 132 birds or any part of them. On this showing Justice White can hardly fail to find for the State. The case will probably be appealed. It may be better to let it go up. All South Water street is watching it. Probably it is a South Water street fund that is backing it. It is a fight between the sportsman element and South Water street. This fight ought to go on, though it tear our game law wide open—the genial dealers threaten that—and tangle up the whole social fabric of our fair land in a hideous internecine war, as some of our gentler souls seem to fear it will. It is unfortunate that the warden caught an ignorant firm like B. Aaron & Son and not one of the bigger and shrewder dealers; but the lesson to these will be a lesson to the market. The Illinois Association never did lick anything before this

and "passes the hat." Then it will be paid easily enough, without much question as to where the blame belongs for letting the matter run on so long. The real difficulty has lain in the fact that the flower of the Possum Club blooms only in the winter. There has been no meeting since that of last June. It might be well to call a meeting of the club at an early date, as possums should now be about ripe. Until that joyous season be arrived, the Palmer House should not seek to intrude sordid matters on the careless minds of the possum eaters. Once the season is arrived, however, and the club in banquet assembled, anybody can have \$66 who happens to want it.

A real live wild gray wolf, big as a St. Bernard—Chicago wouldn't have a wild wolf if it wasn't a big one—was found one morning this week at Twenty-fifth street and Indiana avenue, about a mile and a half from the heart of the city, and perhaps eight or ten miles inside of the heavily populated district. When discovered the wolf was trying to eat a dog for breakfast. The dog-catchers' wagon went in pursuit, and after a long chase the wolf was run to earth in a hole near the breakwater on the lake shore. He was taken to the dog pound. No one knows where the animal came from. It is probably a specimen escaped from captivity somewhere in the city. For a few days all the papers west of here have been wild with merriment over Chicago's wolf story, and the papers here print a half column at a time of clipped comment about the wolf.

A novel legal process was taken here this week, by which Wilson & Co., furniture dealers, issued an attachment for a valuable dog, said to be worth \$200, the property of Mrs. Helen G. Wyng, who was in their debt and who was said to be about to leave the city. Constable Flemming met Mrs. Wyng at the depot, and demanded custody of the canine.

"I have a great attachment for this dog," said the lady. "So have I, madam," politely responded the constable. He got the dog.

Mr. J. M. Oliver, of Swan Lake Club, lower Illinois River country, at the first of the week told me that the

duck shooting on the club grounds had been very good, bags running over 50 and 60 birds being not uncommon. Mr. Ed. Bangs bagged 78 big ducks one day and 83 the next. Dr. Henrotin got 57 one day and 63 the next, mostly mallards. On the 23d the keepers wired up that the birds were in by the thousands and wanted some one to come down. The first heavy cold snap drove the birds down and they had worked back north by the 23d. The cold storm of this week will doubtless send them nearly all south, except a few mallards.

Last week Mr. Oliver bagged 115 quail in 3 days near New Vernon, Ill. He says they started 17 beavies in one day. This will give an idea of the quail shooting in this region for this fall. Mr. Oliver seems one of the fortunate sportsmen. This fall he killed his sixtieth deer. And he told me about a trout stream up in Michigan—but that would freeze everybody's young blood.

The raw and disagreeable cold of yesterday, Thanksgiving Day, has to-day changed to heavy snow. It is too early yet to learn who went hunting and who did not, but it is probable that only a few went afield. There was the usual amount of trap-shooting. On the whole, Thanksgiving Day here was not exceptionally brilliant in a field sportsman's point of view. Fort Dearborn Club is the only sporting organization I know of which is effusively thankful about anything. It is thankful that the Milwaukee team didn't beat it 27 birds out of 200, instead of 17, as see trap columns. It seems that the Milwaukee shooters fell on to the Chicago boys in a very harsh, abrupt sort of way last Tuesday.

Nov. 29.—The cold storm has brought in from the north a scurry of fowl, probably the last of the season. Six inches of snow yesterday, about the heaviest recorded for November. E. HOUGH.

WAYS OF THE RUFFED GROUSE.

WHEN the grouse leaves his home to visit the feeding ground, he flies swift and straight at the distance of from 3 to 30ft. from the ground. When he arrives within about 50yds. of the place, he sets his wings and sails in a straight line and alights on the ground. Generally he does not take a circle or sweep around on this occasion. The grouse does so only when, disturbed and frightened, he wishes abruptly to check his flight and alight at some point while in full flight; by doing this he saves himself from being injured by coming in violent contact with the ground.

The places to which the grouse resorts for the purpose of obtaining his food are usually from 200yds. to a half mile or more away. On these excursions many grouse are killed by coming in contact with telegraph wires and other obstructions. A section boss informed me that his men have picked up along the tracks as many as three grouse in as many miles in one morning, and that for days together during the months of September and October they rarely failed to find one. This occurred in the Mohawk Valley, where in places the birds are rather abundant.

One of these places where the grouse obtains his food is lowland adjoining streams where the wild grape flourishes. The grouse is passionately fond of this fruit, so much so that he will linger around the vines for hours together, feeding as opportunity permits, and when shot at this season his beak will be found stained purple with the juice of the grape. Another place to which the grouse resorts is those woods where the chestnut trees abound. Of these nuts the grouse consumes great quantities, swallowing them whole. The grouse also eats clover leaves, small frogs and the fruit of the sumac, which will be found scattered over the snow around the tree where he has fed.

In the early part of September the grouse resorts to the pine woods for the purpose of eating the huckleberries; when disturbed by an intruder he moves swiftly, with a darting sort of zig-zag motion, at the same time jerking his tail from side to side in such a manner as to display the white feathers, and when he does so he looks extremely like the rabbit when he jumps away. On one occasion under these circumstances I actually shot a grouse, supposing that it was a rabbit.

Another place that the grouse visits is an apple orchard. He does so for the purpose of eating the tender buds. I knew a farmer to kill three birds one afternoon, shooting them from a window of his house, which was close to the orchard. He apologized for taking such an advantage by asserting that the birds damaged his young fruit trees.

At times a ruffed grouse may be found under an apple tree that stands solitary far out in the field. He goes there to pick up the seeds of those apples that have remained ungathered. I recollect once in the month of December walking along a woodman's road about 4 o'clock in the afternoon and seeing off in the field about 60yds. away an old apple tree. I noticed that the ground was bare under it, while there was a snowy wilderness all around. I noticed also that several dead branches lay under the tree, and that among these there was one branch that had rather a peculiar and suspicious look to me. I proposed to go nearer and investigate. After I had gone about 25yds. I came to a pile of stones, and I sat down and looked under the tree again. The same appearance was presented as when I had looked before. I was still in doubt. Cocking my gun, however, I advanced toward the spot. I had taken but a few steps; when the mysterious looking branch moved, then darted a short distance and flew. As it left the ground I fired.

When I went up to the tree I did not find a grouse but a handful of his feathers scattered over the ground. This bird flew about 300yds. to the woods. As I approached he fluttered out from under a dwarf hemlock and went skimming away about 4ft. from the ground. When 30yds. off I shot him. DORP.

OUR FICKLE GAME LEGISLATION.

THE record for the year 1891 comprises alterations in the statutes of the thirty-three following, all of which are noted in the current edition of the *Book of the Game Laws*:

Alabama,	Massachusetts,	North Dakota,
Arkansas,	Michigan,	Ohio,
California,	Minnesota,	Oregon,
Colorado,	Missouri,	Pennsylvania,
Delaware,	Montana,	Texas,
Florida,	Nevada,	Wa-hington,
Georgia,	New Hampshire,	West Virginia,
Idaho,	New Jersey,	Wisconsin,
Illinois,	New Mexico,	Wyoming,
Indiana,	New York,	Manitoba,
Maine,	North Carolina,	Nova Scotia,

OUR GAME SUPPLY.

IN the present day of repeating rifles and shotguns and improved breechloading firearms generally, the important question is, Where is our future supply of game to come from? The sporting papers are full of suggestions more or less crude, and the sportsmen themselves are worried and divided over the best way to overcome the difficulty. Many are "taking time by the forelock" and solving the question for themselves by joining clubs or buying large tracts of land. This, while it is to a certain extent successful, seems to be rather a selfish, though natural, way for looking out for Number One; but it appears to me hardly the true way. There is, I think, always a feeling in the heart of a true sportsman when shooting over preserved ground that he is killing comparatively tame birds or animals, and it does not afford the same satisfaction as when the game is entirely wild and the shooting free to every one. I do not wish to put myself on record as being opposed to clubs, for they have many good points, and one of them is the fact that they do much to preserve game and invariably help stock the surrounding country. Their members generally obey the game laws; in fact, the first thing a club does is to limit the number of fish and game to be killed and to increase its stock by careful breeding.

The average sportsman is naturally selfish when shooting or fishing on unpreserved ground; he knows that game is scarce and hard to find, so when he does happen to get a good chance he kills all he can. Now, it seems to me that the first duty he owes to his brother sportsman and to the coming generation is to content himself with a moderate bag. Sportsmen are naturally loath to do this, for the reason that they feel that the next man that comes along will undoubtedly take advantage of his generosity and kill to the last one, particularly if he happens to be a market gunner. And speaking of the latter individual, we ought to "face the music" at once and prohibit all shooting of game for the market. Our small supply of wild game is too valuable to waste in that way. This fact I believe is universally admitted by all excepting the market men and those who make believe they like the stale and tainted stuff that is kept year in and year out in the freezing houses and sold in season and out at the restaurants. The State of New York and some other States are already moving in this direction, and the present law prohibiting the transportation of game out of the Forest Preserve unless accompanied by the person that shot it is doing much good. I am sorry to have to say that this law as far as venison is concerned is evaded by the residents of the North Woods. The temptation to provide themselves with a good supply of meat for the winter's use is too great. Deer killed during the cold weather are hung up to freeze, and in that climate will keep until spring. Of course it is impossible in that great wilderness when the snow lies deep to prevent it with the very small force of wardens now employed by the State.

Much good is being done by the FOREST AND STREAM and other sporting journals in the way of educating sportsmen to a higher standard, and if it were only possible to induce the public to read up more on these matters, still greater benefits would follow. Even with the present increase of guns and gunners there ought to be in this great country sufficient game to provide our overworked people with a fair amount of sport, certainly at least enough to tempt them out to enjoy an occasional health-giving tramp through the woods and fields.

Our wealthy sportsmen, who can travel from one end of the country to the other in search of their favorite game, might easily lend a helping hand, not only by setting a good example themselves, but also by making it a point to force others to respect the laws whether they are so-called sportsmen, marketmen or keepers of restaurants.

WAKEMAN HOLBERTON.

OHIO NOTES.

Editor Forest and Stream:

It was estimated that from our city alone fully 600 left by train Monday P. M. for different sections of the State, and all were bound to that particular place where the birds were most abundant. Such a motly throng of shooters has not been seen at our depots for many years. Generally in pairs they came, some decked in canvas coats and vests and rubber boots, all ready for the morrow; others more modest, and probably the most capable had their outfits in big valises, and would have passed for commercial travelers if it were not for their dogs and guns. With such a collection of dogs, guns and hunters, it would seem that the quail family would soon become extinct; but from latest reports there are enough left for fair sport next fall. The writer, accompanied by two congenial spirits, left here Monday evening for Green-wich, a small hamlet on the Big Four road, where quail were reported "thicker than bees at harvest time."

In fact, there were a great many and we had very fine shooting, but left most of them there when we came away. Altogether we had a most enjoyable time. Our host, Mr. Tom Thompson, of the Thompson House, exerted himself to make it pleasant for us, and was ably assisted by his estimable wife, who, besides furnishing us with edibles fit for an epicure, insisted on preparing some of our quail for us. Shooting was fine, feed good; but writer enjoyed the evenings at the "grocery store" as much as anything else. Such stories were related! One man had killed 105 squirrels in less than two hours, within a mile from town. Another had seen turkeys more plentiful than quail were now, and had killed nine at one shot, etc., etc. But it all happened about thirty years ago or just before the war. What interested the writer most was the fact that there was owned in the town a common hound and a shepherd dog that would find quail and stand them as staunch as any setter. The shepherd dog would also retrieve. C. F. P.

CLEVELAND, O., Nov. 21.

Editor Forest and Stream:

Since the first day the weather has been favorable, large numbers have taken advantage of the same and vast quantities of game have been bagged. There are far more gunners than ever before, and they have better guns, but there are more quail than for many years past. This is caused, first by favorable winters, and second, by the action of farmers. A large portion of Ohio farmers were, like the writer of these lines, raised principally in this State when there was more forest than field, and both forest and field were alive with game. The result

was that most of us boys became pretty fair hunters. As old men, there is still a lingering desire to spend an occasional day with the gun. The farmers have formed game protective societies and keep pot-hunting hoodlums from their premises. They also feed the quail during severe winters. The result is that very good gunning prevails nearly every season. Our State fish and game wardens, as they average, are not of the least advantage, but the end sought by our game laws is mostly accomplished by our farmers. Any reputable gunner can obtain the privilege of gunning to a reasonable extent from his farmer acquaintances, or by introduction from proper parties known to farmers. Thus the game question here is being satisfactorily solved, and without visible assistance from the State Commission. MILTON P. PEIRCE.

COLUMBUS, O., Nov. 18.

Editor Forest and Stream:

Mr. George Howland and I had a most delightful outing of a week in October, catching three pike, total weight 45lbs., one 38in. long, the other two 36in. a piece; and killing all the small game we could use in camp and sending a good lot home. Our local paper the other day recorded: "R. S. Dupuy, and his sons, James and Frank, of this city, and Dr. Van Dupuy, of the Soldiers and Sailors Orphans' Home, at Xenia, O., went hunting yesterday, over on Tygart, and will be gone until to-morrow evening. We hope they will be loaded with game." We did have a splendid time, bringing home a buggy load and dividing it out among sick friends at home.

IRONTON, Ohio.

JAMES DUPREY.

THE GAME FIELDS.

Editor Forest and Stream:

Shooting in northwestern Iowa has been good this year. A great many chickens were killed before the season opened, but there was fair shooting, even then, after Sept. 1. A friend and I bagged 107 chickens in four days' shooting. Our shooting was mostly done in Dickinson county.

October rains filled a great many sloughs that were dry, and brought more ducks about here than I have seen before in this locality in several seasons. Most of the ducks that came early were gray ducks and pintails, some spoonbills and teal. Lately there has been good shooting at mallards and bluebills. Nov. 7 two of us killed 28 mallards, 4 widgeon and 8 bluebills in one morning shoot near Newell. We were through shooting at 9 o'clock A. M. Three days later, in the same slough, we shot 46 mallards in four hours. It was snowing at the time, though not very cold. Several good bags of ducks have been made along the Des Moines River since the ponds froze up. C. E. Willey shot 24 mallards on the 14th in Lizard Creek, a small branch of the Des Moines, where ducks are never found except in severe weather. There are a great many quail here, but they are protected this year.

CONOIS.

FORT DODGE, Iowa, Nov. 15.

Editor Forest and Stream:

I noticed one of your numbers said that Jackson's Hole was becoming settled, and that it would be only a question of time when the large game of this place would be destroyed. There have been more Indians here this summer than ever before, and they have killed hundreds of deer, elk and antelope. And that is not all. J. D. Sargent, who claims to be Hamilton's agent, has just sent out a wagon load of elk heads to be shipped to New York, which he claims to have killed himself. Now Sargent claims that through the influence of the Hamiltons, the laws of this State have been changed so as to permit non-residents to kill game, but even as it is he is trying to keep a hunting resort, as you can see by a letter which I inclose. Nearly all of the settlers are in favor of preserving the game of the State, but there is no court of justice of any kind here, and we are powerless.

FRED. E. WHITE.

JACKSON'S HOLE, Wyoming, Nov. 10.

ONTARIO MOOSE.

Editor Forest and Stream:

Regarding the comments made by the *Toronto World*, as printed in to-day's FOREST AND STREAM, I should like to say that nothing in the account of "Moose Hunting up the Ottawa" would imply that the moose were killed in Ontario; as a matter of fact this was not the case. The *Toronto World* knows that the Ottawa at Mattawa is the boundary between Ontario and Quebec. All the moose we heard of being killed by visiting sportsmen were killed on the Quebec side, though we must confess that we did hear of many killed by the natives in Ontario. We are readers of the FOREST AND STREAM and *Book of the Game Laws* and therefore knew that it was a closed season in Ontario. It was a buck deer that the New York lawyer shot from the steamboat, not a moose, and the account should have so stated. We dodged no inspectors, excepting to bring the head home, and we do not understand that we violated any law in doing this.

NEW YORK, Nov. 25.

NIAGARA.

RHODE ISLAND GAME INTERESTS.

Editor Forest and Stream:

In reply to your inquiry as to the work of the Rhode Island Association for the Protection of Game and Fish, I have to report that all of our suits, in the main, have been decided in favor of the association. We have won a suit for shooting out of season on the evidence of being in the woods with dog and gun, "pursuing with intent to kill"; having birds in possession and snaring, on evidence brought against one of the worst offenders, convicting him of tending and setting snares. We have established the fact in the courts that we can get conviction and sentence under our laws, and we practically stopped shooting out of season and snaring. We lost one case where we had a buyer for the summer resorts convicted of having twenty-one birds in his possession. The case was brought wrong, in my opinion. Twenty-one warrants were made out to get a conviction on each bird. We won the case on one bird, and sentence was given. He was ably defended, and escaped on the others on the plea that having been fined on one bird, it could not be proved on which one of the twenty-one he had been convicted on, and therefore he should not be fined twice for the same offense; rather weak, but as he virtually owned

the country justice, it stood. The case has been brought in another form, and he may yet have to settle.

The society stands well, and we have done a great deal of work with our means. Woodcock have been very plenty, quail fairly so, and partridges, that we thought would be plenty from the number of young birds, are very scarce, from some unknown cause.

May write you further at later date.

A. L. ANDREWS, President.

PROVIDENCE, R. I., Nov. 24.

NEW HAMPSHIRE FARMS.—Charlestown, N. H.—*Editor Forest and Stream*: I inclose you a slip from the Concord Statesman, which shows how the "abandoned farm" problem is being solved in some parts of New Hampshire. The farms are sought for summer residences. Other regions tell the same story. Sunapee Lake and the towns around it, and the borders of Monadnock Lake, and the slopes of Monadnock itself, show the same influx of purchasers from the cities as soon as it was known that desirable property for summer homes was in the market. Mr. Neal says, just as I wrote you a year since, that the thin soil was worn out, but if Prof. Atwater is right, even that is not correct, and by proper treatment even these old hill lands may be made to "blossom like the rose" again. We have not felt such an inroad in the Connecticut Valley yet, for the few deserted farms here, as a general rule, are too far from the railroad to be easily accessible, but death sometimes makes a vacancy in the most desirable situations. If any of the readers of FOREST AND STREAM would like to start a nice "stock-farm," I can point them to a rare opportunity just open in this town, 50 or 60 acres of the best meadow land on the river, with a new house, never occupied, and large barns for hay, horses and cattle. I have no interest in the matter, except for the good of the town, but will introduce any one to the executors. It is a wonder to me that more people from New York do not discover this beautiful region. We are only seven hours from the city, with three trains a day.—VON W.

CAMP RECOLLECTIONS.—The rewards and pleasures of life in camp are not all fleeting, for often in later months come recollections of the old camp on the shore of the lake; of the gamy bass we worked so hard to land; of the ducks we dropped at such long range; of the screeching old loon we captured with the faithful rifle; then of the spread cooked over the old stone oven, although rough at some times, always tasting better than any meal ever eaten in the first-class hotels; and lastly, the after-supper puff. With what ease he sits there, with old Max at one side, while on the other old Sport sits with his head on his master's knee. How often we see this picture when out on our fall gunning trip, and how often we see at the further end of the tent a person who seems to be troubled about something. His elbows are on his knees, face covered by hands, and he is scratching his head furiously. What can be the matter? Oh, nothing. He is only thinking how he fired both barrels into his only bevy of the day, not ruffling a feather. But cheer up, old man; it's only a day off with you. He does not need this advice, for next morning he is one of the first up about camp, and after a warm breakfast, or even before, he is off, and not long afterward returns with a full bag. Like the true hunter he is, one day's bad luck does not discourage him, but he would readily confess it made him feel a little sore for the time.—BOSTON.

Camp-Fire Gickerings.

"That reminds me."

AS I sat in my city office last week and read "Kin's" article on the "Big Coon of Split Rock Mountain," my thoughts ran back to many a hunt he and I have had together on the desert plateau in Wyoming, as well as under "Old Dix" of the Adirondacks, or in the region round Lake Champlain, and I put down the paper with a pang of regret that those days were no more—a pang, however, that was softened by the memory of one incident of the coon hunt which "Kin" has somehow failed to relate. "Kin" has told how the coon was bagged, and there his narrative comes to a dead stop at the foot of the pine that towered above the precipice. I am not so sure he will pardon me if I tell what happened next, but I have trespassed before on his good nature, and I'll risk it once more.

"Kin" is a big tall fellow of six feet three, and the build of a football guard, and he has the perfectly natural failing of priding himself on his strength—as other big men have had before him. Consequently it is not to be wondered that on this occasion he volunteered to carry what coons the party might kill. For this purpose he had brought along a guide basket, and when the fallen monarch of coondom had given his last kick and been effectually convinced that he was dead, it was placed in the basket and this was then raised to "Kin's" shoulders by the willing hands of his two companions. "Kin's" first impression when he once had his arms fairly through the straps, was that the coon felt even heavier than it had looked, but he did not have much time to figure it out, for Guy Ferguson, the wiry, the greyhound, the walking machine of bone and sinew, was under way and urging Hunter to find more grandfather coons.

Up hill and down ledge they went at a rate that would have winded a champion six-day pedestrian, and it seemed to Kin that the coon grew heavier every step. He heartily regretted his bargain and wished time and again that the old coon was still safe in its tree—anywhere, in fact, but on his back. But wishing did no good, and Lacy never slackened his pace. When they had gone a couple of miles Kin ventured to remark that the coon had the heft of a yearling steer. Guy promptly volunteered to carry the little thing if he "was tired" and Kin as promptly refused, but he had never been so badly used up—not even on that winter's day four years ago, when he walked fifty-four miles on an empty stomach.

At last daylight came, and the hunters brought up in the quiet dawn of the Sunday morning at the Bay Farm. Kin slipped the basket off his tired shoulders and let it fall to the ground. Out rolled the coon and a rock that would weigh 24 lbs.

Kin looked around in a dazed way for an explanation, but the hunters had silently slipped away, leaving him to work out his own solution of the problem. JACK.

MAINE FISH AND GAME.

THE remarkably low water continues, and in the back woods the season of ice is at hand. It is now pretty certain that the spawning of all the trout family has been at low water this year. Ponds in New England that usually supply sufficient water to drive sawmills are now so low as to give almost no water at all to the half-dried-up streams below. Lakes that have hitherto been considered sufficient in water supply to run whole cities of factories have been drained to their last foot of water this fall. The bottoms of rivers have lately been seen that have never been seen before. Where are the trout and the landlocked salmon? Generally they have tried to ascend the streams for the purpose of spawning, as is their wont, but generally they have failed. In many cases they have ascended a short distance and have been stranded in streams by the still further drying up of the water during October and November. In some instances men, with the true instinct of sportsmen, have been to these pools and have contrived to liberate the trout, either by digging channels that would permit them to get back into the ponds and lakes below or by carefully lifting them out and carrying them back to deep water. Several of the partially dried up tributaries of Moosehead Lake in Maine have been looked out for in this way. Accounts come of an Indian guide who has traveled a number of miles through the woods to one of the tributaries at the head of Moosehead and has liberated a great school of big trout that were in a pool where they must have perished from the simple drying up of the water. At Rangeley the Fish Protective Association has been looking out that the trout which have struggled up stream to spawn and have become stranded by the falling of the water, did not perish. At the head of Richardson Lake and at the mouth of Sawmill Brook a great body of trout were struggling for weeks to reach the upper waters. They began trying to ascend late in September, but the stream was too nearly dry for them to succeed. Some of these trout have been stranded. And, alas! I hear that some of them have been jigged out of the water. In one case a pole was rigged with a hook at the end, so it is told, and by this means great trout have been dragged out of the water, only to be wasted. At the mouth of the same stream the usual fall run of bluebacks has not been seen, probably for the good reason that there was not water enough for them to go up the stream in. At the Upper Dam there has been water enough all along, so that it would not be possible for the trout to get into water shoal enough to strand them. Trout are reported to have been spawning on the old beds at Trout Cove. What the result will be to the eggs thus left when the late rains bring up the lake several feet over these spawning beds is a question.

Mr. John B. Drake, of the Boston produce trade, is a lover of the woods and the rod and line. He did not get away to Maine during the trout season, as usual, and has been obliged to content himself with a trip to New Hampshire for black bass and the possibilities of some duck shooting at a pond that he is very well acquainted with. He found the pond almost too low for bass fishing and decidedly too low for duck shooting on the marshes. The old gentleman he had with him as boatman says he has never seen that pond as low in 20 years, and he has located rocks and shoals in it that he never saw before.

Mr. I. T. Waterman, of East Auburn, Me., with his son, C. E. Waterman, has just arrived from a very successful deer hunt in the vicinity of Roach Pond, some 40 miles from Mount Katahdin. They shot six deer, all that the law allows them to have. They say that they saw 29 in all while away and could have got several more. Their prizes were displayed in a milk wagon in the streets of Auburn and Lewiston the other day and excited a good deal of attention. One, a very fine buck, they will mount. Now there is just a shadow of suspicion that these deer could not have been hunted fairly, but that dogs were employed to run them into the water. Perhaps the suspicion is all wrong, but if it is, then the gentlemen had most remarkably good fortune. Will they tell the readers of the FOREST AND STREAM how they succeeded in getting so many deer?

The officers and members of the Megantic Club, the headquarters of which are in Boston, feel rather proud of the success their brethren have had in hunting on the grounds of the club's preserves this fall. There have been killed this fall, two moose, three caribou and twenty-seven deer thus far, and there is a month more of open season on this large game yet. President Bishop has worked very hard for a moose this fall, but has not succeeded. He believes that moose are growing more and more scarce in Maine, and that they are in great danger of annihilation. He will try again next year, and spend a good deal of time and money to secure the head of a bull moose. This will be the last one he ever expects to get.

Mr. E. M. Gillam, commercial editor of the Boston Advertiser, has been spending his vacation with dog and gun in New Jersey. At the old homestead he was joined by his brother Charlie, of the Philadelphia Record, and the older brother, who has won fame as the writer of John Wanamaker's advertisements, came down for a few days. The Gillam boys all love the dog and gun as well as they love the newspaper profession, and of course they went gunning. Quail they found to be scarce, and partridge more so, and it was too early for great success in duck shooting in the vicinity of Cape May. Ernest did not get his deer this year, though he watched at the runways for a couple of days, waiting for the dogs to drive the deer into gunshot. Hounding deer is legal in New Jersey for a certain length of time, I believe. It is not easy to make Ernest believe that it is cruel and terribly destructive to deer to hunt them with dogs. He is a good shot, even at a flying deer, with a rifle, and he

knows of no other way to get such a shot except by watching at the runways till the dogs drive the deer up. SPECIAL.

HIS MAJESTY ESOX LUCIUS.

RUMORS had reached us concerning the big pike in Lake Sanford. There had been plenty of open talking about the trout, but in regard to the pike it was different, such valuable information being held as much too precious to be given to the passing stranger.

It was only through the courtesy of a genial body of sportsmen most fortunate in their possessions that Frank and I found ourselves one summer's day en route through the Indian Pass, and before the sun had set we had emerged from the swamp at the head of Lake Henderson into the little green lane at the upper end of the Deserted Village, and a half hour later were washed up and widening that jolly circle before the blazing logs under the hospitable roof of the Adirondack Club. There was a general thanksgiving when fair Stella's heels clicked merrily in the hall without, that welcome sound, the dinner bell, making a most fitting accompaniment.

It was a case where "good digestion did wait on appetite and health or both." It was on the morrow that my story begins.

It was just threatening rain by the time we started, and the dark lake, fringed here and there with waving stretches of wild rice, looked in prime condition for a strike. Then a fine drizzle set in, and by the time we reached the lake the wind was drifting great shifting patches of "squall" scurrying across the dark water. Putting on our "sou'westers" we pulled down the inlet, swung off the first bed of rice to our right and overboard went the spoon. Slowly we crept around the edge of the point, Frank rowing and I in the stern with the rod. Just as we cleared the point that rod bent double, and I yelled to Frank to hold up a bit, as I guessed we had struck a log. In an instant the line slackened, and with a roar out of the wet he springs, showing his full length, and falls back with a plunge, the black water seething about him.

I shall never forget the impression that first leap made upon me, to say nothing of Frank. Here was the king of the pike family!

When I recovered my senses I found things fairly safe, "His Majesty" fairly rational and leading like a lamb, and Frank, with his eyes bulging from their sockets, heading with long strokes for deep water, all the while hurling at me in plain French such sound advice as "not to give him an inch, unless you have to;" and "mind he don't run in on you." His suggestions, numerous enough to have sufficed for the management of a modern naval combat, were only cut short by another ugly plunge on our quarter. Again the old rod bent, quivered and recovered herself for a sudden maneuver. The last exhibition of temper gave me a good 10 yds., for the fish seemed for the first time since being struck to weaken, and I put the little reel to a test.

And now, while he sulks in three fathoms, let us look at the rig we are fighting him on. Having fished wholly in trout water, we came badly prepared for these big fellows. An old-fashioned lancewood, of some dozen ounces, minus two guide rings; a small click reel—no gaff, not even a big net—and lastly a spoon composed of the best of gangs and the lid of a tin box bent into shape with a pair of pliers. So much for the armament.

Again and again the old fellow plunged and sawed, and generally had things his own way, yet still the good rod held. One time he is too quick for me on a short line; and down goes the rod and half my arm with it under water. It is a relief when he rolls lazily to the surface, while Frank declares he thought I was going overboard that time along with the whole outfit.

And so the fight continues, and my arm begins to ache with the continuous strain.

"Give him fifteen minutes more, and then let's try our chances at beaching him," says Frank, and I agree to it. There the old monster lies half out of water like a veritable "Monitor," while we trust to luck and continue slowing in a great circle. I measure him with my eye. He is longer than the rod case at my feet, and that is over four feet. He seems to be getting sick of it. His last plunge brought him rolling heavily to the surface. No trout could have stood such punishment. We glance at the watch. It is nearly an hour and three-quarters since he took the spoon, just off the point, which lies now a thin strip of green far behind us. Now and then I can see he is getting ugly and below the waves that lap about his huge green bulk, it is comforting to see the big hooks sunk deep in his jaws, securely locking them.

Suddenly he sinks straight beneath the surface. The reel sings and I feel he is gathering his strength for another desperate dash—a second's pause—an ugly rush—and the next instant he has broken the line. The waters close over him. He is gone! I sink in the bottom of the boat feeling strangely tired. We look at each other; then we both laugh—a laugh that sounds more like the loon's than human. Then we wend our way silently homeward. Not a word passes between us. Not until we reach the club house and the little jug with its tiny handle is handed down from its corner in the cupboard: then Frank, with the air of a judge, breaks the silence with "Here's a health to the king, may he live to a green old age to fight many as good a battle." F. BERKELEY SMITH.

"SLEDGING."—I am informed by Mr. Ferriss, of the South Mountain Fishing Club, that "sledging" in Maryland waters means stunning fish by means of stones as they lie under the shelter of rocks or in rock clefts. The stunned fish is dipped out with a net before it recovers from the effect of the concussion.—B.

THE TARPON HOUSE, advertised to-day, is in a country famous for shooting and fishing.

TO DENVER VIA BURLINGTON ROUTE.—Only one night on the road. Leave Chicago at 1 P. M., or St. Louis at 8:25 A. M., and arrive Denver 6:15 P. M. the next day. Through sleepers, chair cars and dining cars. All railways from the East connect with these trains and with similar trains via Burlington route to Denver, leaving Chicago at 5:45 P. M., St. Louis at 8:15 P. M., and Peoria at 3:20 P. M. and 7:50 P. M. All trains daily. Additional express trains, making as quick time as those of any other road, from Chicago, St. Louis and Peoria to St. Paul, Minneapolis, Council Bluffs, Omaha, Cheyenne, Black Hills, Atchison, Kansas City, Houston and all points West, Northwest and Southwest.—Adv.

YELLOWSTONE PARK FISHES.

THE Fish Commission has recently published in its "Bulletin" some interesting and valuable reports of its explorations of waters in various regions of our country. Among these the reconnaissance of the streams and lakes of the Yellowstone National Park by Dr. David Starr Jordan, on account of the popular sympathy with the efforts of the Government to protect and improve this great "pleasuring ground" and the effective manner in which the explorer has handled his mission of inquiry, is attracting well-merited praise. This paper is rendered all the more acceptable by the many fine illustrations which enrich and explain the text.

Dr. Jordan's exploration was made in the fall of 1889 at the request of Commissioner McDonald. Dr. Charles H. Gilbert and Mr. W. W. Spangler assisted in the investigation, and the most hearty and intelligent coöperation of Capt. F. A. Boutelle, Lieut. W. E. Craighill and Lieut. Edwards, as well as the services as guide of Mr. Elwood Hofer, contributed greatly to the successful prosecution of the work. Numerous streams of the Yellowstone, Madison and Snake River basins were examined and trout were found in the following: Yellowstone River; Yellowstone Lake, Riddle Lake, Solution Creek, Trout Creek, Alum Creek, Antelope Creek, Black-tail Deer Creek, Lava Creek, Lupine Creek, Gardiner River, Madison River, Gibbon River, Cañon Creek, Horse Thief Spring, Heart Lake and Witch Creek. In Riddle Lake trout live at an altitude of 7,900ft.

According to Dr. Jordan the Yellowstone Park is a plateau with an elevation of 7,000 to 8,000ft. above the sea, and for the most part covered with lava of Pliocene age. The lava flow was fatal to fish life. Since its surface has become cold the waters flowing over it have been inhabited by plants, insects and crustaceans suitable for fish food, but not with fishes, since the streams leave the lava beds over falls having a height of 50 to 308ft. "The water of the geysers and other calcareous and silicious springs does not appear to be objectionable to fishes. In Yellowstone Lake trout are especially abundant about the hot overflow from the Lake Geyser Basin. The hot water flows for a time on the surface, and trout may be taken immediately under these currents. Trout have also been known to rise to a fly through a scalding hot surface current. They linger in the neighborhood of hot springs in the bottom of the lake. This is probably owing to the abundance of food in these warm waters, but the fact is evident that geyser water does not kill trout. The Hot River, which drains the Mammoth Hot Springs, flows into Gardiner River. Trout abound about the mouth of this stream, and here, as in numerous other places in the Park, the conventional trick of catching a trout in cold and scalding it in hot water is possible." The number of fishes found in the Park was very small, including only ten kinds, of which two are suckers, four minnows and chubs, a grayling, a whitefish, a red-throated trout, and the inevitable scourge of all trout waters, the blob or freshwater sculpin. The fish fauna was augmented in August and September, 1889, by the following plants by the Fish Commission: Five thousand trout (*fontinalis*) in Glen Creek and in Gardiner River above the falls; 1,000 rainbow trout (*irideus*) in Gibbon River; 1,000 Loch Leven trout in Firehole River, above Keppeler's

Cascades, and 1,000 Williamson's whitefish in Twin Lakes, and the same number in Yellowstone River below the lake. One of the species of sucker was found to be infested with a flat intestinal worm, sometimes reaching a foot in length, but apparently not affecting the health of the fish. The large chub of Heart Lake and Witch Creek (*Leuciscus atrarius*) was full of eggs at the end of September, unusually late in the year. About the whitefish Dr. Jordan reports as follows: "The mountain whitefish is abundant in the Madison River below the falls. It is said to be equally common in the Yellowstone, but none were obtained by us. It is a slender and graceful fish, readily taking the fly like a grayling or trout. It is most abundant, so far as we have noticed, in the eddies or deeper places in swift streams. It seems to be essentially a river fish, rather than an inhabitant of lakes." "The grayling is very abundant in the Madison River below the junction of the Firehole and the Gibbon. Numerous specimens were collected for us in Horse Thief Spring, a small stream just outside the limits of the Park, by Mr. Lucas. The grayling is said to ascend the river in summer as far as the Firehole Falls and Gibbon Falls. It is said also to

be found in the Gallatin River, in the northwestern part of the Park."

Dr. Jordan refers all the trout of the Park to a single species, represented by numerous color varieties, but all black spotted and having a characteristic red dash across

the throat. "The trout of the Yellowstone Lake and of many of its tributaries above the falls are infested by a parasitic worm (*Dibothrium cordiceps*)," which has been

made the subject of a special report by Prof. Edwin Linton. "In the trout examined the presence of many worms was accompanied by a shrunken or irregular

condition of the ovaries or testes. Perhaps spent fish are more likely to be wormy. According to Mr. Arnold Hague, the best trout are in swift or deep waters; the

wormy ones about eddies or among logs or masses of floating vegetation. The wormy trout takes the fly freely, but is in general little gamy. In fact, all the

Yellowstone trout seem less active than is usual for the species." Dr. Jordan accounts for the presence of the blob in Gibbon River above the falls by its probable trans-

near the bridge below the mouth of the Hot River. Dr. Jordan considers it identical with, or a slight variety of, the gray sucker of the Platte Valley. It is closely similar to the common long-nosed sucker of the Eastern States, and is believed to reach a length of 18in. The color is "dark gray, irregularly mottled and barred with black."

2. THE RED HORSE SUCKER (*Catostomus ardens*).—This is a large scaled species, represented by examples measuring from 6 to 16in., occurring in Witch Creek and Heart Lake. It was considered to be identical with the common sucker of Utah. "This fact, together with the general affinity of the fishes of Heart Lake with those of the Great Basin, suggests that the fauna of the Upper Snake River, above the great Shoshone Falls, may have been derived from the Great Basin rather than from the Lower Columbia." Tape worms flourish in this fish, sometimes occupying more space than all the abdominal viscera, yet the parasitized suckers appear to suffer no loss of flesh because of the infestation.

3. THE DACE (*Rhinichthys dulcis*).—Like the well-known black-nosed dace of the East this little fish inhabits cold and clear mountain streams. It reaches a length of about 5in., and is to be found in cascades and swift brooks. The fish is believed to be suitable for introduction into trout streams as food for trout.

4. THE BROOK MINNOW (*Agosia nubilosa*).—This small dace-like fish inhabits brooks and swift waters, resembling the last species in appearance and habits, and was taken rather commonly also in the warm waters of Witch Creek. It belongs to the Columbia Basin, extending southward at least to Utah.

5. THE UTAH CHUB (*Leuciscus atrarius*).—The chub abounds in Heart Lake and ascends its tributary, Witch Creek, into water having a temperature of 88°. The females were full of eggs in October. In Utah Lake the fish reaches a length of 20in., and is very destructive to young trout.

6. THE BANDED CHUB (*Leuciscus hydrophlox*).—A handsome species growing to a length of 4in. Dr. Jordan found it in Heart Lake and Witch Creek. The fish has been taken in Blackfoot Creek, Idaho, a tributary of Snake River. "Color silvery, a plumbeous lateral band, dusted with dark points; traces of red coloration on belly in largest specimen."

7. THE MOUNTAIN WHITEFISH (*Coregonus williamsoni*, var. *cismontanus*).—Found in the Madison River below the falls, and attributed also to the Yellowstone. "It is a slender and graceful fish, readily taking the fly like a grayling or trout. It is most abundant, so far as we have noticed, in the eddies or deeper places in swift streams. It seems to be essentially a river fish, rather than an inhabitant of lakes." From the typical Williamson's whitefish the Park variety differs in its much more slender body and shorter fins. The Montana whitefish, described by Milner from Chief Mountain Lake, is considered by Dr. Jordan to be identical with Williamson's—a conclusion reached independently by the writer some years ago.

8. THE GRAYLING (*Thymallus ontariensis*).—This fine species was found abundant in the Madison below the junction of the Firehole and the Gibbon. The supply used in stocking the Yellowstone was taken in Horse Thief Spring. In the Gallatin this grayling is very common, as we have announced in FOREST AND STREAM. We cannot admit the identity of the Michigan and Montana grayling with that of Alaska; *signifer* has a much higher dorsal fin besides good character about the skull, which make its separation easy.

9. THE RED-THROATED TROUT (*Salmo purpuratus*).—Dr. Jordan refers all the black-spotted trout native to the Park waters to a single species, the *purpuratus* of Pallas, for which he uses the doubtful name *mykiss* of Walbaum. Variations in the number and size of the black spots are common, but the essential characters remain the same. Yellowstone Lake is believed to have been stocked originally from Snake River, through Pacific Creek, Two Ocean Pass, and Atlantic Creek, and an interchange of individuals across the Continental Divide is still a probable occurrence. The existence of a tape worm in this

trout was discussed in our columns of Oct. 22. "The wormy trout are leaner and more compressed than others, and the sides of the belly are likely to show ridges and lumps. The flesh is said to be redder in the diseased fish, and the external color is more likely to be dusky or brassy." Spent fish are probably more likely to be wormy.

10. THE MILLER'S THUMB (*Cottus bairdi*, var. *punctulatus*).—This pest of salmon and trout waters abounds in the grassy bottoms of Madison River, Gibbon River, and

1. GRAY SUCKER.

2. RED HORSE SUCKER.

3. DACE.

4. BROOK MINNOW.

5. UTAH CHUB.

6. BANDED CHUB.

7. MOUNTAIN WHITEFISH.

Cañon Creek. In Gibbon River it occurs both above and below the falls and may have been transported over the barrier by some fish-eating bird. As a destroyer of eggs and young fish the Miller's thumb perhaps has no equal. Commissioner McDonald has seen one of moderate size

waters of North America, one of the species extending southward as far as the Alabama River. One variety is frequently found in caves in the limestone region from Indiana to Tennessee. None of the blobs much exceed 7in. in length; some of the largest examples we have

tiveness to eggs and young of the salmon. The rainbow (*Salmo irideus*) is equally destructive. The young fry are devoured in enormous numbers by fish-eating birds. In the region referred to the writer has shot gulls and terns, and on holding them up by the legs young salmon

9. THE GRAYLING.

9a. RED-THROATED TROUT (YOUNG).

eat scores of young trout almost in the twinkling of an eye, and the writer has observed salmon nests that were entirely stripped of eggs by the same insidious and ubiquitous marauder. Wherever salmon and trout are found in America it is safe to say that the

seen are from Wytheville, Va. The species are usually represented by vast numbers of individuals, making up by numbers what they lack in size, and it is almost impossible to exaggerate their power for mischief. Around the margin of Karluk Lake, Alaska, we have seen nest

dropped out of their mouths. Near the river mouths marine flounders and sculpins enter the brackish water and feed upon young salmon. In the ocean seals and sea lions continue the destructive work. The adult fish, when entering the rivers for the purpose of spawning,

10. MILLER'S THUMB.

9b. RED-THROATED TROUT (ADULT).

Miller's thumb may be seen keeping the species in check. About twenty species of blobs are recorded in the latest catalogue of the fishes of North America, and one of these, *Cottus richardsoni*, runs into nine varieties. These fishes are now placed in the genus *Cottus*; but were formerly united under the name *Uranidea*. There are several sections of this genus, those containing the largest number of species being *Potamocottus* and *Uranidea*. The one described above belongs to *Potamocottus*. The blobs are found in nearly all the fresh

after nest of the red salmon emptied of eggs by these small fishes. The eggs are rapidly digested, and the capacity of the blob for the destruction of salmon is greatly increased by this circumstance.

In FOREST AND STREAM of April 3 and 10, 1890, attention was called to the vast number of enemies against which the salmon has to contend for its existence. On the spawning grounds are the blobs, and, besides these, are the black-spotted and red spotted trouts of the region. The Dolly Varden (*S. malma*) is famous for its destruc-

must run the gauntlet of incessant seining across the river mouths; they must endure the hardships incident to the ascent of the rapid and rocky streams; and when they reach the shoal waters in which their eggs are deposited bears await them, to give the finishing touches to the work of destruction. If we add to all of these hardships and death-dealing agencies the obstructions and pollutions of salmon streams in populous regions, the wonder is that any of the anadromous salmon are left to reproduce their species.

T. H. BEAN.

CHICAGO AND THE WEST.

CHICAGO, Ill., Nov. 26.—Mr. Jeff. Smith, whose petition for appointment for fish warden for work in the Fox Lake district was mentioned last week, has just received his commission from the Governor. He starts the first of next week for the lake country, where the cold weather has already frozen some of the lakes hard enough for ice fishing. He will finish his work of warning the residents against ice fishing, and will look out to see whether any parties already warned have begun to fish. He says he will stop this fishing before it begins, if possible. Jeff. Smith should not be mistaken for his cousin, Ike Smith, who keeps a summer resort hotel, over beyond George Clark's. It is Ike Smith who is too lazy to fish through the ice, and not Jeff. Smith. The latter will see to it that nobody, lazy or otherwise, fishes through the ice up there, he says. Jeff. Smith lives in Chicago most of the time and has property there, but also owns property near the neck of Catherine Lake. He tells me that he has already been approached by several of the residents who want to know whether there "would be any trouble" if they should set out a few lines "just to catch a few fish to eat." He told them there would be. That "fish to eat" plea is very threadbare, likewise very transparent.

Last week I offered a short letter from Dr. Bartlett, bearing on a damage suit brought against him in Schuyler county. Some time ago mention was made of the \$5,000 damage suit brought in that county by a market-fisherman by the name of Smith. Not being clear as to which suit was which, I wrote to Dr. Bartlett for information. It seems that these two cases are the same, and that the \$5,000 has dwindled down to a \$62 verdict, with a new trial on that, as the following letter will show:

ILLINOIS STATE FISH COMMISSION—Quincy, Ill., Nov. 21, 1891.—The status of our case in Schuyler county is about as follows: Smith, of Meredosia, owns or claims to own the fishing right in a portion of what is known as Coal Creek; across this creek, which is quite wide—large enough for a steamboat to go into it—he places a combination pound and wing-net, wings from net entirely across one side of stream and within a few feet of the shore on the other side. We were advised of this net being there, and I ordered the Lotus there and warden to take it up, which they did, taking net to Beardstown for safekeeping. Smith replevins the net and sues myself and others for trespass to a close, or in other words, going on to an inclosure and committing trespass. Damages claimed, \$5,000. A jury gave the plaintiff, Mr. Smith, a verdict for \$62, which we excepted to, and upon argument for a new trial it was granted. An indictment has been found against Smith for violation of the law in setting his net in said Coal Creek, and will be tried next term of court. Fishing still good at office boat, two gentlemen of New York making a nice catch there a few days ago.—S. P. BARTLETT.

The last sentence of the letter has reference to the official joke of the Illinois Fish Commission, which I have detailed earlier as duly investigated by myself. For fuller particulars apply to the two gentlemen from New York. To-day I talked with Mr. W. H. Haskell more fully about the "landlocked salmon" in Trout Lake, Wis. It seems that one of these fish was sent to the Smithsonian Institute, and reply was received that it was neither the landlocked salmon nor the lake trout. No further description was vouchsafed. The fish, as described by Mr. Haskell, has a general silvery tone of body, with large bluish or purplish spots, black in the center. The flesh ranges, like that of the brook trout, from nearly white or faint pink to deep salmon color, according to the individual. It is very delicious eating. The highest weight reported is 22½ lbs. In the fall, after the close of the

spawning season, these fish spread all over the lake, feed on the surface and break water in schools. They can then be taken on the fly or the spoon. After that they seem to sink and spend the year in deep water. Trout Lake has outlets, but this fish is not reported from any connected water.

E. HOUGH.

ANGLING NOTES.

STRIPED bass are still being caught in considerable numbers in the Hudson River, particularly off Sing Sing. They are found in the deep channels, and take sand worms in preference to any other bait. It is unusually late for them to be taken on the rod and reel, and while they undoubtedly remain in the river all winter, they will soon stop biting.

Inquiries for tarpon tackle are beginning to be made at the fishing tackle stores and already a number of ardent fishermen have left for Florida. Many changes and improvements have been made in the tackle used for the big herring, particularly in the way of snelled hooks. The cumbersome and expensive chain has had its day, the linked wire, rubber-covered snell and many others have been tried and found wanting; the latest and best seems to be the braided linen snell wrapped with copper wire. This snell is hitched to a special hand-made forged steel 10 0 hook. The wire winding should commence about 3in. above the hook. The object of this is to allow a shark, if hooked, to bite off the snell, and to prevent its being chafed off by the rough lips of the tarpon. Of course the tarpon is allowed to swallow the bait and the unprotected part of the snell passes into its throat. This is the rig used by Dr. Grymes and other expert tarpon fishermen.

Fishermen should remember that these fish are big and powerful fighters, and that it is useless to expect to kill them with cheap tackle. Many anglers have been disappointed after going to the expense and trouble of a trip to Florida, to find that they lost most of their fish; in fact, I know several fishermen who, while they struck a number of tarpon, never saved a single one. Some lost them because they got "rattled," but in most instances it was due to cheap reels and lines. Cheap reels become useless with the first run of these big fish, the spoon expands under the pressure of the swelling lines, for all lines will swell when wet, particularly the cheaper grades, and the line, of course, parts at once when the reel fails to work properly. The reel should be large enough to take 600ft. of first-class linen line not smaller than No. 18 or better No. 21.

With proper tackle and a little experience in handling large fish there is little risk of losing even a 200lbs. tarpon. Another cause of these fish breaking away is the use of too stiff and too short rods; if the rods have a little spring they are not half so apt to tear out. Some of them are made so stiff that they do not give a particle, and this affords the fish too much purchase and brings all the strain on the line. Mr. John G. Hecksher's pattern of rod seems to have given the best results, for while considerably stiffer than a striped bass rod, it still has a good deal of spring.

SCARLET-IBIS.

THE VELVET TRAIN of the Monon Route between Chicago and Cincinnati offers the best and most luxurious service obtainable between those points.—Adm.

DERRYFIELD BEEF.

CHARLESTOWN, N. H., Nov. 27.—Editor Forest and Stream: Thanks to "Kelpie" for supplementing my memories of William Stark's poem; he is all right as far as he goes, but the whole poem would fill a page of FOREST AND STREAM. Some of it was genuine poetry, too, for Stark was a talented man, though eccentric, and his brain finally gave way, and he died in an asylum.

I knew him well, and remember his stocking a deer park in the suburbs of Manchester with a herd of elk from Wisconsin some thirty years ago, and visiting it with him to see them one bright morning in the early "sixties." He also had some rare wildfowl and a trout brook. He was years in advance of Austin Corbin and many others.

The poem referred to Manchester, New Hampshire—not Massachusetts, as printed. The country right around Amoskeag Falls was called "Derryfield," being an outlying district of the old town of Londonderry, Ireland, originally settled by emigrants from Londonderry, Ireland, commonly known as the "Scotch-Irish." They were strong men, and left a mark not only on the history of the State but of the Union.

The names of McNeill, McClary, McCrillis and McGaw are well known beyond the limits of New Hampshire.

Some of the same emigrants found their way over to the western edge of the State, and "Derry Hill," in our neighboring town of Acworth, marks the site of their farms, though the name of old "Deacon Finlay" is the only one I can recall.

I should like to meet "Kelpie," for we have evidently "camped on the same trail;" and if FOREST AND STREAM plants that bivouac at Chicago at the Exposition in 1893, and "the Pibroch of Donuil" calls the clans together, I hope that those of us who are still in the flesh may get together round the camp-fire and form a personal acquaintance with each other. I should hope to see "King-fisher" and "Awahsoose," too, and the genial poet from Louisiana, as well as "Bourgeois" and "Piscoc;" but we should miss and mourn those, who, like "Nessmuk," "Wells" and "Ned Buntline," have already gone to the "happy hunting grounds." How man's visions of a future life are colored by his tastes in this one. To the wild Indian it is an eternity of field sports with his favorite horse and dog. To the music-loving Jew it is an everlasting sacred concert, which would be apt to pall on unmusical organizations. Who can tell? VON W.

TRULY ODD IF ODDLY TRUE.

W. R. Davidson, a well known citizen of South Nyack, went out on the river this morning to lift one of his "cat lines" and was surprised to find on the end of the line one of the largest sea gulls ever seen in this part of the Hudson. The bird had probably made a dive into the water for a fish and caught one which was fast to the hook. The hook caught in the bird's mouth and held him there until Mr. Davidson's arrival. The gull will be kept alive by his captor.—New York Times.

FOREST AND STREAM, Box 2832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Glean," "Dick Swiveller," "Sylviane" and other competent authorities to be the best treatise on the subject extant.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grippell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—Adm.

Fishculture.

THE KANKAKEE FISHWAYS.

HOLYOKE, Mass., Nov. 30.—*Editor Forest and Stream:* I concur with Mr. Hough that the fishway law of Illinois should be enforced so long as it is a law, and the Wilmington Water Power Co., recognizing the right of the Legislature to enact such a law, has constructed the fishway over the large dam in the Kankakee. The laws should be obeyed, whether we believe them right or wrong. Private opinion must not stand against public acts; but is it unreasonable to criticize the wisdom of the law makers, when they permit Chicago to empty its foul sewage down the Des Plaines and the Illinois rivers, causing an effectual bar to the passage of fish from what Mr. Hough claims to be the main breeding grounds of that system of rivers and yet compel mill owners to be at the expense of opening their dams for the passage of fish which cannot reach them?

I can perhaps appreciate the supposed benefits to be derived from fishways on streams open to the passage of salmon, shad, sea trout, sturgeon or any other anadromous fish that periodically leave the ocean and push on up rivers for the purpose of depositing their spawn, but I do claim that they are of little if any benefit to rivers like the Kankakee.

I do not believe that an efficient fishway can be a cheap one also. A cheap structure can be built up which one fish out of a million can struggle up, but one large enough to allow an easy passage for the larger portion of fish which may approach a dam will cost much money and be expensive to maintain. Our Holyoke fishway is costly, but it is not efficient. It is really valueless for the purpose intended. Its entrance, as one of your correspondents suggests, is quite a distance down stream, but of necessity that must be so, for it would be impracticable to bring the mouth of the structure within the whirlpools caused by the water falling from a height of 30ft.

I have no controversy with your correspondent Mr. Hough. He seems to have faithfully and conscientiously worked for the fishways along the river, but when he longed for the day that the Wilmington dams might be removed in hopes that a few fish might run the river more freely, it seemed to me that he considered more the sport of a few anglers than he did the material prosperity of the dwellers in that beautiful valley. Those dams and canals and locks with their necessary adjuncts, which he wrote so flippantly about (as I felt), cost nearly six hundred thousand dollars, and surely the owners of that property have some rights that all should be willing to respect.

The fishway over the Wilmington dam has been completed, I believe, to the satisfaction of the Fish Commissioners. I trust that it may prove of use to the people of the State of Illinois, but I fear that none now living will ever be able to ascertain any benefit to the fisheries of Momence that can justly be attributed to it. E. S. WATERS.

MAINE FISH HATCHING.

THE season is proving more difficult for the obtaining of landlocked salmon and trout eggs than was at first supposed it might. Actual cold weather has come on without rise enough of water in the streams tributary to the principal trout and salmon lakes in New England to enable the fish to reach their usual spawning beds. The Maine Commissioners have had to net their landlocked salmon at Edes Falls, tributary to the Sebago waters, for the reason that the fish could not get up to the weirs. There was not water enough for them to ascend. The Commissioners have scarcely taken above 800,000 eggs where they reasonably expected to get 1,500,000. And they are in a quandary as to how they can begin to fill their obligations and the desires of others for restocking. The eggs of the sea salmon taken at the Government hatcheries at Orland, Me., this fall will not come up to half of the number expected. Low water has prevented the parent salmon from reaching their usual breeding haunts, and the people interested in the hatcheries have failed of finding them. The Lake Auburn (Me.) Fish Protective Association has completed its spawn taking work for the season. The society has been more successful than its neighbors in the same State, and has done much better than might have been expected, considering that the fish have not been able to run up the brook as usual. Trout have been seen at the mouth of the principal spawning stream with their back fins out of water, and in this position they have been netted and taken for breeding purposes. This season 400,000 eggs have been taken, where twice that number were hoped for. But the record compares well with the previous season, when 425,000 eggs were obtained. Nearly 100 trout were taken that were worth detaining for breeding purposes, and nearly all of these weighed over 2lbs. They went back into the lake last week, apparently none the worse for the process of having been stripped. At Rangeley the success of the association there is not yet reported. It should be good, since the resources of that region are greater than almost anywhere in the State. The streams are larger, and the trout and salmon are large enough to yield a greater number of eggs. SPECIAL.

IRISH SETTER CLUB'S TRIALS.

THESE trials, which commenced on Nov. 23 and were concluded Nov. 25, must be conceded to have been a great success, the work of some of the dogs in the stakes being quite equal to and surpassing many of the performers in the other trials. Of course, as a class, there is much to be done yet to bring them to the point to which their ardent admirers would like to see them, but I am confident, placed in the hands of men who thoroughly understand their profession, the Irish setter can and will take a prominent part in future trials. It remains with the breeders, however, to do their share, by careful breeding to good field performers

PAXICO AND PEARL'S FAN.
United States Field Trials.

and trained dogs. Let the bitches while in whelp be hunted, and the same intelligence be devoted to their interests as has been the cause of the prominence that the English setter holds, and there is no cause why the Irish setter men should despair. The presence of two such enthusiastic Irish setter men as Drs. Wm. Jarvis and G. G. Davis added greatly to the interest of the trials. On the vice-president, Dr. Rowe, devolved the arrangements of the trials, and everything passed off very smoothly; Major Taylor, Luke White and J. B. Stoddard giving general satisfaction. In the first series each brace was given long opportunity to show what was in them, and there was no hurry at any part of the meeting. It was the expressed opinion of all present that the Irish Setter Club should follow up the good work, and next year I hope the entries will be doubled; and with so many men coming into the breed just now there is no reason why they should not every one lend a helping hand, either with their money or their dogs.

HIGH POINT, N. C., Monday, Nov. 23.—It was a dreary outlook this morning when we opened our shutters. The rain was coming down in torrents and the wind blew almost a hurricane. Every one had settled that this was a most uncalled-for damper on the Irish Setter Club to commence with; but suddenly it cleared up, and the sun coming out it was decided to start after lunch. This would allow the

J. B. B.

CHAS. BARKER AND PROMOTION.
United States Field Trials.

ground time to dry out a little, as the wind was still very high. The judges appointed were Major J. M. Taylor, Luke White and J. B. Stoddard. The start was at the Blair farm, and the first brace in

THE DERBY.

MAID OF BORSTALL-SQUAW, were sent off at 1:26 in a large grass and sedge field. Maid of Borstall (Ichiquin—Onota Belle) was handled by T. M. Aldrich and Squaw (Darragh Pat—Ruby Glencho) by H. B. Anderson. The start was not productive of much incident, neither dog ranging far from handlers, though Squaw was the better ranger of the two. They both turn too much to handlers, being afraid to launch out very far on their own account. After going some time Maid pointed near woods, and Squaw coming in in front made a hesitating point, as birds flushed wild. Then two more birds were flushed. Going into the cover after these birds, nothing was done, though singles flushed wild. Very slow work in the cover. Out into open fields again in sedge by a plum thicket, Squaw roared to a point on a bevy, which Anderson put up; dog steady to shot and wing. Then in high sedge Maid flushed a single. Squaw, a bit further on, pointed a single very nicely, Maid backing to order. Some more roading by Squaw to a fir tree, where she pointed, but broke point and nothing found, and the heat closed at 2:30. Most of the time the dogs did not range more than 20 or 30 yds. from handler, though Squaw made a fair cast or two now and then, and was much the best on bird work.

LEIGH DONE VI.—FINGLAS.—Leigh Done VI, (Fly—Betsy Leigh), a lightly-made dog, was handled by Mathies. Fing-

las, an importation from Mr. O'Callahan's kennels, brought over by Mr. S. L. Foggis this last summer and sold by him to Mr. Bishop, is by Fingal III.—Aveline, and W. T. Irwin had charge of him. Put down in sedge grass Finglas started off well, but Leigh seemed to have no idea of range, trotting most of the time round his handler. Going up hill Leigh made game in an uncertain manner, stopped and Fingal backed capitol to one side, but Leigh moved on and nothing found. Through the sedge, in which Finglas seemed hardly at home, we passed into pine woods, Finglas making rings around the others, but flushed when he struck the birds. He evidently is not accustomed to cover work and high grass. In pines a single flushed wild, and Finglas coming up stopped as another single rose just in front of him, and it looked like a flush; he was steady to wing. Then out of woods in sedge, near other corn, Mr. Bradley's horse flushed a large bevy at the edge. These birds were followed, but dogs did nothing more, and ordered up at 3:27. Finglas ranged out fairly well, but seemed ho'hered when the ground was not open; he hunted out the likely places, and with a little training on this ground he would no doubt do much better, as he has good action. His long journey from Kansas, with only a day's rest, may have affected him, as he has a reputation on the other side as being an excellent field dog under English conditions of field work. Leigh Done VI. will not go further into the stake.

ELCHO'S MAID—COLERAINE.—This was expected to be a good heat, as George Gray thinks a good deal of his entry, Elcho's Maid (champion Elcho, Jr.—Maid), and Coleraine is well known through her excellent work in the English trials last spring. She is a litter sister to Finglas. It must be said that she has not been herself since she arrived not long since from England, she being seventeen days on the water, and has never eaten a good square meal since she arrived, has seen very few quail and was an entire stranger to this style of country, her only work here being in the Oklahoma country. Starting at 3:29 Geo. E. Gray handled his own bitch and W. T. Irwin handled Coleraine. Both started off in good style and quite refreshed our spirits after the slow pottering work of some the others. In sedge Coleraine was the first to score, pointing stylishly on a bevy which flew into the woods as handler flushed, Maid backed fairly and they were steady to Irwin's flush. Both dogs then got points on singles in high sedge, and were steady to shot and wing. Along the pine woods Coleraine seemed hardly to understand this high sedge business; afraid of losing her handler. Going into pines after flushed birds Maid, under a pine tree, made a point and as Gray went up to flush she moved on but stopped as

MR. HUNTER AND BLACK WONDER.
After winning Pointer All-Aged at Bicknell, Ind.

bird flushed just in front of her. Coleraine backed nicely. Then Coleraine dropped to a bevy side of woods, Maid coming in in front. Both ranged busily and with much judgment here. Alongside a brook Maid then pointed and Coleraine honored it. Higher up Coleraine pointed some single birds which flushed wild and then she flushed one, but was steady to wing. Dogs were then called up at 4 o'clock. Coleraine had a little advantage on birds, showing a good nose. Both ranged out well and at good speed. By far the best heat so far.

ROSE OF CLAREMONT—BESSIE MAVOURNEEN.—Rose of Claremont (Claremont Patsey—Nino) was under the guidance of Geo. McClin, and Bessie Mavourneen (champion Tim—Curren Belle III) was handled by E. T. Mathias. They were cast off at 4:06 just outside of some woods, but neither started off with much vim. Starting with a flush near pines the birds went into cover. After quartering several fields at a slow rate, neither dog ranging out at all, Rose made game but moved on, and the bird she should have nailed flushed to one side, a yard or so away, and wind was right for scent. Out of woods Rose rather blinked as she pointed a bevy, but was steady to flush. Dogs ordered up at 4:37. Neither ranges out at all, the handlers could find almost as many birds alone, as the dogs trotted along in front of them most of the time.

PRIDE OF PATSEY—ADONIS.—The former, by Claremont Patsey—Nino, was handled by Geo. A. McClin, and Adonis (champion Tim—Curren Belle III) by F. J. Schuyler. Down at 4:38. Neither got off at all fast in the ragweed. It was not long before Pride almost walked on top of a bevy which flushed when stopping to wing, both acting fairly steady. Then by a fallen tree in woods both pointed a single and were steady to flush. Just before getting out of woods both dogs either stopped just on or flushed some single birds, trees too dense to see. It was in many cases difficult to tell one red dog from the other. Then both made casts round a single which flushed wild, in fact several got up that the dogs should have scored on, but their nasal organs seemed deficient in a bird dog's most requisite faculty. Ordered up at 5:09, near the Model farm. Neither showed much hunt and will be retired from the stake. In justice to Adonis I may say that his education has only just commenced, for he is only ten months old.

NUCKET A BYE.—This bitch (Redfern—Gypsy Maid) was handled by her owner H. B. Anderson. Sae was put down at 5:15 toward home, as dark was drawing on apace. She ranged out fast and wide, compared to the others, and on hillside went up to a bevy in good style, and was steady to wing. Birds flew into woods and were followed, but we did not come up to them, though Nugget hunted round at a merry rate. Out of woods in sedge she pointed a single, which a judge flushed as he came out of woods. Then she did a pretty piece of work, dropping to a point at speed, she moved on as handler came up and, making a cast, she located the bevy, pointed, and was steady to Anderson's flush and

shot. After this she was called up, at 5:45, when it was almost dark. Nugget hunts with a vim, shows judgment and a good nose, and is moreover a busy, merry sort of worker, especially in cover. This ended the day's running, and we had got a line on the sort of work we might expect from the Irish setter. Some of them had shown excellent merit as Derby dogs, under the adverse condition of ground and wind.

TUESDAY.

It was announced last night that Elcho's Maid and Squaw, Nugget and Coleraine, should run to decide the winners in the Derby, with Finglas, Maid of Borstall and Adonis in reserve. A slight frost during the night made the morning air crisp, while a warm sun did its best to make us all comfortable. The ground had dried out nicely and conditions were favorable to good work.

ELCHO'S MAID—SQUAW were the first brace put down in stubble near woods at 9:26. At the start Maid made game, but nothing came of it; Squaw ranging further out. Into cover at the edge, Squaw pointed and Maid honored it; both moved on and a single flushed wild. Roading out of woods and then in pines not far off, Maid nailed a single in good style and was steady to flush. Then going into pines, at the edge Maid held a bevy nicely, and Squaw helped the good

W. H. Child's Leigh Done VI. with E. B. Bishop's Finglas.
George E. Gray's Elcho's Maid with E. B. Bishop's Coleraine.
George H. Kendall's Rose of Claremont with B. M. Vaughan's Bessie Mavourneen.
F. H. Perry's Pride of Patsey with H. E. Richards's Adonis.
H. B. Anderson's Nugget a bye.

Second Series.

Elcho's Maid with Squaw.
Nugget with Coleraine.
H. B. Anderson's Nugget, first money, \$200, and Rev. R. O'Callaghan's subscription of \$15.75.
E. B. Bishop's Coleraine second money, \$125.
Geo. E. Gray's Elcho's Maid third money, \$75.
Mr. Anderson also wins the \$50 for handler of winning dog.

ALL-AGED STAKE.

The drawing for this stake last night had resulted as follows: Geo. E. Gray's Hope with R. E. Lutz's Jim Beatty.
E. B. Bishop's Finglas with C. P. Hubbard's Jessie Jones.

and were followed. Duke came very near flushing two birds, just stopping on top of them. Then returning Duke nailed another single. Points on scent at edge of woods for Duke, Don backing, closed the heat at 4 o'clock. Duke showed very fair hunting sense and intelligent range. Don acted poorly, rambling round his handler most of the time.

LIMERICK—EDNA II.—This was a good heat, dogs being cast off at 4:03 in a grass field. Limerick (Glen Elcho—Nora) was handled by John White, and Edna II. (champion Elcho, Jr.—Romaine) by Joseph Hawkins, of S. C. Bradley's kennel. Both dogs started at a good gait, ranging wide and intelligently over a large field, where, by cover, Limerick was the first to find and pointed a bevy, Edna backing nicely. White flushed and dogs were steady to wing. Following these birds Edna wheeled to a single in a bunch of sedge, and to the left at the same time Limerick pointed a brace, and both were steady to their handlers' fire. This was a very pretty piece of work. Then Limerick pointed another, but it flushed wild. Edna just at the edge of woods pointed another single, Limerick dropping to do her honor. Hawkins flushed and fired, Edna steady, but Limerick moved as bird flushed. Then Edna while galloping at speed stopped at the foot of a pine tree as a bird flushed. Going into the open some distance off Edna made a pretty point, then drew

N. ROWE. H. B. DURYEA. A. MERRIMAN. JOHN WHITE. J. M. AVENT.
EASTERN FIELD TRIALS, 1891.

OWNERS AND HANDLERS AT EASTERN FIELD TRIALS, 1891.

work by a stylish back; both steady to flush. After these birds in pines Maid roaded to a flush and was steady to wing. Lower down, Squaw made game and roaded to a single, which she pointed, Anderson flushed, shot and dog steady. Elcho's Maid then held up at 9:50. Squaw going alone not far from here nailed a bevy and dropped to the birds as they flushed wild. Then called up at 9:54. Elcho's Maid had a turn by herself, but found nothing, and was called up at 10:03. Several singles were flushed by horsemen which she might have located. Elcho's Maid had somewhat the advantage on birds, showing more bird sense: range and speed about equal.

NUGGET—COLERAINE.—These two were put down outside of woods in sedge at 10:03, and both started off well. On a hill Coleraine began her work poorly by a flush, but was steady to wing. After some varied ground had been worked out Nugget in open pointed and Coleraine dropped as she backed, nothing found. Coleraine showed no sign of game,

Max Wenzel's Ready II. with G. G. Davis's Silk. Michael Flynn, Jr.'s Sedan with Geo. E. Gray's Blue Rock. Dr. Wm. Jarvis's Duke Elcho with F. L. Cheney's Onota Don. C. T. Thompson and W. H. Child's Limerick with Dr. Wm. Jarvis's Edna H. F. H. Perry's Claremont Patsey with E. B. Bishop's Coleraine. This was an excellent filling, and one the Irish Setter Club should feel proud of. No time was wasted after the Derby winners were announced in casting off the first brace.

HOPE—JIM BEATTY, at 11 o'clock. Hope (Brian Born Jr.—Biddy) was handled by owner, and Jim Beatty (Lee Grouse—Lew) by J. W. Howse. Both started well. Ranging through some fields, into woods and then into open again, when Hope stiffened out on a bevy, Jim honoring the point. Gray flushed, shot, and dogs were steady. Going into pines after scattered birds, Hope scored again, Gray firing at the flush, dog steady. Nothing more was found and dogs called up at 11:35. Hope did all the work on birds and was the better ranger, showing fair judgment and nose.

FINGLAS—JESSIE JONES.—Put down in open sedge field at 11:46, neither got out very far. In an orchard Jessie thought she had something, pointed and was backed by Finglas. The bitch moved on, but after some roading failed to locate, and then both started on another quest. Nothing done, however, and neither showing much hunt they were called up at 12:20, as it was lunch time. After this welcome respite and a chance to stretch our limbs, these two dogs were put down again at 1:22; but still they were unable to find game, and were finally called up at 1:39. Finglas seemed to have lost the little snap he had yesterday, and ranged rather listlessly, paying more attention to his handler than to the work on hand. Bessie did better ranging, but neither will do for the finals.

READY II.—SILK.—Cast off at 1:45. Ready II. (Red Dash—Ready) was handled by H. B. Anderson and Silk (champion Chief—Gypsy Maid) by F. J. Schuyler. Soon after starting Silk dropped to a point, and moving on after a while a single flushed wild. Going into woods each flushed a single, and then Silk pointed another, Schuyler fired and dog steady. Getting out of the woods and into a corn patch, Silk pointed a single in good shape, Schuyler fired again, and dog dropped to shot and wing. Then we hunted out some corn, and dogs were ordered up at 2:16. Both dogs ranged fairly well, and the work on birds was in favor of Silk, who was well broken; but neither showed very good powers of scent and their chances are small for a second appearance.

SEDAN—BLUE ROCK.—We were told to keep our eyes open on this heat, as something better was coming, nor were we disappointed. Sedan (Chester D. Herald—Nancy) had the services of the well known handler, S. C. Bradley, and Blue Rock (Muskerry—Nancy Lee) was handled by owner, Geo. E. Gray. Starting off at 2 o'clock, both ranged out well to their work, and after covering some ground, Blue Rock, at the edge of cover, scored on a single, and both dogs then roaded carefully out of woods, but did not locate further. Higher up in pines Sedan froze to a bevy in good style and Bradley fired at the flush. Dogs were sent after these birds, and in pines two or three points were noted with no result, but afterwards a single flushed wild, evidently running ahead. Then Blue Rock pointed where bird had flushed; both dogs roading, Sedan soon nailed a single in picturesque style, and at the same time to the right Blue Rock pointed, but he was not so fortunate. This was all done in the space of two minutes. Getting out into the open, Sedan soon came to a point, but nothing found. Dogs were called up at 3 o'clock. The heat was in favor of Sedan as far as sense and nose went; pace and range about the same.

DUKE ELCHO—ONOTA DON.—The former, by champion Elcho, Jr.—Maid, was handled by S. C. Bradley and Onota Don by champion Chief—Bizreena, was handled by Horace Smith. Cast off at 3:05 in sedge field. Down by a ditch Duke pointed a bevy, Don at the time being round handler's heels, dog steady to flush. Up in pines in a brier thicket, Duke held another bevy; Bradley put up the birds and dog steady to shot and wing, birds flying into thick pine woods

on and pointing again, Hawkins put up two birds some distance off; Limerick had been called to back and did so 20yds. ahead. Soon after this dogs were called up at 4:32. This was the best heat yet, both beating out their ground well and showing good nose. These dogs from Thomasville are certainly the best ranging dogs of the stake and show every evidence of the association with men accustomed to handling high class field dogs.

CLAREMONT PATSEY—COLERAINE.—We were now quite near the Model Farm buildings, and dogs were cast off at 4:45. Claremont Patsey (Frisco—Nellie IX.) was handled by Geo. A. McClintock, and Coleraine (Finglas—Aveline) by W. T. Irwin. Twenty yards from the starting place Coleraine stiffened on a bevy 40yds. away, and Patsey coming across wind in his cast went right into the "brown" of them, a bad piece of business. Coleraine held her point steady till flushed. Followed birds, when in bottom Coleraine dropped

EASTERN FIELD TRIALS, 1891.
MR. HUNTER WITH DAISY HUNTER.

EASTERN FIELD TRIALS, 1891.

JOHN WHITE WITH DUKE OF HESSEN AND COUNT GLADSTONE.

but ranged off as soon as allowed to. Nugget roaded into the edge of the cover, nailed the birds and Anderson shot as they flushed, Nugget behaving nicely. After these birds in woods, Coleraine was the first to spot a single, Irwin fired; this was repeated higher up, and Nugget also put another to her credit, pointed again, and roading on nailed it, following suit directly after, Coleraine backing. All this within a few yards and was an opportunity for pretty and careful work well carried out. Further on Nugget pointed again and was held for Coleraine to back, bird flushed wild. Dogs were called up at 10:46. Nugget had shown some superior work on birds and fully demonstrated the fact that there are Irish setters that have just as good a nose and can handle their birds just as carefully as any other. Coleraine was found clogged with burrs, and no doubt this accounted for her indisposition to range toward the end of heat. This was her handler's care. Judges soon announced H. B. Anderson's Nugget first, E. B. Bishop's Coleraine second and Elcho's Maid third.

SUMMARY.

Irish Setter Club's Derby—First Series.

Nelson McIntosh's Maid of Borstall with L. A. Van Zandt's Squaw.

to a point, drew on and then gave it up, made a cast over a ditch, dropped to a good point, Patsey coming up, dropped, then moved in ahead of the other and birds flushed all round. Marked down on hill, where Coleraine improved her opportunity and pointed two birds. Near cover on the hill Patsey stopped and then roaded in a very uncertain manner, and stopped again just as the bevy flushed wild. At the same time higher up Coleraine had dropped to a small bevy and was steady to Irwin's flush. Then into the woods for singles, where Patsey did not improve his chances by flushing a single, and just as the heat closed Coleraine pointed larks. Dogs were then called up at 5:15. Coleraine did good work in this heat, and made a good bid by her superior nose and steadiness for a prominent place in the Stake. This closed the day's work.

WEDNESDAY.

It was given out by the judges last night that Limerick and Coleraine, Hope and Sedan and Blue Rock and Edna should be brought to the field to-day to run in the second series. There was no hurry, as we had all the day before

us, so a late start was made. The day opened cloudy, but the sun came out as we cast off the first brace, LIMERICK—COLERAINE, at Hargreave's Farm, some distance from town, at 9:44, in corn stubble. Outside of pines after ranging for about 15m., both going well, Limerick pointed in sedge and the birds were flushed by White some distance ahead; Coleraine backed and both were steady to shot and wing. On through oak woods and at edge Coleraine dropped to a single which Irwin put up. Presently Limerick made game, roared a bit and then cast off. Out of woods, in sedge, both pointed a single, which rose a yard or so away, and were steady to wing. Dogs were called up at 10:33. Limerick had good pace and range and showed some good work on birds. Coleraine needs conditioning, for she settled down a good deal toward the finish of heat. Down 4m.

HOPE—SEDAN.—These two were cast off in corn stubble at 10:34, both going off at a good gait and ranging out intelligently. In pines Sedan soon nailed a bevy and was held on point for Hope to back, when Bradley flushed, and dogs behaved nicely to shot and wing. Then followed some good work on the singles. Sedan was the first to point one; then further down both stopped to a bird. Still in pines, higher up, Hope nailed her bird, Sedan honoring the point in good style. Then Sedan stiffened out on scent, and Hope, instead of backing, passed in front, but nothing resulted from the *four pas*. Crossing a hollow in pines, Sedan came to one of the prettiest points in the trials, and Hope's stylish back completed the pretty picture. Gray clinched the good work by putting up a single, Fred, and Hope was steady, but Sedan broke a trifle, stopping at caution. They were called up at 11, nothing further happening. Sedan did good work on birds, and showed best nose. Hope also ranged well and performed quite creditably.

BLUE ROCK—EDNA H.—In corn stubble again these two were cast off at 11:01. After ranging out well through several fields, Blue Rock dropped to a point near a fence by pine wood, and Edna came in from the side, backed, but handler could find no game. Blue Rock roared on down the fence but failed to locate anything. Passing into cover Edna came to a full stop, and was held for Blue Rock, who was working out further in the woods; not coming, Hawkins was told to flush, and a single got up, Edna dropping to wing. Further on Blue Rock coming toward us pointed a single, Edna backing nicely, and dogs were steady to Gray's fire. Then further on Blue Rock just stopped in time as a single rose out of the briars and several others followed suit, dog steady to the flying birds. In pines Blue Rock pointed false. At 12 o'clock the dogs were called up. Edna showed the best work and style and better range, though Blue Rock also merited praise for his work. This dog has quite a reputation on the other side. He was a winner at the Irish setter trials last year, and also a bench winner at the Birmingham, Eng., show of 1890. He was imported by Mr. Covert, and a full description was given of him in FOREST AND STREAM after the Chicago show last spring. It was time for lunch now and the judges had a consultation, and not agreeing exactly ordered

COLERAINE—EDNA H.—Out for another run at 1:20. After ranging out some time Edna, side of lowland, pointed some feathers where a single had flushed, and a few yards away Coleraine nailed a bird, which Irwin flushed, and then another got up to one side; dogs steady to shot and wing, Edna having been brought round to back. Near a pine tree further on Coleraine picked up another single and Edna dropped to a point like a flash on bare ground by a little patch of grass, from which Irwin put up a bird, Edna backing in good style. This good work on singles convinced every one that Coleraine was entitled to a high place in the stake, and after the dogs were ordered up at 1:50 judges soon decided that Sedan wins first, Coleraine second and Edna H. third. After handlers and owners had received congratulations we all trotted home, and the first Irish setter trials had come to a close and were counted a great success.

SUMMARY.

Irish Setter Club's All-Aged Stake—First Series.

Geo. E. Gray's Hope with R. E. Lutz's Jim Beatty.
E. B. Bishop's Finglas with C. P. Hubbard's Jessie Jones.
Max Wenzel's Ready II. with Dr. G. G. Davis's Silk.
Michael Flynn, Jr.'s Sedan with Geo. E. Gray's Blue Rock.

Dr. Wm. Jarvis's Duke Elcho with F. L. Cheney's Onota Don.
C. T. Thompson and W. H. Child's Limerick with Dr. Wm. Jarvis's Edna H.

F. H. Perry's Claremont Patsey with E. B. Bishop's Coleraine.

Second Series.

Limerick with Coleraine.
Sedan with Hope.
Blue Rock with Edna H.

Third Series.

Coleraine with Edna H.
Michael Flynn, Jr.'s Sedan first money, \$200, and Elcho cup, donated by Dr. Wm. Jarvis.

E. B. Bishop's Coleraine second money, \$125.
Dr. Wm. Jarvis's Edna H. third money, \$75.

Sedan, the winner, is a well-made, rangy bitch, and if I mistake not has made a good appearance on the bench. Coleraine is a capital made one, small but full of type, and so is Edna H., which I commented on favorably in the Chicago bench show report last spring.

After the Irish Setter All-Aged Stake had been decided and we had all returned to the hotel, it was found that the rule requiring that the first and second winners should run together had not been complied with. This necessitated a return to grounds just outside of the town, where Sedan and Coleraine were cast off and run about twenty minutes. Sedan flushed a bevy, no other game was found and the party returned to town.

H. W. L.

NATIONAL BEAGLE CLUB FIELD TRIALS.

THE second annual field trials of the National Beagle Club were held at Nanuet, N. Y., Nov. 23-28. They were a complete success from beginning to end, but the enjoyment was somewhat marred by a day of hard rain and by the scarcity of game. At the opening of the season rabbits were abundant, but many have been shot, and at times during the trials it was almost impossible to make a start.

The country was fairly well suited for the meeting. There are many pastures overgrown with furze and low bushes, where there was some splendid sport; there are no stone walls; the swamps are few and small; the underbrush is not so dense as to impede one seriously, but the briars were abundant and very sharp.

The club was fortunate in choosing for judges Pottinger Dorsey and W. S. Clark. These gentlemen worked hard and followed the bounds faithfully throughout each race. Their decisions were just and impartial, and were well received by all interested parties except one gentleman. He made himself prominent by systematic "kicking," but the decisions which he criticised so severely were pronounced correct by all disinterested persons who saw the races.

The success of the meeting and the enjoyment of those present were due in great measure to Mr. H. L. Kreuder, of Nanuet. Not only did he attend to the numberless details of the trials, but he took the best of care of all the dogs, threw open his house for the club headquarters and royally entertained all who were present. The kind hospitality of

Mr. Kreuder and the ladies of the family will not be forgotten by those present at the trials. As a slight token of appreciation the club presented to Mr. Kreuder on Thanksgiving night a polished oak desk and chair. Our host was taken by surprise, but replied in a very neat speech.

The Massachusetts contingent arrived on Sunday morning and other club members came in during the afternoon. On Monday a large representation was present, but to the disappointment of all rain fell in torrents nearly all day. As it was evident that no field work could be done, the bench show, which by programme was to be held before the trials, was not hurried, and it was 11 o'clock before the first class faced the judges.

In the challenge class for dogs, 15in. and under, Racer, Jr., met Tricotrim. Both are well known. Racer better in expression, muzzle and carriage of stern, took the blue ribbon. There were no entries in challenge bitches.

In the open dog class nine beagles faced the judges. First went to Hunter, a young dog of great promise: good in head, forelegs straight and clean, good bone and well-carried tail. Fleetwood, second, is soft in coat, weak in head and bitchy in appearance. Roy K., third, is a little long cast and light in muzzle. Fairy's Lee, vhc., has good bone, but is poor in expression and carries tail badly.

No challenge bitches. The open bitch class gave the judges something to think about. As there was not room to judge them in the kennels, they were taken out on the lawn in the pouring rain. After consideration, June Rose and Fannie Racer were given equal first; both were in fine condition, and are handsome, stylish bitches. Second went to Belle of Rockland, a bitch showing true beagle character. Third was captured by Gypsy Forest. She was shown in perfect condition, has good legs and body, but is poor in head. Lady Lill, vhc., is a bitch of the correct type, but, chilled by the rain and cold wind, she moved poorly and would not show to advantage, otherwise she would undoubtedly have been higher on the list.

In challenge dogs, 15in. and under, that pretty beagle Royal Krueger took first. In challenge bitches Ava W. won. She is well known. In the open class Clyde took a blue ribbon. There were five entries in the open bitch class. Belle Ross, good in legs, feet and body, and in splendid condition, took first. Second went to Judy, who loses to Belle in body and running gear. Nibs, good in body but poor in muzzle, took third. Foxy, vhc., is light all over. In the puppy class The Pasha and The Czar, litter brothers and perfectly matched, took first and second respectively. The Pasha was in a little the best condition. Roup C., third, is light all over.

In the evening Harry Twyford and John Bateman were elected members of the club, and it was decided to begin the running of Class A., dogs 15in. and under, on the following morning.

TUESDAY.

The rain had ceased but the sky was overcast and a cold northwest wind was blowing. The party left headquarters at 7:45, and a short walk brought us to the hunting grounds.

First Series.

HUNTER—RING.—The first couple were ordered down on the edge of an oak grove, Hunter was handled by A. Parry, and Ring by T. W. Chapman. Ring at once ranged the wider and showed more dash and spirit than Hunter, who is a young dog of little experience and depended too much upon his handler. Working through the woods Ring gave tongue, but failed to find. After ranging for some time, Hunter trailed to a start. Ring was at his heels at once, but the scent seemed to be very poor on the wet leaves and neither dog followed well; there were some bad checks, and the driving was slow and unsatisfactory. Dogs tested for gunshyness and found all right. After being down 40m. they were ordered up and race given to Ring. The poor work was undoubtedly due to the water-soaked ground and strong wind.

TRICOTRIN—ROY K.—These dogs were cast off at 9:18 in oak scrub. Tricotrin was handled by D. C. Wixom, while G. E. Eska looked after Roy K. Tric ranged better than Roy, who depended entirely on his handler and showed little desire to hunt. Walking out of the oaks into a briar field Eska saw a rabbit in its form. Picking Roy up he threw him at the rabbit. The dog landed almost on the cottontail and ran him by sight at a great pace for a few yards and then stopped. Tric, called up, overran the track, circled, picked it up, ran about 100yds. and lost. Taken up at 9:40 and heat given to Tricotrin. Neither dog showed much spirit and the work done was very poor.

TONY WELLER—STORMY.—At 10:10 these beagles were cast off in a briar field, C. E. Eska handling Tony and Geo. Laick Stormy. Tony was all fire and hunt, but Stormy acted as if frightened by the crowd, ranged poorly and showed no wish to hunt. Tony gave tongue and trailed toward the spectators, but the rabbit was jumped by them before he had time to start it. Both dogs being called up, Tony took the track first, and together they drove the rabbit through the briars. Tony did most of the work, and Stormy showed but little life till he caught sight of the rabbit crossing the road. This put new spirit into him, and a pretty run followed, but Tony did much the best work whenever the rabbit made a fling. Ordered up at 10:55 and race given to Tony Weller. This heat was far better than those which had preceded it.

BILL NYE—RACER, JR.—Ordered down in a field of briars at 11:03. Bill, handled by his owner, W. H. Hyland, and Racer, Jr. by C. E. Eska. Both dogs started off with life and ranged well. A rabbit was jumped by Judge Dorsey and then dogs were called up. Bill took the track at once. Racer packed well, and together they did some fine driving till the rabbit made his fling. Both circled well, but Bill, making a beautiful cast, took the track, and during the rest of the race cut out all the work. Racer ran well and showed style and hunting sense in his work, but did not try to press to the front, seeming satisfied to follow. Bill Nye took the race after a half hour's run.

FLEETWOOD—FAIRY'S LEE.—Down at 11:40 in the briar field, Fleetwood looked after by F. W. Chapman, and Fairy's Lee by T. S. Field. Both started with life. Fairy gave tongue first and trailed prettily to a start. Fleetwood backed to him, but did not try to set the pace and was content to give tongue and follow. After some fine trailing by Fairy's Lee, the brace was taken off the rabbit, which, being but quarter grown, dodged here and there, leaving but little scent. Drawn away, the dogs worked in the thicket but failed to start. Taken up at 12:18, heat given to Fairy's Lee, who did much the best work all through the race.

SEDGEWICK—STORMY.—Sedgewick, the bye dog, was put down in edge of a swamp at 12:25 to run with Stormy, who had already run one heat, Sedgewick handled by D. C. Wixom and Stormy by his owner. Stormy started and did some splendid driving in the swamp, his beautiful voice ringing grandly. Sedgewick ran with him and tongued but little. The rabbit was lost in the wet swamp, both dogs giving voice occasionally. This heat was very unsatisfactory, as nearly all the driving was in the thick brush, where it was impossible to follow the dogs and see which was doing the work.

A halt was now made for lunch under some walnut trees, and sandwiches and cider were very acceptable to the hungry sportsmen as they sat in picturesque attitudes on some very hard rocks. After consultation the judges decided to run the second series in the order reported below.

Second Series.

TONY WELLER—BILL NYE.—Tony was handled by C. E. Eska and Bill by Wm. Hyland. These fine dogs were put down at 1:55 in thick saplings. Coming out of the woods

into a pasture both worked carefully. Here John Bateman, who had followed all the heats and tired out many a younger man, jumped a rabbit. Both dogs being called up and started even, Tony took the track first, and in a short run to a stone wall, where the rabbit holed, did most of the work. Tony cast across the wall, but Bill trailed to hole and marked. Bunny was taken from the wall and dropped in the field. Tony hit the track off at once and did some pretty work, making all the running across the field to a stone wall. Here he marked a burrow in which the rabbit had gone to earth. Ordered up at 2:30 and heat given to Tony. Some beautiful work was done in this race in full view of the spectators.

Just as the dogs were ordered up, the rabbit holed by Tony dodged out and ran into the brush at foot of the hill.

FAIRY'S LEE—RING.—Ordered down at 2:45 and put on the track of the rabbit. Fairy took the track first, Ring harked to him, and well packed they ran bunny through the open field, first one and then the other leading. Ring did much better work than in the morning, showing fire and life. It was now late in the day, dry, and very hard trailing. With many checks they drove across the open, both doing well, but Ring a little more rapid in his work. Drawn back, they did some pretty driving down the hill to the railroad track, where they were checked and failed to find, though both tongued occasionally in the swamp. Ordered up at 3:13 and decision reserved.

TRICOTRIN—STORMY.—Put down at 3:24 in open pasture, both dogs handled by owners. Stormy showed much the greater vim and desire to hunt; Tric was indifferent and hunted listlessly close to his handler. After beating a number of fields, Stormy started a rabbit in a swamp and drove him among the spectators, when he took refuge under a stump. Judge Clark bolted him out. Tric took the track and did some rapid work across a mowing field to a barn, where the rabbit went to earth. Stormy meanwhile was at fault. Drawn away to new ground, Tric showed more life, but no game was put up. After being down nearly an hour, they were taken up to be put down again in the morning.

WEDNESDAY.

The morning dawned clear, frosty and still. The party got an early start, and seven heats were run during the day.

TRICOTRIN—STORMY.—were put down at 7:50 to run off their undecided heat of yesterday. Both were handled by their owners, and worked through Demorest's orchard and a swamp to a sunny hillside, where Stormy did some pretty and rapid trailing, but failed to start; Tric followed him, but was mute. Back again in the swamp Tric got on to a rabbit and alone hustled him across the railroad track into the open woods. Stormy, put on with him, drove for some distance, doing all the work. Taken up at 9:00 and race given to Stormy, who, throughout the heat, had shown the best hunting qualities; he has a splendid voice, but is inclined to use it when there is little need.

The second undecided heat of Tuesday was next disposed of, and

FAIRY'S LEE—RING.—were laid on at 9:20 in a swamp. The dogs were handled by their owners, who worked them out of the swamp on to a side hill covered with sumach bushes. At first the dogs moved slowly, Ring having a trifle the best of it in ranging. A rabbit was started by that master of the art, John Bateman, and the dogs were called up and put on together. Neither took the track quickly, but after casting here and there Fairy's Lee hit it off with Ring at his heels. On the hillside both did pretty and stylish work, but finally lost in the open field. The handlers now did a little hunting for themselves, and bolted the rabbit from a stone wall. Both dogs were hot on, tonguing beautifully and running in full view. It was a most exciting race. Fairy's jolly handler mounted a large stump, and while he did some wonderful high kicking, called to his beagle: "Sing to him, Fairy, sing! Now the Fairy's talking! See the Fairy, hear him sing!" Both were hunting well when ordered up. Down 45m. and decision reserved.

TONY WELLER—RING.—were the next couple and were loosed at 10:20 on the sumach hillside. F. W. Chapman looked out for Ring and C. E. Eska steered Tony to victory. Both dogs got away full of fire and hunt, and after ranging for a few minutes were called to a brush heap where a rabbit had been jumped. After a little casting they took the trail together. Going down the hill Tony did the best work, but in the swamp Ring was leading as they went out of sight in the brush. Here on account of the bottomless mud it was impossible to follow closely, but they were heard merrily tonguing for some minutes. There was a check at the railway, but Tony crossed, cast in the swamp and carried the track away in fine style. Here a big cur took a hand in the running and spoiled the sport for a few minutes, but he was soon left by the beagles. Both cast prettily; Tony caught the scent first and did a beautiful piece of work, following the track through a culvert under the railroad and led into the swamp. Ring meanwhile was at fault on the other side, but backed to Tony, and together they drove the rabbit to the point of starting. Tony doing most of the work. Taken off at 11:55 and heat given to Tony Weller.

The judges now made the awards in Class A: Tony Weller first, Ring and Fairy's Lee equal second, Bill Nye and Stormy equal third.

Class B—For Bitches 15in. and Under.

The running now began in Class B, and the first brace ordered down was

LADY LEE—FANNY RACER.—Lady was handled by her owner, A. Parry, and Fanny by C. E. Eska. They beat through a pasture into the woods, where the spectators kicked out a rabbit. The dogs were called up and started even. Lady took the track first, Fanny backed well, and in open set the pace. Both worked well, showing great style and eagerness. While at fault on the side hill both backed to a hand driving near by. This dog was caught, and the bitches working beautifully drove a rabbit downhill into the swamp, and after some minutes brought him back again. Up after a half hour's run and heat given to Fanny Racer, who was a little the fastest and very quick on the turn.

FLORA K.—DORA were cast off at 12:15 on the hillside, where the last couple were taken off the rabbit. Dora was handled by Geo. Laick, and Flora by C. E. Eska. The dogs made bad work of it, but Flora finally picked up the track and with Dora did a little driving, but soon lost. Both worked with some little energy and gave tongue occasionally, but accomplished nothing. Ordered up in a half-hour and heat given to Flora K.

This finished the racing for the morning, and after lunch on the hill

GYPSY FOREST—NELLIE were loosed at 1:25, Gyp handled by A. Parry, and Nellie by D. C. Wixom. Both started off well, showing good action and style. In the woods Mr. Wixom saw a rabbit under a tree, called up his dog and poked puss out with his gun. Gyp was near, and both dogs went off at a terrific pace. It was nip and tuck between them, and altogether the fastest thing yet seen. They were at fault at a brook, but Gyp picked up the track first and in the open field cut out the work. When checked, Gyp circled wide, showing judgment and hunting sense, while Nellie potted trying to work every inch of the track. The rabbit was then jumped by some of the party and both beagles, hot on, ran to a final loss. Working through some young wood, both ranged well, but Gyp covered the most ground. It was now very dry and many likely places were drawn blank. At last a rabbit jumped from the weeds. The dogs took the track at the same moment, but lost after a short run. Soon

after Judge Dorsey saw a rabbit, and calling the dogs started it in sight of both. As it jumped Gyp came within an inch of catching it, and both beagles dashed down the hill at great speed, Gyp working two turns and Nellie one. Hard pressed, the rabbit took refuge in a wall, and both dogs marked the hole. After being down two hours, they were taken up to be put down again in the morning.

BELLE OF ROCKLAND—COUNTS JUNO.—Belle was in charge of C. E. Eska and Countess was handled by F. W. Chapman. Both started badly and with little vim. Mr. Wixom bolted a rabbit from a thicket and Juno picked up the track and ran it alone, but Belle was too fond of her handler to leave him and refused to take the track. Taken up at 4. Countess Juno won.

This finished the day's sport and all returned home thoroughly tired out. A delicious game supper, in which rabbit and quail figured, put every one at peace with himself and the world.

THURSDAY.

The morning was clear and frosty, but in the afternoon rain fell and interfered with the sport, only three races being finished.

NELLIE—GYPSY FOREST were put down in Demarest's orchard at 8 to finish the undecided heat of yesterday. Both started merrily, Gyp ranging the better. On the sumach hill Nellie tongued, and both dogs followed the trail for some distance, but it came to nothing. Judge Dorsey then bolted a cottontail from a bunch of grass. Nellie took the track first, but Gyp did most of the work and trailed to hole and marked, with Nellie close behind. The driving was slow and difficult. An unsuccessful attempt was made to get the rabbit. Then the crowd sang "The Suwanee River," and as bunny did not come out even then, he was probably killed by the first note. Drawn away, much good country was hunted without result, but at last both dogs got on a rabbit and hustled him through the thickets and briars at great speed, Gyp setting the pace but with Nellie close behind. Heat given to Gyp after being down three hours. This suit only confirmed the opinion formed yesterday, and the race should have been decided long before it was.

JUNE ROSE—TONE.—Tone, first prize winner in last year's trials, was cast off with June Rose at 11:10, both dogs handled by their owners. June showed the most vim and found after a few minutes work. Tone was on at once and away they went at a killing gait, leaving judges and handlers to smash their way through the briars as best they could. At the road the rabbit made a fling which June worked very prettily and flew down the hill, with Tone a good second. Checked, Tone cast well and hit it off; June on at once and together they did some rapid work up the hill, both dogs keen. In a long run each worked many flings without much advantage to either. Taken up at 12:20 and race given to June Rose. Fine work was done by both dogs, but June was the faster and in much better condition for hard work.

This heat ended the first series and the judges selected the couples to run in the second series as reported below:

Second Series.

COUNTS JUNO—FLORA K. were put down at 12:10 in a pasture, Messrs. Chapman and Eska handling them. Juno moved slowly without vim, while Flora hunted at a snail's pace, yapping occasionally. Up at 1:05 and the walk given to Flora K.

FANNIE RACER—GYPSY FOREST were set loose at 1:55 in edge of woods immediately after lunch. Gyp did not move with her usual style, showing her long, hard race of the morning; Fanny was full of life and spirit. Much ground was covered without finding fur. Rain began to fall as we re-entered the familiar brier field, where a half-grown rabbit was seen by Mr. Parry. It took two pokes of a stick to start him. Both dogs took the track but the driving was difficult, as the rabbit was sulky and would do nothing but dodge. The rain now came down in earnest and a start was made for home without deciding the race.

FRIDAY.

The rain had ceased and the sky was cloudless. The party made a late start, as it was almost impossible for the tired hunters to get away from their beds. There were many false starts and much babbling, but it was no use, they could not lead off. Only five heats were run, as game was very difficult to find.

GYPSY FOREST—FANNY RACER.—These stylish, pretty beagles were put down at 8:25 in Demarest's pasture. Both worked with spirit, and getting out of the field were put on a rabbit in oak underbrush. The leaves had not yet fallen, and in a few minutes judges, handlers and the few spectators who followed the hounds were dripping wet. Gyp went off in the lead, doing most of the work, though Fanny got in a turn now and then, but was not running in the form she displayed yesterday. Ordered up at 8:55 and race given to Gyp. Fanny is young and inexperienced, but will be heard from later.

TONE—NELLIE were laid on at 9:30 in our old stamping ground, the brier field. Both got away poorly, seeming stiff after yesterday's hard runs, but soon warmed to their work and moved better. Tone trailed prettily to a start. Nellie was with her at once, both hot and eager. At first Tone did the better work, but Nellie improved, and during the last of the race had everything her own way. Taken up after a half hour's run and heat given to Nellie. This was a very fast race and difficult to follow. Tone is out of condition; when in shape she is a hard one to beat.

Final Series.

JUNE ROSE—GYPSY FOREST.—Cast off at 10:15 in the briars, to run for first prize; both handled by their owner, A. Parry. Together they trailed prettily to a start in a bull brier thicket. Leading alternately, they pressed the rabbit at a great pace through the thicket, both dogs full of snap in spite of the thorns. But they could not carry the rabbit out of the bull briars, and the whole run covered but little ground, the rabbit constantly twisting, turning and playing all his tricks. Thrown off several times, they cast well, picked up the track, and were running when ordered up at 10:55. Race and first prize given to June Rose, who did the best work during this pretty run. Gypsy Forest took second prize.

FANNIE—TONE.—These beagles were put down at 11:10 to determine the third prize winner. Fannie opened first, trailed finely, but lost. The spectators started a rabbit and both dogs were called to the track and failed to take it for some minutes; then, tongue once or twice and lost in the briars. Called away, a long stretch of country was drawn blank. At last a rabbit was started in the open oak woods. Fannie did some pretty hunting, and led at first, but at a turn circled the wrong way, and Tone hit it off and had the rest of the race to herself. Tone did better work than in the previous heat. Up at 12:40 and race given to Tone. As Nellie had previously beaten Tone, the result of this race gave her third prize.

Class C—Dogs 13in. and Under.

ROYAL KRUEGER—CLYDE.—These dogs were down at 12:50 in the briars. Clyde handled by A. Perry and Roy by D. C. Wixom. Both started with style and dash, moving about alike. Roy gave tongue where the previous brace lost their rabbit, Clyde tackled with him and they did some pretty hunting, but failed to find. Ordered up at 1:27 for lunch. Cider, sandwiches and hot baked beans made the Bostonians feel at home again. Down once more at 2:10. Gun fired to test the dogs and the report started a rabbit. Both dogs did some fine hunting, but Clyde was faster and cast better when checked. The ground was very dry and trailing difficult, and the rabbit was finally lost. Up at

2:45 and heat and first prize given to Clyde; second to Royal Krueger.

Class D—Bitches 13in. and Under.

First Series.

BELLE ROSS—JUDY.—Cast off at 2:50 in briars. Belle handled by A. Parry and Judy by C. E. Eska. Judy was timid and bolted back to her box, but when brought up the second time did some ranging, but was under no control. For an hour and a half the country was scoured, but no fur or sign of it was found. Up at 4:25 to be put down again in the morning.

In the evening the field trial committee decided, in order to finish the field trials as soon as possible, to run the puppies with C. S. Wixom as judge; at the same time the regular judges could go on with Class D.

SATURDAY.

Before daylight the party were astir and hunting grounds were reached at an early hour. The sky threatened rain at sunrise, but later the sun broke through the clouds. Mr. Vredenburg, secretary of the A.K.C., accompanied the party, and saw the poorest sport of the week.

BELLE ROSS—JUDY at 6:50 were taken into oak scrub to finish undecided heat of yesterday. Judy, a timid little thing and unacquainted with her handler, was kept in chain till the rabbit was up, so as to give her every possible chance to show her quality. Put on a heat track with Belle, Judy refused to hunt. Belle ran prettily and was given the race. Judy is said to be a fine hunter, and it was unfortunate that her owner could not be present to handle her.

TOXY—AVA W.—Put down at 8:03 where last brace were taken off. Ava moved merrily and hunted well. She trailed through an open field and worked a fling very nicely, giving tongue in a beautiful pleading voice clear as a bell. Toxy seemed frightened by the crowd and worked poorly. Ava W. won in twenty minutes. Both handled by their owners.

NIBS—ROMP C.—Set loose in the briars at 8:23. Nibs, energetic and gay, hunted with spirit. Romp made little or no effort to find. A cow smashing through the bushes put up a rabbit and both dogs were put on the track. Nibs did all the work. Up at 9:13 and race given to Nibs. She is a very small beagle, but shows snap and life in her work.

Final Series.

NIBS—BELLE ROSS.—Laid on at 9:21 and moved about alike, showing spirit and hunting sense. Two very small rabbits bolted, but neither dog could do much with them, as the scent lay poorly and the rabbits refused to do anything but dodge. Taken up in a half hour. The judges gave equal firsts to Nibs and Belle Ross. Ava W. took second and Romp C. third.

Class E—Puppies.

There were but three entries present in this class, Juno having failed to appear, and they were run together.

ROMP C., THE CZAR, THE PASHA.—These pups were put down together at Blauvelt's at 7:11, C. S. Wixom acting as judge. They started no game and neither was very ambitious to hunt, but Romp C. showed a little more vim than the others and was given first. The Pasha second and the Czar third. The poor work done by these pups shows that the age limit should be extended or the class abolished.

The Absolute Winner.

The races to determine the absolute winner now came on, and better sport was expected. Romp C. Ava W. and Belle Ross were withdrawn. The judges first ordered down **CLYDE—TONY WELLER.**—They were cast off at 10:04 in the briars, Clyde in charge of A. Parry and Tony looked after by Harry Twyford. They started well, both working prettily and full of fire and hunt. Tony was the first to give tongue, Clyde trailed with him, but mute; the trail came to nothing. Other country was hunted, both working hard and occasionally finding scent enough to give tongue, but failing to get away; one promising track was carried into the swamp, but lost there. Then followed a long and tedious hunt for fur, but at last Judge Dorsey got up a rabbit from the sunny side of a rock. The dogs were put on together, Clyde hit the track a trifle in advance of Tony and going up the hill had the best of the race, working three turns in succession. Tony then settled down to business and during the rest of the race his work was superior to Clyde's. Each dog was running as if for his life, but Tony was the speedier and cut out most of the work, though Clyde took a lead in it now and then. Up at 11:47 and race given to Tony Weller.

TONY WELLER—JUNE ROSE.—Down at 11:53 on trail where last brace were taken up. Tony had had work enough to excite his best efforts, while June, just taken from her box, started without her usual life. Tony picked up the track at once and in the open woods caught a couple of turns in great style, and led away at a clipping gait through the swamp and up the hill. June did not hark to him, and before she knew what was going on was far in the rear and out of the race. Up at 12:06 and race given to Tony Weller, who thus became the absolute winner. Three hearty cheers were given for Tony, and the National Beagle Club trials for 1891 were at an end. Tony Weller (Keno—Fly) is a white, black and tan dog, whelped March 24, 1885, and is the property of Wm. H. Child. Tony is well known on the bench, and in these trials proved himself a splendid field dog. He is a rapid, energetic and stylish worker, possessed of fine judgment and hunting sense.

The judges announced that the specials were awarded as follows:

The Forest Beagle Kennels, with Hunter, June Rose, Gypsy Forest and Lady Lee, won the specials for the best kennel of four on the bench and in the field. With Hunter and June Rose they won the special for best brace on the bench.

Glenrose Kennels, with Ring and Tone, won special for best brace, dog and bitch, in the field.

Pocantico Kennels, with Stormy, won special for dog with best voice.

Hornell-Harmony Kennels, with Ava W., won special for bitch with best voice, and with Nibs special for dog winning the greatest number of heats owned, entered and handled by breeder.

Wm. H. Child, with Tony Weller, wins the club medal and the special for best trailing.

SUMMARY.

Entrance fee in each class \$5. Twenty-five dollars added in all classes where there are ten or more entries. First prize 40 per cent., second 30 per cent., third 20 per cent., of entrance fees and added money.

Class A—Dogs 15in. and Under.

First Series.

Glenrose Beagle Kennels' Ring beat Forest Beagle Kennels' Hunter.

Hornell-Harmony Kennels' Tricotron beat Rockland Kennels' Roy K.

Wm. H. Child's Tony Weller beat Pocantico Kennels' Stormy.

Wm. H. Hyland's Bill Nye beat Rockland Kennels' Racer Jr.

Edwin Fields' Fairy's Lee beat F. F. Ogiers's Fleetwood. Pocantico Kennels Stormy beat Hornell-Harmony Kennels' Sedgewick (a bye).

Second Series.

Tony Weller beat Bill Nye. Fairy's Lee and Ring (dead heat). Stormy beat Tricotron.

Final Series.

Tony Weller (Keno—Fly) beat Ring (Victor C.—Try R.) and won first prize.

Ring and Fairy's Lee (Lee II.—Fairy) were given equal second.

Bill Nye (Rip Van Winkle—Queen Nellie) and Stormy (Royal Krueger—Pussie) were given equal third.

Class B—Bitches 15in. and Under.

First Series.

Rockland Kennels' Fanny Racer beat Forest Beagle Kennels' Lady Lee.

Rockland Kennels' Flora K. beat Pocantico Kennels' Dora.

Forest Beagle Kennels' Gypsy Forest beat Hornell-Harmony Kennels' Nellie.

F. F. Ogiers's Countess Juno beat Rockland Kennels' Belle of Rockland.

Forest Beagle Kennels' June Rose beat Glenrose Beagle Kennels' Tone.

Second Series.

Flora K. beat Countess Juno.

Gypsy Forest beat Fanny Racer.

Nellie beat Tone.

Tone beat Fannie Racer.

Final Series.

June Rose (Frank Forest—Juno II.) beat Gypsy Forest (Frank Forest—Sue Forest) and won first prize.

Gypsy Forest won second.

Nellie (Rattler—Rosebud) won third.

Class C—Dogs 13in. and Under.

First Series.

Bradford S. Turpin's Clyde (Frank Forest—Sue Forest) beat Hornell-Harmony Kennels' Royal Krueger (Bannerman—Cora) and won first prize.

Royal Krueger won second.

Class D—Bitches, 13in. and under.

First Series.

Bradford S. Turpin's Belle Ross beat W. H. Ashburner's Judy.

Hornell-Harmony Kennels' Ava W. beat Glenrose Beagle Kennels' Toxy.

Hornell-Harmony Kennels' Nibs beat Glenrose Beagle Kennels' Romp C.

Final Series.

Belle Ross (Ross W.—Cricket) and Nibs (Royal Krueger—Midge) won equal first.

Ava W. (Royal Krueger—Midge) won second.

Romp C. (Tony—Skippy) won third.

Class E—Puppies.

Glenrose Kennels' Romp C. (Tony—Skippy) won first.

Rockland Kennels' The Pasha (Mac—Fanny K.) second.

Rockland Kennels' The Czar (Mac—Fanny K.) won third. BRADLEY.

CENTRAL FIELD TRIALS.

LEXINGTON, N. C., Monday, Nov. 30.—There was every promise on Saturday last that we should have fair weather to commence these trials in, but even down here the weather indulges in vagaries that upset the best laid plans. Yesterday opened with a snowstorm, and toward night a heavy frost set in, so that all thoughts of running to-day had to be abandoned. There are several visitors here and the full complement of handlers. Those present are Messrs. P. H. O'Bannon and Harry Smoot, Sperryville, Va.; R. L. McCook, New York; Bayard Thayer, Boston, Mass.; Captain Wainman and F. L. Bevan, Ashboro, N. C.; S. L. Boggs and Joe Lewis, Pittsburgh, Pa.; D. A. Upson, Cleveland, O.; J. M. Tracy, Hempstead, L. I.; N. Wallace, Waterbury, Conn.; C. C. M. Hunt, Palmyer, N. Y.; J. H. and J. A. Hunter, Sanborn, Ind.; S. C. Bradley, J. B. Stoddard and John White, Thomasville, N. C.; J. M. Avenet, Hickory Valley, Tenn.; Charles Tucker, Stanton, Tenn.; D. E. Rose, Lawrenceburg, La.; Charles Barker, Ravenna, Neb.; John Lewis, Ramsey, N. J.; E. T. McMurdo and C. E. Buckle, Charlottesville, Va.; S. J. McCartney, E. I. Martin, Wilmington, Del.; Dr. Rowe, Chicago, Ill.; Dr. Jarvis, Claremont, N. H.; B. Waters, V. M. Haldeman and Major J. M. Taylor, and Angus Cameron, England.

The draw for the Setter Derby took place this morning in the club room. The order of running is: E. J. Meyer's Prima Dona with Blue Ridge Kennels' Hope's Mark; J. K. Garnet's Ned Noble with N. T. Harris's Wun Lung; Royal Phelps Carroll's Iza with Blue Ridge Kennels' Landress; W. B. Meares, Jr.'s, McMurdo with Harry Northwood's Amy Robsart; W. F. Burdell and J. D. Poston's Latonia II. with J. M. Avenet and Bayard Thayer's Camille; Pierre Lorillard, Jr.'s, Lora with Blue Ridge Kennels' Bob Cooper; Randolph Kennels' Randolph's Roy a bye. The club has secured another farm in place of the Smith farm, that was so far away from town. This is the Hargreaves farm, and the ground is excellently adapted for the trials. Game is plentiful and there is little brier and thick cover, making it an excellent place for the running of the Derby Stakes. Jack Frost still holds the soil in his firm grip, but the sun melted most of the snow during the day, and no doubt a late start will be made in the morning. H. W. L.

[Special to Forest and Stream.]

LEXINGTON, N. C., Dec. 1.—The trials commenced this morning with a late start in delightful weather. Snow nearly all gone. In the first heat Hope's Mark had the better range and hunted with more judgment than Prima Donna and did best work on birds; neither did well toward the finish. Wun Lung ran rings round Ned Noble, and had the best of it on birds and was steadier. Iza had better range and speed than Landress, but little judgment; Iza had little the best of it on birds, but neither are likely to be seen in finish. Amy Robsart showed better work than McMurdo, the latter breaking in several times, and will hardly remain in. Latonia was lame when called to run with Camille; hurt her shoulder in wagon. Camille then ran with Randolph's Roy, Camille under little control and starting with a long chase after hare; neither steady to wing. Afterward Roy had slight advantage on birds, but Camille showed best pace and range. Lora and Bob Cooper will both stay in; they ranged well and were about equal on birds. This ended first series. Judges have just announced that Bob Cooper, Wun Lung, Hope's Mark, Amy Robsart and Lora remain in, and Iza, Camille and Ned Noble in reserve.

The Pointer Derby draw resulted: Jas. E. Mahaffy's Prince, Jr., with Charlottesville Kennels' Mainstay; Hunter Bros.' Black Wonder with J. R. Daniels's Promotion; Charlottesville Kennels' Outcast with W. G. Brokaw's Bob; Charlottesville Kennels' Exile with Beresford Kennels' Dauntless.

We regret to hear that Mr. Thomas Statter, of Manchester, England, whose name is well known on both sides of the Atlantic as one that was long identified as an owner and breeder of some of the most celebrated pillars of the stud in the Laverack setter, is now a confirmed invalid. To pass the time away he has written a book on pointers and setters, which will shortly be published. Such a book is bound to be interesting to the present generation, who have necessarily an imperfect knowledge of the earlier dogs to which they delight in tracing back the pedigrees of the dogs they own to-day—Rhobe, Moll, Blue Dash and all the rest of them.

LORD CLOVER'S PEDIGREE.

Editor Forest and Stream:

When compiling the "Prize Pugs of America and England," I had even better facility for obtaining information regarding prize pugs than the owner of Lord Clover can possibly command, yet I failed to obtain any reliable information regarding champion Little Dorrit, and came to the conclusion that such a dog was a myth, hence the curtailing of the pedigree. Of course I was in possession of a pedigree advertised by a former owner of Lord Clover, which gave champion Little Dorrit as his grand dam, but I did not consider such information reliable. In fact Lord Clover is not the grandson of champion Little Dorrit. There is not now and never has been any champion Little Dorrit, and he who advertises a pedigree which includes such a dog makes a great deal more serious breach of the rules which should govern dog breeders than would result from curtailing a disputed pedigree.

I am glad to see, however, that our friend comes down to plain Little Dorrit in his last letter. Let him stick to that and I shall feel that the "Prize Pugs of America and England" has accomplished something toward the end for which it was compiled.

With respect to the alleged discrepancies in the "Prize Pugs of America and England," pointed out in our friend's letter, I would just say that if he read with as much intelligence as he appears to write, he would scarcely have attempted to find fault. He claims that on page 14 I give one pedigree for Stingo Sniffles and on page 130 a different one. Now, as a matter of fact, on page 14 the pedigree mentioned is in a quotation from the English *Kennel Gazette*, and is printed between quotation marks, and the error contained therein is not mine. Moreover, the quotation does not come under the head of pedigrees, and an intelligent reader would never look for a pedigree in that portion of the book, which refers to the origin of the pug generally.

It would be equally clear to an intelligent reader that Little Dunt, mentioned in Rustic Queen's pedigree, is a printer's error, and should be read Little Dorrit, and more especially is this clear if Rustic Queen's dam What's That's pedigree is turned to on a subsequent page.

I am glad to find that our friend, who has evidently been straining himself in the effort, has been able to find so little real fault with the "Prize Pugs of America and England." It is very evident that he is sore because the pedigree of his dog has been called into question, and this in the more noticeable from the way in which he attempts to hit off his reference to my editorial career with the scissors; but this, too, falls flat, for, on reference to the "Prize Pugs of America and England," he will find the following sentence: "There is in this work very little which the writer claims as original, except the method of compiling information."

Yes! no doubt of it he is sore! He should not blame me so much, though, but turn his attention to those who attempted to find the dog a "champion" granddam on his maternal side. Had it not been for the one first prize which Lord Clover was particularly lucky in winning, even his curtailed pedigree would never have appeared in the "Prize Pugs of America and England."

M. H. CRYER.

PHILADELPHIA, Nov. 30.

THE PEARL OF PEKIN INCIDENT.

DENVER, Colorado, Nov. 23.—*Editor Forest and Stream:* In your issue of the 19th inst. Mr. W. Wade takes issue with Mr. J. H. LeMoine, in regard to the language used by the latter in commenting upon the Pearl of Pekin vs. Chicopee Lass controversy.

The rule governing the riding over of an opponent's dog was made to cover such cases as that of Mr. J. J. Edmonds' riding over Pearl of Pekin in her course with Chicopee Lass. Had some stranger ridden over Pearl, Mr. Bartels (the owner of Pearl) would have been and should have been the one to suffer thereby, but as Mr. Edmonds (his opponent) was the one to ride over Pearl, Mr. Bartels was not the one who should have suffered by the accident. On the contrary, Mr. Edmonds should have suffered the consequence of his own act, even though it was an accident, and should never have allowed his opponent to suffer by any act of his own, even though it be an accident. Neither law nor equity will in such a case allow the opponent, an unoffending party, to be the one to suffer. For this reason the rule was made, and it was made mandatory: "The course shall be given to the owner of the dog so ridden over, etc.," is certainly mandatory. There is no room for discussion, as to the meaning of the rule, and when the majority of the Executive Committee of the American Coursing Club sustained Mr. Edmonds, they knowingly rode over the rules which they were elected to enforce.

Accident cuts no figure, for the rule was made for the purpose of imposing the penalty upon the proper party, whether the riding over be an accident or not. In a case of this kind the Draconian rule (as Mr. Wade is pleased to term it) works no hardships; it merely puts the hardship where it belongs—on the offending party and not on the injured party. Surely Mr. Wade would not expect the innocent and unoffending party to suffer by the act of an opponent, and have the offending party escape without a scratch, even though the act were unintentional.

When I consider how plainly the rule reads and how imperative and mandatory it is, I must agree with Mr. J. H. LeMoine in denouncing the decision of said executive committee as a "most unrighteous decision" and an "outrageous departure from honest judging."

I notice that Mr. Wm. Green, who judged the Great Bend meet of 1889, and who is conceded by the leading coursing men of the country to be its best judge of coursing, in *Turf, Field and Farm* of the 20th inst. takes the same stand that Mr. LeMoine has taken, to wit: Mr. Edmonds' intent, cuts no figure. How any one can construe the rule otherwise is beyond my comprehension. It is certainly not necessary to be a lawyer to understand the rule; any one able to read ought to be able to understand it. It is very evident that Mr. Wade is no lawyer, as he has informed us. Had he been he would have read the rule and would not have called Mr. J. H. LeMoine to task for stating the truth, and calling spades spades.

JOHN H. GOWER.

DOG CHAT.

ON Tuesday evening, Nov. 24, the handlers and visitors present at the Irish setter trials at High Point, N. C., were invited to a little social reunion in the dining room of the hotel. Speeches were made by nearly every one present, and whether it was the juice from the apple that steamed in the *Item* trophy or the enthusiasm developed by the success of the trials, we do not know; but certain it is that considerable oratorical ability was displayed by one and another. This led Mr. John White, in his inimitable style, to tell us that he was certain the emancipation of Ireland was now an assured fact, although this did not interest him personally so much, as he was of Norman descent himself. Then Mr. Stoddard, who had acted as one of the judges, made a humorous break that we who are acquainted with this veteran handler will appreciate. The joker rose to his feet and opened his speech with, "I never had but one Irish setter, and that I shot." This brought down the house, but he saved himself by claiming it was an accident. Tom Aldrich, in his dry, humorous way, told us how he had started the Irish setter trials by running his dog in the first heat. The vice-president took the chair and Mrs. Jarvis and Davis both spoke feelingly and to the point on the red dog, and altogether it was a very pleasant two hours that we spent.

We have received the premium list of the dog show to be

held by the Rhode Island Poultry Association, Dec. 17, at Providence, R. I. The classification is liberal, sexes being divided in all breeds. The prizes are \$3 and \$2 in every class, and each breed has a special of \$1 for the best. Several specials are given in cups and money. The entry fee of \$1 and \$1 kennel fee is, however, rather too much for the amount of prize money offered. Entries close Dec. 12 with Mr. R. G. Davis, Box 1061, Providence, R. I. It is intended, we believe, should this little show stir up enough interest among Rhode Island fanciers, to form a kennel club and apply next year to the A. K. C. for admission. There are numerous members of dogdom in this section of the country, and there should be little difficulty in holding a good show in Providence, especially as its close proximity to Boston would draw a big entry from the city of culture.

Mr. Pritchard, manager of the Fleur City Kennels, writes us enthusiastically about their new mastiff Cardinal Beaufort. He is making up into a grand dog, his hocks, about which there was some doubt, having come all right, and altogether this country seems to have agreed with him; and it is intimated that their Ilford Chancellor must look to his laurels. It will be remembered that Cardinal Beaufort was a prize winner in the best company on the other side before Mr. Moore purchased him for Mr. Whitney.

The proprietor of the Menthon Kennels will offer at the coming New York show a free service to Lord Bute to the best American-bred St. Bernard bitch, and for the second best a free service to Lord Thorndale, or by paying \$65 the service of Lord Bute can be secured instead.

When we met Mr. Roger Williams at the Lexington, Ky., show he told us that he had just shipped a greyhound pup to Dr. Van Hummel and expatiated on its merits to some extent. He was not far wrong, for that was Van's Peter, that afterward won the Great Bend Derby with only three weeks' preparation.

The Central City Kennel Club, of Jackson, Mich., held its annual meeting in the parlors of the Commercial Hotel and elected officers as follows: Pres., Dr. Edwin L. Kimball; Vice-Pres., S. H. Slifer; Sec'y, Chas. H. Ruhl; Treas., Chas. W. Sarvis. A vote of thanks was tendered Mr. Sarvis for the successful and entirely satisfactory manner in which he superintended the bench show last year, and he was unanimously chosen to serve as superintendent of the bench show to be held Feb. 16 to 19 inclusive. Mr. Sarvis, through his intelligent supervision of last year's show, made many friends for the club.

As a result of his advertisement in *FOREST AND STREAM*, Mr. R. D. Stocking has sold all his dogs and he wishes us to say that "those not receiving answer to their inquiries will know why."

Among the new kennel ads this week are the following offers for sale: W. H. Hyland setters; C. R. Raynor, setters; Will Allen, pointers; 988 Prospect avenue, setters; 173 Bergen avenue, St. Bernards; Prairie Mound Kennels, setters; Dana Rhodes, setter; S. B. Bowen, mastiffs; John P. Barnard, bulldogs; Box 70, beagles; Ray Hildebrandt, beagle; H. F. Littlefield, collies; H. Fred Church, terriers; D. A. Goodwin, setters; C. T. Brownell, setters; P. H. Hacke, Barzois; Dr. Lordy, setters; W. F. Foss, setters; Edward Lever, terriers; J. G. Glover setters; Jos. Baird, setters; Janitor, pointer; Geo. W. La Rue, setters; F. A. wants two setters.

In the Albany suit brought by George B. Gallup against August Belmont and other members of the American Kennel Club for libel, the General Term on last Monday gave judgment for the defendants.

Wife—"My dear, that horrid man next door has killed the dog."

Husband—"Well, never mind, my dear, I'll get you another one some time."

Wife—"But it wasn't my Fido that he killed; it was your hunting dog."

Husband (wildly)—"Where is my gun?"—N. Y. Herald.

THE "SIBERIAN BLOODHOUND"

TREATOR, Ill., Nov. 21.—*Editor Forest and Stream:* In view of the discussion regarding the Massachusetts law, it may be interesting to many to know the origin of the so-called "Siberian bloodhound." Some twenty years ago Mr. George E. Stevens first introduced to the general public a number of great Danes, which he imported for use in an "Uncle Tom's Cabin" company. He pictured them on his bills as great ferocious monsters, with red mouths and blood dripping lips, in pursuit of Eliza Harris. To further thrill the public he called them "Siberian bloodhounds." The name originated in his own fertile brain and was purely the inspiration of a theatrical manager, who was seeking something sensational for advertising purposes. These animals heavily chained and muzzled he paraded up and down the streets in the different cities he visited. Other enterprising managers soon followed his example, and within a few years every place of any importance had been introduced to the great "Siberian bloodhound." It is not to be wondered at that an ordinary legislature made the mistake of believing that these dogs lived on raw human blood.

Mr. Stevens now lives at St. Joseph, Mich., and while he has discarded the "Siberian bloodhounds" and "Uncle Tom's Cabin" he maintains a kennel of sporting dogs and manages a theatrical company of a different kind. J. W. FORNOF.

CASHIER'S WINNINGS.—Cincinnati, Nov. 2.—*Editor Forest and Stream:* If Matthew Henry had been prompt and had nerve enough he could have won some money by accepting my offer to bet that Cashier was eligible to challenge class in pugs at Lexington. Too late now, as per letter from Mr. A. P. Vredenburg, dated Nov. 17, the American Kennel Club has decided that under Rule 18 Cashier was not. Rule 18 reads that "in estimating number of prizes a dog has won, with reference to competing in challenge class or not, the prizes won in open class shall be calculated up to 12 P. M. of day preceding the closing of entries of (next) show." This is a plain case of a "poor rule that don't work both ways," and shows the urgent need of a new rule to govern just such cases as Cashier's, where a dog has won his four firsts in open class and is honestly entitled to the win he made in challenge, looking at the matter from a common sense standpoint. One day deprives him of this, a close call and the first case of the kind I've heard of. The only grasshopper that was flying in the field had to hit me, but I can stand it; so can Cashier, and we'll both come up smiling for the next round just the same.—A. L. G. EBERHART.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application. *Potteen, Superba and Irene II.* By E. Lever, Philadelphia, Pa., for two wheaten and one red Irish terrier bitches, whelped Jan. 13, 1891, by Mars (Benedict-Irene) out of Sandy (champion Dennis-Sandycroft Vim). *Gem of Gem.* By A. W. Purbeck, Salem, Mass., for white and

red greyhound dog, whelped Aug. 23, 1891, by Gem of the Season (Ivanhoe-Fly II.) out of Lady Clara.

BRED.

Prepared Blanks sent free on application.

Maud Torrington—Gem of the Season. A. L. Page's (Stanley, N. J.) greyhound bitch Maud Torrington to A. W. Purbeck's Gem of the Season (Ivanhoe-Fly II.), Nov. 22.

Bernard Beauty—Count. G. W. Patterson's (Worcester, Mass.) rough St. Bernard bitch Bernard Beauty (Don-Gretna) to his Count (champion Apollo—champion Miranda), Oct. 2.

Dell—Count. G. W. Patterson's (Worcester, Mass.) rough St. Bernard bitch Dell (Everest—Squa) to his Count (champion Apollo—champion Miranda), Oct. 3.

Bayadere—Count. G. W. Patterson's (Worcester, Mass.) rough St. Bernard bitch Bayadere (champion Bayard—Brunhilda) to his Count (champion Apollo—champion Miranda), Oct. 10.

Kitty—Gem of the Season. W. Tozier's (Fairfield, Me.) greyhound bitch Kitty (Jack Keeley—Needle) to A. W. Purbeck's Gem of the Season (Ivanhoe-Fly II.), Nov. 15.

Wrinkle—Bradford Ruby II. Mrs. H. Hammond's (Chicago, Ill.) pug bitch Wrinkle (Joe II.—East Lake Virginia) to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), Nov. 11.

Rubie—Eberhart's Cashier. Mrs. B. Strauss's (Cincinnati, O.) pug bitch Rubie to Eberhart Pug Kennels' Eberhart's Cashier (champion Kash—Lady Thora), Nov. 23.

Gyp—Red Rover. S. Matteson's (Camden, N. Y.) cocker spaniel bitch Gyp (Prince Albert—Golden Floss) to T. J. Hook's champion Red Rover (champion Obo II.—Weststock Dinah), Nov. 12.

James Mortimer sends us the following list of visits to King of Kent, all of recent date, with the apt remark that the long list goes far to show that the popularity of pointers is not on the wane. The list is: J. E. Smith's (Dubuque, Ia.) Mollie Bang, Quick & Vickery's (Lewell, Mich.) Daisy, F. S. Webster's (Washington, D. C.) Lassie Bang, J. B. Wickery's (St. Paul, Minn.) Chicago Fawn, Robt. Leslie's (Lynd, Mass.) Belle Randolph, D. H. Moore's (Boston, Mass.) Babe Graphia, J. N. Pike's (Malden, Mass.) Clip, F. Larkin, Jr.'s (Sing Sing, N. Y.) Betsy Bracket, Wm. F. Taber's (Long Branch, N. J.) bitch by Mainspring, W. E. Field's (St. Louis, Mo.) Queen, Hempstead Farm's (Hempstead, L. I.) Woolton Game, Chas. B. Pine's (Bar Harbor, Me.) Mollie Bang, F. E. Lewis's (Tarrytown, N. Y.) Lady Tammany, Westminster Kennel Club's Westminster Sal, Westminster Kennel Club's Westminster Nan.

WHELPS.

Prepared Blanks sent free on application.

East Lake Virgie. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch East Lake Virgie (champion Bradford Ruby—Puss B.), Nov. 13, two bitches, by O. P. Klauke's Spokane (champion Kash—Lady Thora).

Bonnie. L. E. Noble's (Boston, Mass.) St. Bernard bitch Bonnie (Sir Herbert—Marvel), Nov. 3, eleven (five dogs), by Wheelock's Scotch Bonivard (champion Bonivard—Mirza).

Kathleen. E. Lever's (Philadelphia, Pa.) Irish terrier bitch Kathleen (Play Boy—Banshee II.), Nov. 18, seven (two dogs), by his Nailer (Badger Boy—Sandy).

Kitty. E. Lever's (Philadelphia, Pa.) black and tan terrier bitch Kitty (Ben—Fortune), Sept. 14, five (four dogs), by his Vortigern II. (champion Vortigern—Luce).

Lily of Gainsboro. A. W. Purbeck's (Salem, Mass.) greyhound bitch Lily of Gainsboro (Laocoon—), Nov. 18, seven (four dogs), by his Gem of the Season (Ivanhoe-Fly II.).

SALES.

Prepared Blanks sent free on application.

Lady Lass. Red Irish setter bitch, whelped Jan. 17, 1893, by T'm out of Baby Flora, by Seminoles Kennels, Philadelphia, Pa., to F. L. Abbey, Detroit, Mich.

Elo. Red Irish setter dog, whelped August, 1887, by champion Elo, Jr. out of Maggie H., by Seminoles Kennels, Philadelphia, Pa., to Dr. J. G. Ely, Hamburg, Conn.

Captain S. Red Irish setter dog, whelped 1889, by Seminoles Kennels, Philadelphia, Pa., to H. H. Harker, East Liverpool, O.

Dinah. Black and tan collie bitch, whelped Aug. 23, 1890, by Glenn out of Lady Trefoil, by Seminoles Kennels, Philadelphia, Pa., to W. Atlee Burrell & Co., same place.

Little Bonnor. Silver fawn pug dog, whelped Aug. 10, 1891, by Bonnor out of Ruby N., by Seminoles Kennels, Philadelphia, Pa., to A. O. Spencer, Ind.

L. W. Clute. South Ballston, N. Y., has sold: *Nellie D. Croxeth.* Pointer bitch, whelped March 9, 1887, by Count Croxeth out of Lo Faust, to Earle & McNaair, Elburn, Ill.

Lenox. Liver and white pointer dog, whelped June, 1889, by Fresh out of Lott, to C. H. Hookroy, Remington, Pa.

Bright C. Liver and white pointer bitch, whelped April 7, 1891, by Van L. out of Nellie D. Croxeth, to D. F. Perry, Columbus, Ind.

Liver and white pointer dog, same litter, to C. E. Morris, Wilton, Conn.

Bonny Croxeth and Thora Croxeth. Liver and white pointer bitches, same litter, to Wm. Geneste, New Orleans, La.

Lenor. White, lemon ticked, pointer bitch, same litter, to C. H. Miller, Spencer, Ind.

Madrell. Liver and white pointer bitch, same litter, to E. Bercher, New Orleans, La.

Lily White. White, ticked with lemon, pointer bitch, same litter, to E. K. Zimmerman, Johnstown, Pa.

Rex—Dircy whelps. Pug dogs, whelped April 18, 1891, one to F. C. Vuger, South Elberton, N. Y., and one each to Geo. Moore and J. E. Brownell, Schenectady, N. Y.

Gipsy. Pug bitch, same litter, to Mrs. T. Loveland, South Ballston, N. Y.

Rifle Range and Gallery.

THE REVOLVER CHAMPIONSHIP.

THERE are now two pending dates for shoots in the contest for the Amateur Revolver Championship of America. The first is at the rooms of the New York Pistol Club, No. 12 St. Mark's place (8th street), near 3d avenue, on Saturday evening next, Dec. 5. Any New York revolver shot wishing to compete under the conditions will find an opportunity on that evening. President Oehl, of the club, will shoot, as well as several members.

The next date already fixed is for Philadelphia, to be at the new Wurflein Rifle and Pistol Association rooms on the evening of Dec. 12. It is likely that some ten members of the association will then make scores. A representative of *FOREST AND STREAM* will be present and conduct the contest.

Other dates have been asked for at various points, and will be arranged as rapidly as possible. The Williamsport Club and the Wayne Club, both of Pennsylvania, have expressed a desire to enter the list with their revolver constituent, and will be given opportunity of rolling up scores.

With the opening of the shoots the suggestion was sent from *FOREST AND STREAM* to the various revolver making companies that they offer prizes supplementary to the main offer of the Winans trophy to the winner, provided the winning was done with a revolver of their make. The Colt Patent Fire Arms Mfg. Co. promptly responded from Hartford that they would be pleased to offer one of their dainty and accurate 22-caliber Lightning rifles as a gift to the man who takes first place with a Colt, and the Smith & Wesson Co., from Springfield, Mass., as announced in last week's *FOREST AND STREAM*, offers the winner a choice of revolver from their works, and, in explaining their gift, say:

"We impose no conditions in connection with the giving of a prize to the winner of the revolver championship. It is for our interests to encourage all such contests, and we have sufficient confidence in the accuracy of our revolvers to believe such inducements to use them quite unnecessary. Their own merits and record will determine this point to our satisfaction, and we do not consider it among the impossibilities that the winner may trace his ability to assume the title to the fact that he used the Smith & Wesson revolver in the contest."

As already stated, *FOREST AND STREAM* will add to the main prize a purse of \$100 cash, to go 50, 30 and 20 per cent. to the second, third and fourth place men respectively. This for the encouragement of the men who try but miss it by perhaps a fraction of an inch on the aggregate. With the opening of the shoots

interest has gone up with a bound. As it is desirable to bunch the shooting as much as possible, FOREST AND STREAM would esteem it a favor if shooters in other cities would write about dates, etc. Chicago, St. Louis and Boston should each furnish a batch of targets for the final measuring up.

NEW JERSEY RIFLE SHOOTING.

[Specially Reported for Forest and Stream.]

HEADQUARTERS OF CLUBS.

Miller R. C., 80 Hudson street, Hoboken.
Union R. C., 223 First street, Hoboken.
Friday Night R. C., 210 Washington street, Hoboken.
Excelsior R. C., 78 Montgomery street, Jersey City.
Seitz R. C., 354 Palisade avenue, Jersey City Heights.
Palisade R. C., 354 Palisade avenue, Jersey City Heights.

The Our Own Rifle Club, of Newark, N. J., held a most successful outing at the Newark Shooting Park on Thanksgiving Day. Shooting, bowling and athletic events were the features of the day. In shooting, first prize was captured by J. Coppersmith with a score of 67, and he was made the recipient of the "Old King" medal. C. Townsend followed with a score of 59, securing the second prize, a handsome silver medal. John Bandier secured the third prize and bronze medal with a score of 56; fourth prize was secured by F. Freisenhner, 41; fifth, G. U. Wiegman, 34; 6th, F. P. Laury, 37; seventh, J. Donnelly, 30; eighth, H. D. Tovering, 29; ninth, Alderman F. A. Freisenhner, 29; tenth, Gu. Goerk, 29; eleventh, Fred Knothe, 28; twelfth, A. O. Hunkizer, thirteenth, Marcus Furth, 8; fourteenth, Chas. Roh, 7; fifteenth, A. Mibler, 6. Members who shot on this target were asked to subscribe a prize valued at not less than \$1. A number of handsome prizes were distributed to the shooters.

Point target, first prize, G. D. Wiegman; second, John Bandier. The day's sports ended with desperate endeavors of the members to catch a lively pig. A fine dinner was served to the now thoroughly famished members and guests, who discussed it with a relish. It closed up a day of excellent sport. The club is now in very good standing and at present one of the leading clubs of Newark. The club's second team will shoot a match with the Putnam R. C., of the same city, at the Our Own's range, on Wednesday, Dec. 2.

EXCELSIOR RIFLE CLUB, Jersey City, Tuesday, Nov. 24, 10 shots off-hand, 25-ring target, possible 250. The scores made in the shoot for weekly class medals were as follows:
W. Manning..... 25 25 25 24 24 24 24 24 22-241
W. Boag..... 25 25 25 24 24 23 23 23 22-238
W. Robidoux..... 25 25 24 24 24 23 23 23 22-236
W. J. Hennessy..... 25 25 25 24 24 24 23 23 21-230-224
O. C. Boyce..... 25 25 24 24 23 23 23 23 22-230-221
J. Hughes..... 25 25 24 24 23 23 23 23 22-229
C. L. Finney..... 25 25 24 24 23 23 23 23 21-228
C. Baule..... 25 25 25 25 25 21 20 20 20-226
W. Weber..... 25 25 24 23 23 23 23 23 20 18-224
J. Speicher..... 25 24 23 23 23 23 23 23 21 21-221
G. C. Varick..... 25 24 23 23 23 23 23 23 21 20-222
B. Clark..... 25 25 24 22 21 21 21 21 21 20-221
F. Hansen..... 25 24 24 23 23 21 21 20 20-218
Adam Hauck..... 25 23 23 23 23 21 21 21 21 18-217
The medal winners were: First class, W. J. Manning, 241; second, J. Hughes, 229; third, C. Boag, 238. During the evening Chris Baule was prevailed upon by Colin Boag to tell of his exciting adventures with a band of cannibals way back in the 50s. Chris had been talking for about fifteen minutes when he noticed that every man but himself had left the place.

PALISADE RIFLE CLUB.—Capt. John Reinhardt, Jersey City Heights, Tuesday evening, Nov. 24. Ten shots, off-hand on 25-ring American target, possible 250:
Capt. Reinhardt..... 25 25 25 24 23 23 22 22 22-231
C. Schrodter..... 25 25 25 24 23 23 21 21 21-227
G. Finger..... 25 25 25 24 24 23 21 21 21-227

J. Campbell..... 25 23 23 23 23 22 21 21 20 18-216
C. Gardner..... 24 23 23 21 21 21 21 30 19-209
The club held a well attended reception and presentation gathering on Nov. 17, a gold medal was presented to genial "Chris" Guerber for making the highest average during the year. President August Guerber made the presentation speech, Chris gracefully responded. Refreshments were then discussed, after which the company were entertained by George Jeffries in inimitable song, and his Hebrew impersonations raised shouts of laughter. Messrs. Eddie Phalon and Lou Geils rendered some excellent banjo solos. John Chavanne and George Brandt also favored the company.

MILLER RIFLE CLUB.—Captain Richard W. Dewey, Hoboken, N. J., Wednesday, Nov. 25. Ten shots, off-hand, American 25-ring target, possible 250. The scores made in the shoot for class medals were:
D. Miller..... 25 25 25 24 24 24 23 23 21-237
C. Judson..... 25 25 25 24 24 23 23 23 22-237

F. Dunstead..... 25 25 25 25 20 18 17 16 14-202
A poultry shoot followed. Geo. Schlecht secured first pick with a clean score, 25 25-75. H. Selteneich secured second with a score of 25 25-73. H. Lohman, Jr., F. Brandt, and J. H. Kruse followed respectively with scores of 25 24-72, 25 24-72 and 25 24-72. A social session followed. JAY H. KAY.

MAGAZINE ARMS.—The Secretary of War in his report for presentation to Congress says: "During the year a board has been appointed consisting of officers of the ordnance, cavalry and infantry, to consider, test and report upon magazine small arms. They have considered the arms in use by the principal European armies, but a satisfactory smokeless powder is an essential element for consideration in fixing upon the reduced caliber. Their experiments and reports of similar trials made abroad indicate that magazine arms are still so far from perfection that it is not wise to change from our present excellent single loader to a magazine system in too great haste. If we have been slow in this matter we have at least been slow in the great expense incurred by most foreign nations in adopting an unsatisfactory magazine arm prematurely. The board, which has not as yet made a report, is still conducting experiments, and is giving American inventors every aid and facility for perfecting and testing their arms."

Trap Shooting.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Dec. 8.—Springfield, N. J. Union Gun Club, all day shoot at bluebirds. E. D. Miller.
Dec. 25.—Athens, Pa. Tournament, at kingbirds and live pigeons. W. K. Park, Sec'y.

1892.

June 13-18.—New York State Sportsmen's Association's Thirty-fourth Annual Convention, at Syracuse, N. Y. Chas. H. Mowry, Sec'y.

THE CLUB CUP.

The second contest for the possession of this massive silver trophy occurred on the grounds of the Carteret Gun Club, at Bergen Point, N. J., on Tuesday, Nov. 24. The cup is competed for yearly and is open to teams of four representing the Larchmont, Tuxedo, Carteret, Country and Westminster Kennel clubs. On the first competition, which was held on the grounds of the Country Club, the Carterets captured the prize; their team then defeated the Larchmonts on this occasion, they scored an early victory, but without a hot fight, the team of the Country Club pushing them to the extreme, and a shoot-off was necessary to decide the contest. The weather conditions on the day of the affair were far from being pleasant, a cold, cutting atmosphere and a sharp wind chilled the shooters when at the score, and heavy wraps were in demand by the spectators who left the shelter of the clubhouse to witness the prominent club men present. We noticed J. B. Metcalf, Geo. Van Wageningen, J. Bryar, Newberry Thorne, D. Thompson, H. C. Beadleson, Robt. B. Lawrence, Arthur Duane, Jordan L. Mott, Jr., E. S. Chapin, W. Hoey, Dr. G. Lee Knapp, W. Gerard, Clarence Dolan, W. G. Murphy, W. Watrous, Charles Duggin, Judge Dugro, David Johnson, F. T. Moorehead, R. B. Floyd-Jones, Paul G. Thebaud, E. A. Schultz, F. E. Potts, Vincent Murphy, E. J. Leelan, W. H. Locke, W. H. Stafford, Oakleigh Thorpe, Justus von Gump, Harry C. Squires and C. de Quilflet. The contest began at 10:50 A. M., with Mr. John S. Hoey as referee.

The race was shot off in squads of three, one from each club, each man shooting his string of 25 birds. The first squad were Messrs. W. B. Smith, Geo. Floyd Jones and W. G. Brokaw, and they had as good a lot of birds as were trapped during the contest. Mr. Brokaw was probably the most unfortunate of the contestants in the whole match in the loss of birds. With one exception his birds were veritable screamers—driver following driver; even the few incomers that fell to his lot were of the fastest kind and were harder to kill than the majority of quarterers. At the conclusion of the first squad's shooting the Carterets were in the lead by two birds. Of the second squad men L. S. Thompson and J. Seaver Page carried off the honors. The former is one of the youngest members of his club, and this was his maiden effort in a large event. He shot in grand form and was the only one to pass up a clean score. Mr. Page's work was also of a high order, his birds being a hard lot. He scored 23 with his two birds scored as lost dead out of bounds. In the third squad each club put in a tried man—Chauncy Floyd Jones represented the Country Club, Capt. Money the Larchmonts, and Fred Hoey the Carterets. The birds in this squad were almost as good as those of the first, and the scores are really better than they look in cold type. Capt. Money was particularly unfortunate in drawing a hard lot of birds, as was also Fred Hoey, but the latter did not seem to be up to form. At the conclusion of this squad the Carterets still held the lead by a single bird.

The excitement at this point was great, and as the men representing the club were known to be good finishers the work was watched with interest. The first to miss was Edgar Murphy, but as he was shooting a hopeless race, his club being out of the hunt, it made no material difference. It was the scores of Kent and Dolan that were watched, and as Dolan lost his 4th bird the followers of the Country Club set up a rousing cheer. Their joy was short lived, however, for Kent dropped his very next bird. In the 10th round Dolan lost another bird out of bounds, and the race for the second time was a tie. Kent kept killing straight, and it looked as though both would kill out, when Dolan again had hard luck, his 23d, a fast driver, hit with both barrels, falling dead just outside the 50yds. boundary. This gave the lead to the Country Club, and when Mr. Kent stepped to the score on the 25th round it seemed a foregone conclusion that he would kill and that he would win, but that was not what happened. He did not do for a right quarterer that was released from No. 1 and did not out of the boundary without a feather ruffled, and as Dolan killed his bird the race for the third time was a tie. For a few moments there was great excitement, and as soon as it had subsided the tie shoot was started, each man shooting at five birds, the Carterets winning by three birds to the good.

Second contest for the Club Cup. Conditions: Strict Hurlingham rules, 50yds. boundary. No entrance money. Score:

Carteret Gun Club (Captain, Fred Hoey).
Geo. Floyd Jones..... 01222122222222222221-32
L. S. Thompson..... 2211122112111211122-25
Fred Hoey..... 22122202002222222222-18
Yale Dolan..... 21202121222222222222-27
Recapitulation—Geo. Floyd Jones had 6 direct right quarterers, 1 left-quarterer, 6 straight drivers, 6 right-quartering drivers, 2 left-quartering drivers, 3 left-quartering drivers, 1 incomer to the left and 1 towering incomer. L. S. Thompson had 6 direct right-quarterers, 3 left-quarterers, 3 straight drivers, 6 drivers to the right, 2 drivers to the left, 2 right incomers, 2 straight incomers and 1 towering incomer to the right. Fred Hoey had 4 direct right-quarterers, 7 left-quarterers, 2 straight drivers, 7 right drivers, 4 left-quartering drivers and 1 left incomer. Yale Dolan had 4 direct right-quarterers, 1 left-quarterer, 3 straight drivers, 7 drivers to the right, 3 drivers to the left, 2 right incomers and 3 incomers to the left.

W. Kent..... 22222018212221222222222-37
Recapitulation—W. B. Smith had 5 direct right-quarterers, 2 direct left-quarterers, 4 straight drivers, 7 drivers to the right, but none to the left, 4 incomers to the right, 1 incomer to the left, 1 straight incomer and 1 towering incomer. J. Seaver Page had 4 direct right-quarterers, 4 direct left-quarterers, 3 straight drivers, 7 drivers to the right, 2 drivers to the left and 2 right-quartering incomers. C. Floyd Jones had 5 direct right-quartering drivers, 4 left-quarterers, 4 left-quartering drivers, 2 drivers to the left, 1 incomer to the left and 1 straight incomer. W. Kent had 2 direct right-quarterers, 2 direct left-quarterers, 5 straight drivers, 5 drivers to the right, 4 drivers to

left, 3 right quartering incomers, 3 left quartering incomers and 1 straight incomer.
Larchmont Gun Club.—Captain Money.
W. G. Brokaw..... 01222222222222222220212-19
E. R. Ladew..... 020211122222222222222222-15
Capt. Money..... 1102111122111202120021-20
Edgar G. Murphy..... 102222222222222222222222-27
Recapitulation.—W. G. Brokaw had 2 direct right quarterers, 2 direct left quarterers, 5 straight drivers, 5 drivers to the right, 4 drivers to the left, 1 right quartering incomer, 1 incomer to the left, and 1 straight incomer. E. R. Ladew had 2 direct right quarterers, 1 direct left quarterer, 4 straight drivers, 3 right drivers, 4 drivers to the left, 4 right incomers and 2 left incomers. Capt. Money had 2 direct right quarterers, 6 direct quarterers to the left, 3 straight drivers, 7 drivers to the right, 3 drivers to the left, 3 incomers to the right, and 1 straight incomer. Edgar Murphy had 3 direct right quarterers, 3 left quarterers, 3 straight drivers, 10 drivers to the right, 3 drivers to the left, 2 right quarterers to the right, 2 incomers to the left, and 1 straight incomer.

The tie was then shot off and resulted:
Carteret Gun Club.
Geo. Floyd Jones..... 02222-4 Fred Hoey..... 22222-5
L. S. Thompson..... 2102-4 Yale Dolan..... 22122-5-18
Recapitulation.—Geo. Floyd Jones had 2 right quartering drivers, 1 direct left quarterer, 1 left quarterer, 1 straight driver, 1 driver to the right, and 1 right quarterer. Fred Hoey had 2 drivers to the right, 1 direct right quarterer and 2 direct left quarterers. Yale Dolan had 2 straight drivers, 1 driver to the right, 1 driver to the left, and 1 direct right quarterer.

Country Club.
W. B. Smith..... 20222-4 C. Floyd Jones..... 21210-4
J. Seaver Page..... 122221-15 W. Kent..... 02202-3-15
Recapitulation.—W. B. Smith had 1 driver to the right, 1 driver to the left, 1 direct right quarterer, and 1 right incomer. J. Seaver Page had 1 straight driver, 1 driver to the right, 1 direct right quarterer, 1 direct left quarterer, and 1 incoming right quarterer. C. Floyd Jones had 1 straight driver, 1 driver to the right, 2 direct right quarterers, and 1 direct left quarterer. W. Kent had 2 straight drivers, 2 drivers to the left, and 1 incomer to the right.

The second victory of the Carterets gives them a good hold on the cup, as it belongs to the club winning it three times, not necessarily consecutive. The next contest will occur at Tuxedo. TEE KAY.

SPRING HILL TARGETS AND TURKEY.

Editor Forest and Stream:
On the great turkey day of this Yankee Nation the Spring Hill Gun Club held a most successful shoot on their grounds, at Blauvelt, Rockland county, N. Y. This station, on the West Shore R. R., is situated in the midst of a most picturesque country; high lands predominate; it has never been boomed, except in the dreams of the farmers of the locality, therefore the name is not familiar to many city people. It is less than one hour's ride from New York; excursion fare \$1. The necessities of railroad building placed the track in the valley, and the necessities of the gun club led them to buy a plot of ground in the valley just opposite the station. They erected a neat and handsome club house, two stories high, in the upper of which they partake of their now famous dinners. No pork and beans nor tough sandwiches for this crowd, but generous roast beef, turkey, stuffed with oysters, chickens (roast and in potpie), chocolate, and fruits in their season. That's the way these boys live as they shoot. Most of them reside in New York city or thereabouts, and that is the reason their shooting is mostly done on holidays, when they gather early and stay all day and have a good time generally. C. M. Hathaway has been president for the past two years, and that means plenty of shooting and the best of them. The club is what can be had. The club is very prosperous, numbers some 30 members, and is gaining all the time. No charge is made for the dinner. The scores of Thanksgiving Day are as follows:
First sweep, 6 live birds each, \$3 entrance, 3 moneys, dead birds belong to shooters, ties div.
Hathaway..... 20122-4 W. J. Simpson..... 21012-4
Schortemeier..... 20220-3 Craft..... 21912-6
Jones..... 20212-3 Moeller..... 20201-1
Richmond..... 21211-6 "Bolton"..... 21201-4
Dr. Allen..... 21221-6

Second sweep same as first:
Hathaway..... 12120-4 Simpson..... 21012-5
Schortemeier..... 10035-3 Jones..... 11002-4
Moeller..... 20222-5 Creighton..... 11002-4
Richmond..... 12022-5 She..... 00001-1
Craft..... 10201-5 Bolton..... 11010-4
Dr. Allen..... 012010-3
Third sweep same as first:
Moeller..... 11221-6 Jones..... 21121-6
Hathaway..... 20201-3 Craft..... 22210-4
Richmond..... 01210-5 Creighton..... 11021-5
Dr. Allen..... 01210-5 Blucher..... 00202-2
Simpson..... 21112-6 Blucher..... 00002-1
Schortemeier..... 112200-4

The scores were not over good unless one considers the superior quality of the birds, which were largely country birds, cooped only the day before, and, therefore, strong and acquainted with the country and full of a desire to get back to home and loved ones as soon as possible. The dinner being been duly dispatched the targets were gotten out and preparations made for a big hurrah in them; but, alas! it commenced to rain about 2 o'clock and by 4 o'clock was too dark to shoot. Nevertheless three sweeps were shot, 10 birds each man, 18 entries—rainy—kingbirds, bluebirds and Standard-Keystones mixed, viz: J. Bogart 6, Blauvelt 5, W. Taylor 6, Miller 6, Shortmeier 5, Creighton 6, Yal, Craft 5, Jones 8, Allen 10, Moeller 4, Hathaway 6, Bogart 7, Creighton 7, Pearson 10, Simpson 8, Bolton 2. All ties divided.

Second, same as first: Creighton 7, Bogart 5, Miller 2, Baker 5, Hathaway 6, Jones 6, Simpson 9, Shorty 9, Allen 9, Rush 9, Taylor 8, Vail 6, Craft 8, Cray 3, Shelb 4, Southwell 3.

Third, same as first: Creighton 5, Bogart 7, Miller 6, Hathaway 7, Baker 7, Shorty 8, Rush 2, Simpson 8, Allen 9, Taylor 8, Vail 8. Medal match, for gold and silver medal to first and second, 10 kingbirds, 18yds.: Simpson 10, Allen 9, Jones 8, Pearson 7, Blauvelt 7, Rush 7, Hathaway 6, Bogart 6, Moeller 4, Southwell 3. Thus ended the day. If there is a livelier club hereabouts we would like to know it. AD VANCE.

MILWAUKEE—CHICAGO.

CHICAGO, Ill. Nov. 25.—Fort Dearborn Club, of Chicago, sent a team of 12 shooters to Milwaukee this week to shoot the return match with the Milwaukee Field and Trap Association, whose team was defeated by Fort Dearborn Club on the occasion of their visit to Chicago. The match was shot yesterday, Tuesday, Nov. 24, and Milwaukee wiped up the earth with the Chicago team in horrible style, winning by 17 birds. Conditions: 12-men teams, 20 live birds per man, American Association rules, shot as 13 individual races, totals to count. The sad tidings:

Mr. H. H. McKinney refereed the match, Mr. E. P. Thomas scoring. The deciding match will be shot this winter, probably at Chicago. E. HUGHES.

NAMES AND PORTRAITS OF BIRDS, by Gordon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

PERTH AMBOY, N. J. Nov. 25.—At Perth Amboy this evening

number which has been made in a number of cases in electing more members of the executive committee than a Division is entitled to, is a very good instance of the fact that two wrongs do not make a right. The requirements of the constitution in regard to the number of members representing each Division are very plainly stated, and were carried out for some years, but of late have been clearly disregarded in a number of instances, mainly through carelessness and hurry at the meetings of the Divisions; two, we believe, at present having one more member than they are entitled to. It is now proposed to remedy the matter by changing the constitution so as to legalize this blunder, in which case two of the Divisions will be left until next November with one member less than their allowance. It is not contended in making this change that the present number is too small or that a larger number will facilitate business, but the sole reason is that as members have been elected in the face of the fact that the limit was being exceeded, the limit is to be changed to make the matter regular. While the matter is in one way a trivial one, it is most important in another; if the Association cannot live up to rules which are good in themselves and plainly printed in its book, but must continually change the rules to make them fit the whims of members and committees, then there is no use in attempting any fixed system of government. Another instance

"There was no such thing as reefing or in fact any means of reef-

ducing the huge sails; it was simply a question of weight of crew vs. propelling power, the sheets being eased off only when there was a dangerous amount of water on board. Once on a wind the boat was kept fairly buoyant and well under control; but when it came to easing off the sheets the amount of water that came on board was really even alarming, and in fact at times one might as well have been sitting in a sluice of salt water.

"The pace can be imagined from the fact of our overhauling and passing to windward all the European racing craft, men-of-war cutters, etc., some of which had started three-quarters of an hour ahead of us, but before they had got up to the third dogboat (five miles). I was much amused at the astonished looks of the Curacao, peeping over the weather gunwale of their cutters as we went by them at a steamer's pace with our array of human bodies poised out over the side.

"Having raced in 10, 20 and 90-tonners in English waters, I must admit that this sort of racing, where every man is so thoroughly a component part of the boat, the sustained pitch, excitement as well as the pace, beat any of my previous experiences. Taking the Malays in their own waters, coupled with their exceptional dexterity as boat sailors, I really think that they would run away from vessels of a similar length—even Uldia and Buttercup—except, perhaps, in a case of a hammer to windward in a seaway, where the depth of hull and lead would, I think, prove the victor, a conclusion I should very much indeed like to see tried. Unfortunately the yacht club here possesses nothing that can come near the Malay 'sampar panjang,' as when competing with any of our local yachts, the native craft came in fully half to three-quarters of an hour ahead.

"Having a fine breeze outside, and being able to fetch the fourth flagboat in one tack, we soon reeled off the first round, a good eight miles, in a little over the hour; our boat being heavier manned and ballasted, the Tigress, in the run in with the lighter wind along shore, was able, with a favorable puff, to run up to and overhaul us. This led us, as it unfortunately subsequently proved, to pitch overboard a lot of our ballast, for when once more outside on the second round we met with a harder breeze coming in more from the eastward, necessitating this time a lot of tacking—the loss of ballast here telling, as we had hard work to overhaul the other boat. The breeze hardening, every one was out to windward, and we had frequently, even then, to let all sheets 'go flying' before we could spare a hand to bale out.

"Once or twice I quite thought we should never be able to get rid of all the water on board, and, as a finishing touch when hauled close up to the flagboat before the first run in, with no less than twenty men out on the gunwale, a sudden whirlwind, caused by some heat eddy coming off shore, caught us 'slapaback.' This, with the huge lateen [settee?] sails, tacks hard down to the masts, all hands out on the one side, near as a toucher finished us, the only expression escaping the Malays as some went into the sea, while others sprang across to the opposite gunwale, being 'this time swamped!' Luckily, the gust swept over us as suddenly as it came, leaving us filled right up to the thwart; while the Tigress, profiting by our mishap—for, strange to say, they escaped this sudden gust—just managed to weather the flagboat, and was off flying, leaving us with all hands hard at work bailing, there luckily being a large stock of ballers always carried on board. It was nearly ten minutes before we got sufficiently clear of water to enable us to bear away after our opponent, who, however, had got too far away by this time, and at in any easy winner.

"The Malays said that in all their experience they had never, while in a hard breeze, been caught in a similar violent eddy. The Unco told me that he thought that nothing could have saved our swamping, and made sure that we were all in for at least an hour's floating about before the masts could have been unshipped and all the sails and gear got clear.

"For my own part I did not at the moment think much of the danger of being swamped, having such confidence in Malays and their mode of treating such a mishap, having so frequently seen them racing in their kolehs—a smaller canoe-shaped craft; and when quite swamped the crew, generally of four hands, going overboard immediately, holding the boat upright, while one hand remained inboard and baled away, the others then scrambling

in, and were off sailing again, all in the space of a few minutes. This, however, I learned could not have been so readily done in so much larger a craft as ours, Unco Khalid significantly remarking that he invariably took care to get well into a sail when the numerous and inquisitive sharks, of which he told me the Malays invariably have a great dread when overboard anywhere beyond the harbor limits; and just now the water police report an unusual number of sharks about the roads, the late heavy monsoon weather having probably caused them to leave the China seas for smoother waters. With a knowledge of this, and the constant risk of having to swim for it, I shall in future most decidedly venture with less confidence in a race in a 'sampar panjang.'

The following dimensions of the two boats have been taken from the drawings:

DIMENSIONS OF HULL AND RIG.			
	Sampar Panjang.	Koley.	
	Ft.	Ft.	In.
Length over all.....	47 3	34	6
l.w.l.....	40 9	30	
Beam extreme.....	7	5 1 1/2

Draft.....	2 3	1 8	
Masts, from stem.....	16 6	9 8	
gunwale to truck.....	14 9	25 4	
foresail.....	9 4		
Bowsprit, beyond l.w.l.....	14 9		
Boom.....	26		
Sprit.....	35 8		
Foresail.....	400sq. ft.		
Mainsail.....	533sq. ft.		
Mizen.....	75sq. ft.	157sq. ft.	
Jib.....	75sq. ft.		
Total.....	1,083sq. ft.	690sq. ft.	
S.A.....	33	23 27	
Corrected length, S. C. Y. C.....	36 88	28 00	
Rating, Y. R. A. rule.....	9 00	3 45	

The crew of the larger boat would include 8 men on the ropes, 3 to bail, 3 to tend sheets, 7 general hands and 1 steersman. Judging from the midship section, the displacement would be under 3 1/2 long tons, while the crew would probably weigh 1.5 tons.

The second drawing shows the "koley" or "koley" mentioned by Mr. Dare, a smaller boat, the one shown carrying 15 men, while some are but 10ft. long with a crew of two.

The construction is as novel as the other features of the boats; they are carved built, with sawn frames, natural crooks, spaced some 3ft. apart in the larger craft. The planking is of syriah, a coarse variety of cedar. The garboards are steamed by laying them on horses over a fire until they are quite hot, when water is poured on, steaming and softening the wood. The planks are dovetailed to each other on the edges, the dovetails being 3in. long and about 6in. apart. Before the planks are finally put in place after being fitted, a narrow strip of palm bark or pith is laid on the lower plank, the upper one being driven down on it. After the planks are on, a number of cross beams are laid across the boat at every 3 or 4ft., and ropes of vine or cane are run under the boat, the ends of each rope being fast to a cross beam. Wedges are then driven in so as to tighten the ropes and bring the planks together; and the hull is left for a month to allow the planks to shrink, the wedges being constantly tightened. When thoroughly dry, the planks are fastened to the frames with tree-nails, very few metal fastenings being used about the boat.

The two boats are by chance of a length familiar to American yachtsmen, the larger being but 9in. over the 40ft. class, while the smaller is just 30ft. l.w.l. The sail areas, however, correspond very closely to those of canoes rather than of decked and ballasted yachts of the same length, the ratio of the square root of the sail area to the l.w.l. being from .80 to .85, while in a racing canoe it is from .75 to .80; the corresponding figures for a modern racing yacht running from 1.30 to 1.50. The probable performance of these boats beside the decked yachts is the merest conjecture, but if it were possible to bring one beside the present 30ft. class, the larger boat, under a corrected length classification, would just sail on even terms with Kathleen, giving a little time to Mildred, Saladin and Hawk. If there is anything in the bugbear of a large canoe in the yacht classes, which has been used to hinder the adoption of the new classification, these boats would be the ones to realize it; but it seems hardly possible that they could make their way to windward without the addition of a centerboard.

The most remarkable fact in connection with these craft is the close resemblance to various typical boats of widely different eras and countries. There is a very close resemblance to the noted Viking ship which was dug up in Norway in 1880, after a burial of probably little less than ten centuries. This vessel was a war ship, designed to carry a large crew, and propelled by oars rather than sails, consequently she is wider and of flatter section than the fast sailing sampar panjang, but the close relationship of the two models is very plain.

DELAWARE RIVER OPEN RACES.—The Cooper's Point Y. C., following in the wake of the P. Y. C., gave their first open race on Sept. 26. Every yacht club on the Delaware was represented, save the Trenton, 40 miles away, and no fault of theirs either; 32 boats crossed the line, and the winning boats received their prizes promptly. The C. P. Y. C. antedates even the old reliable and time-honored Riverton Y. C. A class has been opened for tuck-ups; five boats have already entered, Mr. C. W. Gale, of the Annie, P. Y. C., being the first with an entering wedge well driven home. This is encouraging to a club reorganized this year, especially so when Wm. L. Grant, Jr., Riverton Y. C., offers a prize for the boat making the quickest time over the Reedy Island course next year (sixth annual). Open races bring yachtsmen together with an exchange of opinions nautical, and fraternally breaking up the odious clanishness often existing and establishing among yacht clubs a brotherhood of jolly good fellows well met. I promise wherever the C. P. Y. C. flag is flown it will be respected. Good men make a good club. In this connection I beg to thank the FOREST AND STREAM for the interest taken in Delaware River yachting, so far as we are from the great center of the sport.—R. G. WILKINS (Cooper's Point).

WADENA.—The new steam yacht Madena, owned by J. H. Wade, of Cleveland, is now on her way from that port to the sea by way of the St. Lawrence River. As she draws 11ft. she will be pontooned through the canals. She will fit out at Portland, Me., for a voyage to the other side, where her owner will join her for a trip around the world.

UTOWANA. steam yacht, Mr. W. W. Durant, has shipped a new crew at Cowes, commanded by Capt. F. Blow, late of the Pandora, steam yacht, and her owner and family will rejoin her in the Mediterranean.

NEW YACHTS.—The Herreshoff Mfr. Co. have an order for a 35ft. cutter for Vice-Com. Morgan, and also one for a 2 1/2 rater for the Clyde. Stewart & Binney have an order for a 30ft. cutter similar to Fancy.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 28 lithographic plates. Price \$1. Contains full history of the great storm of March, 1838, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

W. O. Yonkers, N. Y.—For targets send to the Dennison Co., No. 194 Broadway, New York.

W. L. S., Boston, Mass., would like to hear (through this column) of a good shooting center in California.

A. H. P., who asked about importing birds from Canada, is requested to communicate with W. W. Hart & Co., 11 Jacob street, New York.

P. H.—There is probably nothing serious the matter with your gun, but it might be well to show it to a gunsmith. The holes might be filled up.

E. U.—Please inform me through your answers to correspondents what breed of dogs are considered the best for bear hunting and where a dog and bitch can be bought. Ans. A cross-bred or mongrel, having some hound blood in him. We do not know where to refer you. Write to Mr. N. C. Locke, Salem, Mass.

J. M. C., Chicago, Ill.—Frederick Law Olmstead, the landscape architect for the World's Fair, wants to fill the lagoons in the park with various kinds of aquatic birds. He says that by removing a bone in the wing they would be unable to fly away. Is it practical? and if so, what bone is removed? Ans. The scheme is practicable. The bones to be removed are the pinion, which is the joint at the end of the wing, and corresponds to the human hand.

C. C., Dundas.—The game laws of the Province of Ontario prohibit the taking or killing of wild duck by means of any of the appliances known as "batteries, swivel guns or sunken punts." Would you kindly give a short description of the above through your correspondence column, and oblige a subscriber? Ans. A battery is a boat so constructed that when occupied by the shooter its deck is on a level with the surface of the water. A sunken punt is substantially the same thing. A swivel gun is a heavy gun of large bore, too large to shoot from the shoulder, and is mounted on a swivel for aiming.

C. A., Hamilton, Ont.—Will you kindly furnish me information as to the care and feeding of trout in winter in our not-over-mild climate. My pond is near Hamilton, and is about an acre and a half in size, with a normal depth of say 4 ft., fed by bottom springs. In May last I put upward of 6,000 American brook trout fry in it. They have grown amazingly—which is proof that the water is suitable—and have not been much fed, except the first two months on sheep's liver, fly food being very plentiful. The very largest of them will measure about 6 in. The pond is not subject to flooding, as very little surface water can get into it, so that I am practically supplied by pure spring water. The ice last year at its thickest was about 14 in. Please inform me as to what I shall feed the trout on, how often and whether they will require that the ice be broken up in some parts to admit air—and any other information you or your readers may think necessary. As this is my first experience in trout raising, I confess I know little about the subject, and for that reason will be all the more grateful for your published information concerning it. Ans. Although your pond is shallow the probability is that brook trout will winter in it safely, and require neither feeding nor cutting of air holes. It is well understood among fishculturists that when the water cools to 36 deg., or less trout will take little or no notice of food, but become sluggish and indifferent to animal life around them. Feeding is not practiced, except in small artificial ponds having a steady inflow and exit of water. The springs which supply your pond will insure a safe temperature for the fish, and natural food sufficient for their needs will doubtless be found. In small artificial ponds trout are fed three or four times a week during the winter in the warmest part of the day. There is no natural food, and feeding is necessary to prevent the big fish from eating the little ones.

Model Yachts and Boats. Their design, making and sailing, with designs and working drawings. Postpaid, \$2.

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understood of the people.
BY G. TRUMBULL.

Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it.—*Boston Evening Traveller.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should he meet it in the woods or on the water—is not compelled to shut the book, drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means.—*New York Herald.*

TARPON - TARPON - TARPON

It Will PAY YOU to Buy your Tarpon Tackle at Marsters'.

Special TARPON Rod, 20-inch butt, 63-inch Lancewood tip, German silver mountings, with double guide and two-hole tip.....Price \$7 50
Same as above, with Greenheart Tip..... " 8 00

Either of the above, with Agate Guides and Agate Tip, \$5.00 extra.

Best Quality Steel Pivot TARPON Reels, Hard Rubber and German Silver, holding 200 yards of 18 or 21 Thread Linen Line..... " 9 19
The same Reel as above, but Nickel Plated instead of German Silver..... " 7 15

Heavy Lancewood TARPON Rods, three-jointed, with extra tip..... " 2 98

Two-joint Calcutta Bamboo Extra Heavy TARPON Rods..... " 2 50

Very best quality TARPON Lines 200 yards 18-thread, \$2.00; 21-thread, \$2.25. Extra quality TARPON Hooks, snelled with double twisted hard line, 40c. per doz.;
Snelled on German Silver Wire and Swivels, \$1.20 per doz. Sinkers, 8c. per pound. Send for Catalogue.

Established 30 Years.

THE "FOREST AND STREAM" IN 1892.

THE first number of the FOREST AND STREAM in its enlarged size will be that of Jan. 7 instead of Jan. 21 as announced last week.

The issue of Jan. 7 will also be made the beginning of Vol. XXXVIII. The present volume will end with No. 24, Dec. 31. In future the two volumes per year will comprise the first and the last six months respectively—January to June, and July to December, inclusive.

A further change, to be made with the beginning of the year, will be in the quality of the paper used. We have selected a new paper, of tint and texture better adapted to the satisfactory printing of illustrations. The pictorial features will be more important in 1892 than they have been in the past.

AMERICA'S MILITARY ARM.

A SORT of report of progress comes from the Board of Military Experts on the selection of a magazine arm in the annual report of Gen. Flagler, the new chief of ordnance. This is to the effect that the tests made of the various magazine arms presented and secured for test have been such as to make it inadvisable at this time to make contracts for the re-armament of the United States Infantry. While there are but 24,000 men in round numbers in the United States Army, there would no doubt follow the announcement of a new arm demands from a number of States for a supply to arm the State militia, so that not only would the expense reach a very large figure, but a blunder on the part of the guiding United States officers in the matter would provoke very widespread criticism. Civilian soldiers are apt to be very sharp commentators in a matter of this sort.

There is a wide difference of opinion among army officers in this matter. Gen. Sheridan was a warm advocate of adopting the best gun then in sight rather than hold back in the hope of securing a better weapon, even though that hope was founded on a probability practically amounting to a certainty. Gen. Breckenridge was also earnest in this direction, urging that it was destructive of the morale of an army to know that its arms are obsolete and inferior. It cannot be said that there is any want of encouragement for inventors and mechanics who are working on the problem of an improved small arm. A dozen governments of the Old World are in hot haste after the last and best thing out in this line. Inventors are welcomed, and having introduced their ideas through the proper channels, are given full opportunity of showing the advantage of whatever they offer. Practically all that has been done abroad by the expenditure of vast sums of money was placed before our Army Board and subjected to their judgment.

It must be borne in mind that the conclusion to retain the single-loader as the official arm of the United States Army does not mean that the Springfield is to be retained, though that would not be such a great catastrophe. It has been virtually decided to abandon the large 45-caliber in favor of the smaller 30-caliber. This is a step toward a magazine arm. The smokeless powder, in one

of its many varieties, is also to be adopted. So that, apart from the advantage of a magazine arm for close range in shooting, our army will have a weapon of the longest range, shooting an elongated pencil bullet, with the advantage of doing away with the cloud of black powder smoke.

There is not the least cause for alarm or worryment in this cautious haste of our army advisers. So far as the drill of our State militia force is concerned, when they have learned to shoot well standing at 200yds. or less and have learned the art of prone shooting at 500 or 600yds., they are accomplished marksmen and could readily adapt themselves to the demands of work at 1,200 or more yards, provided the arm was capable of it. It might truly rouse the professional pride of a uniformed force to know and feel that they had the best arm in existence, and this is a point well worth covering, providing there is any chance of its remaining covered, and this is just the ground taken by Gen. Flagler when he says, "It is hoped that this country can produce a better arm; and until it can or until it has been demonstrated that it cannot, it would be wise to defer a change from the excellent single-loader, now in service, to a magazine system."

It would make a long and interesting chapter to tell of the race which has been going on in Europe now for several decades to find the ideal small arm. The advance has been very great, but the new weapons, however finely they have passed examinations in proof houses and before committees, have not been given the only satisfactory test of real use. As it is in arms so it is in respect to powders. The test in the case of the ammunition is a matter of time, and cannot be hurried. A lot of cartridges which have been tucked away for years in a magazine may come to the front fighting line at a critical moment. Will they stand the test and show results? This is a question which no cautious army officer would answer in the affirmative respecting any of the new powders, whatever rival inventors and agents may noisily claim for their several compounds. America is not losing very much in the way of risk by going slow in the matter, and it has much to gain. For domestic use, so to speak, that is, putting down riots, etc., our military, regular and militia, are amply provided, and if they are to be strengthened for this work, it is not in the direction of extra long range, small-calibered rifle, with plethoric magazine, but rather in the direction of machine guns and gatlings. The resolution to go slow on magazine arms need not deter any militiaman from working for his badge bar, nor prompt any regular to cease trying to get on the army team.

THE SIX-INCH TROUT LAW.

GENERAL RIPLEY'S paper, read at the annual meeting of the Vermont Fish and Game League and printed in our columns this week, contains among various important matters a renewal of the 6in. trout limit discussion, which has induced legislation in most of the commonwealths in which trout and salmon are native. Reference to the *Book of the Game Laws* shows that a 6in. trout law is operative in Colorado, Connecticut, Delaware, Michigan, New Jersey, New York, Utah, Vermont and Wyoming. In Maine, New Hampshire and Pennsylvania trout 5in. long may be taken. California has fixed the limit at 8in. for all trout except brook trout, and we are in doubt whether the native species (*Salmo irideus*) is intended or the introduced *fontinalis*. Colorado, Utah and Wyoming, whose indigenous trout are chiefly black-spotted species of large size, apply the same rule framed for brook trout (*fontinalis*) in the East. Michigan fixes the 6in. limit for brook trout, rainbow trout, grayling and landlocked salmon—species showing a wide range of variation in size at maturity—and New York has a similar array of species of diverse limits of growth. In Vermont it is lawful also to take salmon trout and landlocked salmon measuring 6in. Washington includes among her salmon the steelhead, which is really a large river trout (*Salmo gairdneri*).

Manifestly there is room for reflection and the mingling of common sense with some of our protective laws if we mean to accomplish the best results. We trust the whole subject will receive careful consideration and free discussion, leading up to harmony and strength of action in the near future. The basis of the 6in. law, as expressed by its supporters, is the necessity of providing

for at least one spawning before the capture of the trout. The opposition to this limit comes chiefly from regions in which the brook trout spawns when less than 6in. long and seldom exceeds 6in. at any time of its life. There is, besides, a large body of anglers who prefer small trout to large ones for the table. We invite expressions of opinion on this important and eminently practical question, as well as upon the need of discretion in the application of comprehensive laws.

OUR BOYHOOD NUMBER.

OWING to the change of plan noted in another column, by which the enlargement of the FOREST AND STREAM will be made on Jan. 7 instead of Jan. 21, as first announced, we shall defer to the initial number of the new volume publication of the material in hand for our special "Boyhood Number," and originally promised for Christmas week. A detailed announcement of the papers will be made next week.

THOSE DELMONICO WOODCOCK.

SOME eighteen months ago, in July, 1890, Dr. Willett Kidd, the game protector of the district in which New York city is included, visited Delmonico's restaurant and found that woodcock were then served there out of season. He promptly put the case into the hands of District Attorney Platt, of Westchester county. Mr. Platt manifested a willingness to do his duty as a public officer with alacrity and dispatch. This willingness mysteriously gave way to reluctance and the alacrity to procrastination, and the dispatch in turn to innocuous inaction. Not even were the papers served. At length, since District Attorney Platt and his assistant, Mr. Verplank, were so crowded with work that they could not attend to the Delmonico case, the protector employed as outside counsel Judge Nelson H. Baker. Judge Baker was for an immediate, aggressive and uncompromising prosecution of the case. In due course of time Judge Baker was so overwhelmed with other business that he really could not give any time to the Delmonico case. The papers were still not served. Protector Kidd then transferred the case to New York County, and gave it to District Attorney Nicoll. This was done, we believe, at the close of last year, or in the beginning of 1891. For some reason the case has not been tried, and this is the more worthy of note because the evidence is said to be very clear, and the District Attorney is believed to have a perfectly good case. We understand that the last stay of proceedings secured by the defendants will expire to-day; and we shall watch with much interest the further progress (or delay) of the case.

SNAP SHOTS.

DR. GEORGE BROWN GOODE, Assistant Secretary of the Smithsonian Institution, best known to the readers of FOREST AND STREAM as the author of "American Fishes," and editor of "The Fisheries and Fishery Industries of the United States," two unflinching springs of information concerning the natural history of fishes, sailed to-day on the steamer Werra of the North German Lloyd Line to the Mediterranean. After twenty years of hard and unremitting labor in behalf of the National Museum and the U. S. Fish Commission, Dr. Goode is obliged to seek much needed rest, and he will pass the winter in Italy and perhaps Sicily, renewing acquaintance with his friends among the zoölogists and particularly the ichthyologists. In the museums of Genoa, Florence and Naples he will find many of the curious deep-sea fishes which have formed the object of his most recent studies, and will endeavor to arrange for important exchanges of specimens.

We have in hand for publication in our issue of Jan. 7 a capital portrait of Mr. Walter Winans, in revolver shooting position, on the Bisley range. Mr. Winans is the donor of the Winans Trophy, for the American Amateur Revolver Championship, now in progress under direction of the FOREST AND STREAM, and enjoys the distinction of being regarded as the most expert revolver shot in Great Britain.

The annual dinner of the Massachusetts Association for the Protection of Fish and Game will be held next Thursday evening at Young's Hotel, Boston.

The Sportsman Tourist.

TO JOHNNY—A DOG.

I'll write a tribute to thee, faithful friend,

While yet you live and rest you at my feet;

Full many a line—aye volume—has been penned

On subjects of less merit than I'll treat:

Perchance I'll write mere words, which one may do,

And even rhyme, and then say nothing, too.

But then I'll do my best, as you have done

In all the duties falling to your share;

If I as fairly write as you have won,

There are no words of praise the world can spare—

For fewer they than other words you know

As well as I; but then 'tis better so.

Ab, me, I've thought some time there is no end

To all the myriad words of ours, mute, sir,

And of them all I write you, faithful friend—

I of them all those two plain words prefer.

If honor can be thus to you conveyed,

In gold and granite be those words insid!

Thro' all the lapse of time what earthly race

Has served as humbly faithful, or as true?

Unswerving—dauntless still in grief or grace,

Consistency I ah, is't not found in you?

What reck you if in rob's or rags he go,

Your master leads, let follow joy or woe.

Ab, Johnny! as you slumber there and dream,

With fitful start of foot and prick of ear,

I'm thinking all things are not as they seem

To us, who dimly see and faintly hear—

Judging more feebly still of all we mark—

Our longest strides are stumbles in the dark.

Else why these cherished virtues should be thine

I cannot guess; their nobleness alone

Lifts your poor tribe so high I blush for mine,

And dread the weaker impulse of my own!

The faults you have let those less ardent name,

My pen would fail or nature get the blame.

Ab, Johnny, in thy darker mind or brain

Doth Reason never throw her brighter light?

'Tis sure you feel, and cry for joy or pain;

You know that this is wrong or that is right;

Your other senses quick and normal seem,

So, if you do not think, how can you dream?

Cannot you tell a better coat from mine?

Some one of happier mood? of quicker tread?

Do you not see some easier lots than thine—

Some luckier dogs, and prettier, better bred?

Why plied you then, in unambitious joy,

And wax your tail content, a poor man's dog?

Ab-ha, old doggie, have you no reply

But just a joyous shake and wag of tail?

Or am I dull to fail to read thine eye,

And know thy answers, though thy tongue doth fail?

Methinks I know or guess them, and I sigh,

To end my effort here.

CHARLES L. PAIGE.

A TRANS-CONTINENTAL RUN.—II.

[Concluded from Page 367.]

WELL, at the end of a week I bade good-bye to Mr. Knight, his brother-in-law Mr. Dunbar and other jolly good sportsmen, with mine host Dipman, and hired the Clara Brown to transport me to Olympia. The trip along these tentacles of this devil fish of a sound is very pleasant. The scene is constantly changing, ducks are flying continually (or such a matter), the wooded shores rise boldly as a rule, the air is delicious, a place where "every object pleases and only man is vile." At Olympia I changed boats, taking the Potter, one of the swiftest boats on the sound, and after a quick trip, during which Mt. Rainier, 60 miles away, showed himself from base to crest in unapproachable style, we saluted Tacoma at 5:30 P.M. At this city, near the confines of the huge Tacoma Hotel, I saw the largest black bear it was ever my good fortune to inspect. He was a monster, as big as the oft-quoted "steer" and as good natured as big, kept for the delectation of the guests of the hotel.

After staying here a few days (during which I discovered an old army comrade with whom I campaigned many a day during the troublous times of '61 to '65, whom I had not seen for 20 years, and enjoyed the interview as only old soldiers can), I left for Victoria, B. C., stopping at Seattle and Port Townsend, making the tortuous entrance to the 6x8 harbor of Victoria in good shape after a thoroughly interesting and pleasant trip over the beautiful waters of island-studded Puget Sound, lovely beyond compare. After looking over the city, and concluding not to purchase it at present, I set sail, or paddle, for Vancouver, where I tarried several days, absorbing the lovely scenery which was revealed across the charming Burrard Inlet, and as I looked time and again and thought of the goats wandering among the peaks which rose rank upon rank, snow-clad, into the empyrean, I recalled "Yo's" fascinating stories of sport among those very mountains, and wished, oh! how I wished, I were with him among the "eternal hills." But no.

Sauntering along the principal street of this enterprising city of twenty thousand people, which had been razed to the ground, with exception of one single house, several years since by fire, but now risen in power and full of pluck, I saw in the window of a little watch-repairer's den some fishing tackle. That was plenty. In I went. Hadn't been there two minutes before two men came in to get some hooks to go fishing out to a lake three miles away. Asked me to go along. Of course. That's the way fishermen do. But my tramping togs were in my trunk, and they wanted to make the next car (electric of course), as their time was short, to get out, fish, and get back by dark. So I thanked them heartily and got directions from the watch man to go out a certain street back of town until I came to the bridge across an inlet from the bay where I could probably have some sport with trout with the fly or beef. Thither I repaired myself, but naught responded to my wiles excepting one trout and quite numerous bullheads, different from any beautiful fish of that euphonious name I ever saw. They had a variation of horn or spine on each jaw as usual, and a lovely fluted collar just underneath reaching down-

ward and backward, and could steal bait with neatness and dispatch like any good for nothing. A fisherman came down toward evening to whip the inlet, who said that some evenings he had very good sport with trout of a pound or two. From him I learned that across Burrard Inlet was the mouth of a stream called Linn Creek, where trout were wont to be taken, that there was a ferry to Moodyville near by, and that it was as good a stream, accessible, as he knew of. He had my unfeigned thanks for this morsel, and I determined that the next day, my last in Vancouver, should see me investigating the properties of said Linn Creek aforesaid.

It was 8 by the clock, and when I stood by the side of the dock where the little propeller lay smoking, and when some quarters of beef had been contemptuously dumped on the bow, the whistle shrieked one heart-breaking shriek and we backed out. After a pretty half hour's trip in the cool air, the sawmill village of Moodyville was reached, where gangs of hungry saws chew up timber and spit out lumber for the yearning bowels of big ships. I had sampled the beef for bait, and betook myself to the creek via a plank road the first half mile and a plank walk the last half, through a fine old moss-hung forest, and then I struck the lovely, brawling stream, but clear as the air above it. Such limpidity did not augur well for success. But the scene was charming. The almost impenetrable, undefiled woods stood guard on either hand, an unbroken array. There were reaches of game and boulders, by the side of which sang the sparkling waters. There were convenient drift piles and isolated logs, above and below which were fine hiding holes for possible pounders. The day was perfect, the air just comfortably invigorating, and I couldn't have improved the *tout ensemble* if I would. I rigged a cast and cast the rig, and continued to ditto in some of the loveliest reaches of water that ever were, until I grew too tired. Then I rigged a piece of beef and caught a little foolish dog salmon, the fin of which I took and caught a small trout. Then I caught another larger and poked along up stream, crossing here and there as logs were handy, for I hadn't the necessary wading boots. I surprised a mink sneaking along just around a bend, saw some wildcat tracks, obtained occasional delicious vistas through the overhanging branches of rocky mountain faces and glistening peaks ahead, lunched by the track of the babbling brook, after which a quiet smoke I took, and so loitering along downward, I let the sweet influences of this soul satisfying day soak into me without let or hindrance. But you can't describe it, you know. The description of perfect bliss was lost long ago, irrevocably.

I reached the little sawmill hamlet as the day was drawing to a close, gave my dozen fish to an Indian boy, sailed across the wimpling waters of Burrard, glinted with the slant rays of the setting sun just dropping behind the headland at the foot of the inlet, and concluded that I had had a royal day of it.

The next morning I filled a tolerably good sized lunch basket with a pretty good assortment of jam and things, inspected the steamship Empress of India, the pioneer of the C. P. R.'s Trans Pacific fleet to Liverpool, took my seat in the "Great Overland Flyer," and amid the huzzas of the assemblage, I modestly acknowledged the compliment, bade good-bye to the Occident and rolled off homeward.

And what shall I say of the scenery of the next thirty-six hours? Not very much I guess. It won't do. You can't describe it any more than you can bliss. How can I give any adequate idea of the noble Frazer and its terrible cañon, as well as that of the Albert? How shall I describe the magnificent glaciers everlastingly moving and yet never moved? How tell of that gorgeous panorama among the Selkirks, where hour after hour those gigantic rock-ribbed and snow-crowned peaks ranged themselves in terrible majesty that we might gaze spell-bound and acknowledge Jehovah? How shall I convey the awe-inspiring effect of standing in a pass scarce a hundred feet wide, while on either side peaks rose almost sheer into the heavens eight thousand feet from the track? Describe it? Not in the flesh.

I state it as my conviction, that there is not on the globe another place where for thirty-six hours, or thereabout, a railway train runs at twenty miles the hour amid such grandeur. I have seen the Rockies from Mexico to British Columbia and lived among them, but I don't remember any such ride as that. I may be wrong. If so, it won't hurt any one.

We ran through a cut in a huge snow rock and land slide that had pulled up right across the track at the mouth of a snowshed a few days previous. Thirty feet high it was, solid, of snow, ice, rocks, huge trees and everything else gathered in its fearful descent. A cut had been made in it for trains, and right in it we stopped for steam, weather mild, snow melting and the whole besom ready to start again at the drop of the hat. I begged the engineer to go long with all the frenzy I had, and we presently crept out of it. I creep ever since when I think about the squeeze we might have suffered.

We rolled along day after day until we reached Fort William, on Lake Superior, where in 1867 I saw an Indian scalp dance just outside the Hudson Bay stockade, where I outfitted for a trip up the Nepigon. Only the H. B. buildings, three, I think, and the stockade there then, and the propeller had to anchor a mile out in the bay. Now there are huge elevators, wharves, round houses and a city. I ran down while the engines changed and viewed the old buildings that stood amid such primitive scenes twenty-four years ago, but all was so changed I should not have recognized the surroundings. Tempus fugit, don't it? Near the crossing of Nepigon, on a fine iron bridge, nearly 100ft. above the water, there is now a hotel. I caught a glimpse of Red Rock H. B. post down the river a way, where the boats stopped on our way up the river on the occasion referred to, and I just ached to be on that noble river again with rod, line and good company.

Into North Bay, at the junction of the Grand Trunk, we rolled on time the sixth day, and here I left the pleasant acquaintances formed en route, and rode down to Trout Creek, where two years ago I had some very nice sport with the trout and of which I informed your readers. Two days I stopped here, having fair success, though it was a little too early for vigorous biting. Still, I made fair catches. I arrived there Friday evening. Saturday I fished. When I got back at evening the German landlord, on seeing my string, remarked:

"I got some, too."

"How did you catch them?"

"Mit my hands."

"I mean what bait did you use?"

"I don't use any bait. I catch 'em mit my hands."

I looked at him with an expression of "Too thin," and after a little chaff he said:

"Vell, I show you to-morrow."

"Good," said I.

Next morning at breakfast he laid beside my plate seven beautiful fish, eight or nine inches long, and as much alike as "two peas." I sampled them satisfactorily, and after breakfast he, my friends Carr and Bartlett, both sportsmen, and I went up the creek into the woods a little way, where he said he flipped the trout out with his hands from beneath the rocks and roots near the bank, and amid a little good-natured chaffing he took off his coat, rolled up his sleeves to the shoulder and stepped down to the brink. A triangular wink went round between the waiting spectators. He stooped down, ran his hand under one stone and another, fingered around behind a root, under the bank, pulled his arm out of the almost ice-cold water, rubbed it, slapped it; moved a little further up, tried it again; crossed over, looked wise, shook his head, tried it again, and finally flipped a big frog out from under a stone, at which there was a combined shout from the audience.

"Well, why don't you catch 'em?"

He shook his head and replied, "I don't believe dey vas here to-day."

"Oh! no," said Carr. "Who's got a line?"

I had something that would answer, so he cut a limb, took a piece of frog skin for bait, and soon had a trout dangling, and said, "Oh! no, no trout here," and then caught another one.

"Don't give it up so," shouted I to the hand fisher, so after he had once more stimulated the circulation in his arm he continued the farce, trying here and there where he could get under the stones without wetting his feet. But he didn't keep it up long. Said it was too cold. So he pulled down his sleeves, put on his coat, and we rambled back to the hotel, gradually dropping the subject, for we didn't wish to rupture the *entente cordiale*. But he still maintained that he caught the fish as we saw him trying to do, and that that was the method by which he and others were accustomed to poach trout in preserved streams in the old country. Who can tell? O. O. S.

WINTER SPORTS IN NORTH CAROLINA.

LETTER III.

Waifs from Currituck.

CURRITUCK SOUND, though incidentally credited to Virginia, because its most direct approaches are all within the territory of Virginia, lies geographically entirely within the bounds of North Carolina. Back Bay, which is a northerly projection of the sound connected by a narrow arm, is wholly in Virginia, and some of the best shooting is obtained there. The Ragged Island Club, of which Mr. Clarence Woodward is president, and your live correspondent, Alex. Hunter, the vice-president, is within the Back Bay waters, and is reached from Pongo Ferry, which is on the line of the Sound Transportation Company navigating the Chesapeake and Albemarle Canal, en route from Norfolk to Newbern. It can also be reached by a 16-mile drive from Virginia Beach, which is a popular watering place accessible by rail from Norfolk. The Martin's Point Club grounds are wholly within the jurisdiction of North Carolina, and so are the holdings of most of the other prominent clubs; and these are all reached by the rail and wagon route aforesaid, or by an outside steamboat plying between Norfolk and Knott's Island.

Currituck Sound has been the objective point for progressive gunners for the past twenty years and more. I remember that the Havemeyer boys (the sugar refiners) were in the vanguard of pioneers. They used to send home barrels of canvasbacks, season after season, to distribute among their wandering friends in New York, long before the rest of the sportsmen caught on to the racket. Before this time, for a generation, the shooting had been almost exclusively on Chesapeake Bay and its several tributaries. Then Havre de Grace was a famous resort, and so was the Potomac. Now, alas! the fowl have almost disappeared from those waters, and even in Currituck they are less abundant than they were even ten years ago. I am not convinced that congregations of canvasbacks are numerically less than they have been for the past ten years, but, from what I can see and learn, the "use" more in other places now, especially on the western or main land side of the North Carolina sounds, where much hardship, trouble and expense, and some intelligent coaching, is required to enable the gunners to get at them. Of course the annual fusillade along the marshes which border the channels and creeks where the fowl feed has a positive decimating effect, but this shooting, in my opinion, has not driven the ducks off from their old haunts so much as physical changes which affect the distribution of the wild celery plants, upon which they principally feed.

Celery is a purely aquatic plant growing wholly under water and it thrives only on marsh muck. Deposits of sand on the beds kill the bulbs. As it is a dioecious plant it may be disseminated to some extent by floating seeds drifting off to other localities, but the chances of propagation by this process are infinitesimal. When sandbars and shoals form upon it, as they do constantly, the plant dies. There is no doubt at all but that the sounds are constantly filling up, and that land will ultimately take the place of existing water areas, just as it has been doing for ages past. An emergence of no more than 4ft. would reclaim an immense territory which is now in the transition state of swamp and marsh, including not only Hyde and Dare counties, but four-fifths of what are popularly known as the Eastern Counties. It is hard to realize the fact, but a solid substratum of sea sand or shell rocks (coquina) underlies the whole region at a depth of 4 to 15ft.

I use the word celery advisedly, because it is not locally known by any other name. Valisneria is not recognized, though I have heard it called eelgrass, channel weed and tape grass, from the tapelike appearance of its long leaves. The scientific name (*V. spiralis*) is applied because of the spiral form which the stalk assumes in its development. I find that one must use the vernacular of the country where he visits, else intercourse will not be intelligible.

The Currutuck Shooting and Fishing Club was one of the very first established. Its grounds included Deal's Island and adjacent marshes, distant three miles only from Knott's Island, and in 1874 afforded superlative shooting at a very trifling cost. Andrew Powell, Esq., wrote to the FOREST AND STREAM in that year as follows:

"White swans, geese, ducks, etc., congregate here in such great numbers that there is scarcely a single moment, day or night, when they may not be heard at their sport or seen on the wing, or in the waters. At one time, and in one body, I saw a mass of ducks and geese, called a 'raft,' covering not less than one hundred acres of the surface of the water, and this within three miles of our grounds. In no portion of this country that I have visited have I seen game so plentiful. From the time the steamer enters the mouth of the Sound until she stops at her destination, some thirty miles below, wildfowl are never out of sight."

Furthermore, he gives the following precious bit of information, which sounds like buncombe to club members nowadays, when each duck that is gathered costs about \$25 to shoot:

"Our superintendent will open the club house on Oct. 15, and from that time until Feb. 15, will meet guests on steamer, convey them to the club house, supply them with decoys, boats, gunner, and board at the rate of \$2.50 a day. Cost of the round trip \$24."

These rafts, mentioned by Mr. Powell, form during severe northeasters, and afterward break up into smaller bodies and scatter throughout the surrounding creeks and channel ways. Protracted cold weather always drives the ducks further south. The water in the creeks is seldom more than three feet deep, and averages about a foot. In many places the growth of the celery is so dense as to make it difficult to navigate a small boat. A glance at the sketch map which accompanies this article will show the lay of the land. There is the outer beach with its wild drift and sand dunes, stretching along the coast for 200 miles, its seaward line almost as straight as a rule, and broken only by occasional inlets, which shift, and open and close with annually recurring storms, while its inner margin is quaintly irregular and deeply indented with re-entering bays and points of land. These points are favorite stands for gunners, because wildfowl, like mariners, take their ranges therefrom, as they trade between their feeding grounds. Inclosed between the mainland and outer beach are the several bodies of water designated as sounds, some portions of which are studded with islands, many marshy and others covered with cypress and pine. The inshore edge of the beach is also agreeably diversified with trees of various kinds, of which pine predominates, and the club houses, of which there are so many, and of which we read so much, are usually pleasantly situated on eligible sand knolls in the midst of pretty groves, with an outlook over the marsh and water. Some of the club territory will accommodate as many as twenty gunners at a time, the property line stretching three or four miles. I believe that every available foot is occupied from Virginia Beach to Hatteras, so that with the exception of individual private holdings there is no place called public domain where the fowl shooter may hunt *ad libitum*. Church's Island, owned by Nettie Midgett, a very nice person, is one of these private holdings. It is four miles from Coinjock, which I mentioned in my last letter as being on the regular route of the Newbern boat. Besides duck, geese and swan shooting, the club grounds generally afford bay bird and good upland shooting.

Of course your readers all know what club life is. Its incidents are monotonously similar, indoors and out, and it seems to me that a man must be an insatiable ogre who can put in an uninterrupted fortnight with incessant shooting. Natural diversity and an interest in the study of natural objects could alone redeem the time for me. Many of your correspondents, however, write of sport in a most captivating way, with which I might be able to sympathize more keenly were it not fated that I must be perpetually on the wing, with rod and gun in hand. As it is, my taste for ripe canvasback is in no wise impaired when it comes to the table; for, by my halidome! it is a goodly bird, comely to look upon and luscious to the taste, when, by the grace of the cook, it is not spoiled in the kitchen, but rare done to that degree that the juice follows the knife. As served, so carved, *secundum artem*—each plump breast first gashed lengthwise and basted with the juice of a lemon squeezed from its golden rind, and seasoned with cayenne pepper and salt; and when this *sauce piquante* imbues the whole, slice two longitudinal strips for the ladies, and place the wings, each with its full proportion of breast, upon the plates of the swains expectant. *Aussi, en passant, un verre du Chambertin.*

Would you then have me re-state the often-described devices of batteries, sinks, blinds and swivel guns, and the best approved methods of setting out decoys, off shore or on, when I am in such high estate with cook and carver; or shall I again recount for callow youth the vicissitudes of bleak December days when the sleet drives into the blinds and all the caloric in the heated gun barrels cannot suffice to warm the benumbed fingers? These things become stale and tiresome in the recital. When I get down to Stumpy Point, perhaps, and take pot luck with the beach men who never shave nor have seen a looking glass, I may be able to deal somewhat in novelties. Meanwhile, I will revert once more to my entrancing trip down the Albemarle Canal with good Captain Southgate, of the steamer Newbern, and his attentive satellites in the cabin and pantry. Captain Southgate is his own steward and we live high on the products of the country. I tell you it is a rare chance when one falls on lines where the captain is a good liver and does his own marketing. Besides, the captain is genial. He is just old enough to be juicy and ripe. I have heard that he lacks five years of sixty. His officers are intelligent gentlemen and good navigators. Passengers who are strangers to each other when they come aboard get to be a family party while the day is still young. They follow the sinuous windings of the Elizabeth and North Landing rivers without once getting into a personal snarl, and they traverse the direct line of the connecting canal in a straightforward and proper manner, according to Scripture. The canal, of course, is wide enough and deep enough for any craft which navigates the sounds. Steamboats and sailing vessels often pass each other. Sometimes there are long strings of oyster schooners and lumber vessels which tail out in the wake of laboring tugs. Sometimes we pass great rafts of logs, fourteen sticks abreast and a quarter of a mile long, that almost choke the passage. Occasionally there is a bunch of tugs, pile-drivers, lighters and scows all jammed up together. A string of telegraph poles extends the whole length, with numbers on each pole, so that a break or an accident can be located by wire within two rods of the exact locality of its occurrence. Turnpike and railroad bridges swing open at intervals. From the promenade deck one can look over the tops of the canal banks, across the marginal cane brakes, into

the dense cypress swamp which lines both sides. The embankments are all of white sand, which has been thrown out of the bed of the canal. All the swamp is underlaid by sand. Some people's idea of a swamp is, that it is a morass or slough grown up to grass and full of bogs. A North Carolina or Virginia swamp is one of the most beautiful forests in the world. Sweet gums and cypress crowned with mistletoe, long-leaved pines, live oaks hung with vines, stately magnolias and bright-leaved myrtle, holly brilliant with red berries, yellow jasmines and sweet briars climbing all over the foliage in spring, purple asters and daisies blooming against the sides of the banks, and washed by the swirl of the big waves which the boat piles up in passing. Considerable areas of the swamp are wet, but large portions are cultivated. Farmhouses occur at intervals, with here and there a sawmill, a log landing or a country store. Occasionally one sees new buildings going up, indicating business life. There are few birds and very little game to be seen—a few crows and buzzards, an eagle, and once in a while a deer. One day we saw a veritable rabbit swimming across the canal, with his long, big ears set like sails. Straight ahead there is a lovely vista, with the pines and vines reflected in the water. Pongo Ferry is an historic place, associated with the Revolution. So is North Landing and Crow Island. Commodore Vanderbilt commenced business here by trading sweet potatoes and redbirds at North Landing; but Currutuck Inlet afterward closed up so that his vessels couldn't get in, and so he had to abandon trading, and started in as a deck hand on a steamboat. Capt. Marshall Parks, supervising inspector of steam vessels in this district, told me this.

The transition from the close canal and the mural foliage to the wide expanse of the open sound is agreeable. The way across Albemarle is lighted at night by 10 plug lights, each composed of three iron tubes 16ft. in length, set up on piles in mid water, and filled with petroleum gas once a fortnight. So the steamer threads its watery way by gas-lamps at night, which serve as bases for sailing courses as well as beacons. Government owns and operates the lights, makes the gas on a little shell mound in the sound, and fills the receivers twice a month. It is all very unique and interesting.

CHARLES HALLOCK.

OFF TO THE WOODS.

Editor Forest and Stream:

I usually start in early in September after several frosts, but this season the weather held warm as mid-summer all the month, and as it drew toward its close I could wait no longer. There was one advantage since the frosts were low, and the swamps, usually miry, were comparatively dry. It is a day's travel from the nearest point of supplies to the terminus of the highway at the entrance of the trail, an old disused toll road. At the appointed time my teamster, with a farm wagon and a heavy pair of horses used to the woods, loaded up and made the last clearing in time to make camp, have early supper and shift the load on to a jumper, over which was put a canvas cover to protect from possible rain.

Perhaps it will be of interest to learn what I took in for supplies for the winter. Following are the principal items: Pork, codfish, smoked ham, beans, flour, potatoes, and a variety of vegetables, sugar, molasses, tea, coffee, dried apples, crackers, vinegar and other condiments and spices; butter, lard, Royal baking powder, together with paraffine candles, kerosene, etc., etc. These will be supplemented later with wild meat, that is if I have usual luck. The principal game is caribou, and it won't take much of it to supply camp, as I don't hanker after it; an occasional meal is enough, and it suits best in a stew with onions and potatoes.

We got away on the trail at break of day and the load, not heavy on wheels, was all the team could draw, and as the sun came up, making it almost unbearable for man and beast, frequent stops were necessary. Rocks, roots, stumps and gullies made travel at best but slowly. Then there were blowdowns to cut out or a new road cut around them. It would appear wonderful to an outsider the way the team would pick their way in bad places, only horses used to the woods could get along safely. Many pole bridges and corduroys had got displaced by spring freshets, and unless the gaps were of more than a step in width no replacing was necessary, as the horses would carefully pick their way. The driver walked behind the load, seldom touching the reins. Once on a steep sidehill the load overturned, but was soon righted and no damage, as the load was packed and corded to meet such mishaps. We stopped for dinner at a cold spring brook, unharnessing the horses, which were reeking with sweat. As the team needed a long rest I started ahead to swamp out, for the worst of the road was from now on, getting to camp at 4 o'clock with three partridges that I had snipped on the way and soon had doing in the pot for our supper. Just about sundown the team came in. After supper the supplies were put under the roof of the dingle and a look was taken near by for trees, for the next forenoon was to be put in in cutting and hauling logs into the campyard for my winter supply. After dark there were a few games of high-low-jack, a final smoke and an early turn in.

Daylight found us astir, and the teamster's ax was laying low the giant birches until breakfast. Soon as the camp was put to rights I joined him and by 11 o'clock 9 big trees were in the roomy campyard. Then a dinner of fried pork, fried onions and boiled potatoes, with biscuit and tea, and we parted, him for the clearing, myself to commence the task of reducing the big trees to stovewood.

HUNTER.

MAINE.

It is hard work to select an acceptable Christmas present, something that will give real pleasure. For the sportsman there is nothing more pleasing than a book which deals with his favorite topic. He enjoys its perusal, and the satisfaction it gives him is a lasting one. FOREST AND STREAM's free illustrated catalogue gives the intending purchaser a wide range of selection and offers many suggestions which at this season of the year are very timely.

TRULY ODD IF ODDLY TRUE.

A party of young women living in Fulton, Mo., arranged a coon hunt to which no men were invited. They started out with four dogs, two guns and two axes, and immediately lost themselves in the woods, where they spent the night. When found the next morning they were crying, in a row on a log, and had no coons. —New York Evening Post.

IN MAINE WOODS.—III.

IN CAMP, Piscataquis County, Me., Oct. 27.—Before I left Boston I let my wild and daring resolve to go to the Maine woods be known to some of my friends. Various were the emotions excited. One excellent lady, whom I honor and love, shivered at the very thought of how I would be sure to freeze. "Go to the Maine woods at this season of the year! Awful!" I protested that it was just the season to go. Then came the question, "But why do you need to go so far, and at such an expense, to find woods? There are plenty of woods just out beyond Dorchester [I am not sure but she said in Dorchester] and it will only cost you 5 cents to get there."

Thus does the un hunting and uncaring mind regard the matter. (You see I have taken your word into my vocabulary and coined another by the same rule.)

Well, there are several thousand reasons why the Dorchester woods will not serve as well as those of Maine for my present purpose. Readers of FOREST AND STREAM know most of them and can conjecture the rest.

My guide is asleep in the sleeping tent some rods away and I sit in the log cooking camp, where there is a stove and a table. The rain falls fast, and delicious to me is its sound on the roof—and I also hear the wash of the waves of the lake on the rocks hard by. Guide says he cannot read after dark. His eyelids button down tight the moment he tries it. He has worked hard all day—so he leaves the world to me. I cannot express the comfort of this silence. The rattle and roar of things is shut out. I have been doing—not what a morning's mail demanded—but just what I wanted to. I have been very busy all day, nevertheless. In the first place I have read over again, for the hundredth or two hundredth time perhaps, a lot of Emerson's poems, half the volume. This must always be done in camp if one would get the true enjoyment of the woods and waters. I want to write you a letter some time to prove that Emerson is not only our best poet of nature but our greatest American poet, anyway. His poems "The Sea Shore," "Wood Notes" and "Monadnock," now—but, as Kipling would say, "that is another story"—and I will come back to camp.

Yesterday, like to-day, was cold and cloudy, a genuine "camp day," and, as such, a day to thank God for and to be enjoyed. But we had our hunt all the same. We had set up a target on the beach and were puncturing it in good style at 130 yds., when, despite our racket, a big, fat buck was good enough to crash into the thin ice up in the dead water and give us our warning. We quickly took it, and with quickened pulses heard him now and then breaking more ice and working his way down toward the outlet. At length he stepped into full view. A shot through the skull and he fell stone dead. I shall not tell whose rifle did it. Our score at the target was just about even when we ceased practice. We both fired at the deer and he is dead. It was a case of most sudden death. Nothing but execution by electricity could be quicker.

By the way, I happen to be, so far as I know and believe, the first person who suggested the latter method. My letter to the New York Tribune, when I was a lad at school, many a year ago, was widely quoted and much commented on, mostly in a humorous vein, but I was in earnest, and I have lived to see the adoption of the method by the State of New York, and with credit to the dignity of the State and the cause of humanity. Let me once more attempt the roll of prophet, though this time by no means that of advocate. Why may not the time come, and that speedily, in view of all the inventive genius now devoted to it, when a weapon shall appear which will throw an electrically charged bullet which shall kill or stun an animal if it so much as graze the extremest part of him, as surely as if it pierced his brain or heart? Heaven defer the day, say I, but I fear it.

Well, we hung up and dressed the deer, and a fine fellow he was, and honestly killed. Just before we go out of the woods we may want one more, but for a week I would not give a cent to shoot another.

I rather want a caribou, however, and if a clear day comes we shall try the bogs.

I have been preparing the skin of a loon. It was the one that was caught in the net of which I spoke in a former letter. I now understand how a loon keeps warm and enjoys life even in icy waters. His white vest is lined with a double thickness of fat, stitched and quilted in among the roots of his feathers in an amazing way. The warmth inside cannot get out and the cold cannot get in. How huge are his muscles and how stout his bones! He is at the same time a stern-wheeler and a side-wheeler, for under water both feet and wings play their part. His outfit is perfect for his business.

I was astonished to find nothing in his gizzard but gravel stones and mud and bits of roots—not a trace of organic matter. Yet he seemed in good condition, and the men who set the net declared that the night before his death he was several times heard to laugh. If any one suggests that a loon's laugh does not mean enjoyment, what, let me ask, does it mean? I will entertain any suggestions. Meanwhile I shall believe that a loon can laugh and be happy on an empty stomach. If so, his secret would seem to be worth finding out.

To-day we have discovered that some animal has dragged away the entrails of several deer which the deer-doggers left. They were dragged away in a mass into the swamp, and for a distance we could plainly follow the trail. We want to think that it was a bear that did it, but certain tracks on the sand beach near by prove that a black cat (fisher) has been about. Now, could a black cat do what has been done? We think not, but the doubt gives opportunity for valuable excitement and speculation. Meanwhile we bait again with the entrails of our deer and set many traps and long for to-morrow.

So you see we are very busy and have little time for folly or dissipation of any sort. We only wish the advocate of "Dorchester woods" could know the degree of our content. Would she not envy us! Truth to tell, perhaps she would not, but would even prefer her home in Boston to a camp on this lake shore this dark and rainy night. People vary so in their tastes!

But I must to our sleeping tent. My rifle is "loaded for b'ar."

C. H. AMES.

Natural History.

MONKEY TALK.

IN the November New Review Prof. R. L. Garner relates his further experiments with monkeys in his endeavor to learn their language. We extract from the paper these paragraphs:

"Since writing the sounds used by the capuchin monkeys, as well as I could represent them by the letters of our alphabet, I have had no reason to alter the literal formula by which they are expressed; but I have found that the word which I had construed to mean *food*, and sometimes perhaps to mean *drink*, has a still wider sense. It is difficult to formulate in human speech anything equivalent to it, since our human mode of speech has been so changed by accretions and by our higher modes of thought that we cannot grasp the thought from such a slight suggestion, and our habits of redundancy make us incapable of their modes of speech. It impresses me that the sound formerly described as meaning *food* is used in some way as a kind of 'shibboleth.' It is possible that this may arise from the Simian idea of food as the chief source of all happiness, and that the satisfaction which it gives is the supreme thought of his life, and in this manner, he associates that sound with every kindness and pacific office, but from a lack of opportunities I have not been able to ascertain to what extent these are associated ideas with him.

I have described in my former paper the fright which I gave to a monkey named Jokes, in Charleston, and at the time of writing that article I had not been able to renew friendly relations with him. After a lapse of some ten or twelve days from the time I had frightened him, I resorted to harsher means of bringing him to terms; I began to threaten him with a rod. At first he would resent it, but when he failed to frighten me by his threats and assaults, he soon yielded and came down from the perch in his cage, although greatly frightened. He would place the side of his head on the floor, put out his tongue, and utter a very plaintive sound, having a slight interrogative inflection. At first this novel demeanor quite defied interpretation; but during the same period I was visiting a young monkey of the same kind called Jack; we were quite good friends for comparative strangers, and he allowed me many liberties with him, which the family to whom he belonged assured me he denied to others. On one of my frequent visits he displayed his temper and made an attack upon me because I refused to let go a saucer from which I was feeding him some milk. I jerked him up by the chain and slapped him sharply for this, whereupon he instantly laid the side of his head on the floor, put out his tongue, and made just such a sound as Jokes had made several times before, under the stress of great fear. It occurred to me that must be a sign of surrender or submission. And many subsequent tests have confirmed this opinion.

But my daily visits to Jokes had not won him back after a lapse of more than two months, and on my approach he would manifest great fear and go through with this strange act of humiliation. I observed that he had a great dislike for a certain negro boy on the place, who teased and vexed him very much, so I had the boy come up near the cage, and Jokes would fairly rave with anger. So great was his dislike for this boy that he seemed to forget all other things about him in his efforts to get to him. I would feign to beat the boy with a stick and this gave Jokes great delight. I would hold the boy so near the cage as to allow the monkey to scratch and claw his clothes, and this would fill his whole Simian soul with joy. I would then release the boy and drive him away with sticks and wads of paper, to the evident pleasure of the monkey. I repeated these things many times, and we became the very best of friends again. After each encounter he would come up to the bars, touch my hand with his tongue, chatter and play with my fingers, and show all signs of friendship. He always warns me of the approach of any one, and his conduct toward them is very largely controlled by my own. He never fails to greet me with the sound described in my former paper. The sound is a compound, as I have shown by reversing the cylinder of the graphophone, and repeating it backward. This will be referred to farther on.

I may here relate that on one occasion a boy was teasing Jokes with a stick, when I approached the cage and put my hand in, and allowed him to caress it; in the meanwhile the boy would reach his hand into the cage under my arm and catch Jokes' tail or toe, which seemed at first to surprise him greatly, but in a trice he detected the author and flew at him with great violence, and every time the boy would reach his hand into or toward the cage the monkey would spring at him and try to catch his hand. In his haste and anger he once grabbed my hand in mistake; but he discovered it so quickly that I had scarcely realized the situation myself before I found him crouched down and his head on the floor, his tongue out, uttering that peculiar sound (which I cannot reduce to letters), in the most suppliant manner, and he continued to do so until he had been assured of peace. When he assaults any one else he always returns to me and touches my hand with his tongue, which seems to be a kind of sign of a covenant.

Another little monkey of this species which I visited a few times was called Jennie. Her master had warned me in advance that she was not kindly disposed to strangers and I should watch her, that she might not do me any harm. At my request he had her chained in a small side yard and forbade any of the family entering it. I approached her little ladyship with the usual salutation, which she seemed to recognize at once, and I sat down by her and began to feed her from my hands. She seemed to regard me as a friend, but of a different species. She eyed me with evident interest and some suspicion, but when I would utter that sound for *food* she would respond promptly. While we were indulging in a kind of mutual investigation of affairs a negro girl, who lived with the family and frequently fed Jennie, being overcome by her curiosity, came into the yard and came up within a few feet of us. I at once decided that I would offer her as a sacrifice on the altar of science, so I arose and placed her between myself and the monkey and began to sound the "alarm" or "menace" with great vigor. Jennie flew into a perfect fit of fright. I continued to sound it, and at the same time to attack the girl with a great display of violence, thus causing the monkey to believe that the girl had made the alarm. I then drove the girl away from

the yard with a great flourish of paper wads and pea-nut shells, and returned to the little monkey to pacify her. She became quite calm and seemed to think I was her hero, but for days she would not allow the girl to feed or approach her. This quite confirmed my opinion as to the meaning of this peculiar piercing sound.

A few weeks later I went to Cincinnati to visit my chimpanzee friends again, and I found immediately that they gave evidence of understanding one of the words which I used on approaching them. This word I had learned from the record of their speech which I had made last year. I have not had the opportunities to experiment with them which would justify my giving a very full account of any of their traits of speech, only to say this, that I am quite sure from my studies of their vocal character in the graphophone, and by listening to them in their cage, if I could be more intimately associated with them I could soon master their language; but they are kept in a large cage, entirely inclosed in a house of glass, the outer doors of which are kept closed to avoid any change of temperature which might tell on their health, and the keeper is so apprehensive of some ill befalling them that he keeps them forever under his eye. I succeeded in getting their attention as I tried to utter a sound of theirs, and I could get the female to come to me every time I would use it. I cannot fully describe it here, although it comes within the compass of human speech, and is not very difficult to utter. It is not quite, but nearly, represented by *h-ou-uh*, very slightly nasal, and, so far, the only trace of a nasal intonation in the vocal products of any of the lower animals which I have ever detected. They have more words than a capuchin monkey, and all the words they speak, so far as I have ever been able to hear, can be reproduced by human vocal organs. My recent visit to them has quite satisfied me that I can make myself understood by them; and while it is premature as yet to mention it, I am now trying to arrange for a trip to interior Africa to visit the *troglodytes* in their native wilds, and if my plans (which are all practicable) can be arranged, I agree to give to the world a revelation which will rattle the dry bones of philology in a wholly new light. Mr. Edison has kindly agreed, if I can make certain arrangements, that he will aid me in the phonograph feature—the only thing which makes these studies possible—and I promise to perform some feats which will be worthy of public attention."

MORE SHARK NOTES.

I AM glad to see that my communication to your columns, "Sharks and their Ways," has called forth experiences of others; in this way we may arrive at the truth. The experience of some of these writers is opposed to mine, but that of a late writer who observed the habits of sharks at Pensacola confirms mine, and I am induced to think that possibly the habits of sharks in Southern waters may differ from those in Northern seas. My observations have been made in tropical oceans and on the east coast of Florida. In Florida waters the species noticed were the dusky shark, the hammer-head, the shovel-nose and the nurse shark; these I have taken with rod and reel, from 2 to 6 ft. in length, and like the writer from Chicago, I have never seen them turn over to seize the bait.

As game fishes the sharks do not, I think, stand high; the most common of them, the dusky shark, when hooked, circles round on the surface and usually bites off the line and escapes. If so hooked that the line cannot be cut, the struggle is furious but short, the shark giving up in much less time than a game fish of half his size, such as a channel bass, salt water trout or snapper would do. I once hooked a shark about 5 ft. long which fought longer than usual, and when brought to gaff he was found to be hooked in a side fin, so that he retained his full powers. So also with the hammer-head. The shovel-nosed shark I have found to be the most active of them. The nurse shark lies on the bottom, and its bite is not felt or its presence known to the angler till he raises his rod, then the fish comes up like a log, without resistance.

MARIETTA, Georgia.

HABITS OF WHITEFISH IN PONDS.

WE are indebted to Col. Marshall McDonald for the following interesting and important information about the feeding habits of whitefish in ponds, contained in a letter from Mr. C. G. Thompson of Warren, Ind. Mr. Thompson is a member of the firm of Smethurst & Thompson, proprietors of the Star Roller Mills. These gentlemen have an abundant supply of good water and ample space for ponds. They have established a hatchery on their property and devote their energies and resources chiefly to stocking public waters. Plans for constructing trout-hatching boxes, like those used at Northville, Mich., were obtained from the U. S. Commission and the hatching appliances are successfully operated. The results with wall-eyed pike, known at Warren as pickerel, have been particularly gratifying, and Mr. Thompson expects to liberate fully 1,500,000 fry in the river next spring. A pond is now being constructed with dimensions of 300 by 200 feet and a depth of 16 feet; this is to be completed by October next and will be used for landlocked salmon and lake trout. The establishment now contains whitefish, landlocked salmon and wall-eyed pike. It is intended to add sturgeon and other fishes next summer and lake trout as soon as possible.

Mr. Thompson feeds his whitefish on mill-feed (called also shorts and middlings) and he finds that these fish, as well as catfish, carp and wall-eyed pike, thrive on such rations. Mr. W. F. Page uses the same material very successfully for black bass at the Neosho station in Missouri.

Two years ago Mr. Thompson procured 12 large whitefish at West Sister Island, Lake Erie, nine of them are now living and have made good growth. Eighteen months ago he received some whitefish fry from the Sandusky station of the U. S. Commission. Several hundred of these survive, measure 10 to 12 inches in length, and weigh probably from 10 to 12 ounces. Last spring Mr. Thompson obtained about 5,000 fry from Put-in-Bay and placed them in the pond with the larger whitefish; but found that "the old fish ate them up as fast as a chicken can pick up corn, consequently we got few fish from that lot. This was a revelation to the whole fish fraternity, as every one supposed that whitefish did not eat anything of the kind—but they do—and one whitefish one year old will

If your shooting friend does not read FOREST AND STREAM why not give him a Christmas present and do a little missionary work at the same time by subscribing to the paper for him. It will give him pleasure fifty-two times a year. Do you realize that next year \$4 will buy you 1664 of these big pages, and all of them devoted to wholesome, manly sport.

OREGON WILDFOWL.

PORTLAND, Oregon, Nov. 23.—Since last writing a most unusual streak of good luck has been with the sportsmen of Oregon. Weather as balmy as springtime, and more ducks than ever. On Nov. 8 the writer and a friend opened the ball at about 6:30 in the morning, from a blind on Muskrat Point, in the Moose Lake, on Columbia Slough. This blind is of peculiar construction and merits more than passing notice. First, a large hole is

light. A trip to the lake on Wednesday without dog or gun showed a grand sight. The lake was as full as it could be of all kinds of birds, from the piping little teal to the largest of the swan family. Let them rest to-day and we will come again. This was what I told Harry, and although very impatient, he thought this the best plan. How well the plan worked and how true the prophecy remains to be seen.

We got to our blind at about 5:45, and as there were no birds in our lake, of course, we felt somewhat crestfallen. However, we put our decoys out and then sat in the blind to wait for daylight. A bright moon was shining and anon we could see large flights of birds passing over. At about 6:30 we began to shoot, but the birds flew high and decoyed poorly for an hour. Then they came, and for three hours we had all the shooting we wanted. Then they stopped for a while and we picked up our dead birds. At noon we had all on the bank, and on counting found we had 102 ducks. Then we had lunch and got in our cripples, and after killing a few more, made our string count 127. This is the best shoot that I have ever had, and Harry says that for a short shoot it is his best. At about 10 o'clock the sun was so hot that we were obliged to dip our guns in the water so we could hold them.

Our daily papers are the most wretched accountants in the world, that is as regards sport. They get their information from people that are not sportsmen and who

clean up 10,000 young fry very easy. They chased about day and night, like trout, for 10 days after young fry were placed in with them. Now we have constructed pens 12 feet long and 6 feet wide, and as soon as hatched they will be planted in them and fed properly until they can swim and will then be transplanted to the large pond. In that way we feel confident of success in the highest degree."

All fish which have come under Mr. Thompson's observation eat the young of their own or any other kind. This agrees with the experience of others. Shad kept in one of the Government carp ponds at Washington thrived wonderfully on a diet of young carp, which were not intended for their support and which were supposed to be safe company. In a Fish Commission aquarium in the same city a number of shad about an inch long were placed with some yearling shad measuring about 4 in.; but the larger shad immediately began to devour the smaller ones and the two sizes were quickly separated. The young shad has teeth in its jaws which sometimes persist until the age of two years, but when mature the fish has no teeth and its habits change. Perhaps the same is true of the whitefish.

THE FOOD OF YOUNG WILD DUCK.—During the summer of 1884 I was on one of the surveying parties engaged in laying out the land between Calgary and Fort Edmonton into township sections and lots. For a time in the month

AMONG THE WILDFOWL.—XIV.

REDHEADS—A COSY SPOT IN THE WILD RICE.

of May and early June we were camped near a small lake on the shore of which grew some rushes, and the slope to which from the prairie was very slight and gradual. Around the border there were thousands of wild ducks of all varieties engaged in the process of hatching and rearing their young. Being appointed cook and camp-keeper to the party, my duty was to stay by and watch the camp to protect it from roving Indians. The lake was about 200 yards from the camp where the tents were erected. Having a telescope I had opportunities of watching what was going on. Most of the birds were incubating, but as the young hatched they at once went to the water. My curiosity was aroused as to how they lived and what they fed on; so one bright afternoon I crossed the creek and walked over to the lake. I found the water literally swarmed with small frogs, and black-with tadpoles in various stages of growth. The little fluffy ducks were filling themselves with this, to them, dainty food, while young grass along the banks and the larger frogs formed the chief sustenance of the old birds. So bountifully has nature provided for all her creatures, and yet each and all prey on one another.—J. MACKELCON (Toronto, Ont.).

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—1 yak (*Bison grunniens*), 1 green hangurst (*Ostinops viridis*), 1 ground rattlesnake (*Crotalophorus milvatus*), 2 green snakes (*Cyclophis vernalis*), 4 common hog-nosed snakes (*Heterodon platyrhinus*), 1 common black snake (*Bascanium constrictor*), 1 black hog-nosed snake (*Heterodon platyrhinus niger*), 2 glass snakes (*Ophiosaurus ventralis*), 33 water snakes (*Tropidonotus sipedon*), and 29 garter snakes (*Eutamias striatilis*). Presented—1 brown bear (*Ursus amercanus*), 3 red foxes (*Canis vulpes fulvus*), 1 opossum (*Didelphys virginiana*), 1 red-tailed buzzard (*Buteo borealis*), 1 carinated tree boa (*Herpetodryas carinatus*), 1 black snake (*Bascanium constrictor*), 1 striped terrapin (*Chelopus insculptus*) and 4 alligators (*Alligator mississippiensis*).

TO DENVER VIA ARLINGTON ROUTE.—Only one night on the road. Leave Chicago at 1 P. M., or St. Louis at 2:25 A. M., and arrive Denver 6:15 P. M. the next day. Through sleepers, chair cars and dining cars. All railroads from the East connect with these trains and with similar trains via Burlington route to Denver, leaving Chicago at 5:45 P. M., St. Louis at 8:15 P. M., and Peoria at 3:20 P. M., and 7:50 P. M. All trains daily. Additional express trains, making as quick time as those of any other road, from Chicago, St. Louis and Peoria to St. Paul, Minneapolis, Council Bluffs, Omaha, Cheyenne, Black Hills, Atchison, Kansas City, Houston and all points West, Northwest and Southwest.—Advt.

dug in the ground, which is quite high well above the water, and a drygoods box 6 ft. long, 4 ft. deep, and 4 ft. wide, is let in flush with the top of the ground. Then a wire screen 2 ft. wide is laid and fastened on above this but at an angle of about 45°, and then dead grass is thrown on the wire. This makes nice room for the dogs on either side, and they are thus well sheltered from any cold winds. Then a good seat is constructed in such a way that it can be moved to suit the convenience of the shooters.

All of our decoys (about eight dozen of mixed trash, canvas and geese) having been set out, we were ready for the birds. And how they flew: the green-winged teal was strongly in the majority, as the count will show. For half an hour the mallards, widgeon and a few sprigs came; and then as suddenly they stopped coming. But what is this? A large white object is seen coming down wind and straight for the blind. A little judicious calling, and then the writer scores his first swan; and a very proud day this was for him. After waiting for an hour, we feel the wind grow stronger from the east, and down come the birds. Then we commence the rapid-firing system, and after another hour or perhaps two the flight is done. Now let us get in all of our dead birds, for it is ten o'clock. How many? Well, we have sixty-one birds. Then we go to lunch, and on our return are surprised to find the lake full of birds again. We frighten them out and they do not come back as soon as we expected; however, about 2:30 the fun begins again, and the shooting is fast and furious for a time. Then we pick up and pack out a distance of half a mile to the train, and a half hour's ride brings us home. On counting up, we find sixty teal, twenty-three widgeon, nine mallards, four sprigtails and five canvas. The swan and a few snipe we get on our way to lunch make the total 107 birds; and this in weather in which one would be ashamed to wear an overcoat.

The 15th was almost a repetition of the 8th, with the exception that nearly all of the birds were large, only two teal and one butterball to mar the beauty of ninety-three mallards, widgeon, sprigs and canvas. Mr. Harry Beal was my companion in both of these shoots, and we will shoot together for some time to come, at least I hope so. Now comes our first ducking in the dark of the moon. The two former shoots were made in the full

have been to guessing school for a short time, so are not to be blamed for their errors.

The pheasant, grouse and quail season is closed. Very few of these toothsome birds have been taken this year compared to former years. The season opens on the first of September, and then the birds have gone to the mountains and tail timber. This is as it should be for a few years. SAND HILL.

THE BLACK PARTRIDGE IN AMERICA.—I was glad to see in FOREST AND STREAM of Sept. 3 that an attempt has been made to introduce the black partridge, and heartily hope it will succeed, being sure that American sportsmen and naturalists would be delighted with them. I have lately read that they are found in Cyprus, so they probably exist also in Asia Minor and northern Africa. It would be easier to take them to America from that part of the world than from India on account of the shortness of the voyage. I hardly agree with Col. Ramsden in thinking that the prairie grass is not high enough, having frequently put up the partridge on slopes of the Himalayas, where the grass was not more than one or two feet high, and that only in patches. There is also no fear of Illinois being too hot, for the bird is common in parts of the Punjab, near the River Ravee, where the summer heat is really scorching.—J. J. MEYERICK (England).

THE HORTON STEEL ROD MANUFACTURERS report that the improvement in make has been followed by a corresponding increase of sales, which goes to show that they are growing in favor with the fishing public. The rods are to be sold the coming season at a much lower price than heretofore, and the prospects are that the Horton Co. will have all that they can do to supply the demand.

NORTHERN NEW YORK.—Philadelphia, N. Y.—Large numbers of bass, rock bass, pickerel and bullheads were caught in the river, on Indian River, at or near this place. Suckers are speared in large numbers every spring by means of a torch made of cotton batting soaked in kerosene oil.—RAY SPEARS.

TAKE A COMPASS.

Editor Forest and Stream:

In regard to what Dr. Morris and others have written about finding one's way in the woods and out of the woods, I would say with Mr. Seymour Van Santvoord, don't trust too much to your knife blade and finger nail, but always carry at least one compass. A year ago last October I was obliged to spend a long, cold, fireless, supperless night about ten miles from the nearest habitation, all because I had been so foolish as to leave my compass at home.

Suppose that a man finds himself about 4 P. M. in a strange valley, with the mountains rising on both sides two or three thousand feet, and the saturated clouds almost touching his head. Try your knife and thumb nail now. The shadow comes all right, the light coming from the opposite side. Cross the valley to make sure. The light still comes from the opposite side, because it is the most open away from the mountain. Try it in the bottom of the valley. It is the lightest up stream. Will I have to climb to the top of that ridge where the light must come from the west and south? But it will be dark almost before I get there, and that would be a choice place to camp. Better stay down here in the valley where at least the force of the wind is broken, and make the best of it till morning. This was my experience. That night it rained, and I had no shelter, matches, nor supper, but I nearly had a chill before morning.

On the other hand, the knife and nail method is often useful, and has taken many a poor fellow out of the woods before dark. I know a man who bet the guides in ascertaining locality in the Adirondacks, that he could go two hours into a tamarack swamp and come out within three more. They took him up. The day was dark and the sky uniformly overcast, so that one could scarcely tell just where the sun was out in the open. He came out on time and it was thought he must have a big "bump of locality," but he himself said it was simply by the use of his knife blade on his thumb nail. NIK.

Essex, New York.

SHAWANGUNK NOTES.

ON the 12th inst. a box containing 28 ruffed grouse was sent to the office of the National Express Co., at Rockland, Sullivan county, N. Y., for shipment to Washington Market. The agent suspected that the contents had not been killed according to law and held the box until Game Inspector Snyder examined it. All the birds had been snared, and prosecution of those concerned in their capture and shipment will follow.

In spite of the severe statutory penalty, violations of the game laws in this respect have for years been flagrant in Sullivan, Pike and Sussex counties. In Pike county thousands of ruffed grouse, not to speak of other birds and rabbits, are snared and shipped to New York or sold to local speculators in game every season. Those who buy game thus caught on speculation or for their own use, knowing the facts, deserve as severe punishment as the trappers themselves.

The counties concerned should have an organization composed of their own citizens to watch for violations of the game laws. The Rockland case is a good beginning, but much more is needed. Every package of game sent to our railway stations should be examined, and all birds, rabbits, etc., found to have been illegally killed should be detained and the shipper brought to account. Such proceedings would soon bring to light the trappers and the extent of their lawless work.

If it can be proved that the sender had twenty-eight snared birds in her possession she can be made to pay at the rate of \$50 for each of them, in which event the total amount of the penalty will be the very tidy sum of \$1,400.

The name of the shipper is probably fictitious, and the sentimental railers at our game laws might begin with that fact in acquiring sounder views. We hear much of the farmer's table being impoverished by game laws made in the interest of city anglers and gunners. The snared grouse in question were destined for epicures who patronize high priced restaurants in New York—people who know little or nothing of Sullivan county and, if possible, care less.

Both rabbits and grouse are abundant this season, while their scarcity throughout the region was remarked last fall. Hunters informed us that foxes were becoming so numerous as to threaten the extermination of the gray rabbits. Now the rabbits are proving a pest to the farmers. The foxes were also charged with destroying grouse during their nesting season. Speaking of the matter in FOREST AND STREAM last winter, the writer suggested that two unusually mild winters in succession might have something to do with it, by permitting an undue increase in the number of carnivorous rodents and snakes. Although not extremely cold, last winter was long and tolerably severe, with plenty of snow on the ground from December until March.

Whatever the exact cause or causes, it must be admitted that natural conditions in some way have more to do with determining the scarcity or abundance of both grouse and rabbits than protective game laws.

A number of Kingston sportsmen have purchased a tract of land at Lewbeach, on the Beaverkill, with the view of forming a game preserve there. They propose to create a pond some twenty-five acres in extent, by a dam 20 ft. high and fifty rods in length. This will give a deep body of pure water. A fish hatchery will also be built and several thousand trout fry will be liberated every year. The Beaverkill is a splendid trout stream, and the big fellows are expected to take up their quarters in the deep waters of the pond.

The extensive trout pound built by the Hartford Park Association two years ago, is now well stocked. Some weeks since several members with their families spent a few days at the club house. While most of the gentlemen were out looking up a deer to replenish the larder, a member hid himself to the pond with rod and flies, and in a short time landed several fair-sized trout. Next season the pond will doubtless afford some excellent sport.

Signs of boars and black bears are plentiful in Forestburgh, and after the first good snow falls there will be a general meet of the Hartford Park people. Bruin and the wild porkers will have to hustle.

Four young Jersey cattle—a bull coming two years old, two heifers of the same age and a last spring's calf—belonging to a farmer at Bushkill, Pike county, Pa., escaped from their pasture and took to the woods, becoming

as wild as deer, and, indeed, looking very much like deer. They fly on the approach of man, and have runways, as deer have.

A short time ago the bull was so frightened as to get pretty far from his runway, but he soon got back, not minding a fence that was in his way, instantly making kindling wood of the rails. Of course the bull is dangerous. Most of the Jersey bulls are cross when in what we call a tame state, but this fellow, being wild, is as furious as the bulls of Barbara, and his capture alive would be difficult, if not impossible.

A few scores of wild cattle in the wilderness of Porter, Lehman, etc., would make very good substitutes for deer, and the hunting of them for deer hunting. Viewing these cattle in this light, one feels like suggesting that the animals be allowed to struggle for subsistence in order to see what comes of it.

When we reflect that until recently wild cattle existed on the cold moors of northern England, the suggestion may not seem extravagant. In form, size and color the cattle of the Channel Islands—Alderney, Jersey and Guernsey, resemble the wild breed, and in a state of nature would be likely to take on more deer-like traits.

B. F. HENLEY.

PORT JERVIS, N. Y.

THE GAME FIELDS.

LEXINGTON, Va., Nov. 23.—I have intended for some time past to let you hear something of the game in this section, but have postponed writing from time to time hoping to be able to give a better account of game than the early season seemed to promise.

On Dec. 16, 1890, we had a snow fall of 28 in., which lay on the ground for weeks; and in that part of the county in which I do the greater part of my shooting, I heard of two coveys of birds, that had taken shelter in corn shocks, being found starved to death. I had hoped that the mortality in other parts of the county would not be so great; but my hopes proved vain.

During the period of thirty years that I have been shooting I never saw game so scarce. A tramp of ten or twelve miles has more than once proved fruitless. I should be glad if the Legislature would pass an act protecting the birds for at least two years.

On the other side of the Blue Ridge, in the counties of Amherst, Nelson and Bedford, I hear that game was never more abundant, and that large bags are frequently made.

Deer are reported to be in numbers in the mountains north of us. One party in a hunt of six days killed six deer and one bear. T. M. S.

A large moose was shot the last of September this year in the Umbagog Lake by the two Thurston brothers. They claim to have shot him on or near Pine Point, which was on the New Hampshire side of the State line, which cuts the north bay of Umbagog in two diagonally.

The moose was a large bull, bearing good-sized antlers, and weighing six or eight hundred pounds dressed. He was wading in the lake at a place where, years ago, before the dams were built to hoist water, moose used to wade across the lake.

Charles Davis got in the best hunt of the season in Elliptown, Piscataquis county, last month, that we have heard of. He was trailing and stalking deer on Blue Ridge and had the good fortune to shoot two, and while dressing them saw two bears approaching, probably attracted by the smell of venison. Charlie's trusty Winchester lay handy by, and he blazed away at the largest—a bear of about 400 lbs.—rolling him over; but the smaller kept straight on for him or the venison. Charlie kept peppering away until he secured them both. They sent the head to Colebrook, N. H., to be mounted, although they were offered \$50 for it.

Many deer have been shot about Umbagog this fall, and some bears.

Partridges are fairly plentiful, and the usual amount of water birds have been killed.

Now, and for the last six weeks, the most of the guides have been trapping fur-bearing animals, such as bear, otter, beaver, mink, fisher, lynx, martin (sable), fox, etc., etc., with very fair success.

Deer are abundant everywhere throughout the lake country, and moose seem to be on the gain. J. G. R.

BETHEL, Maine.

Editor Forest and Stream:

On reading the letter from Mr. Andrews on the subject of game protection in Rhode Island, I was indeed glad to hear of the good results with which he had met; and hoping to be of some use to his association, I propose to disclose one of the worst nests of game law breakers in Rhode Island.

The town of Narragansett Pier contains no less than twelve large hotels and two large restaurants, besides many cottages. The great rush to this place is, only for two months of each year. These months are July and August, just the time of year when game should be unmolested. During this season the hotel keepers offer fancy prices for half grown quail, partridge and woodcock.

There are plenty of men in the surrounding towns of Wakefield, Peace Dale and Kingston who jump at this chance and kill off all the game before the law-abiding sportsman gets a chance. This is so year in and year out, and it will be just the same next season; so, if a steady watch is kept secretly, they may make an example of one or two of the scamps. My summer home is in Narragansett Pier, and I would like to see the birds let alone until the opening day, which is October 1 for quail; heaven knows, soon enough. T. DE C.

NEW YORK CITY.

Foxes are abundant, several having been killed this fall. Parties leave here nearly every day, and seldom return without a brush or two. Quite a lot of partridges were killed this fall. Reports from the Adirondacks say partridges were never more abundant than during the last fall. RAY SPEARS.

PHILADELPHIA, N. Y.

There is a bear skin on exhibitions in Hudson's gun store that takes the cake. It is 9 ft. in length and 8 ft. across in the widest place. The bear that wore this skin was a grizzly, and he lived in far-off Alaska. Judging from the size of the skin, he must have been as large as two

ordinary cows, and could not have weighed less than 2,500 lbs. It is by far the largest bear skin that has ever been seen in Portland, and even old bear hunters who are told of its dimensions shake their heads in an incredulous manner until they see it with their own eyes.—Portland Oregonian.

WAYS OF THE RUFFED GROUSE.

THE ruffed grouse rises at times from the ground with his head directly toward the person approaching in the field. Not with the intention, however, of flying in that direction, but on the contrary, just the opposite. When the grouse does this he is usually along the skirts of the woods, sunning himself in the leaves.

When disturbed at this time he springs up with lightning-like rapidity and whirls away on his side with a backward curve that exposes to view for a moment the under surface of his body and wings. After he has gone about 20 ft. he rights himself, and flying low, goes away in a straight line.

This remarkable flight of the grouse is somewhat similar to the feat performed by the acrobat when he turns a somersault sideways by placing one hand upon the ground.

Commonly the grouse flies across the shooter or directly away, the bird turning around at the last moment and leaving the ground either with a spring, or after a short run. When the grouse flies he does so with a sort of rocking motion, caused by his working his wings alternately. He does this for some distance, after which he usually sails along with his wings set, and in this manner will go a long way before he alights on the ground.

The grouse, also, in his flight swerves considerably, at times to the right and left. He often does this for the purpose of placing an obstruction between himself and the danger behind him.

On one occasion I saw an ardent sportsman fire at a grouse in the woods about 35 yds. off. But the most of his charge of shot went into a large pine tree which happened to be directly in the line of flight and behind which the bird had just darted and disappeared. But for that tree the gentleman would have probably shot his grouse. DORR.

SCHENECTADY, N. Y.

CHICAGO AND THE WEST.

CHICAGO, Ill., Dec. 1.—Across the street from where I daily grapple with things rises the vast and beautiful structure known as the Woman's Temple, built by the W. C. T. U., and one of the finest buildings in this city. This organization, at its meeting in Boston last month, passed a resolution against vivisection, and also one against the practice of wearing the skins of birds as millinery ornaments. The resolution, as printed at the time, read as follows:

"Resolved, That we hereby express our disapproval of the custom of wearing the bodies, wings, or feathers of birds (except those of the ostrich) as part of our clothing or headgear, and we call upon all right-minded women to unite with us in efforts to abolish this destructive and cruel fashion."

It must be a great trial for certain of the ladies to subscribe to the foregoing. Indeed, the resolution should have had an amendment, embodying one exception among the feathered race. The wearing of the wings, tail, body, head, or the total or fragmentary frame of the English sparrow should have been not only allowed, but encouraged. This would have helped us all out of our troubles, and would have relieved the State of Illinois from the delicate position in which it now finds itself placed. To-day, in short, is Sparrow Day, the beginning of the two months' season during which the State will pay 2 cents a head as bounty on English sparrows. There is a swarm of English sparrows sitting over on the Woman's Temple now discussing the question, and probably indorsing the resolution as it stands above. The small boy will revel in destruction now for a while, indeed, has been doing so for a long time; for many a peck of heads nipped untimely will be sworn through as the full fruit of December. The law will cost the county a barrel of money, and will kill thousands of decent sparrows of other species, in spite of the fines imposed for killing or for paying out bounty on any but the English sparrow. But if the ladies would only consent to wear sparrow wings on their hats now, with what a sigh of relief could the tax payer go down into his pocket for his share of the sparrow tax. This is a very ill-built, misfit world.

Not much shooting here just at present except at the trap. The quail season for Illinois closes to-day, Indiana season closes Dec. 20. The market is full of Wisconsin and Michigan venison, shipped illegally of course.

Some mallards still linger along our timbered streams. Numbers were seen last week on the Kankakee at Mak-saw-ba grounds. Their pursuit seemed too hard to certain ease-loving members of the club, to wit, Geo. Holden, J. P. Card and L. R. Brown, who went rabbit hunting instead. The three killed fifty rabbits in one day. They purposed having a great joke on one of their friends in the city, and intended to put all these in one big sack and ship them to him "collect." On the next morning, however, when they wished to put the rabbits in the bag, they found them all frozen stark and stiff and their legs pointing in about 400 different directions. They had to postpone the shipment and wait for a thaw.

Any one liking rabbit shooting—I confess I always rather did—can find all of it he cares for in the timber mottes along the edge of the Kankakee in Indiana. Thayer, Shelby, DeMotte, Lowell, any of a dozen towns would be good enough. Vandalia, Ill., is another good point. E. HUGH.

DUCKS IN FISHING NETS.—Erie, Pa.—I've been told that one fish boat brought in here 1,300 ducks last evening and another 1,000 from their nets. The fishermen say that the ducks dive for the wheat and other grain lost from passing vessels and when rising are caught. In former years but few ducks have been caught thus here, and this present experience is, as yet, as unexplainable as it is unusual. The damage done to the gill-nets by the ducks in their efforts to escape is so great as to render a duck haul, though never so large, a bit of poor luck for the fishermen, even though the netted ducks are salable, if they have not been in the water too long.

WHERE HAS ALL THE GAME GONE?

"THE blackhearts used to come to Toronto Bay in hundreds of thousands every spring. Once, about fifteen years ago, I killed 400 at a single discharge of my double-barreled, but they don't seem to come any more, somehow," said an old sport.

"Thirty-five years ago this fall," said a lumberman, "I went with a lot of fellows up the St. Lawrence River on a steamer, and we fairly plowed our way through ducks. Why we killed hundreds with our revolvers just for fun, and even knocked them down with sticks and stones."

"What could you do with so many?" I said.

"Do! Why we never bothered about them again after they fell."

"In 1867, I and two other fellows discovered a herd of 200 odd elk yarded up in the snow, in Oregon. We killed every one of them in a few hours," says an old miner.

"I've seen a hundred thousand hogs fattened on wild pigeon squabs in Kentucky," says an ancient pioneer.

"Forty years ago," said the first settler of Peel county, Ontario, "I stood by that rock in the river, with a pitchfork, and pitched out fat salmon till I had a pile on the banks nearly as high as a man."

"And then?"

"Oh, I took a dozen or so of the best and left the rest to rot. We all did it every spring. But there has not been a salmon seen here for ten years now; it's a judgment on us."

"Yes," says an old ranchman, "I've seen the prairie north of the Canadian River so thickly strewn with dead buffalo, left untouched where they fell, that one might have walked sixty miles on them without ever touching ground."

These are only a few out of thousands of well known facts, and yet people keep on asking "What has become of all the game?" If they wish for a fuller solution let them turn to the department of this journal in which each sportsman tells of the size of his latest "bag," and further let them turn to the cover and advertising pages, and mark the growing multiplicity and perfection of infallible, deadly, wholesale engines of destruction of every possible kind; each year shows us something new, with greater precision, range, power and rapidity than ever before, while the luckless wild things are endowed no better than when a bow and arrow were their worst foes. Let them note these facts, I say, and ask once more where has the game gone to. For my part I should be quite contented to see the total abolition of what is known as sport with the gun. ERNEST E. THOMPSON.

INDIANA SPORTSMEN AND FARMERS.

WE have received from Mr. F. M. Gilbert a copy of the subjoined resolutions, sent to him by a committee of the leading sportsmen of Evansville:

EVANSVILLE, Ind., Dec. 3, 1891.—F. M. Gilbert, Esq., Game Warden First District, Indiana: At a meeting to-night the following resolutions were adopted, and I herewith present them to you:

Whereas, We represent the citizens of Evansville who believe in recreation when possible to leave our work, and we love gun and dog, and find our only sport in the pursuit of quail; and

Whereas, We are not market shooters, but shoot only for our own pleasure and the few quail that our families eat, and we therefore do not gain any recompense from shooting; and

Whereas, Matters have reached such a pitch among the farmers that no matter how gentlemanly in deportment we are, we are ordered off (often with curses and all kinds of foul abuse) from nearly every farm in this section, and it has become impossible to realize any enjoyment from our guns and dogs; and

Whereas, We learn and firmly believe that the farmers keep us from shooting the game (which is the property of the State and not theirs) in order to themselves kill it, contrary to law, and sell it; therefore be it

Resolved, That we call on you to do your duty as Game Warden, and arrest and cause to be prosecuted to the full extent of the law, every farmer who brings in netted or trapped quail, or quail taken in any illegal manner against the statutes of the State of Indiana. That we call on you to cause to be prosecuted the proprietor of any store, grocery, provision store or restaurant that sells or offers for sale any quail illegally taken. That we call on you to prosecute any express company, steamboat, railway company or common carrier of any kind that shall take game of any kind out or the limits of the State of Indiana.

We hereby pledge ourselves to assist you by any means in our power. Respectfully,

ED. L. DURHAM, Secretary pro tem.

J. F. KNIGHT, President pro tem.

A QUAIL'S FREAK.—One afternoon last month I shot a quail which fell near a brook. When told to "find," my dog Bang surprised Let and me by jumping into the brook and putting his head under the overhanging bank, locating the bird without doubt. I gave a stamp and out came the quail and paddled for dear life across the brook. Our efforts to make the dog understand the situation only resulted in his redoubling his attempts to get under the bank, and so Let jumped into the brook and retrieved the quail himself. We found that I had broken his wing, and so had made this cunning and unique attempt at escape. —F. LIN (Plain Hill, Conn.).

MISSOURI GAME.—Alexandria, Mo.—Quail appear to be an average this year. I have seen three flocks of a dozen birds each. The common rabbit is fairly numerous. This seems to be a great year for coons. The gila monster in the Keokuk Park is flourishing. —JASPER BLINES.

Books make good holiday gifts, and give more pleasure in proportion to the money expended than anything else. If you want a good book on shooting, fishing, natural history, or any other subject connected with outdoor life, consult the list of the Sportsman's Library in this paper, or better still, send for FOREST AND STREAM's free illustrated catalogue of works on outdoor sports.

Sea and River Fishing.

Angling Tackles. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price \$2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price \$1.50. American Angler's Book. By Thad. Norris. Price \$5.50.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

FISHING THROUGH THE ICE.

Editor Forest and Stream:

When the Frost King with chilling breath congeals the surface of many thousands of lakes and ponds through the Northern States, he is hailed with delight by those who, either for pleasure or profit, enjoy the sport of catching pike, pickerel and other varieties of fish from holes cut through the ice. The art of taking fish in this manner is an ancient one, much skill having been displayed and ingenuity shown in the construction of the various appliances and forms of tackle used, the essential point being so to arrange the tackle as to give the greatest possible certainty of hooking the fish securely. To accomplish this there must be an abundance of coiled line to run freely out when the bait is seized, the bait being secured in such manner that it can not be stripped from the hook, although easily gorged by the fish, and the hook of such a pattern as will give the most uniform results.

That the readers of FOREST AND STREAM may profit by the teachings of those whose many years of experience have taught them the proper thing, a plain description of the most killing and successful tackle known will be given with instruction, which if followed can not fail to bring ample reward to him who will brave the cold and wintry winds in pursuit of this exhilarating pastime. The lines used should be good and strong, not less than 45ft. in length and plenty of them, as the more lines used the more are the chances of success. Seine twist, hard-twisted (which can be purchased by the pound and cut into proper lengths), makes very substantial lines. To arrange the coil of the line bend a piece of spring brass wire (size No. 16) 9in. long into a spring the shape of a hairpin (Fig. 2), with an eye or loop in the bend. Make

from a shorter piece of wire a ring 4in. diameter (Fig. 3), having a downward projecting stem an inch in length, with a small loop at the end.

Tie the hairpin at eye into and a few inches from the end of the line, pass the opposite end of the line through the ring and the loop of the stem, a half-hitch of the line around the stem will hold the ring in position, the distance from the ring to the end of snell being the depth that the bait will hang below the ice and can be easily changed according to the varying depth of the water. Coil that portion of the line between the hairpin and the ring by cross-winding around the thumb and little finger of the open hand; place the coil in the hairpin, compress the ends of the hairpin and insert them into the ring, the spring pressure of the hairpin against the ring will hold the coil in place (as seen in Fig. 7). When in use the ring slips easily from the hairpin the instant the bait is seized, freeing without resistance the coiled line and giving ample opportunity for the wary fish to swallow the bait.

The ring should be sufficiently tight upon the hairpin to prevent the opening of the coil from the exertions of the live minnow bait, which may be of any variety of small fish. Chubs, suckers and dace from 5 to 10in. in length are preferably the best, being hardy, they live longer upon the hook, and when properly baited are as lively at the end of a week's time as when first put on the hook, proving of great advantage where the lines are to remain set in the ice for several days' duration. The hairpins, rings and snells should always be made of brass wire, as steel or iron wire corrodes, rusting the lines. In making snells (Fig. 4) use soft wire, size No. 24, double and twist a piece of the wire 28in. long, leaving a small loop at the end for the hook, twist and fasten with solder a strong loop at the other end for the line. The hooks (Fig. 5) used are very killing, being especially suitable for the taking of those varieties of fish which kill their prey before swallowing the same and are called the "barbless double-pointed" hook. They are but little known at the present day, although hooks of the same pattern, crudely made, were used during the bronze age and are still found among the remains of the European lake-dwellers.

They are easily baited, leaving the bait perfectly natural in appearance, and do not arouse the suspicions of the fish; but once swallowed, whether large or small, the hook will not tear out, break or become dislodged. They should be carried in a small box separate from the lines. In baiting, break the skin of the minnow just ahead of the dorsal fin with the point of the hook, push the end of the snell under the skin at least an inch toward the minnow's head, prick through the skin and loop with the point of the hook, and bring the loop to its place in the shank of the hook, drawing the shank back under the skin with the points of the hook flaring upward, outward and backward (as in Fig. 7).

In setting out lines, they may be tied to sticks laid across the holes in the ice, but if allowed to remain for

any length of time are apt to become frozen in, making caution necessary in cutting out not to sever the line. To guard against this, as well as to mark the holes in case they should become covered with snow, get as many pieces of heavy galvanized wire 2ft. long as there are lines in number, bend at two-thirds of the length in each an eye or loop of 1 1/2in. diameter, also a small loop at the longer ends. The longer ends, with lines attached, should hang in the water and the sticks placed through the large loops and across the holes. A miss blow of the ice chisel or axe in cutting out will not harm the wire, and the short ends of the wires projecting above the ice mark where the lines are set, the wires also preventing the fraying of the lines against the ice at the bottom of the holes.

The coiled line hanging below the ice can not clog nor freeze, and a glance will reveal by the coil being broken that a fish has seized the bait. Fish often bite best during the very stormiest and coldest of weather, when the ice is forming rapidly. At such times all devices which are used above the ice to indicate the hooking of the fish, or give out line, are practically worthless.

In cutting holes an axe is often used, making the work quite fatiguing when the ice is thick, the ice chips, clogging and breaking the force of the blows, the water rushing in causing a great deal of splashing, help to make the work disagreeable before a decent hole can be finished; an ice chisel will remedy all of this, and with such an implement nice round holes, neatly bevelled out at bottom, can easily be made. Any blacksmith can make a good ice chisel by welding into the end of a 3/4in. round iron bar 4ft. long a piece of tool steel, drawing out thin, 3in. in width and chisel-shaped, sharpening well, and forming a knob at upper end of the bar to prevent slipping through the hands.

Pike or pickerel do not gather in schools, but go about singly in search of their prey, making it necessary in setting lines to place them where the fish in search of food will find the bait, the fish moving from the deep to the shallow water. In setting lines cut the holes from 20 to 30yds. apart, following the contour of the shore, along the edge of deep water, which can generally be told by the rushes. Find with a sounder the depth of water at every hole and lower the bait half way to the bottom, never using holes where the water is more than 20ft. in depth.

Snags and stakes of all kinds should be avoided, as fish instinctively go to them when hooked, to free themselves from the line, winding it into a labyrinth of puzzles, and though rarely escaping, causing much annoyance and trouble. When the line has become snagged, follow its course from the hole, by cutting a row of holes directly over it until the snag is reached, if the fish can be located it can be gaffed by tying the gaff hook to a pole, and a strong pull will break the line or snell, which if badly snagged is not worth fretting about, providing the fish is landed. The sticks when placed across the holes should be parallel with the shore, that an even strain may come upon the line and stick, as most fish when hooked make a rush for deep water, and a large one is apt to break the line or stick if misplaced. The lines should be looked at twice each day, the fish taken off, rebaited and reset. Always play a large fish until well spent, as they make their final struggle at the hole. Kill, when landed, by a blow on the back of the head. In removing the hook a thin, flat stick makes a capital disgorger, by inserting in the bend of the hook and removing from the gullet of the fish.

The hooks patterned after models made in this city can be procured from the leading tackle dealers in New York city. A hand-sled with a box thereon, in which may be carried the fish, minnow pail and other things, will be found very convenient and save much time when used.

Mr. Lewis Bullard and the writer visited a small lake situated twenty-five miles distant from this city, on Feb. 23, 1891, and set out sixty lines that day, taking them up on the morning of the 26th, our catch being twenty-eight pike and two bass, aggregating a total weight of 220lbs., the ten largest weighing 22lbs., 22lbs., 21lbs., 18lbs., 16lbs., 11lbs., 6oz., 11lbs., 9lbs., 13oz., 8lbs., 4oz., 7lbs., 10oz., respectively, the largest fish being 44in. in length. In the capture of the largest two we had an exciting time, one of them being taken where ice was barely sufficient to withstand our weight, and so clear that the fish, seeing us, could not be brought near the hole without arousing all its energies and having to be played for several minutes before becoming sufficiently subdued to be gaffed. The other fish had wound the line several times around a pole which had been pushed into the muddy bottom to serve as an anchor for boats. His struggles had loosened from the bottom this pole weighing several pounds and we found the fish towing it around beneath the ice. This fish in its efforts to get free had so contused and bruised itself that it literally sweat blood when taken from the water.

The passage by our last Legislature of a bill prohibiting the use of night or set lines in fishing is construed by the State Game Warden to apply to fishing through the ice as well. This will deprive many of their winter's sport and cut off a large supply of food fish, as our pike cannot be taken with any certainty of success by any legitimate means except through the ice in winter.

The pike (*Lucius lucius*) is the shark of the fresh waters. The terror of the inland seas. He enjoys not the company of his kind, but roams about alone, seeking what he may devour. There is a greener glitter in his wicked eyes as he perceives the sucker bait, and glides toward it with scarce a movement of the fins or ripple of the water. The sucker, aware of danger, in obedience to nature's greatest law, endeavors to be free. Alas! poor sucker. One sweep of that might tail, one grasp of those cruel jaws, another victim to the greed of that insatiable maw, one more tragedy in Nature's play. The ring slips, the coil unwinds, the hook pricks. Alarmed, what a grand rush he makes for the dark blue of the deep water! Kerchug! The good stout line comes taut, the hook tears at his vitals. Thoroughly frightened now, he swims round and round in search of friendly stake or snag to let him free. The nasty bit of wire, rasping between those cruel jaws, is the goad that spurs him on. One more great surge to part the line, and the fight is over. Far out beneath the ice he lies, sullen and morose. Conquered is the monarch of the lake. BEN O. BUSH.

THE VELVET TRAIN of the Monon Route between Chicago and Cincinnati offers the best and most luxurious service obtainable between those points.—Advt.

THE SIX-INCH TROUT LAW.

A paper read by Gen. W. Y. W. Ripley before the Vermont Fish and Game League.

I HOPE we are bent on practical work, and that full discussion as to the best modes of preserving, and even increasing, our game and fish supply, may be had; and that a free interchange of thoughts and views on that subject may result in legislation of a more practical kind than some with which we have been afflicted in times past. I have very strong convictions of my own about these matters, and although I am aware that in many respects they differ from other equally earnest workers, I propose to take this opportunity to ventilate them.

Legal restraint is the sole and only means of preservation. Just how far that should go and how best be applied, is the question that should interest us most. The only object of such restraint is that the rate of destruction may not exceed the rate of natural increase.

Do our present laws, fairly well observed as I think they are, effect this? I think you will agree with me that they do not, and that the supply of the four choicest varieties of fish and game native to our State—trout, black bass, partridge and woodcock—is found less and less abundant every year.

What is the remedy? Artificial propagation? Such means cannot be applied to the birds at all, and it is extremely doubtful to my mind whether it is the best means of preserving and increasing the supply of trout, and much more so that of the bass.

In my judgment there is a better remedy. First, shorten your open season for all fish and for all game; second, make the limitation of size on fish such that it will insure every fish born into the world one chance, at least, to attempt to reproduce its kind. Our laws prohibit the killing of trout less than 6 in. in length and of bass 10 in. Now a trout, male or female, that is just under 6 in. long on the 31st of August and is put back into the water, on that day is not mature and cannot, as a rule, propagate its species during the succeeding autumn; next May, however, he is of legal size and may be legally killed, and yet has had no chance in the world to do his share in the work of restocking the streams. The trout of 9 in. long on the same 31st of August, however, is one year older than his 6-inch comrade and is fully mature, the female can deposit spawn capable of being fertilized by the male of the same size who is able to perform his functions. These two fish, if thrown back on the last day of the season, or at any time during the season, will breed during the succeeding autumn.

It is true that both may be killed during the next season, but they will have done one year's work toward keeping good the population of the stream. I shall be met at once with the assertion that female trout of 5, or even 6 in. in length frequently have spawn in them; this is true, but that spawn, borne by an infant, so to speak, is not capable of being fertilized. They are like pullets' eggs, the product of an animal with all the instincts of reproduction, but, being immature, are without the capacity for successful work in that direction. If my views are correct, and I am supported by the opinions of such world noted experts as Seth Green, Spencer F. Baird, Annin, Fred Mather, Livingston Stone and Col. McDonald, is there any logical reason for the existence of a 6 in. law? On the contrary, is there not a good reason for a 9 in. law? Does not the complaint of hardship and injustice of the 6 in. law come mainly from people who live high up among the mountains or adjacent to small streams or remote from large ones? Where the brooks are small and the trout correspondingly so? Do not they say that the 6 in. law is entirely in the interest of the town sportsman who lives near the larger waters, or who has more time and better facilities for reaching them? Do they not claim constantly, clamorously, that the law deprives them of the pleasure of fishing in their small brook for the benefit of others who fish in larger waters? If you expect these men to obey your law cheerfully you must show them a good reason for the existence of the law, and this I think is possible. You must show them also that you yourselves are willing to forego some part of your own sport for the general good.

Nor would a 9 in. law be a hardship to any one for more than two years, since the 6 in. trout of to-day would certainly be above the legal size in 1893. Who shows his basket of 6 in. trout with any pride? No one; but a basket of 9 in. trout is a pretty sight, and even in such baskets you will always find the largest on top. If any one doubts the beneficial results of such a law well enforced, he is past my power of conversion. I have been asked frequently why it was that in some brooks trout never grow to over 6 in. in length; my answer is that they do grow to a larger size, but at the 6 in. period of life they have outgrown such water and the food supply in them, and leave for broader and deeper waters. It may be that in some ponds entirely land-locked there is found a family of very small trout that breed successfully. If this is so it is because the food supply has been insufficient for, perhaps, hundreds of years; and a race of dwarfs has been the result. There are, of course, exceptions to all rules, and it may be that in very rare cases very small trout have bred and multiplied in free running waters, but the general rule is the other way, and it is by general rules that we must be guided in these matters.

On bass the limit is 10 in. I am not sufficiently acquainted with the habits of these fish to venture an opinion as to the nature of the 10 in. bass as breeders, but it could do no harm certainly if the limit was fixed at 12 instead of 10 in. Now as to seasons.

The destruction of game must be kept far within rate of natural increase. There can be no doubt that the number of persons who fish and shoot for sport or profit is much larger than it was twenty years ago, while the pot-hunters are always with us, and the number of these increases in a much larger proportion. I think that we must expect their numbers to increase in the future also.

The more interest you and I take in these matters the more others will take. This very meeting will add to the number of men who will go afield next year. Improved weapons and tackle play an important part, also and it is fair to assume, and we must assume, that in proportion to the amount of game in the forests and fish in the waters, a larger percentage is destroyed in each succeeding year. The summer boarder, so-called, plays his part, and it is by no means an unimportant one, in the work of extermination. In my judgment there is but one means of checking this diminishing of the supply, and that is shorter open seasons.

I would have the open season for trout commence on

the 15th of May and close not later than the 15th of August. This, with the limit as to size made 9 in. instead of 6, I think, would be all we could do at present for the trout. If it proved insufficient after a trial of say four years, I would again shorten the season and make the limit of size 10 in.

As to birds I would make the open season for both woodcock and partridges commence on the same day, and that day not earlier than Sept. 15; and the first of October would be better. I would have it close as to both on the last day of November. This is in line with the best and most recent laws of the most carefully preserved States. In Maryland the season for quail opens on the first of November and closes on Dec. 24. The same short seasons prevail in many other States, much more favorably situated for the natural increase of game than Vermont is; and if they find it necessary to so restrict the season, and with fifty birds to our one, are willing to forego a little this year for the sake of next, ought not we to be equally willing? Nay, is it not a greater necessity for us to do so than it is for them?

I would allow of no exceptions to the operations of the general law for any local reason. The application of the laws should be uniform throughout the State. Local exemption is frequently brought in favor of the summer visitor, or more frequently by the landlord. We welcome all who come among us for health or pleasure, and as becomes good sportsmen, we hold out the right hand of fellowship to all brothers of the rod or gun, but we who live here have also some rights which the visitor is bound to respect.

Among the other means of destruction the match or side hunt stands prominent for utter infamy. I had hoped that relic of a barbarous age had found its last ditch, but some such hunts have taken place in this State this year. Can there be anything more abhorrent than the sight of a whole community, or all that can be prevailed on to go, turning out simply for the purpose of determining which side can do the most of the villainous work? Such proceeding should be and is discountenanced by all true sportsmen and might well be the subject of legislative enactment.

ANGLING NOTES.

PROFESSOR BICKMORE in a recent lecture brought up the old question, why salmon and trout rise to artificial flies. This subject, though more or less threadbare, is always of interest to anglers, and nearly every one has his own theory which he believes to be correct. There is no doubt, I think, that all creatures, whether fish or fowl, naturally and instinctively snap at anything which resembles food. The most intelligent dog possessing the finest possible nose will snap at a cork if you throw it toward him when he is watching you at the dinner table, and chickens, when expecting food, will rush after a handful of gravel thrown on the ground. So it is with fish, they are usually on the constant lookout for something to satisfy their appetite, and anything that touches the water is immediately seized, particularly if it resembles in the least what they are in the habit of feeding on, though as quickly dropped if not what they expected it to be.

Wild trout that have never suffered from the deceitful practices of man will readily seize a bare hook if moved quickly through the water, and if it is covered with a bit of red or white flannel over even a splinter of wood, it becomes a deadly lure. As they become better educated they require closer imitations, and in over-fished waters nothing but the most carefully dressed midges on the thinnest of gut will induce a decent sized fish to rise.

One of the best examples of this is found at our fishing clubs. They usually turn out their trout a month or so before the opening of the season; and when first fished for, the members have no difficulty in killing their full allowance; but as the days go by the fortunate survivors become more and more difficult to catch; so that after a month or six weeks of fishing they become so well educated that none but experts have any chance to fill a creel.

I have frequently watched the actions of wild trout for hours at a time. There was a fine pool within half an hour's walk of the hotel at Ralston, Pa., where I used to spend my summers. This pool was just below a fall and was dark and deep. It contained a fair supply of trout from half to three-quarters of a pound in weight. Below the pool the water flowed over a bed of solid rock and was not, as a rule, over a foot deep. When undisturbed the fish would drop down to these shallows and lie in the sun, sometimes a dozen at a time. If a leaf or bit of twig, or, in fact, anything fell on the water, the trout nearest to it would dart at it as quick as a flash, sometimes take it in their mouths and drop it again as if tasting it, and sometimes strike it with their tails as if in play. Often they would play like kittens and chase one another about the pool for several minutes at a time, and occasionally they would seem to lose their temper and indulge in a row which sometimes ended by the weaker one scudding off with a mutilated tail. As trout get older they become more shy and rarely feed at all in the day time, and as a rule, exhibit a supreme contempt for all kinds of artificial lures. After dark they will steal out from the deep holes under the bank and hunt up minnows in the shallows, but during the day they will not venture near enough to the surface to even see a fly.

The practice of setting aside certain waters as sanctuaries for trout seems to be meeting with great success in Maine, and it is high time it was tried in our Adirondack waters. The idea is an excellent one.

SCARLET-IBIS.

CRAPPIES IN PONDS.—Mr. A. H. Eggborn, of Eggbornville, Va., introduced 11 crappies into a pond in 1887 and now the water is well stocked with them. Individuals weighing from 1½ lbs. to 3 lbs. are found, but most of the fish are too small for the table. They can jump as nimbly as the jack or pickerel. Mr. Eggborn considers the crappies as next in rank to black bass and brook trout as a pan fish. The species is known in the locality as silver perch.

VIRGINIA BASS.—Lexington, Va.—Bass have been perhaps more abundant this year than for some previous years, large numbers being caught in the North River and the James. Some good catches were made as late as Nov. 5.—T. M. S.

ONONDAGA ANGLERS' ASSOCIATION.

IN the Syracuse *Courier* Mr. Henry Loftie give this account of the admirable work accomplished by the Association and the State force:

"People know but little of the work that has been done by protection in this vicinity through the influence of the Onondaga Anglers' Association," said a prominent member of that organization to a *Courier* representative last evening. "Our private protector, Harry Jackson, is paid by the Association and by subscriptions of the citizens of Syracuse. Since last March Mr. Jackson has taken 42 nets and made 45 arrests. Some cases have been settled by paying fines and others are in the hands of the attorneys. Jackson could have done more work if the Association had had more funds at their command. He has proved himself a very efficient officer and at times run the risk of losing his life.

"State Game Protector Harry Hawn has taken on Oneida Lake, rivers and Skaneateles Lake 128 nets and made 63 arrests. Some have paid their fines and the balance of the cases are in the hands of attorneys. Mr. Hawn is working under the direct orders of the State and is dictated to by them entirely. Skaneateles Lake has been thoroughly cleaned of illegal netting and it is claimed at the present time there has not been 50 trout taken this fall where usually they have been taken out by the barrel.

"Superintendent J. W. Pond, State Fish and Game Protector, has done great work. He is always on the wing, and he comes in on our territory when we least expect him. I know of several raids made in this section by him. He always leads the protectors. He often sends a stranger on the fishing grounds to get the points, and when the proper time comes he gets the men and the nets. Every one who knows of his work says he is a most persistent worker and the best superintendent we have ever had, and when we get the annual report from the Commissioners it will surprise some of us. We can then compare Mr. Hawn's work with other protectors, and will see the good work that has been done for protection by Superintendent Pond.

"I notice the work which has been done by the State force, commencing Jan. 1 and ending Sept. 1, 1891, is as follows: Number of nets seized and destroyed, 190 fyke nets, 157 trap nets, 1 pound net, 2 purse nets, 240 gill nets, 11 seines, 3 spears, 4 eel racks, total value \$16,874. One hundred and ninety-one persons were prosecuted, nearly every one of whom were convicted. Amount recovered in fines, \$6,261.46. One hundred and seventy-nine suits are still pending, mostly in Supreme Court.

"Soon the Anglers' Association will have a meeting at the Business Men's Association rooms and every one who believes in protection and having the best fishing grounds at our door should come to the meeting and join the Association which will help us pay our debts and continue this work. We cannot do this work without funds, and it is necessary that every one who loves angling should join the Association. We notice some anglers object to a hatchery on Oneida Lake. I do not think they understand it. If there is no hatchery there the lake would not be protected as well. The writer knows that when pike run up the stream to spawn other fish follow them and eat up 50 per cent. of the spawn. If the State has a hatchery there, they certainly would give better protection. If the State has 5,000,000 of fry for other waters, they hatch out 10,000,000 and put back into the lake 5,000,000 of matured fish. Would we not have better fishing by having better protection and 5,000,000 matured fish put in this lake annually? Oneida Lake cannot be protected by one protector. When it becomes State waters they must then give it better protection, which means better fishing. I, for one, say 'give us a hatchery.'

"The Commissioners have at all times assisted us in every way they could, for they well appreciate the work we have done toward protection in central New York. The writer has fished in most all waters in central New York, and has never known when the fishing has been as good and the waters as free from nets and illegal fishing as at the present time.

"Great credit is due the efficient Commissioner of State Fisheries, President Blackford, who is a worker. Munroe Green is working night and day to hatch the fry to be delivered throughout the State during the winter and spring to stock the different waters."

CHICAGO AND THE WEST.

CHICAGO, Ill., Dec. 2.—After a while there won't be any place at all but Chicago. This, at least, is the inevitable result if the average Chicago man's hopes and beliefs come true. At any rate, it is already an easy saying that the best of everything comes to Chicago. This is true, from the World's Fair down to fresh lobsters, and equally true in regard to fish. The largest tarpon ever caught is now in Chicago. It is beautifully mounted and now rests in good similitude of life in the anteroom of J. V. Northam & Co.'s wholesale house, at 150 Monroe street, just across the street from my office. This is the fish mentioned so prominently by *FOREST AND STREAM* at the time of its capture last season. It was taken by a lady, Mrs. Geo. T. Stagg, of Frankfort, Ky. The record, as appended to the case, gives the weight of the fish as 205 lbs., length 7 ft. 3 in., time in playing 1 hour 25 minutes. The rod, reel, line and hook on which the fish was taken are in the case below the fish. They make only a plain tarpon outfit, the rod being simply a 7 ft. stick of natural bamboo, 2 in. at the butt and thick as one's finger at the tip. The arrival of this fish at the city seems to have awakened an unusual tarpon interest here for this winter. Several parties will go South, probably to Fort Meyers, in the hope that the Caloosahatchie may hold still larger specimens for the City by the Lakes. Chicago is the only real tarpon center.

Dr. S. P. Bartlett, secretary Illinois State Fish Commission, and Mr. H. L. Watlington, secretary of the Illinois Valley Association, were in my office to-day. They just came from Mr. Geo. E. Cole, with whom they had had a long talk in regard to the organization of a State league, to be made up of all the different local and protective societies of the State, on the plan first and exclusively suggested in these columns in the issue of Nov. 26. Among men like these mere schemes or visionary plans hold little weight, but in regard to this project there seemed to be the most favorable opinion, and so the gentlemen above informed me. They further stated that

plans looking forward to such an organization were about to be put in effect. I should not be surprised if the Kan-kakee, Fox, and other local game and fish societies will have word from the State Fish Commission on this head before their annual January meetings. This would leave the matter of an organization, so far as these meetings were concerned, a simple and easy thing, the appointment of delegates for a convention being about the only thing needful. Dr. Bartlett thought Chicago a better place for such a convention than Springfield, and this is probably true, as the heaviest associations center here.

I asked Dr. Bartlett how he would feel about applying a part of his scanty appropriation toward the expense of a paid secretary and he said he thought he would favor that, as it would take considerable detail work off the hands of the commissioners. All in all, the outlook for a State League is a good one. I believe that such a league here would be the result of no mere bluster, and that it would not end in talk. It would be organized for working purposes, and it would do work. I am much disposed in favor of the paid officer for the harder detail work of these associations, and believe that is going to be the way to get more attention and more work out of the bodies of sportsmen. What is everybody's business is nobody's, but if it were one man's business he would attend to it, if he found a business duty. If he did not he could be jumped on direct. If thus saddled with the work and the privilege of getting jumped on he ought to be paid for it.

Dr. Bartlett reports the status of the suits against him by the Illinois River fishermen, whose nets he has confiscated, as being now in a very satisfactory condition. "The only trouble is," said he, "they sue me personally, and not in my capacity as an officer. All they want is to make me personally go to expense and inconvenience, though they know I can beat them in the suits. However, I guess I can wear them out."

Mr. Watlington reports a very flattering state of affairs for the Illinois Valley Association at La Salle. They have brought some nineteen suits, and have won them all. It certainly looks as though they would keep their promise to break up all netting and seining above the Copperas Creek dam of the Illinois.

A meeting of the Swan Lake Club was to have been held for the purpose of discussing the situation on Lake Senachwine, the scene of the once supposedly legal netting operations of the keepers of the club, the Woods Bros. The result of the meeting is not yet made known, but the position of the club is not hard to prophesy. If netting is found to be of questionable legality in those waters, the club will have the keepers stop such netting, no matter how that affects the club lease, of this I feel quite sure. Swan Lake Club is not disposed to knowingly violate or see violated any of the game or fish laws, and this has been declared here all the time, even at the time of the warden's efforts to catch and show up the Woods boys as violators not only of law but of their club agreements.

E. HOUGH.

THE NORTH SHORE.—Mr. Alex. Starbuck tells us that on his 1891 excursion to the North Shore he was surprised to see the great multitude of anglers that visited the North Shore. He writes: "There were at least three hundred between Port Arthur and the 'Soo,' and of these fully one hundred and fifty came under our immediate observation. I presume your publication of the North Shore letters had much to do with it, for several of the parties whom I met here so stated. Now, I only hope they all had as good sport as I had and could endure without a murmur the lake's capricious temper. I noticed that 'Podgers' was not enthused with North Shore trout as I described it. I am inclined to think he is too ambitious and wants more trout to a day's sport than generally falls to the patient angler. After a period of forty-five years angling in almost every part of this country, including trips to the famed Nepigon, where one becomes sated with the sport, I must confess I prefer the North Shore for the pursuit of the trout, beautiful above any other place. True you sometimes have grand storms that lash the shores with frightful violence, but again you have weeks of such charming and exhilarating weather as to delight you beyond measure."

NOVEMBER SALMON.—On Nov. 21 Capt. George McDonald caught an eight-pound salmon in Newark Bay. Believing that other individuals were captured on various parts of the coast, we applied to Fish Commissioner Blackford for information on the subject, and have the following reply: "Along the Atlantic Coast at this season of the year stray salmon are often taken. During the last month probably 100 salmon, weighing from six to twenty pounds, have been caught in the mackerel weirs off the coast of Massachusetts." We should like to see the experiment tried of winter fishing for salmon in the Gulf of Maine by the method followed in the Baltic, as described in FOREST AND STREAM Jan. 8, 1891.

ANY subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal card the name of that friend.

"Forest and Stream" Nursery Rhymes.

There was a young man in Nassau,
Who failed to obey the game law;
He killed prairie chicken,
Gave his bird dog a lickin',
And cursed every one that he saw.

As we could not catch him killing small game
We fined him for swearing, and now he's quite tame.

KANSAS. W. J. D.

Sing a song of big fish—
I cannot tell a lie;
Caught it on a grizzly-king,
It was the dropper fly.
Played four and twenty minutes,
Before it came to gaff,
And weighed by its own scales
About 'steen and a half.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

Fishculture.

HUDSON RIVER FISHWAYS.

AT the meeting of the New York Fish Commission last Tuesday reports from the game and fish protective force were read, showing that during November the sum of \$656 had been collected as penalties and unlawful nets to the value of \$625 had been destroyed. Applications for brook trout fry for private club waters were refused.

Commissioner Burden reported that the New York Central, Harlem, New York & Northern, Delaware, Lackawanna & Western, and New York, Ontario & Western railroads had courteously consented to haul free of charge over their respective lines the Commission's new fish cars. It is probable that the West Shore will do the same. It is, indeed, on the part of the railroads, a fitting recognition of the work of the Commission, which by stocking the waters is making business for the passenger agents.

Commissioner Burden read the following report from Mr. W. H. Rogers, who had been asked to examine the obstructions of the Hudson River. He explained that the estimated cost to the State would be diminished by \$6,500 if the owners of the Sandy Hill and Fort Edward dams were required to put in the ways, in compliance with the law:

AMHERST, N. S. Nov. 26, 1891.—Henry Burden, Esq., Commissioner Fisheries, Troy, N. Y., Dear Sir: I herewith inclose a short report of matters as they appear to me on the upper Hudson. With reference to Baker's Falls it may not be necessary to put a fishway on the mill wall, as the fish may go over the fall and through the small fishway in the dam; in that case a saving of \$9,500 will be effected there, and if it is thought advisable to put but one way in the other dams where I suggest two, a further saving of about \$3,500 will be the result, and the whole work may possibly not involve an expenditure of over \$35,000. This can be determined when I next visit the place. Should any further information be desired on the subject, I will, of course, supply it, as far as possible, at any time. Yours very respectfully, W. H. ROGERS.

REPORT ON DAMS AND FALLS ON THE UPPER HUDSON, STATE OF NEW YORK, WITH REFERENCE TO THE CONSTRUCTION OF FISHWAYS. BY W. H. ROGERS.

Henry Burden, Esq., Commissioner of Fisheries, Troy, N. Y.:

SIR: As you suggested I visited the Upper Hudson during the first week in November. The water being unusually low I had a good opportunity to view all the obstructions to the ascent of fish, and to examine in detail the local difficulties to be overcome, and to make in each case an approximate estimate as to cost. A second visit, however, when the water is at medium height, will be necessary in order to figure more closely for actual construction. The following facts, however, will afford sufficient data to justify legislation upon this subject the coming winter.

1. Fort Edward Dam.—This is a new wooden dam, built during the past summer, is about 17ft. high, with from 3 to 4ft. depth of water below the dam when I was there. To overcome this obstruction I would construct a fishway on the main dam on the same principle as to location as the one at Mechanicsville, the crib work of 8x8 or 9x9 as desired, the whole except the floor of the channel way to be of chestnut or other hard wood and bolted, ballasted and anchored to the dam in a substantial and workmanlike manner, and with proper ice heads and oak roofing. [This] can be done for about \$3,000.

2. Baker's Falls.—This obstruction I consider the most difficult one on the river on which to locate a successful fishway. A second visit when the water is higher will be necessary, at present I would recommend that two fishways side by side be put in the lower portion of the fall to enable the fish to pass into a still-water located about one-half way up. To do this a temporary dam will have to be built at the lower side of the still water in order to turn the water off the face of the fall below, so that a channel way can be excavated in the rock in which to place the fishway. With proper ice heads and oak coverings, ice logs, etc., will pass over it without injuring the structure. This part of the obstruction can be thus made passable for any sort of fish for \$3,000. Then I would build a fishway similar to the one at Mechanicsville, on the opposite side of the river by the mill, against the stone wall, and thus pass the fish into the mill channel, where they will have a free passage through the gates as at Mechanicsville. A channel will also need to be blasted through the ledge of rock out to the main channel at the lower entrance of the way where the fish will come naturally from the still waters referred to above; this part of the work can be done for \$3,500. I am not quite sure but that salmon can work their way from the still water up over the long sloping fall to the dam and would therefore recommend that a small fishway be put in the dam directly above the hollow in the fall, through the zigzag course of which the fish may get up. I could form a better opinion of this if I saw the falls when the water was higher. This small way would cost \$500, therefore to master this fall fully will involve an expenditure of from \$7,000 to \$7,500.

3. Sandy Hill Dam.—This is about 12ft., with 2 to 3ft. depth of water below. A reef or small island of rocks divides the river into two channels below the dam. Therefore, I would put in two fishways, as per blue print C, which will cost \$1,750 each. One, however, may be sufficient at present.

4. Glens Falls.—This is a much more formidable obstruction, and, including the dam, the difference in the water level from below the fall to the surface in the pond above is about 45ft. There I would build the way in strong crib work against the mill wall from the dam down to the foot of the fall, covering the crib work outside with 3 or 3½-inch hardwood plank to protect the work from injury by descending ice and logs, and in places with iron if necessary. This way will be about 250ft. in length and will cost about \$7,000 to \$7,500.

5. State Feeder Dam.—Is about 14ft. high. A fishway against the flume wall as at Mechanicsville will be easily put in here at a cost of \$2,500. One on each side of the river would give more accommodation to the fish. The two can be put in for \$4,000.

6. Palmer's Falls.—Presents the most formidable obstruction on the river, being about 85ft. from the lower level of the water to the top of the dam above the crest of the fall. At first sight this fall presents an obstruction to the ascent of fish quite impossible to overcome even by the best skill and any reasonable expenditure of money. But upon closer inspection of the fall on its east side, a way is found to locate a fishway of proper construction at a reasonable cost, and which will allow fish of any kind seeking to ascend an easy pass to the upper waters of the river. I have not been able during my short visit to the place to figure very closely as to the cost, but I would say that \$12,500 to \$15,000 or possibly less would do the whole work in a substantial manner. It will require about 800ft. of fishway to produce a proper stream for shad and all other fish to get over the fall, including a proper shad ladder on the Troy dam as per blue print. Good fishways of the Rogers patent can be put on all the dams and falls now obstructing the ascent of fish from the Troy dam to the top of Palmer's Falls for from \$40,000 to \$45,000.

A BOOK ABOUT INDIANS.—THE FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—Adv.

DOG SHOWS.

Dec. 10 to 14.—Freeport, Ill. T. E. Taylor, Sec'y.
Dec. 30 to Jan. 2.—Gloversville, N. Y. F. B. Zimmer, Sec'y.
1892.

Jan. 5 to 8.—Albany, N. Y. W. C. House, Fort Plain, N. Y., Sec'y.
Jan. 5 to 9.—Charleston, S. C. Benj. McInnis, Sec'y.
Jan. 13 to 16.—Columbia, S. C. F. F. Capers, Greenville, Sec'y.
Jan. 21 to 25.—Elmira, N. Y. C. A. Rowman, Sec'y.
Feb. 4 to 12.—Chicago, Ill. John L. Lincoln, Jr., Sec'y.
Feb. 16 to 19.—Jackson, Mich. Chas. H. Ruhl, Sec'y.
Feb. 23 to 26.—New York. James Mortimer, Supt.
March 1 to 4.—Philadelphia, Pa. F. S. Brown, Sec'y.
March 8 to 11.—Washington, D. C. F. S. Webster, 738 B'way, N. Y.
March 15 to 18.—Pittsburgh, Pa. W. E. Littell, Sec'y.
April 7 to 10.—Boston, Mass. E. H. Moore, Sec'y.
April 20 to 23.—Los Angeles, Cal. C. A. Sumner, Sec'y.
May 4 to 7.—San Francisco, Cal. H. L. Miller, Sec'y.

FIELD TRIALS.

Dec. 14.—Philadelphia Kennel Club, Deatonsville, Va.
1892.

Jan. 11-12.—Bexar Field Trials, San Antonio, Texas.
Jan. 18.—Pacific Field Trials, Bakersville, Cal.
—Southern Field Trials, New Albany, Miss.

THE CENTRAL FIELD TRIALS.

THESE trials so far have progressed without a hitch, and the meeting has been a pleasant one. The absence of Mr. Churchill who was to have judged with Messrs. J. M. Tracy and N. Wallace, has led to some trouble in securing a third judge. Dr. Jarvis very kindly officiated till Thursday morning, when other engagements compelled him to give up. Then Mr. E. W. Clarke was associated with the two gentlemen named above in judging the All-Age Setter Stake; but now Messrs. Tracy and Wallace are going it alone for the rest of the meeting. Birds are fairly plentiful and the country hunted over is well adapted for trials, being much better than last year. Among the visitors not already mentioned, that have dropped in during the past week, are Messrs. E. Dexter, Boston, Mass.; H. B. Duryea and R. L. McCook, New York; A. D. Lewis, Hempstead, L. I.; E. W. Clarke, Jr., Philadelphia, Pa., and Dr. H. J. Thomas, Winston, N. C.

THE SETTER DERBY.

LEXINGTON, N. C., Dec. 1.—It seems as if there was just as little dependence to be put on the weather down here as in any other part of the country. Sunday—snow, wind and heavy frost, and the biggest fog fire none too warm; but now, as I write, the night is quite balmy and the day has been almost too warm for walking. Of course most of the snow has disappeared, and the local weather prophets predict a pleasant week. Yesterday was a big loafing spell for most of us, and none were sorry to jump into the saddle this morning and canter to the Hargreaves Farm, about five miles from town. A late start was made on account of the frost, which, however, soon disappeared when old Sol began his day's duty in earnest.

First Series.

The first brace to be called was

PRIMA DONNA—HOPE'S MARK.—There was a delay of half an hour after the judges arrived. Some of the handlers, including Mr. Rose with Hope's Mark, had taken their dogs to the farm ahead in mistake. At 10:35 the brace was put down in sedge. It was at once seen that the new grounds were well adapted for the trials, nice undulating stretches of sedge grass, wheat, etc., with comparatively little cover and few briars. Soon after starting Hope's Mark showed some of his former brilliant tactics, making wide casts in the sedge, till finally he brought up stiff on a bevy. Prima Donna was brought up to back, did so, and Rose flushed the birds, both dogs steady. We ranged after the singles, and here the trouble began. Both dogs pointed frequently and honored each other, but nothing but disappointment awaited them. Hope's Mark got out to his work with greater judgment. Then on the hill we thought surely he had them, Prima Donna backing him, but a false alarm again. Then in cotton Hope's Mark flushed a bird. Then Hope's Mark flushed a bevy and we all wondered what was the matter with the dog that smothered competition at Bicknell. After this both dogs pointed birds that flushed wild. Prima Donna evened things a little by flushing inexcusably a single, dropping to wing. Dogs called up at 11:32. Both had fair range, Mark far the best, and his first bevy redeemed the rest of his heat.

NED NOBLE—WUN LUNG.—Ned Noble (Rowdy Rod—Pearl Noble) was handled by S. C. Bradley, and Wun Lung (Capt. Bethel—Enid) by D. E. Rose. Down at 11:36 in sedge, off they both went at speed. It was soon apparent, however, that the wiry little Wun Lung was doing his best to show us that his name did not handicap his wind in any way. He certainly is the fastest mover on the ground, and withal is under good control and works to his handler. Going through woods, handlers flushed a bevy, but it went to one side of our course, they were left and soon after a bevy flushed wild out of briar thicket. Wun Lung was in thicket and it is presumed he pointed, the other dog going in just after him. On up the hill, by a corn patch and in sedge, Ned Noble pointed lark, and then roared toward woods. After some time had elapsed Wun Lung nailed a single which flushed wild in swamp and briars, dog steady to wing. Out into ragweed 100yds. further on Wun Lung pointed several birds in a little bunch of tangled briars, Ned honored the point; Rose fired, Ned a bit unsteady, lower down, 20yds., Ned nailed another. Wun backing this time. Bradley fired, dogs fairly steady. Going on, at edge of a swamp Wun Lung pointed a bevy in the thick briars. Lower down Ned at the same time pointed outlying birds of this bevy, which flew into the swamp, when Ned got one of the scattered birds and then flushed one, dropping to wing. Dogs were called up at 13:35. Wun Lung is a little different class to the other, ranging wide and fast while Ned noble peters a bit and is not so cocksure on his birds. It was getting late, and we were all pleased to find the lunch wagon quite near, so we lunched *al fresco* and quite enjoyed the warm sun.

IZA—LAUNDRESS.—They were put down after lunch at 1:45 in cotton patch. Iza (Rodrigo—Ollie S.) was in charge of J. M. A. Vent and Laundress (Roi d'Or—Belle of Piedmont) was handled by J. B. Stoddard. In dwarf pines, Laundress was the first to attract attention as she pointed, and while waiting for Iza, who had gone off somewhere, a single flushed wild to one side of pointing dog. Nothing found after. Then Iza pointed and Laundress coming up went through two birds as A vent flushed one to Iza's point; both dogs became demoralized as he fired. A vent dropped his dog with his hat. After due punishment, they moved on into woods, when Iza pointed, then roared on toward edge of woods she nailed the balance of bevy and was steady as A vent fired at the wild flush. False points for both ensued some distance further and at 2:42 they were called up. Iza

had a wide range, good speed and fair nose, while Laundress was unsteady to flushes, she worked more to the gun. McMURDO—AMY ROBSART—McMurdo (Roi d'Or—Mildred) was handled by J. B. Stoddard and Amy Robsart (Dad Wilson—Bohemian Girl) by H. M. Short. Cast off at 2:49 in weeds at edge of cover they both started well. Amy in woods pointed, then moved on, McMURDO not honoring her. However, in a corn patch Amy nailed a bevy in good style, McMURDO doing his duty but indifferently; Short fired, Amy steady, but the other not. Birds were followed and Amy scored a single, Short fired and Amy behaved nicely, but McMURDO chased as birds flushed, came back to order and received the punishment due him. Then of these birds McMURDO pointed a single, Amy backing, but the former spoiled the good work by breaking in again. Working out a cotton patch Amy found another bevy, which Short put up and the bitch was steady to wing. After scattered birds in woods, McMURDO nailed a single in briars and behaved quite nicely to shot and wing. Higher up and out of woods Amy scored another single, which flushed as Short came up. After this dogs called up at 3:35. The heat all through was in favor of Amy Robsart, who worked with good judgment and ranged out well. She will certainly be near the top at the finish if she keeps it up.

LATONIA II.—CAMILLE.—Latonia II. (Paul Gladstone—Latonia) was handled by N. B. Nesbitt and Camille (Jean Val Jeau—Haidee) by J. M. Arent. When called out it was found that Latonia had in some way injured her shoulder since starting in the wagon. How it was done Mr. Richards could not tell, as he had been with her nearly all the time. She was tried in the field for a minute, and though she gamely made a cast it was obviously cruel to run her, and she was withdrawn and Camille ran with the bye dog, Randolph's Roy.

CAMILLE—RANDOLPH'S ROY.—Randolph's Roy (Ned—Bett's Nell) was handled by F. L. Bevan. Cast off at 3:43 in standing corn stubble. Almost at the start Camille put up a hare and away she went after it, and Arent turned and smiled on the judges, for it was no use to whistle, she meant blood. She was lost some time, but was finally brought up to Randolph's Roy, who had been held up. Working into corn patch, Camille seemed to have been demoralized and went right into a bevy accompanied by the other dog; both chased, and it looked all up with Camille. It was unaccountable after her good work at High Point. On in corn, Camille flushed a single, then stopped and waited for rest to flush, which they did as Arent came toward the dogs in front, and birds flew into oaks. Going through this cover, handlers flushed several birds that the dogs should have nailed. In cotton patch Randolph's Roy dropped two or three times to a single, and was steady to flush. Then a false point was put to his credit and one for Camille closed the heat at 4:39. Camille had best pace and range, but Roy behaved better on birds and showed fair training, being under good control, but is something of a potterer. Neither will do for finals at this rate.

LORA—BOB COOPER.—Lora (Gladstone's Boy—Ruby D.) was under the care of Chas. Tucker, and Bob Cooper (Roi d'Or—Miss Nellie Y.) was handled by D. E. Rose. Put down where others were taken up at 4:35; both started off in good style. In high sedge and weeds Bob thought he had something but was mistaken, roared on, then made a cast or two, then pointed, but left it, and then pointed again as he finally reached the bevy. Rose fired to flush, dog steady; just before this a single had flushed to the right; very likely the bird Bob was first on. After these birds and in bottoms Lora pointed a single which flushed wild, Bob coming up at the same time. In open, higher up, Bob pointed, moved on and Lora coming up to back got nearest the birds and pointed, but Bob had them first. Tucker fired, dogs steady. Bob, in woods, pointed but broke it, nothing found and out of woods Lora pointed a single in hollow, Bob honoring the point. Nothing more was done and dogs called up at 5:24. Bob Cooper had the best range and nose and behaved quite well on his points. Lora also did well, showing good nose. The next order was "Home!" some four miles away.

WEDNESDAY.

Second Series.

Last night it was given out that those dogs that would be required for to-day were Amy Robsart and Iza, Bob Cooper and Wun Lung, Lora and Hope's Mark, Ned Noble and Camille. The spotting system is expected to do away with so many beats, but here were more dogs left in than would have been the case under the old beat system. According to the work done Iza, Camille and Ned Noble had no business with the others in the second series. The weather was cloudy, the sun breaking out now and then and ground was in good condition for scent. The start was on the new farm again, about five miles from town, and the first brace,

AMY ROBSART—IZA, were sent off at 9:47 in ragweed and sedge. Iza soon after starting ranged off to one side and found a bevy in woods and was steady to Arent's fire, then she nailed two singles, when dogs were brought together again to look for scattered birds. Amy, in dwarf pines, pointed some singles, and birds flushed wild as Short came up, dog steady to shot and wing. Out of pines into sedge field and ordered up at 10:11. The work done was in favor of Amy Robsart in intelligent range; bird work about equal.

WUN LUNG—BOB COOPER.—This promised a lively heat, for both are fast, merry rangers, and but for Bob's want of training on birds one is nearly as good as the other. Cast off at 10:16 in open, both started off at their usual gait and, hunting independently, soon got separated, and Wun Lung was held up till Rose could find Bob and bring him round. It is a difficult matter for one man to handle two such fast rangers as these two, but Rose is getting accustomed to it now. Starting again in pines Bob at once pointed a bevy; Wun backed and both were steady to shot and wing. Then Wun scored points on singles of this bevy. Bob then pointed a rabbit. No more game was found, though both worked hard, and Wun Lung's beautiful and untiring style of casting is something remarkable, he keeping up such a high speed all the time. Up at 10:36. First and second places were filled, and the trouble was with third.

LORA—HOPE'S MARK then put down at 11:03. Both went out to their work well. Soon Lora flushed a bevy, and going after singles Hope's Mark pointed and Lora coming in flushed the single. Then Hope pointed again, drew on and flushed a bevy, but was steady to fire. This was not stake work by any means, though the cover was thick and in swamp. Dogs up at 11:15, and

NED NOBLE—CAMILLE, put down at 11:32 in same place—sedge and corn stubble. Some distance was covered before dogs made any signs of game when Ned pointed, left it and roared on some way, but failed to locate. After a while, in bottoms, Camille flushed a bevy. On hill above Ned pointed false, then moved on. Dogs brought together. After this Camille pointed false, and both pottered round some time in thicker over swampy ground, but found nothing and were called up at 12:04, neither doing good work and only confirming their previous running in the stake.

Judges then consulted and called for Wun Lung and Hope's Mark, why, it was hard to tell, as on the work done Amy Robsart had shown equally as good, if not better, work than Hope's Mark, and Wun Lung's position must have been assured. Down in corn stubble at 12:06, both ranged out independently, but the speed and intelligence was much in Wun's favor. No game was found and weather getting warm, a break was made for lunch at the farm near by, dogs being called up at 12:25. After discussing the varied contents of our lunch baskets and sundry skylarking by the most athletic members of the company, these two dogs were

called out again at 1:21. In woods both pointed, but Wun was sent up to back Hope's Mark, nothing found. This side of oaks Wun Lung pointed birds, Hope's Mark honored him, Rose shot and dogs were steady. Into woods and Hope's Mark pointed, moved on and pointed again, uncertainly, two birds, which Rose fired at, and Hope's Mark needed caution and a collar pull. Then he dropped to another single as it flushed wild, and dogs were called up at 1:30 and judges announced Wun Lung wins first, Bob Cooper second and Hope's Mark third. Amy Robsart should certainly have been equal third, if not entirely so, as her work was consistent and she made no mistakes.

SUMMARY.

Central Field Trials Setter Derby—First Series.

E. J. Myer's Prima Donna with Blue Ridge Kennels' Hope's Mark.

J. K. Garnett's Ned Noble with N. T. Harris's Wun Lung, Royal Phelps Carroll's Iza with Blue Ridge Kennels' Laundress.

W. B. Meares, Jr.'s McMURDO with Harry Northwood's Amy Robsart.

W. F. Burdell and J. D. Poston's Latonia II. with J. M. Arent and Bayard Thayer's Camille.

Pierre Lorillard, Jr.'s Lora with Blue Ridge Kennels' Bob Cooper.

Randolph Kennels' Randolph's Roy a bye.

Second Series.

Amy Robsart with Iza.

Wun Lung with Bob Cooper.

Lora with Hope's Mark.

Ned Noble with Camille.

Third Series.

Wun Lung with Hope's Mark.

N. T. Harris's Wun Lung wins first money, \$400.

Blue Ridge Kennels' Bob Cooper wins second money, \$200.

Blue Ridge Kennels' Hope's Mark wins third money, \$100.

The winner of the stake, Wun Lung, is by this time well known and must indeed be looked upon as truly a phenomenal youngster. He is one of those lucky dogs that come so seldom. Born at an opportune time, Feb. 19, 1890, he was well enough on to run in the Southern Trials Members' Derby, at Lafayette, La., in January last, and his merit was at once appreciated, winning first prize, and following this up by a second in the Derby open to all. It is fresh in the minds of your readers the record he made at Bicknell, Ind., winning third in the United States Field Trials Derby. Coming on to High Point, N. C., he won first in the Derby at the Eastern Field Trials, beating the dogs that were placed above him at Bicknell, an honor his owner must be proud of. Then to this place, where he wins first in the Setter Derby. Honors enough in all conscience for one year, making a record never excelled by any field dog the world over. Only one dog, besides himself, has ever run in two succeeding Derbys, and no dog has run with such success.

Bob Cooper is aptly described by a spectator who has invested in Blue Ridge Kennel stock, "He's a little runt, but he can go"—and find birds, too. Hope's Mark is heavier built than either and is quite a handsome dog.

POINTER DERBY.

First Series.

After the finish of the Setter Derby there was no delay in commencing the above stake with

PRINCE, JR.—MAINSTAY.—Prince, Jr. (Prince Black—Flirtation) was handled by E. I. Martin, and Mainstay (Mainspring—Barnard) by Capt. McMURDO. They were cast off at 1:47 in corn stubble, Mainstay getting to his work the best of the two. The latter soon pointed a bevy and was held for Prince to back, McMURDO fired and dogs steady. Then in swamp below two birds flushed wild to Mainstay's uncertain point. This was very thick cover and it was almost impossible to see the dogs; Mainstay before he came out of it got four points on birds. Then Prince scored a bevy with Mainstay backing, birds flushing wild. Mainstay then in cover stopped on a single which also needed no urging to "raise." Nothing more of moment was done excepting a flush by the Captain, and dogs were called up at 2:32. The heat was all in Mainstay's favor, his ranging and nose being much superior to the other.

BLACK WONDER—PROMOTION.—Black Wonder (Ike—Bang Bang's Pride) was handled by owner, John Hunter, and Promotion (Lord Graphic—Bell) by Chas. Barker. These two were winners at Bicknell, Ind., last month, and a good heat was expected, but Black Wonder was contrary and soon spoiled his chance for stake money. Cast off at 2:33 in corn stubble. Crossing a ditch, in sedge, Black Wonder flushed a bevy. Following the scattered birds, Promotion nailed one of them and followed it by three more, Black Wonder backing, and then he dropped as two others got up. A false point for Promotion followed, and then Promotion picked up another bird and was steady to Barker's shot. Black Wonder was now lost, and Promotion was held up. The former dog was found on a point in woods and held for Promotion to back; a single flushed wild; however, and Black Wonder followed this up by another point on a single. Down in swamp, Black Wonder roared to a point on a woodcock, and this about finished the heat at 3:49. Promotion did steady work, and though not fast he finds his birds and handles them well. Black Wonder was heedless and not at all at his best.

OUTCAST—BOB.—Outcast (King of Kent—Hops) was in charge of C. E. Buckle and Bob (Arkos—Loole) was handled by Hart Height. They were sent off in sedge at 3:22, and both got on well in their work, but Bob had the speed and range of the other. The first work done was a point for Bob, Outcast backing, on a bird of bevy flushed by horsemen. Then in sedge in open Outcast nailed some single birds and behaved well to flushes. Outcast, while Bob was pointing, went in ahead of him, and a rabbit got up. Another point to Outcast, which did not develop game, and then both roared to birds, which flushed wild, Height shooting. No more game work done, and dogs called up. Bob beat out his ground better than the other, had good pace and range, and was steadier on points. Darkness was coming on, and home was now the order.

THURSDAY.

The morning opened dull and cloudy, with signs of rain. The last brace in first series of Pointer Derby was cast off about three miles from town. They were

EXILE—DAUNTLESS—Exile (King of Kent—Hops) was handled by Capt. McMURDO, and Dauntless (Arkos—Loole) by S. C. Bradley. Cast off at 9:10, both ranged out with a

win. Soon after starting Dauntless made game in ragweed, roared to points, finally leaving the bevy, which flushed 20 yds. to one side, and then dropping to flush; Bradley shot. Continuing the course toward woods, Dauntless made an uncertain point on a single and then pointed where bird got up. Going into corn stubble, Exile pointed, moved on and a bird flushed. Dogs were then held up and moved to Hargreaves farm. Off again at 10:01 and held up again at 10:16. An unsatisfactory heat, twisting and turning in search of a bevy that had been flushed. Finally, in swampy ground, Dauntless ran right into a bevy, this terminating the heat. Exile did the only work, showed fair range and pace, but not exhibiting much intelligent work. Dauntless will not be considered further.

Second Series.

The judges then called for BLACK WONDER—BOB, which were put down in sedge at

10:39, and soon, near a ditch, Black Wonder repeated his previous tactics by flushing a bevy, and both chased a bit. Following the birds in swamp thicket, where Bob roared some time, finally coming up with a single, which flushed wild. Black Wonder pointed false, but moved on as Hunter came up. Some more ground was thrashed out, but nothing found and dogs up at 11:00. Bob improved his chances in the stake by being easily handled, but we know that Black Wonder can do better work than he has done here; he needs some more training.

PROMOTION—MAINSTAY, had evidently been spotted for the two first places, and were sent off together in sedge at 11:15. Promotion was the first to show game, pointing several times uncertainly, till finally he nailed them, and Barker flushed and killed, dog steady. On the singles Mainstay was the first to find, and Promotion made one of those pretty pictures we sometimes see in the field, backing the point with forefoot on a rail fence. Then horsemen and judge flushed several birds that dogs should have scented. Promotion got another point in thick cover, was honored by Mainstay, and Barker put up the bird. Soon after this dogs were called up, and it was easily seen that Promotion's place on the slate was settled. Both dogs hunted independently and with good sense. Now the difficulty was to find the third winner out of an indifferent lot.

EXILE—OUTCAST were called out at 12:03 to see if they could do better than Bob, which nearly every one had slated for third place. They ranged for twenty minutes without finding, and when called up the judges announced Promotion first, Mainstay second, Bob third. A decision that met with full approval.

Summary.—First Series.

J. A. Mehaffey's Prince, Jr. (Prince Black—Flirtation) with Charlottesvill Kennels' Mainstay (Mainspring—Barnard).

J. H. and J. A. Hunter's Black Wonder (Ike—Bang Bang's Pride) with Dr. J. R. Daniels's Promotion (Lord Graphic—Belle).

Charlottesvill Kennels' Outcast (King of Kent—Hops) with W. G. Brokaw's Bob (Arkos—Loole).

Charlottesvill Kennels' Exile (King of Kent—Hops) with Beresford Kennels' Dauntless (Arkos—Loole).

Second Series.

Black Wonder with Bob.

Promotion with Mainstay.

Exile with Outcast.

Dr. J. R. Daniels's Promotion wins first money, \$400.

Charlottesvill Kennels' Mainstay wins second money, \$200.

W. G. Brokaw's Bob wins third money, \$100.

The winner, Promotion, was described in the United States Field Trials report. He is a lemon and white dog, and while not a fast worker, beats his ground out thoroughly and is good on his birds. He is now owned by Mr. D. A. Upson, of Cleveland, O. Mainspring is a handsome-looking liver and white heavily ticked dog, and is a good ranger, keeping well out to his work and under good control. Bob is a good-looking white and liver colored dog, a careful hunter and has a fairly good nose.

ALL-AGE SETTER STAKE.

First Series.

The drawing for this stake took place last night and entries filled well. The first brace down,

COUNT ERIC—DAD WILSON, Jr., were cast off after lunch at 1:36 in corn stubble. Count Eric (Count Noble—Fannie W.) was handled by N. B. Nesbitt, and Dad Wilson, Jr. (Dad Wilson—Lit) by H. M. Short. Both settled down to wide ranging and Count was soon lost. After he was found Count was the first to point, but broke it before handler came up; at the same time higher up in cover Dad Wilson, Jr. pointed a single and Count brought to back. Short fired and missed, dog steady. Higher up Count pointed another single, Dad Wilson, Jr. backing stylishly. Next it was Dad's turn to get one, which Short killed, dog did not retrieve. Up at 2:36. The work on birds was nearly all in Dad Wilson, Jr.'s favor. He was easily handled and worked stylishly. Count is not very obedient but has good range, pace and nose and works with a snap.

DAISY HUNTER—BONNIE BONDBHU.—This was expected to be a good heat, but there's many a slip, etc., and the good thing did not come off. Daisy Hunter (Gath's Hope—Daisy F.) was handled by her owner, John A. Hunter, and Bonnie Bondhu (Count Wakefield—Pearl Bondhu) also by her owner, Geo. A. McClin. Down in ragweed at 2:41, both started off with the usual vim. Bonnie commenced with a false point. Meanwhile Daisy was lost in cover, and was found some distance ahead after 15 minutes' search. Edge of pines on hill Bonnie pointed, and Daisy coming down wind backed prettily on sight. McClin put up a single. Then Daisy got one and Bonnie Bondhu honored the point; Hunter killed and Daisy retrieved in good style. Dogs were taken up at 3:20. On birds they were about equal, but Daisy was not hunting with her usual attention to the run.

RUPERT—NATALIE II.—Cast off in corn stubble at 3:28. Rupert (Roderigo—Bo Peep) was handled by part owner J. M. Arent, and Natalie II. (King Noble—Natalie) by N. B. Nesbitt. Both off well. In corn, just out of woods, Rupert was the first to find a bevy. Natalie honored the point from the top rail of a fence and birds flushed wild. Natalie scored on the scattered birds and birds were followed to cover. Both dogs then struck points in woods, Natalie on the main part of bevy, Rupert outlying birds. Then Natalie pointed footscent. Both pointed by a fallen tree, roared and at edge of woods Natalie nailed a single nicely. Into cover, where Natalie pointed false, and so did Rupert afterward in open. Going into cover again Rupert pointed a single, Natalie backing prettily, Arent shot and missed, dogs steady. In corn Rupert then pointed but nothing came of it. Then both pointed a bevy and handlers fired at flush, dogs steady. Dogs called up at 4:14. Both ranged well, with good pace, Rupert showing somewhat the best nose.

HARRY C.—THE CORSAIR.—Sent off in ragweed at 4:16. Harry C. (Roderigo—Countess House) was handled by S. C. Bradley, and The Corsair (Dan Gladstone—Haidee) by D. E. Rose. Both dogs ranged out with speed and in good style. After going some distance Harry pointed in ragweed and was held for Corsair to back, which he did, and Bradley flushed, fired and killed, dogs steady. Harry retrieved fairly well. Then Corsair pointed false. Then Harry nailed another bevy in his wide range and Corsair was brought to back. Bradley fired at flush, killed, and Harry was held while The Corsair retrieved the bird in nice style after a cast or two. Afterward Harry C. found another bevy and dogs were called up when it was getting dusk. Harry ran in something like true form and will be a formidable competitor. The Corsair I have seen do much better.

FRIDAY.

How the rain did come down this morning, and the wind blew a hurricane. Of course all thought of hunting was out of the question, and it was supposed we should not get out at all to-day; but, the weather clearing toward noon, a start was made after lunch. The ground was naturally very wet, and the going not at all in favor of the dogs. The first series in All-Age Setter Stake was continued with

DOLLY—BLADE.—They were sent off in a field at the edge of the village. Blade was first to point, but moved on, then stopped, and Dolly coming round in front from a cast, nailed the bevy; Short fired and missed, dogs steady. Following these birds down in briar thicket, both got points on birds,

that flushed wild. Roading down the ditch, they secured a couple more; then Dolly pointed, left it, and Blade, on the other side of the ditch, pointed a single that flushed wild. The dogs were almost identical in markings, both so heavily marked with black that it was almost impossible to distinguish one from another. Dolly soon after pointed false in pines and was backed by Blade, who did the same further on. Dolly pointed false again, and then on hillside she dropped to some scattered birds that flushed wild; Short fired, killed, and Dolly retrieved in good style. Following the marked birds, Blade got another single in woods, was well backed by Dolly, and Tucker flushed. Called up at 2:48. Neither had much range or speed, but of course the condition of ground was against them, but they did well on their birds.

EDGE MARK—TOP MARK.—Down at 2:47 in open grass field. Edge Mark (Skidmore—Flo Maclin) was handled by S. C. Bradley and Top Mark (Gath's Mark—Burd Helen) by H. M. Short. Both started at a good pace, but Edge Mark soon dwindled down and did not range out as he should have done. Edge Mark at top of woods made game, roaded, but failed to locate, and birds flushed wild the other side of the belt of timber. Then Top Mark pointed a single nicely, and same time, higher up, Edge Mark followed suit. Bradley fired and missed, dog steady. After this they passed several singles, which should have been scored on, and were called up at 3:33. Top Mark showed fair range and speed, and had better style and nose than the other, Edge Mark hunting too low without decision.

LON NOBLE—COUNT GLADSTONE.—Down in ragweed at 3:36. Lon Noble (Count Noble—Alphonse) was handled by Chas. Barker and Count Gladstone (Count Noble—Ruby's Girl) by John White. Count at once got out to his work, ranging well and at speed, the other not comparing favorably in this respect. Lon started with a false point in sedge. Then dogs were moved to other ground. Here Count was the first to point, was backed by Lon Noble, and White flushed; dogs steady to wing. Beating out a large field Count dropped to a point, then moved on toward cover, where in sedge near the edge, Lon flushed birds and got the punishment due for this *faut pas*. Then she was redeeming herself by a point on a single, when Count came in ahead and took the point, bird flushing wild. Count pointed again, no result, and both roaded into pines, where Count made an uncertain point; and dogs were called up at 4:24. The heat and work done was all in favor of Count Gladstone, the other will be counted out.

PAUL BO—ANTEVELO.—Were then cast off for the last heat at 4:28 in wheatfield. Paul Bo (Paul Gladstone—Bo-Peep) was handled by Frank Richards and Antevolo (Count Noble—Trinket II.) by Chas. Tucker. Both dogs ranged out at good speed, Paul Bo showing most judgment. Paul soon found a bevy and was well backed by Antevolo, Richards killed but his dog does not retrieve. Paul followed this up by another single point, Antevolo refused to back and was near flushing when Tucker dropped her, Richards shot, dogs behaving well. Going into pines dogs flushed a bevy. Following the birds Antevolo, at the other side of wood, nailed a single and so did Paul, both handlers fired and Richards killed and had to bring the bird himself. Then further on Paul dropped to a point, was backed, but nothing came of it. Paul near pines went up to a bevy in good style, Antevolo drew in front and pointed and birds flushed wild, Richards shot, dogs steady. Little more was done and dogs called up, as it was getting dusk. The heat was all in Paul Bo's favor, he running a good race, and Antevolo ranged well, but her tendency to steal the points will go against her.

ORLANDO A BYE.—At the same time that the last heat was being run Judge Wallace had Orlando out to run his bye. Orlando is by Roderigo—Bo-Peep and his part owner J. M. Avent handled him. He ran 45m. and ranged out well and at a good pace. He pointed twice on singles and then on a rabbit. Afterward Avent walked up a bevy and Orlando secured another point on a single. This ended the day's work several miles from town.

SATURDAY.

There was a heavy frost last night, so we did not hurry the start this morning, as the ground was pretty hard, though the warm sun soon softened it out. The start was again at the Hargreaves farm, which is one of the prettiest bits of country in this neighborhood. Long stretches of sedge and grass, at intervals broken by clumps of timber, not too thick, and with a noticeable absence of briars. The judges called up eight dogs in the second series. These were: Daisy Hunter with Count Eric, Harry C. with Paul Bo, Orlando with Antevolo, Dad Wilson, Jr. with Count Gladstone.

Second Series.

DAISY HUNTER—COUNT ERIC.—Put down in open at 9:29, they both ranged out well, first into corn, then into sedge. In a little spinney Daisy made game, then pointed in a questioning manner, moved on, and nothing was found for some time. Dogs worked apart too much; this was Count Eric's fault, for Daisy laid to the course, but Count was lost for some time and Daisy was held up for a while. Then in woods Daisy was put down again, roaded to two birds and only just stopped in time as they flushed wild. Called up then at 10:35, Count being still lost. It was an unsatisfactory heat, Daisy Hunter getting really no point on game.

HARRY C.—PAUL BO.—Down at 10:42 in ragweed, and both soon put acres behind them. Both dogs made game in woods, pointed and bird flushed wild. In the open Paul stood to a single and was well backed. This was repeated in the same order, Richards firing. In woods Harry C. nailed a single in capital style. Dogs called up at 11:20. Paul Bo ran an excellent race and Harry C. improved his chances.

ORLANDO—ANTEVELO.—Put down where others taken up in grass field at 11:25. A bevy flushed wild and then on, Orlando's superior scenting powers brought him to an outlying bird to the right, Avent fired, missed, dog steady. To the left Antevolo stopped on a single, that flushed in a hurry. Then Antevolo was missed and Orlando held up. Off again together, they skirted timber where Orlando was said to have flushed a bird. After this, lower down he nailed a single in sedge, edge of woods. Avent missed the shot, and dogs called up soon after at 12:15. The heat was all in favor of the dark colored dog Orlando, who was under good control and working with good sense. Then we galloped to our lunch baskets at the barn near by.

DAD WILSON JR.—COUNT GLADSTONE.—Cast off near farm at 1:04. Both pointed in woods at start, but nothing found. Count pointed again, then working through a cotton patch Dad nailed a single in good shape, and as Short fired and missed, dog steady, a bevy flushed wild ahead of Count. After this Count was missed and not found for ten minutes. Dad working out ground to the left, Short flushed a bevy. After the scattered birds, when Count was the first to come up with them and secured a couple. Then through the fence both dogs pointed the balance of birds. A false point for Dad ensued. In woods, Mr. Tracy flushed a bird, and Dad dropped to wing. Count, at edge of timber, put a bevy to his credit in fine style, Dad honoring nicely. White fired, missed, and dogs steady. On the scattered birds Count did well, nailing them in the bottom land. Up at 1:50. All Count Gladstone's heat, after he was found, running a good race with plenty vim and style. This ended the second series, and judges called for the winners of the Derbys to run the absolute winner heat.

WUN LUNG—PROMOTION.—Sent off at 1:56 in corn stubble. Both ranged out wide, but Wun Lung's greater speed and

wide casts were very noticeable, as usual. This dog reminds one of a bag of springs, always eager and on the go. To find new ground the dogs were worked chiefly on bottom land and swamp, when the open country would have suited Wun Lung much better. Promotion being at his best in broken, swampy cover work. In swampy sedge Wun Lung pointed, Promotion honored, Wun Lung drew on, pointed, but nothing found; both roaded, and 50yds. further, in sedge, Promotion came up with the bevy which flushed wild. Then he pointed fur and false pointed, Wun Lung backing. Down by ditch Wun Lung pointed undecidedly, nothing found, but higher up the hill in cover Promotion soon pointed three birds and was steady to Barker's "raise." In ragweed, edge of wheat, Wun Lung pointed a lark. In thick pines Promotion pointed a large bevy which flushed as judges came up. Taken out of woods and coming out of a swamp Wun Lung stopped, Rose thinking there could be nothing ordered him to move on, when a single flushed. Judges consulted, and it was an anxious moment, for it meant \$400 for one or the other. No decision was arrived at, and dogs were ordered to work toward pines again. They hunted out swamp alongside the railroad and Promotion found birds. Barker shot and killed, dog steady. Dogs ordered up at 3:10, and coming up the hill judges decided that the pointer Promotion was the absolute winner of the Derby and \$400 additional money, making \$800 that Mr. Barker takes from the meeting.

All-Age Setter Stake, Third Series.

The judges then wanted
ORLANDO—PAUL BO to run again, and it was generally thought that the heat was to comply with the rule about first and second running together, as these two were the favorites in the race, although before the stake was commenced nobody wanted anything but Daisy Hunter. Down in ragweed at 3:19. In pines Orlando pointed false, but Paul's nose served him truer, for outside of cover he dropped to a bevy; Richards flushed the birds, fired and missed, dog steady. Then lower down Orlando spotted a single, Avent fired at it and killed. Orlando retrieved the bird fairly well. A point on fur for Orlando. In woods Paul Bo pointed a single in fine style, and was held some time for Orlando to come up; not coming Richards flushed the bird, fired and missed, dog steady to both. Higher up Orlando pointed false. Throughout the heat Paul Bo was much superior in pace and range, and handled his birds faultlessly. Dogs up at 3:56. Judges had a confab and ordered out.

HARRY C.—COUNT GLADSTONE.—Cast off at 4:01 in ragweed and sedge, Count showing a little the best in speed and range. In cotton patch Count pointed false. Then one of the prettiest sights of the trials was seen as they both pointed in woods on the dry leaves; both are stylish dogs, and their quivering flags and uplifted fore feet made us anxious to reproduce the scene by the aid of our trusty "Hawkeye," but the old saying is true—what a lot of things a man sees when he hasn't got his gun. Nothing came of the point, and Count, in a wheat field, repeated the performance with the same result. Then he was lost for some time. Meanwhile Harry C. just out of woods in sedge, nailed a single, which Bradley shot at but missed, dog steady. After this the heat was all in Harry C.'s favor, he finding the birds and being under good control, which cannot be said of Count, who was heedless in the extreme. When called up, judges decided Paul Bo first, Orlando second, Harry C. and Count Gladstone divide third money. The decision was well received, as Count's previous work fully entitled him to recognition, though Harry ran throughout the stake a much better race and some people thought he was entitled to the whole of third money.

SUMMARY.

All-Age Setter Stake—First Series.

Edward Gray's Count Eric (Count Noble—Fannie W.) with J. Shelley Hudson's Dad Wilson, Jr. (Dad Wilson—Lit).

J. H. and J. A. Hunter's Daisy Hunter (Gath's Hope—Daisy F.) with Geo. A. McClin's Bonnie Bondhu (Count Wakefield—Pearl Bondhu).

J. M. Avent and Bayard Thayer's Rupert (Roderigo—Bo-Peep) with Bert Crane's Natalie II. (King Noble—Natalie).

Greenfield Hill Kennels' Harry C. (Roderigo—Conness House) with E. O. Damon's The Corsair (Dan Gladstone—Haidee).

J. Shelley Hudson's Dolly Hill (Ben Hill—Dolly S.) with Pierre Lorillard, Jr.'s Blade (Toledo Blade—Sula C.).

Francis S. Brown's Edge Mark (Skidmore—Flo Maclin) with B. M. Stephenson's Top Mark (Gath's Mark—Burd Helen).

B. Ridgway's Lon Noble (Count Noble—Alphonse's Girl) with Adolph Dill's Count Gladstone (Count Noble—Ruby's Girl).

Richard Merrill's Paul Bo (Paul Gladstone—Bohemian Girl) with Pierre Lorillard, Jr.'s Antevolo (Count Noble—Trinket II.).

J. M. Avent and Bayard Thayer's Orlando (Roderigo—Bo-Peep) a bye.

Second Series.

Daisy Hunter with Count Eric.

Harry C. with Paul Bo.

Orlando with Antevolo.

Dad Wilson, Jr. with Count Gladstone.

Third Series.

Orlando with Paul Bo.

Harry C. with Count Gladstone.

Richard Merrill's Paul Bo wins first money, \$250.

J. M. Avent and Bayard Thayer's Orlando wins second money, \$150.

Greenfield Hill Kennels' Harry C. and Adolph Dill's Count Gladstone divide third money, \$100.

Paul Bo is a handsome, well-made setter, as becomes his parentage. Consistent in his work, showing a keen nose combined with free and intelligent range. Is decided on his points and makes few mistakes. Orlando was described at High Point. Harry C. is a handsome, heavily marked dog, shows plenty of pace and range, and here he proved that he had excellent scenting powers. Count Gladstone is a little dog on the Wun Lung pattern. Full of vivacity and eager for his work, he gets over a lot of ground, and delights in mystifying his handler as to his whereabouts; this is his only fault, as he is well trained otherwise, has a good nose and goes to his birds with decision and snap.

LEXINGTON, N. C., Monday, Dec. 7.—Another wet morning and consequently no work could be done in the trials. These wet days, although they afford a welcome rest for some of us, are exasperating to the majority, who are anxious to keep down their hotel bills and get the agony over as soon as possible. Toward noon, as usual here, the rain stopped, and after lunch we started in a field almost in the village with

THE POINTER ALL-AGE STAKE.

First Series.

The draw had taken place on Friday night last, and the first brace down was

NICK OF NASO—DUKE OF HESSEN.—Cast off at 2:25 in sedge. Nick of Naso (Naso II.—Pettigo) was handled by John Lewis, and Duke of Hesse (Luck of Hesse—Blarney) by John White—"a pair of Jacks," as a man facetiously termed them. Both dogs settled down to wide ranging, but a deal of ground was beaten out before any game was made. Duke was the first to point in sedge just out of cover, Nick of Naso backing, but nothing resulted, and further up the

hill he pointed a bevy, and White wounded bird, but dog could not find it; Nick backed. Further up Nick came up with a single, but pointed twice before he nailed it; Lewis fired and missed. Afterward Nick made game, roaded into oaks, pointed, but Lewis could not find; dog moved on, and stifening out again ten yards further on, Lewis put up a bevy, fired and missed, dog not quite steady. Then going through woods, both were found at a point at the other side; nothing came of it, however. Casting back a few yards higher up, Nick of Naso pointed a single that flushed wild. Nothing more being done, dogs were ordered up at 3:14. The race was pretty nearly all in Nick of Naso's favor; was under better control than Duke, but the latter had slightly the best range. Both stylish workers, as two such handsome bench show dogs would naturally be.

WILD DAMON—DON FIS HEL.—Cast off at 3:18 in the same field. Wild Damon (Damon—Flora) handled by C. E. Buckle and Don Fis Hel (Devonshire Sam—Nellie Bang) was handled by Geo. A. McClin. Wild Damon started with a flush on bevy. Wild Damon made wide casts and was much the speedier ranger. Coming back from a long cast to the rear Damon pointed prettily in woods and was held for Don Fis Hel to back, and then Buckle flushed the bird, dogs steady. Then to the right Don Fis Hel nailed one nicely, but McClin missed it, dog steady to shot and wing. A long tramp for about twenty minutes ensued, when Wild Damon pointed, but nothing found in the high ragweed, he roaded and drew to a point several times, but nothing was done. Then Don pointed false, Wild Damon backing. In oaks Wild Damon, making a nice cast, winded a single, which flushed wild just after he pointed. Dogs were called up soon after at 4:20. Wild Damon did the best ranging and had the keenest nose, handling his birds well. Don Fis Hel ran better than heretofore.

DEVONSHIRE DON—ROCK II.—Cast off at 4:22 in sedge field. Devonshire Don (Molton Baron—Village Star) was handled by Dr. Thomas, his owner, in the absence of his trainer J. B. Stoddard, who was laid up with the grip at Thomasville, N. C. Rock II. (champion "Graphic—Lady Belle") was handled by S. C. Bradley. Both got off well to their work. After ranging out some time Rock pointed stylishly in sedge, Bradley could not find, and dog moved on a pace or two and birds flushed wild. Don backed but left it and working round up wind nailed the balance of bevy, which was marked down in woods. Dr. Thomas shot and killed, Don retrieved the bird at once but dropped it about 5yds. away and would not fetch after mouthing the bird a bit. Of course, the dog was handicapped rather by the change of handlers, though the Doctor worked his dog well. Going into the woods some pretty work was done on the singles, both pointing about the same time, Doctor shot at his bird, but missed. Then Rock nailed another, which Bradley killed and dog retrieved in good style. Afterward Rock pointed, moved on and stopped as a single flushed a yard from Bradley's feet. Working out of woods and over a lot of ground Rock pointed and Don honored it, both showing good style, Rock left the point and roaded, but failed to locate game. Dogs called up at 5:08. The heat was a little in favor of Rock II., who ranged out well and with good judgment, running much better than last year. Both did well on their birds and Don's slight unsteadiness was doubtless due to a more or less strange handler. The weather was very cold and raw and we were all glad to get back to our firesides again.

SUMMARY.

All-Age Pointer Stake—First Series.

H. R. Baldwin's Nick of Naso (Naso II.—Pettigo) with Hempstead Farm Kennels' Duke of Hesse (Luck of Hesse—Blarney).

Charlottesville Kennels' Wild Damon (Damon—Flora) with N. R. Fishel's Don Fis Hel (Devonshire Sam—Nellie Bang).

Dr. H. J. Thomas's Devonshire Don (Molton Baron—Village Star) with C. E. Connell's Rock II. (Graphic—Lady Belle).

C. C. M. Hunt's Barker's Grouse (Mainspring—Swain's Fly) with R. R. Moore's Grouse (Underwriter—Trix).

Charlottesville Kennels' Maid of Kent (King of Kent—Hops) with A. L. Sanford's Frank W. (Duke of Vernon—Royal Cote).

[Special to Forest and Stream.]

LEXINGTON, N. C., Dec. 8.—The All-Aged Pointer Stake was concluded this afternoon.

Starting near town, Barker's Grouse and Grouse, handled by Bradley and Lewis respectively, ran a poor race, Grouse not running up to form; neither dog ranged out well. Grouse, however, was the best and found a bevy and a single to Grouse's bevy. Maid of Kent and Frank W. was the next brace down, and ran much better. Handled by Buckle and Lewis, Frank pointed two bevs to Maid's one and ranged nearly as well.

Second Series.

Duke of Hesse and Wild Damon ran first, Wild Damon starting with a bevy to good point; he soon found another and retrieved well. Afterward pointed a single and a bevy and handled his birds well; only range in Duke's favor. Rock II. ran all around Grouse in the next heat and secured one bevy and retrieved well. Frank W. and Maid of Kent ran another heat, when Maid pointed a bevy to Frank W.'s uncertain single.

Judges then called for Duke of Hesse with Maid of Kent and Wild Damon with Frank W. in

Third Series.

Cast off after lunch, Duke of Hesse found his first bevy and retrieved nicely to kill. Then Maid pointed a bevy and also retrieved well. Down nearly an hour, Wild Damon and Frank W. then ran for two hours, but there was little point work. Wild Damon pointed one bevy and Frank the other just at the close of heat. Judges then announced Maid of Kent winner of first money, \$250; Duke of Hesse second, \$150; Frank W. third, \$100. Duke of Hesse also wins the Pointer Club special.

The Free-for-All Stakes commence to-morrow. Drawn as follows: R. Merrill's Paul Bo with B. Ridgway and F. S. Brown's King's Mark; E. Gray's Count Eric with Charlottesville Kennels' Rip Rap; Charlottesville Kennels' Maid of Kent with J. M. Avent and Bayard Thayer's Chance; J. M. Avent and N. T. Harris's Antonio a bye. The race for absolute winner of All-Age Stake will also be run.

H. W. L.

SPANIEL PRIZES.

Editor Forest and Stream:

At a meeting of the executive committee of the American Spaniel Club, held in New York on Dec. 1, it was decided to award the following cups at the forthcoming Westminster Club show, viz.: The American Spaniel Club's field spaniel cup, solid silver, value \$100; the American Spaniel Club's cocker spaniel cup, solid silver, value \$100; the American Spaniel Club's stud dog trophy, value \$25; the American Spaniel Club's American Field cup, solid silver, value \$100; which, with the usual cash prizes offered by this club, will make keen and unusual competition.

It has also been decided to hold the second annual dinner of spaniel exhibitors and lovers of the breed during the show, arrangements for which are in the hands of Messrs. Wilmerding and Keasbey, to which all spaniel men are invited. The annual meeting of this club will be held on Feb. 24, 1892, at 4 P. M. ROWLAND P. KEASBEY, Sec'y.

New York, Dec. 4.

DOG CHAT.

ALTHOUGH the Gordon setter as a class in England is far ahead of the breed in this country, still it would seem that they yet require some special aid in bringing their field trial qualities to the front. The English Gordon Setter Club will therefore hold a field trial meeting next spring. There will be two events, one for Gordons not more than fifteen months old and an all-aged stake.

Mr. John Hay, of Pembroke, Wales, has sold two greyhounds to a fancier in Brazil, South America. This is the gentleman who sold the noted greyhound Pious Pembroke to Mr. Purbeck, of Salem, Mass.

Mr. Augustin Daly, the well-known theatrical manager, brought with him on his return from his recent European trip two bulldog pups by Bruce II. out of an own sister to Leonidas. He also purchased two St. Bernards by Lord Bute out of Streatham Baroness. There are no more generous bidders for dogs than members of the theatrical profession, and it is therefore pleasing to note a disposition on their part to seek dogs of thorough breeding instead of lavishing their affections on the homely mongrels that the ubiquitous sidewalk dealer cajoles them into purchasing.

The English Kennel Club will hold its next show June 6, 1892, at the Agricultural Hall, London. This will suit the American visitor nicely, allowing him to take in the home shows before crossing the briny, as we understand is the intention of several prominent fanciers in this country. The habit seems to be growing on some of them.

The number of visitors that attended the late Crystal Palace show in England was 33,591, against 28,507 in 1890. It is certainly wonderful how well dog shows take in and around London, especially when they have them every few months.

It may not be generally known that Mr. Harry Twyford, the manager of the Oriole Kennels, and who is popularly known to show goers in this country, is a brother of the Mr. Twyford who bred the fox-terrier crack Dominie, which at the Sheffield show was the cause of a sensation when Mr. Vicary, one of England's best judges, put him over the great Result. This Mr. Twyford, though he has relinquished exhibiting, we are told by *Fanciers' Gazette*, has just refused \$2,500 for a trio of his fox-terriers.

This journal also tells us that at the Sheepdog Trials near Denbigh, in the Amatur Stake, a well-known bench winner, Ormskirk Charley, a son of the Chestnut Hill Kennels' Christopher, penned his sheep in seven minutes. As he had to drive three sheep liberated from a pen round a flag to the left along a distance course, pass through twice between two marks, and then pen the sheep, within ten minutes, the performance was a very meritorious one. The smartness and intelligence which he displayed (though he was unlucky with his sheep) is a telling reply to those who are never tired of impressing on us the fact that the present type of collie is altogether unfit for his proper avocation.

"*Mutum in parvo*" some one termed Mr. Sydney Smith when he was over here last spring, and it seems that the dog, St. Bernard, does not occupy all his attention, for we see that he has been elected councilor (alderman) for the Northeast Ward, Leeds, for the next three years.

Mr. C. E. Bunn, of Peoria, Ill., in a quiet way is securing some excellent breeding stock in mastiffs. His latest importation is Ilford Cameo, from Mr. Cook's kennels, and she came over on steamship America.

Poor champion Dublin Scot seems to be having a wandering time of it now that his days of usefulness are drawing to a close. He has again changed hands and is at present owned by Messrs. Gould and Johnson, of Hull, Eng.

Stock-Keeper (Eng.) says: "FOREST AND STREAM gives illustrations of two cups which are offered for competition to greyhound coursers. In artistic design and originality the Americans beat us hollow with their cups. The Luse cup, named after the donor, is a most graceful structure, surmounted by a silver model. The National Greyhound Club's Derby cup looks old-fashioned and solid, and is much preferable to the commonplace shape which is so much in vogue among Englishmen. We refer to the empty egg-shell pattern on a lanky stem."

One of the notable catalogues of the year is that just sent us by the Menthone Kennels, of Phoenixville, Pa. Its arrangement is excellent and very artistic. The first part of the book contains a well executed picture and a history of the Hospice of the St. Bernard, in aid of which a fund is now being raised. Pictures of Lord Bute and other dogs follow with pedigrees, etc., of dogs in the kennel. The St. Bernard standard is also given; in fact, take it all in all, it is the best kennel catalogue we ever remember seeing. Mr. Krosking, the proprietor, does not, we are pleased to notice, forget to thank and enumerate the sporting journals which have helped his kennel by referring to his dogs. Lord Bute, we hear, is getting along excellently.

Looking at the Barzoi discussion now going on in the English *Stock-Keeper*, from an outsider's point of view, "Russian Bear," writing from Moscow, Russia, hits the nail square and bears us out in our oft expressed opinion when he says: "Now as to breeding Barzois, if the English want to manufacture a new breed of dogs there is no one in the world who can stop them from it, but if they want to breed Russian wolfhounds, they must stick to the Russian taste, and the ears, eyes, hindlegs, etc., must be formed as is wanted in a Barzoi, and not in an English greyhound." He also says that it is admitted that the Barzoi of to-day in Russia is not up to the standard of that of thirty years ago, either on the bench or in the field, but that they expect with care to breed up to the former standard.

Dr. H. T. Foote, having a farm of thirty acres in New Rochelle, has made the boarding and treating of dogs and horses a special feature, and having exceptional facilities for this he should do well, the location is so convenient to New York.

The Anglo American Kennels have sold the St. Bernard Young Alton, that they imported last summer, to Mr. Rudolph Stuckey, of Pittsburg, Pa., proprietor of the Keystone Kennels. The dog is excellently built, we have been told, and at fifteen months old weighed 170 lbs. Mr. Stuckey has at last made a good move in getting a stud dog into his kennel whose legs are beyond reproach. Mr. Symonds also tells us that he has sold the bull-terriers Queen of the Dale and Common, both seen on the bench in Canada shows this fall, to Mr. N. E. Smith, of Montreal, Canada, and Prince A. I. has been telegraphed for by a noted fancier in Spokane Falls, Washington, Mr. A. B. Jackson, traveling freight agent of the Northern Pacific R. R.

Dr. C. M. Rounds, of San Antonio, Texas, deserves the sympathy of his fellow sportsmen. In the death of Wun Lung's Sister he has lost a merry worker and a rare little hunting bitch. It will be remembered that we spoke very favorably of her at the U. S. Field Trials when she ran such a good heat with Hope's Mark. Dr. Rounds purchased her from Mr. McCartney just before these trials. She was

brought on to Lexington, N. C., to run in the Central Trials Setter Derby, when on Saturday last a swelling developed in her throat, symptoms of diphtheria were noticed, and despite every care she died in a couple of days.

Mr. T. J. McCartney has been engaged to take charge of "The Retreat," a sporting lodge belonging to Gen. Miles and Mr. John A. Morris, of lottery fame, and both of New Orleans, La. The estate comprises about 10,000 acres and is fenced in. It is stocked with deer and there is any amount of feathered game. Particular attention will be paid to the kennel, the training of field dogs being under Mr. McCartney's especial care.

It was not long before Mr. Angus Cameron "caught on" and one of our principal Eastern kennels will have the benefit of his experience. The Hempstead Farm Kennels have secured his services to train their dogs for the field, it being their intention to go into field trial competition extensively. During the winter Cameron will be located near Thomasville, N. C., and will commence at once, after the trials, on his Derbys for next year.

Mr. W. L. Washington has purchased from Major Jamieson the noted Irish setter bitch Ileen, by Ch. Ponto out of Ch. Drenagh. The Irish setter in this country is bound to come to the front, when such well bred recruits are constantly being imported.

Mr. Jarrett, the popular manager of the Chestnut Hill Kennels, drops us a line now and then, and when he does there is generally a little news picking in it. He tells us that the Roslyn Dolly pups are "great"—"four champions, at least." These are by the English dog Gladus. This kennel has lately been anxious to breed some blues, and now they have three pups out of Golden Flirt of this color. Christopher, we are pleased to hear, is standing his new country well, and is being extensively sought at stud. The Chestnut Hill Kennels, despite all the collies they have sold this year, have still sixty-eight dogs of that breed, and twenty-six couple of harriers and a dozen Irish terriers make up a pretty good kennel. Their St. Bernard, Donna Silva, that missed to Plinlimmon, was bred last week to Mrs. Smyth's King Reinit.

Our thanks are due to Messrs. Luckwell and Douglas for the very excellent photographs of the noted cockers Ch. Black Duke and Black Dufferin. We all know how difficult it is to get good pictures of spaniels, but the photographer in this case has scored a success.

We have received information of such a character as to warrant a belief that the Oak Grove Kennels, of Moodus, Conn., of which Mr. F. C. Fowler is the proprietor, may be accorded the confidence of breeders.

Trim, one of the most valuable hounds of the pack owned by A. B. F. Kinney and John M. White, of Worcester, Mass., died last Sunday of pneumonia. Trim was an unusually strong working hound and was a winner of the endurance medal at the recent trial of the Brunswick Pur Club, at Princeton. He was of native blood and was bred by Mr. Kinney.

Those who wish to attend the Philadelphia field trials at Jetersville, Va., should write to Mr. C. E. Connell, the secretary, at once, so as to secure transportation, accommodations, etc., at the trials. The two special cars, placed at the disposal of the club, will be attached to the train that leaves Broad street, Philadelphia, at 7:20 A. M., Monday, Dec. 14, and will go through without change.

Mr. D. A. Upson, of Cleveland, O., must be congratulated on his purchase of the pointer Promotion that has made quite a record for himself in the U. S. Field Trials Pointer Derby, where he won second to Black Wonder, and at Lexington, N. C., at the Central trials, he turned the tables on the latter, winning the Pointer Derby and following it by beating Wun Lung in the absolute winner of Derby heat. Promotion is by Lord Graphic out of Belle, and while not a brilliant worker in the field, he still ranges in a telling manner and gets the birds with decision, which is generally a *sine qua non* with the sportsmen. We notice that Mr. Upson advertises a litter brother of Promotion in our business columns, and he should not be long before he finds a purchaser.

Among the new announcements in our ad. columns to-day we note the following offers for sale: Fox-terriers, American Horse Exchange, O. Stewart Bamber; pointers, Jauloir, O. L. Bossa, Bar Harbor Kennels, D. A. Upson; setters, J. L. Beers, P. J. Schild, Oak Grove Kennels, A. J. C. Smith; beagles, Beebe Bros.; rabbit dogs, J. H. Miller, H. L. Kreuder offers beagles and J. B. Holden pointers at stud.

TEXAS FIELD TRIALS.

THE second annual meeting of the Bexar Field Trials Club will be run near San Antonio, Tex., Monday and Tuesday, Jan. 11 and 12. Open to all. Programme and prizes:

Puppy Stake—Open to setters and pointers whelped after Jan. 1, 1891. Retrieving required. Entrance \$2.50. Two prizes—\$10 to first, \$5 to second. Entries close Jan. 11, at 9 o'clock A. M.

Derby—Open to setters and pointers whelped on or after Jan. 1, 1890. Retrieving required. Entrance \$5. Three prizes—\$30 to first, \$20 to second and \$10 to third.

All-Aged Stake—Open to setters and pointers which have not won first in any all-aged stake at a meeting held under the management of a regularly organized field trial club. Retrieving required. Entrance \$5. Three prizes—\$65 to first, \$30 to second and \$15 to third.

Special Prize—Pitcher and cup, valued at \$30, donated by Scott & Lemmon, Diamond Front Saloon, to the best dog run in the All-Aged Stake and owned in Bexar county.

G. A. C. SABOT, Sec'y.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (unfilled free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application. Golden Dust. By J. B. Martin, San Francisco, Cal., for white black and tan fox-terrier bitch, whelped July 7, 1891, by Blenheim Shiner (Blenheim Rubicon—Blenheim Brilliant) out of Jess.

Golden Chip. By J. B. Martin, San Francisco, Cal., for white, black and tan fox-terrier bitch, whelped April 23, 1891, by Blenheim Shiner (Blenheim Rubicon—Blenheim Brilliant) out of Vixen (Scarsdale—Delta).

Roy Belton. By M. Herrington, New York, for black, white and tan English setter dog, whelped April 14, 1891, by Fervid (champion Rockingham—Saddlebags) out of Dora Belle (Blue Dan—Princess Llewellyn).

Myron McKee and Lillian Russell. By J. M. Brown, Newport, R. I., for black and white ticked English setter dog and white, black eye, bitch, whelped Nov. 24, 1890, by Don (Bo Bondhu—Princess Kittle) out of Tinnie B. (Figaro—Fairly Blonde).

BRED.

Prepared Blanks sent free on application. Chip II.—Moses K. H. G. Hammett's (Newport, R. I.) cocker spaniel bitch Chip II. (Jersey—Chip K.) to J. M. Brown's Moses K. (Obo II.—Black Bess II.), Nov. 17.

Dorothy—Monarch VI. C. P. Lawshe's (Trenton, N. J.) bull bitch Dorothy (Caliban—Hillside Girl) to Retnor Kennels' Monarch VI. (Monarch—Sling), Nov. 23.

Gwynnie—Soudan. R. H. Alberts, Jr.'s (Hoboken, N. J.) English setter bitch Gwynnie (Belthuss—Wonna Gladstone) to L. L. Ingram's Soudan (Druid—Ruby), Dec. 1.

Dixie B—Sir Edward. Jas. E. Hair's (Bridgeport, Conn.) English setter bitch Dixie B. (Mack B.—Pet Barwya) to his Sir Edward (Belthuss—Wonna Gladstone), Nov. 30.

WHELPS.

Prepared Blanks sent free on application.

Sissey. Anglo-American Terrier Kennels' (Salem, Mass.) Irish terrier bitch Sissey (Apprentice Boy—Nelly), Nov. 18, eight (four dogs), by their Valley Boxer (Bob—Liffey).

Elip. Mr. Kerr's (San Francisco, Cal.) fox-terrier bitch Elip, Nov. 6, four (two dogs), by J. P. Martin's Blenheim Shiner (Blenheim Rubicon—Blenheim Brilliant).

SALES.

Prepared Blanks sent free on application.

Rose Graphic. Liver and white pointer bitch, whelped May 15, 1889, by champion Graphic out of White Rose, by C. D. Roberts, Dexter, Me., to A. H. Higginson, Boston, Mass.

Dash. Liver and white pointer dog, by Beppa III. out of May F., by C. D. Roberts, Dexter, Me., to A. H. Higginson, Boston, Mass.

Alcester's Flirt. Liver and white pointer bitch, whelped April 26, 1891, by Meteor, Jr. out of Mamie, by C. D. Roberts, Dexter, Me., to C. B. Pines, Bar Harbor, Me.

Albert's Nancy. Black, white and tan English setter bitch, whelped Jan. 9, 1891, by San Roy, Jr. out of Nell o' Warwick, by Dr. Jas. E. Hair, Bridgeport, Conn., to H. J. Baughn, Ridgeville, Ind.

AN ENLARGED "FOREST AND STREAM"

WITH the issue of Jan. 7 next, which will be the first number of its thirty-eighth volume, the FOREST AND STREAM will be permanently enlarged from twenty-eight to thirty-two pages.

This change has been made necessary by the growth of the special interests to which the paper is devoted, and by the corresponding requirement of more space for their adequate presentation. The enlargement is to be taken as an earnest of our purpose to increase the interest, usefulness and value of the FOREST AND STREAM; and by means of the better opportunities thus afforded, to maintain for it the character it has so long enjoyed as the representative sportsman's journal of America.

Each of the departments will be benefitted by the change—Sportsman Tourist, Natural History, Game Bag and Gun, Sea and River Fishing—and, in particular, our news columns—the Kennel, Yacht and Canoe, Rifle and Trap. The generous amount of space now given to Kennel will be maintained, and the room devoted to Trap Shooting will be so enlarged as to make the department the most comprehensive and the best arranged contemporary record of that sport.

Since this journal was established eighteen years ago, the popularity of sports with the rod and the gun has advanced with giant strides; and in the development of those manly recreations the FOREST AND STREAM has taken no unimportant part. With their growth it has kept equal pace in worth, in influence, in circulation and in generous public recognition. What it has been it will be. The record of the past contains the abundant promise for the future.

In 1892 and the years that shall follow, as in 1891 and the years that have passed, the FOREST AND STREAM will stand for all that is best and truest in field sportsmanship; and it will strive to merit from its growing hosts of friends a continuation of that warm appreciation and indorsement with which it is now favored.

One word remains to be said: The price will remain unchanged; \$4 per year. Subscribe now.

Rifle Range and Gallery.

THE REVOLVER CHAMPIONSHIP.

SOME good scores are piling up in the contest for the possession of the Winans Trophy and the Amateur Revolver Championship of America. Last Saturday evening several strings were put on record at the gallery of the New York Pistol Club, No. 12 St. Mark's place, among those shooting being President Oehl, of the club, and Officer Petty, of the New York police force, one of the very few out of the 3,000 policemen carrying revolvers in this city who has an accurate knowledge of their use. On next Saturday evening there will be shooting for the trophy at the gallery of the Wurflein Rifle and Pistol Association, 227 North Eighth street, Philadelphia. A quartette of good revolver shots have already signified their intention of being ready to put up fine scores, and this they will no doubt do. The Wilmington (Del.) Rifle Club, which has some excellent pistol shots in its membership, responds to an invitation to fix date for shoot as follows:

There is very little gallery shooting done here, even with the pistol, and none at all with the revolver, so that the contest you are conducting is a little out of the line of our revolver shooters. I have regretted several times that your match could not have been arranged to be shot at the regulation distance of practice of 50 yds., with full charge ammunition and at the standard American target, which is so generally used among revolver experts. However, the contest will no doubt be interesting to those fond of gallery work and prove stimulating to the growing interest in the revolver.—HOWARD SIMPSON, Sec'y.

There are a number of excellent revolver shots in this city who are just now absent from town. Ample notice, however, will be given of the closing of the entry lists, after which the announcements of results will be published as speedily as possible.

A Trophy for Jersey Rifle Clubs.

IN ORDER to stimulate a renewed interest in gallery rifle shooting FOREST AND STREAM has decided to arrange a series of tournament shoots, open to any regularly organized rifle club in New Jersey, and it will give an elegant trophy to the club winning the greatest number of matches. Each club that enters will shoot two matches against every other club, one on the range of each club. The teams will comprise five men each. A meeting will be held at the Millers' headquarters, 80 Hudson street, Hoboken, N. J., on Wednesday evening, Dec. 10, at 8 o'clock, and each club that desires to enter a tournament is requested to send two delegates. At this meeting full details in regard to rules, trophy etc., will be given. All rifle clubs desiring to enter are requested to communicate with J. H. Kruse, 223 First street, Hoboken.

The Our Owns Are Alive.

NEWARK, N. J., Dec. 8.—The Our Own Club, of this city, intends to do considerable match shooting this winter, and is ready to receive challenges from any club in the country for gallery contests. On Dec. 2 their second team defeated the second team of the Puritan Rifle Club, on the Our Own Ranges, by a score of 1,032 to 1,021. To-night the return match was shot, the conditions being 10 men per team, 10 shots per man, 12-ring targets, 75ft., and 22cal. rifle. The score:

Our Owns.	Puritans.
Freisenheuer.....101	Carpenter.....104
Goyek.....107	Lauren.....99
Heber.....103	Hausman.....105
Donal.....105	Ralshe.....91
Uhl.....93	J. Kopf.....93
Furth.....103	Woods.....92
Cherry.....110	Morris.....92
Cherry.....110	Helb.....103
Halsey.....100	Danger.....103
Wolf.....93-1,005	C Kopf.....100-979

The Independent and Volunteer rifle clubs shot a well-contested match on the former's range last night, the result being as follows:

Independent.	Volunteer.
J. A. McCallum.....110	Reilly.....109
T Cox.....105	Blythe.....114
J. B. McCallum.....138	Meter.....105
Berry.....103	Doherty.....102
Rummell.....109	Pfeifer.....110
Parks.....110	End.....108
Smith.....110	Scheib.....106
Townley.....108	Knaich.....105
F. Cox.....100	Huebner.....110
Camp.....109-1076	Huebner.....104-1068

Zettlers' Weekly Shoot.

The following scores were made in the badge competition of the Zettler Rifle Club, at 219 Bowers, on Tuesday evening: L. Flach 247, C. Perovial 245, J. A. Boyken 244, C. G. Zettler 243, H. Witte 242, M. Dorrier 241, H. Holger 241, S. C. W. Plaster 241, F. C. Ross 240, V. Steinbach 240, B. Zettler 240, C. E. Janzner 240, F. Hecking 237, F. Lindkorf 236, M. B. Engel 235, F. Fabarius 233, M. Tropp 233, N. D. Ward 226.

Trap Shooting.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Dec. 12.—Fulford vs. Brewer, 250 live birds each, at Woodlawn Park, Long Island.
Dec. 17.—Essex Gun Club, monthly club shoot, at Marion, N. J.
Dec. 17.—Freche vs. Smith, 100 live birds each, at Marion, N. J.
Dec. 19.—Boiling Springs Fish and Gun Club, open sweepstakes at 50 artificial, at Rutherford, N. J.
Dec. 19.—Open sweepstakes at live birds, on John Erb's grounds, Newark, N. J.
Dec. 19.—Maplewood Gun Club, practice shoot at artificials, at Maplewood, N. J.
Dec. 19.—South Side Gun Club, regular club and open shoot, on club grounds, near Emmet street station, Newark, N. J.
Dec. 25.—Athens, Pa., tournament, at kingbirds and live pigeons, W. K. Park, Sec'y.
Dec. 25.—Boiling Springs Fish and Gun Club, open tournament at artificials, at Rutherford, N. J.
Dec. 25.—Maplewood Gun Club, open tournament at artificials, 1892.

Jan. 1.—South Side Gun Club, open tournament at artificials, on club grounds, near Emmet street station, Newark, N. J.
June 15-18.—New York State Sportsmen's Association's Thirty-fourth Annual Convention, at Syracuse, N. Y. Chas. H. Morry, Sec'y.

DRIVERS AND TWISTERS.

JUDGING from the present outlook this will be the liveliest season on record in trap shooting circles, and the quantity of powder and shot expended, live birds and targets trapped will be enormous. The dealers in live pigeons and the grounds where exhibitions will be a little above the average, the supply will be plentiful and the quality first-class. The late cold snap has already added slightly to the cost of birds.

Club shoots, club tournaments, individual and team contests without number have been and are about to be arranged, and the devotee of the sport who cannot get his fill of ruffling feathers or smashing "crockery" must be a gourmand.

The event of events for the vicinity of New York, is, of course, the contest to take place at Woodlawn Park on Saturday between those giants of the smooth-bore, E. D. Fulford, of Bridgeport, and John L. Brewer, of Hammonont. Not only New York, but the entire shooting world as well is deeply interested in the outcome of this event, which will take place on the grounds where exhibitions are given. The conditions of the match call for 250 live birds per man, 12-bore guns, 30yds. rise, strict Hurlingham rules, except that the inclosure is to be the boundary. The stake is \$1,000 a side. The match will be called at 10 A. M. By special arrangement boats will leave the foot of Whitehall street every hour during the day, connecting with special trains on the Sea Beach Railroad, which will take the spectators to the grounds. These men are conceded on all sides to be in a class by themselves, the fact being proven by their marvelous work at Marion on Nov. 12, 13 and 14, when Fulford killed 100, 99, 94 and 24 against Brewer's 98, 94 and 25 in three consecutive matches and a tie shoot. For two men to face the traps for three consecutive days and kill 693 out of 650 birds is sufficient to give them a classification of their own.

It has been said that the birds on the first and second days were of inferior quality. Granting this, how many men are there in this or any other country who could equal the above record even if the birds, each and every one, were tied fast? But there will be no cause for complaint as to the quality of the birds in Saturday's match, provided of course that the weather is what it should be. The birds are to be furnished by Mr. Brewer and the "Captain Jack" is not able to choose good flyers, the job need not be undertaken by any one else. There is one point on which the lovers of the sport can rest content, and that is, that the above match will be shot strictly on its merits and that the best man will win.

The Essex Gun Club, of Newark, will hold its monthly club shoot for prizes at Marion, on the 17th inst., and a good time is expected as usual. In the competitions for prizes each man is rated at a given number of points per shoot, and the member gaining the highest number of points above his allotment during the season wins first prize. The members are also divided into three classes—A, B and C—the first shooting at 30, the second at 28 and the third at 30yds. rise. Thus far Lemuel Thomas, who is rated at 8, has a score to lead for prize; Harry Sme being a good second. This shoot will be open only to club members. The birds will be furnished by Al. Heritage, "Old South Pay," and will be of a quality to make the members shoot their best.

The South Side Gun Club announces that it will hold its annual open-to-all tournament at artificials on New Year's Day, on its well-appointed grounds, near the coal chutes below the Emmet street station, Newark, N. J. A fine programme of events will be arranged, the object being to suit all comers. Plenty of ammunition of all kinds will be on hand, as will be an abundance of refreshments, liquid as well as solid. A feature of the day will be a public trial of the Hobart system of rapid firing, devised by my old friend Wm. R. Hobart, who says the system is bound to be a go, and will be more popular than any of the rapid-firing systems now in vogue.

Gus L. Freche and Harry Smith, two well-known Newark shooters, will have a test of skill on the Marion grounds on the 17th inst., each man to shoot at 100 live pigeons, under Hurlingham rules, for a purse of \$100. A few weeks ago these men came together in a 50-bird race, Smith killing 43 to Freche's 39. Gus was not satisfied with the result, hence the coming match. Freche is a veteran at the business, being an old member of the Essex and Newa-k gun clubs, and the hero of a hundred odd matches, while Smith is a comparative tyro, his shooting career

having been started in January, 1891, with the Essex Gun Club. Up to the last four months he seemed unable to strike anything faster than about a 75 per cent. pace, but since then he has been shooting great guns. At the October shoot of the Essex he killed 42 out of 44 birds and killed 34 of them straight with his first barrel. On Thanksgiving Day he killed 39 out of 42 birds. If he is in the above form on the 17th he will come very close to being a winner.

The big guns of the trap-shooting world have a chance to make a neat little pot, provided they can nerve themselves to cover a bet offered by John Erb, the well-known proprietor of the Old Stone House grounds on Bloomfield avenue, Newark. Mr. Erb says he will wager \$400 against \$1,000 that no man can kill, on his grounds, 94 out of 103 pigeons under the following conditions: Mr. Erb to furnish the birds and to have notice at least two weeks before the trial is to take place; the shooting to be governed by Hurlingham rules, except that he will give the shooter the advantage of shooting from one instead of five traps; 12-gauge guns; 30yds. rise.

Mr. Erb also says that he will wager \$500 even that no man can kill 94 out of 100 pigeons, on his grounds, under same conditions as above, except that they shall shoot from five traps. Who wants a piece of either of the above amounts?

My old friend Neaf Aggar, the well-known and popular salesman at Henry C. Squires, has furnished me with the following description of the new W. W. Greener hammer gun, which will be used by E. D. Fulford in his big shoot against J. L. Brewer on Saturday. The gun was delivered at Squire's store on Thursday night and Neaf describes it as "a beauty." It has two sets of barrels, one for trap and one for field work. In shape for trap work the gun weighs 7lbs. 12oz. The barrels are 30in., full choke. The stock is 14 1/2in. in length, with 2 3/4in. drop at the butt and 1 1/2in. drop at the cone. It is the highest grade gun made by this handled any gun. The loads to be used by Fulford are as follows: 44rs. Schultze powder in both barrels; 14oz. No. 7 chilled shot in right barrel and 14oz. No. 6 in left, the whole loaded in Squire's tournament shells.

The success which attended the recent series of shoots, held under the auspices of the Trapsshooters' League of Essex County, N. J., gave a great boom to the smashing of crockery within the confines of the county. As is known, the League comprised six clubs, and each month a team shoot and individual tournament was held on the grounds of one or another of the clubs, until each one had received its share of the benefits. First prize for teams was won by the Maplewood Gun Club, whose team captured five out of the six contests. At the conclusion of the series of shoots the League was disbanded and a new organization was formed, it being the intention of the projectors to include in this all the clubs in the seven counties comprising Northern New Jersey. Recently, however, it has been deemed advisable to abandon this plan and organize a League which shall be open to every club in the State. A few days ago I had a talk with Mr. W. R. Hobart, who is an old-timer in shooting men with Von Lengerke & Detmold, and who is an old-timer in devising schemes for the advancement of trap shooting. Mr. Hobart's idea is to arrange a tournament on one of the following plans: First, to form a New Jersey League, each county to have a series of preliminary team contests for the purpose of deciding upon the strongest team in the county, the leading teams to be afterward brought together in a series of contests to decide the State championship. In this event the final series of shoots would be held on in each county. His other plan was to have a team of ten, twelve or fifteen men from each county come together in a series of shoots for the State championship, instead of holding the preliminary shoots as above. In case the former plan should be adopted the teams would comprise five or six men each. In either case it is intended that each man shall shoot at twenty-five artificial targets, either Standard Keystones or bluerocks.

The plan for organizing a league on either of the above lines would be practically as follows: Every club affiliating would be required to pay \$2 as an entrance fee and ten cents dues for each member on its roll. Previous to the beginning of a tournament each club would pay into the league treasury the sum of \$5 (or any other decided figure) upon the amount derived from this latter source to constitute a fund for the purchase of prizes for teams and individuals according to the schedule adopted.

After carefully considering the two plans outlined by Mr. Hobart I am inclined to think that the one calling for county teams would "freeze out" too many shooters. In Essex county, for instance, there are over a score of active gun clubs, and at least seventy-five really expert shooters, four-fifths of whom would be unable to take part in a contest under the second plan. By adopting the first-mentioned plan every shooter in the State could take part on one or another of the teams in the preliminary series of shoots. I have been requested by the projectors of the affair to invite discussion on this subject and hope to hear at an early date from every club in New Jersey. Any communications on the subject will be cheerfully accorded space in these columns.

The Boiling Springs Gun Club announce that on Saturday they will run an all-day's tournament at artificials on their well-appointed grounds at Rutherford, N. J., the main attraction to be a big sweep at 50 targets per man, \$5 entry. A big turnout of experts is expected.

The Maplewood Gun Club will run a Xmas Day shoot on their pretty grounds at the Maplewood station of the D. L. & W. R. R. Shooting will begin at 9:30 A. M., the regular programme to comprise events at 10, 15, 20 and 25 targets. The special attraction will be a team contest for a holiday dinner, to be eaten on New Year's eve.

Newarkers are looking anxiously for the appearance of a volume descriptive of the hunting experience of a well-known local scribe and an equally well-known member of the shooting fraternity, who recently made an extended trip through Morris county, N. J. Private advices credit the pair with having "begged" (I am inclined to believe that the informant misspelled this word) three partridges and one rabbit. The forthcoming book will be written by the brother of the author of "The Hidden City," and will be copiously illustrated.

Considering the fact that there are 313 shooting days in the year, it seems rather curious that so many conflicting dates should be claimed for tournaments in certain localities. Recently one of the Newark clubs arranged a two-days tournament, publishing the dates fully a month in advance, notwithstanding which another of the local clubs, less than a week before the above tournament took place, came out with the announcement of an all-day tournament, to be held on one of the dates claimed by the club first mentioned. The result was a flat failure for both affairs. The clubs should have agreed that the first party can and they can do this in no better way than by avoiding dates already claimed in arranging their tournaments. As soon as a date has been fixed on send it to FOREST AND STREAM to be placed among the fixtures. We aim to make the fixtures a complete guide to all coming events.

I have heard a large number of sportsmen speak in the highest terms of the manner in which they were treated by the firm of Von Lengerke & Detmold during the recent busy season, in the way of having their orders promptly filled. In one instance a party rushed into the store at 11 A. M. and said that he wanted fifty shells loaded with 48rs. of Schultze powder and 1oz. of No. 8 shot, but if he could not get them in fifteen minutes they would be useless to him. At present the firm has his order filled and left the store, although they had to be specially loaded. Little instances of this kind, where trivial amounts are concerned, tend to show the caliber of a firm.

C. H. TOWNSEND.

The Murphy-Thompson Match.

An exclusive party was admitted to the grounds of the Carteret Club at Bergen Point, last Thursday, to witness the match between Edgar G. Murphy and L. S. Thompson. The day was a good one for the sport, but the birds as a whole could have been much better. The conditions of the match were 100 live birds per man, 30yds. rise, 50yds. boundary, for a stake of \$1,000 a side. J. S. Hoey was referee and Justus von Lengerke scorer. Murphy was looked after by Fred Hoey, while W. E. Smith did the honors for Thompson.

Murphy is well known as a veteran match shooter, while this was Thompson's first appearance in anything but sweepstakes events. The former's friends had no trouble in having their bets covered, and in consequence some \$12,000 or more of Thompson money found its way into the pockets of Murphy's backers.

Thompson won the toss and walked to the score first, killing a straight driver by using both barrels. Murphy followed with a good first-barrel kill of a fast left-quarterer. At the end of the twentieth round the score stood 20 for Murphy to 14 for Thompson, the latter losing 4 out of his first 10 birds. On the second round the scores stood 37 for Murphy, 33 for Thompson. On the

next round Murphy gained one kill. On the fourth round Murphy led by two birds; on the next round he gained two more, and the score ended with 88 kills by Murphy against 82 by Thompson, the former losing 7 and the latter 9 birds dead out of bounds. The scores follow:

Edgar G. Murphy.....	11111111111111111111-20
L. S. Thompson.....	01110111111111111111-17
	11111101111101111111-18
	11111101111101111111-15
	11101101110111011111-16-86
	101010101010111111-14
	11111101111101111111-17
	11111101111101111111-18
	11101110101010011110-14-82

Thompson shot a 7 1/4-pound Greener gun, using V. L. and D. shells, loaded with 42rs. of E. C. powder and 1 3/4oz. of No. 7 1/2 shot in the right barrel. In the left barrel he used 45rs. of E. C. powder and 1 3/4oz. of No. 7 shot. Murphy shot a 7 1/4-pound Francotte gun and used V. L. and D. shells. He had 42rs. of E. C. powder and 1 3/4oz. of No. 7 1/2 shot in both barrels.

The Union Gun Club.

SPRINGFIELD, N. J., Dec. 8.—For the last twelve months the members of the Union Gun Club have striven earnestly to roll up good scores at the monthly shoots, the main attraction being a gold and pearl medal valued at \$25, this to go to the member winning it the greatest number of times during the season. There were also four other prizes. Up to to-day E. D. Miller, R. H. Breintnall and E. Collins had won it twice and R. Briant had won it once. To-day's contest was therefore very interesting. In this contest each member shoots at 20 singles and 5 pairs of bluerock targets, lies being shot off at 3 singles and 1 pair. As this was the final shoot of the season Manager Miller combined with it a good programme of open events, and offered two prizes of \$3 and 2 respectively for averages. Shooting began at 10:30 and was not concluded until dark. Among the visitors was Samuel Lyon, president of the North Side Gun Club, of Massapeh, L. I. C. H. Townsend, of FOREST AND STREAM, was scorer. The results of the several events are given below:

Warning shoot, 10 singles, \$1 entry: Collins 8, Hobart 7, Lyon 7, Drake 6, Miller 6.
Warning shoot, 10 singles, \$1 entry: Hobart 9, Sigler 8, Collins 7, Miller 7, Breintnall 7, Drake 6.
Regular programme, No. 1, 10 singles, \$1 entry: Miller 10, Breintnall 9, Collins 8, Hobart 8, Drake 8, Smith 7, Lyon 7, Sigler 6.

No. 2, 15 singles, \$1.50 entry:
Lyon.....111111011111-14 Miller.....01111111111111-13
Hobart.....111111011111-14 Sigler.....010101111111-11
Smith.....111111011111-14 Collins.....011111011111-11
Drake.....111111011111-13 Breintnall.....110101010111-10

No. 3, 20 singles, \$2 entry:
Hobart.....111111111111-17 Collins.....1110111001011111-15
Sigler.....111111111111-17 Miller.....010101111111-16
Miller.....10111011011111-17 Lyon.....11111101011111-16
Breintnall.....111111011111-17 Drake.....11111101011111-15

No. 4, 5 pairs, \$1 entry: Miller 8, Hobart 7, Breintnall 6, Collins 6, Sigler 5, Drake 5, Smith 3.
No. 5, 15 singles, \$1.50 entry:
Miller.....111111111111-15 Hobart.....01111011111100-11
Smith.....011111101110-12 Breintnall.....101101011111-11
Collins.....101101101111-11 Lyon.....111110100011-10
Sigler.....11001101110111-11 Drake.....1111110101110-10

No. 6, 20 singles, \$2 entry:
Miller.....10111011111111-18 Sigler.....0111111000111111-16
Collins.....11111010011111-18 Breintnall.....1101110110110111-14
Smith.....11111010111001-16
Lyon L. Hobart withdrew.

No. 7, 5 pairs, \$1 entry: Miller 5, Breintnall 8, Smith 7, Hobart 6, Sigler 6, Collins 5, Drake 5.
No. 8, 15 singles, \$1.50 entry: Miller 14, Breintnall 12, Smith 11, Collins 11, Sigler 11, Lyon 10, Lindsey 7.
No. 9, 10 singles, \$1 entry: Breintnall 10, Hobart 9, Sigler 9, Lindsey 7, Collins 7, Smith 7, Miller 6, Drake 5.

No. 10, club prize shoot, 20 singles and 5 pairs:
Miller.....1111111111111111 11 11 11 10 11-29
Sigler.....1111110101111111 10 11 11 10 11-25
Collins.....0010110110111111 11 11 11 10 11-23
Breintnall.....1101011011101111 11 10 11 10 11-21
Lindsey.....111010101010111101 11 11 10 11 10-20
Briant.....1110101011111010 11 10 10 10 10-20
Smith.....1111111101111111 10 10 10 10 10-15

Miller's victory of to-day made him the final winner of the medal, he having won first place five times; second prize, a shell case, went to E. Collins; third prize, pair corduroy trousers, to R. Briant; fourth prize, \$2.50 gold piece, to M. F. Lindsey, and fifth prize, \$2 cash, to D. Terry. The best average to-day was won by E. D. Miller, R. H. Breintnall being second. The wind blew strong and fully all day, which accounts for the poor scores in some events.

Canajoharie Gun Club.

The scores of the Thanksgiving Day shoot of the Canajoharie Gun Club were received too late for our last issue, and in consequence we are obliged to publish them in an abridged form:

No. 1, 10 kingbirds, \$1 entry: Horton 10, Weeks 9, Walrath 9, Fulton 9, Giesel 9, Pierson 8, Roberts 6, Sanders 6, Pegnim 5, Chapman 4, Partiss 2.

No. 2, 15 kingbirds, \$1.50 entry:
Giesel.....11111111111111-15 Goggin.....01111111111100-12
Pierson.....11111110111111-14 Betts.....10111111111104-12
Roberts.....01111101111111-13 Walrath.....10011111111110-10
Rockworth.....01111101111111-13 Portiss.....10100111111100-9
Chapman.....10111111111101-13 Pegnim.....0100011011010-8
Horton.....11001011111111-12 Sanders.....01001010101011-8
Weeks.....11111101111111-12

No. 3, 10 live birds, \$5 entry, 3 ground traps, 4 moneys, all ties divided:
Lord.....211121211-10 Horton.....0101210122-7
Goggin.....221121210-9 Giesel.....1022010111-7

Bierbauer.....00101011111111-9 Portiss.....10010000000001-3

No. 9, 5 pairs of doubles, \$1 entry: Sanders 6, Weeks 6, Walrath 6, Horton 7, Piersons 6, Pegnim 7, Portiss 4, Chapman 6, Bierbauer 6, Giesel 3, Rock 8, Roberts 4, Fulton 7, Wessell 4.

No. 10, same as No. 1: Weeks, Rock, Horton and Sanders 10; Piersons 9; Chapman, Pegnim, Giesel and Bierbauer 7; Roberts 5.

Walnut Hill.

WALNUT HILL, Mass., Dec. 2.—The exceptionally fine weather of to-day brought out a goodly number of trap-shots of the Massachusetts Rifle Association to participate in the regular fortnightly series of matches. The main interest was centered in the twelfth crown and the gold coin match, in which there was unusually sharp rivalry. Messrs. Burrett, Black, Bowker and Choate were tied for first place with 19 out of a possible 30 birds. In shooting off the tie Mr. Barrett made a clean score of 15, which entitles him to wear the champion gold medal until the next shoot. Mr. Choate, who crowded Mr. Barrett very sharply, missing only one bird, used a 5 1/4-pound, 20-gauge gun.

Twenty-five targets, square system of firing: Barrett 19, Black 19, Bowker 19, Choate 19, Bennett 16, Curtis 16, Cook 15, Hosmer 15, Snow 14, Gale 13, Gore 12, Parham 12, Rule 12, Nichols 11.

Lake View's Chicken Shoot.

WORCESTER, Mass.—The Lake View Gun Club held an all-day shoot at the club grounds Thanksgiving Day, and it was a success from start to finish. There was a large attendance and many participated in the contests. Shooting began at 9:30 A. M. and continued till dark. The novel feature of the day's shoot was the "chicken" shoot at stationary and flying targets. Twenty-five birds were won by different members of the club. At the stationary target, birds, rise, each of the following succeeded in getting one or more birds: H. Groves, H. V. Faiman, Cal Williams, J. Cummings, and Jim Manning. Blue-rock contests were then begun.

First match:			
A G Powers.....	11101-4	H L Bond.....	00101-2
C Forehand.....	11101-4	Wm Brown.....	11101-4

Shoot for a Supper.

SYRACUSE, N. Y., Dec. 4.—Yesterday twenty members of the Onondaga County Sportsmen's Club assembled at their club house and divided into two teams, of 10 men each, for a shoot at 25 kingbirds each man, unknown angles, 5 traps, the losing team to pay for supper for the party. The teams were captained respectively by Colonel Courtney, of the Lefevre Arms Company, and George Mosher, of the Hunter Arms Company. The scores follow: Courtney's Team..... 11111111111111111111-24
Mowry..... 1101111111111111111111-22
Montgomery..... 0100111111111111111111-21

The supper was discussed at the Hub Café. The same teams will again try conclusions on Dec. 10 for a supper to be served at the Maple Bay Hotel.

Toronto Gun Club.

TORONTO, Dec. 3.—A large number of shooting enthusiasts attended the opening winter shoot, held under the auspices of the Toronto Gun Club, at Stark's grounds this afternoon. The club in reducing the price of birds, has taken a wise step toward making the club and the sport more popular. George Briggs acted as master of ceremonies in his usual happy style. Owing to early darkness a large number of intending shooters were unable to take their turns at the traps. First shoot, five birds: George..... 12111-5 Henry..... 11011-4
Rogers..... 12211-5 Charles..... 11020-3
Emond..... 02111-4 Teat..... 10101-3
Sweepstakes, ten birds: Charles..... 12121112-9 Henry..... 212021212-9

Johnston 0, Jaytee 3, C. Ayre 2, J. Ayre 2, Smith 3, Warrington 3, T. Soden 5, Sloper 3, Miller 1, McCrady 2, J. Simpson 2. Ties at 9 divided by Blea and Rogers.

Garfield Thanksgiving Shoot.

CHICAGO, Ill., Dec. 3.—Garfield Gun Club, of Chicago, braved a keen and cutting wind on the great national jubilee day and had a little fun at the live bird traps, about 500 birds being handled. Low scores were the rule, the high wind making shooting very difficult. The boy Willie Palmer tied top score with 16 out of 20. In view of his years this was remarkable. He bids fair to be a steady and able shot. There was quite a good little

attendance. Considerable regret was expressed that Mr. Snifkins, one of the club's best and most regular attendants, could not be present. Score: Shoot No. 1, 5 live birds, 5 ground traps, 28 and 30yds. rise, Illinois State rules:

Money vs. Davenport.

CAPT. A. W. MONEY, the English trap-shot, met and defeated L. T. DAVENPORT in a 100-bird match at the Larchmont Gun Club, on Dec. 8. The birds were a capital lot, trained almost to dodge the showers of shot. Davenport used a 7 3/4 pound Lefevre gun, Scultz powder, 45rs. in both barrels, and 1 1/2 oz. of shot in V. L. & D. shells. Capt. Money shot an F. T. Baker gun, made in London, and weighing 7 1/2 lbs. He used E. C. powder and V. L. & D. shells. The score ran, at 100 birds, 80yds. rise, 80yds. boundary, \$1,000 per side: Capt A W Money..... 020212022120212020112120-18
L T Davenport..... 211012022222222222222222-19-79
Dead out of bounds—Davenport 8, Money 5. Killed with one barrel—Davenport 14, Money 43. Two barrels—Davenport 59, Money 38. Right quarterers—Davenport 36, Money 40. Left quarterers—Davenport 14, Money 18. Hithersalls—Davenport 8, Money 15. Incomers—Davenport 23, Money 22. Towerers—Davenport 6, Money 5. A return match will be shot at the Carteret Gun Club grounds, Bergen Point, next Tuesday.

Philadelphia.

PHILADELPHIA, Pa., Dec. 5.—About 300 sportsmen visited the Forest Gun Club grounds this afternoon to witness the match between James A. Mills and S. J. Hithersall. The conditions of the match were 25 live pigeons per man, modified Hurlingham rules, the loser to pay for their birds and an oyster supper for ten; each shooter to invite four friends. At first both men were considerably rattled, and they missed their first and second birds, but after that they settled down and did some good shooting, as the birds were strong, fast flyers. Harry Thurman acted as referee, Dr. Kerr as trap-puller, and Wm. Green as official scorer: J A Mills..... 002101212012121121101-20
S J Hithersall..... 0021020120101212021121-17
Mr. Hithersall not being satisfied with the result, another match was immediately made, to come off in about two weeks, to be at 50 birds per man. Time of match 1h. and 27m. After the pigeon match was finished the target traps were immediately put out and the following sweeps were shot, rapid-firing system: First, 10 birds, entrance \$1, div. 40, 30, 20, 10 per cent.: Landis 10, David 7, Morrison 6, Thurman 9, E. Wolstencroft 8, Kerr 4, Mills 6, Willard 8, Whitcomb 5, Martin 4, Hithersall 5, Adair 8. Second, 10 birds, entrance \$1, div. 30, 20, 10 per cent.: J. Wolstencroft 9, Willard 8, H. Thurman 7, Mills 5, Landis 10, W. H. Wolstencroft 9. Third, 10 birds, \$1 entrance, div. 50, 30 and 20 per cent.: Thurman 5, Willard 8, Landis 8, J. Wolstencroft 10, W. H. Wolstencroft 8, Mills 5.

Big Sweep at Burnside.

BURNSIDE, Ill., Nov. 27.—Watson's Park was the scene of some fine shooting yesterday, the attraction being a sweepstake at 50 live birds per man, \$25 entry, American rules to govern, excepting that the boundary was 50yds. The contest was close throughout, I. W. Dukes finally winning first pot with a score of 47 kills. The detailed scores follow: I W Dukes..... 11222121111222211110-47
W P Mussey..... 12221122122121210101101222222221222122-47
J L Wilson..... 120212201221212121111222222221222122-45
A C Conson..... 22010101121213020102222121210111222222-43
Geo Hoffman..... 1221221221222121110222101110100122121201-40
To-day the Chicago Shooting Club held its monthly shoot at 50 live birds per man, American Association rules, the result being as follows: Atwater..... 111121202221212112-19 M Eich..... 2011101121201212221-17
Vadsworth..... 122221221221222122-19 A Anson..... 2111011212122212122-19
Atwater receives an allowance of two birds, which makes him the owner of the club medal, this being the third time he has won it. After the above event Atwater and Eich had a friendly shoot at 25 Peoria blackbirds each, the former breaking 21 to Eich's 19. RAVELTGG.

The South Side Shoot.

THE weekly shoot of the South Side Gun Club, of Newark, took place on Saturday afternoon, all the shooting being at artificial targets. The attendance was rather light, but the scores were up to the average. The first event was at 25 targets per man, in which Breintnall broke 71. In the second event, same conditions, Breintnall broke 83. Event No. 3 was at 10 targets each, Breintnall breaking 9, Phillips 8, Terrill and Beam 7 each, Knight 6, Douglas 5 and Thomas 4. Event No. 4, same: Breintnall, Phillips and Terrill 8 each, Knight, Douglas and Thomas 6 each, Beam 4. Event No. 5, same: Terrill, Douglas and Beam 8 each, Breintnall, Phillips and Thomas 7 each, Knight 5 and Osterhaus 4. Event No. 6, same: Osterhaus 9, Phillips 8, Terrill 7, Breintnall 6, Douglas, Thomas and Beam 5 each. In a number of events at 3 pairs of doubles each the following totals were made: Breintnall 6, 6, 6, Beam 7, 6, Osterhaus 5, 7, 3, Thomas 4, 4, 5, Phillips 7, Douglas 6. The final three events were at 10 singles each, the totals being: Breintnall 9, 10, 7, Phillips 8, 9, 7, Thomas 8, 8.

Shooting in Connecticut.

SOUTH NORWALK, Conn., Nov. 27.—The South Side Gun Club of this place held its second annual tournament to-day, on the Baxter grounds, and quite a number of outside shooters were present, among them being Milton F. Lindsley, of the American Wood Powder Company, Hoboken, N. J.; Enoch D. Miller, Union Gun Club, Springfield, N. J.; Wm. R. Hobart, of Von Lengerke & Detmold, New York; S. J. Lyon, Brooklyn, N. Y.; Near Appar, representing Henry C. Squires, New York, and A. H. Merriman, Meriden, Conn. All the shooting was done at artificials. The scores are given below: No. 1, 10 straightaways, 75 cents entry: Appar 8, Lyons 8, Hobart 10, Lindsley 9, Sanford 8, Blakeslee 7, Hendrie 8, Miller 10, Ferris 5, Thomas 9, Bristol 6, Merriman 5. No. 2, 10 singles, 3 angles, \$1 entry: Appar 8, Lyon 8, Hobart 7, Lindsley 9, Sanford 5, Blakeslee 2, Hendrie 7, Miller 9, Bristol 5, Merriman 6, Thomas 6, Ferris 2. No. 3, 15 singles, \$1.50 entry: Appar 14, Lyon 14, Hobart 9, Lindsley 13, Sanford 10, Blakeslee 7, Hendrie 8, Miller 12, Bristol 10, Merriman 6, Thomas 7, Grant 9. No. 4, 10 singles, \$1 entry: Appar 9, Lyon 8, Hobart 8, Lindsley 7, Sanford 9, Blakeslee 8, Hendrie 8, Miller 10, Bristol 6, Ferris 5, Thomas 7, Grant 3. No. 5, 10 singles, 75 cents entry: Hobart 9, Lindsley 8, Lyon 4, Sanford 9, Blakeslee 5, Miller 9, Bristol 7, Hendrie 8, Thomas 6, Merriman 6, Grant 7. No. 6, 30 singles, \$2.50 entry: Hobart 15, Lindsley 16, Lyon 13, Sanford 16, Appar 17, Blakeslee 14, Miller 18, Bristol 13, Hendrie 17, Merriman 11, Grant 13. No. 7, 10 singles, \$1 entry: Hobart 8, Lindsley 9, Lyon 6, Sanford 6, Appar 9, Blakeslee 7, Miller 8, Bristol 6, Hendrie 8, Thomas 6, Merriman 6. No. 8, 10 singles, gun below the elbow until target is in the air, \$1 entry: Hobart 8, Lindsley 3, Lyon 6, Sanford 8, Appar 9, Blakeslee 4, Miller 9, Bristol 5, Hendrie 1, Merriman 7, Grant 7. No. 9, 10 singles, 75 cents entry: Hobart 8, Lindsley 8, Lyon 4, Appar 8, Blakeslee 6, Miller 9, Bristol 7, Hendrie 9, Merriman 7, Thomas 6. No. 10, 5 pairs, \$1.50 entry: Hobart 8, Lindsley 6, Lyon 3, Appar 7, Miller 6, Bristol 3, Hendrie 4, Merriman 4. No. 11, 15 singles, \$1 entry: Hobart 10, Lindsley 7, Lyon 7, Appar 10, Blakeslee 7, Miller 8, Hendrie 9, Thomas 3, Sanford 9. No. 12, 5 pairs and 10 singles, \$2.50 entry: Hobart 15, Lindsley 16, Appar 16, Miller 19, Hendrie 7. No. 13, 15 singles, \$1.50 entry: Hobart 14, Lindsley 10, Appar 13, Miller 11, Hendrie 15, Lyon 12. No. 14, 10 singles, 75 cents entry: Hobart 10, Lindsley 7, Appar 9, Miller 10, Hendrie 9, Lyon 9, Grant 5, Thomas 7. No. 15 was a walking match, miss-and-out, Lindsley coming out the victor by breaking 8 straight; Miller was second with 7. In an extra event, at 10 singles, entry, Hobart broke 10, Miller 9, Appar and Hendrie 8 each, and Lindsley 7. The final event was under similar conditions, Appar and Miller breaking 9 each, Hendrie and Lindsley 8 each. In all events ties were divided.

Atlantic Rod and Gun Club.

THE annual meeting of the Atlantic Rod and Gun Club was held at the Exchange, West End, Coney Island, on Saturday, Dec. 5. President R. J. Dwyer occupied the chair. The reports of the secretary and treasurer showed that the club was in good financial condition for its first year. Over \$1,200 had been paid out, without including the cost of the entertainment of the visiting clubs at the interstate shoot. The gold badge presented to the club by George Engeman was awarded to J. B. Voorhes; R. J. Sutherland won the Borden badge as second prize, and the Quimby medal for bluerock shooting was won by D. Monsees. The election of officers for the ensuing season was then held. R. J. Dwyer refused to accept the presidency on account of business engagements, and C. E. Morris was unanimously chosen to fill the position. A. Chambers was re-elected vice-president, John J. Van Dyne recording secretary, R. J. Sutherland treasurer, and William A. Weber captain. President Dwyer appointed William A. Weber, G. F. Kleish and R. J. Sutherland as a committee of three to revise the by-laws of the club and submit them at the meeting to be held next Saturday. It is proposed to shoot at ten birds instead of seven, and to change the date of the club shoots from the last Wednesday of each month to a more favorable day. It is also proposed by some of the members of the club to issue invitations to several of the leading clubs to form a Long Island Shooting League, instead of the Interstate League, all the shoots to be shot off on each club's grounds.

The Smoothbore at Claremont.

CLAREMONT, N. J., Dec. 5.—The fine weather drew about a dozen members to the weekly shoot of the New Jersey Shooting Club to-day, and some lively sport resulted. The scores in the various events were as appended: Ten clay pigeons each, unknown angles—Schaeffer 8, Richmond 7, Pope 8, Bigoney 6, Schoevling. Keystone system, twenty singles each—Richmond and Schaeffer 10, Simpson 17, Hunt 16, Hobart 15, Pope 14, Compton 13, Grief 9, Schoevling. Walking match, ten birds each—Sundermann 5 1/2, Compton, Vincent and Pope 5 each. From unknown angles, ten pigeons each—Hobart 6, Bigoney, Pope, Richmond and Schaeffer 5, Grief 3. Nine singles, Keystone system, and three pairs each—Schaeffer, Hobart, Simpson and Hunt 13, Compton 10, Pope 7. Walking match, ten singles each—Schaeffer 9, Bigoney and Hobart 8, Hunt and Compton 7, Richmond 6, G. F. Grief 3. Ten singles each, Keystone system—Sundermann 10, Hobart and Simpson 9, Pope, Hunt and Compton 6, Vincent 5, Grief 3. Thirteenth match of the series of twenty singles each, Keystone system, for a Marlin rifle—Simpson won. The other scores were: Compton and Richmond 18, Hunt, Sundermann and Bigoney 16, Pope 15, Vincent 14.

Pop Anson beats Wilcox.

BURNSIDE, Ill., Nov. 28.—Pop Anson, the well known captain and manager of the Chicago nine, showed the people of this section that he could shoot as well as play ball, at Watson's Park this afternoon. He was stacked against J. L. Wilcox in a match at 100 live birds each, the winner to be the one to break 100. A side, and the story of the affair is best told by the appended score: A Anson..... 212121212121212001-16 J Wilcox..... 22212221211111110-1
122112212222212121-19 20120110101221022-1
22101211212111111-18 211212110121102212-1
12112222222221201-18 122122121210000021-1
121122111212121111-20 002122121212121212-1

The contest for the Gun Club medal at 10 live birds per man was won by E. M. Steck, who grased 10 to Jas. O'Brien's 9.—RAVELTGG.

Riverside Rod and Gun Club.

ROCHESTER, N. Y., Dec. 3.—Regular shoot of the Riverside Rod and Gun Club at 25 bluerocks, 15yds. rise: Davenport..... 111100111100101101111-19
Pauckner..... 1010101010110110001011-12
Abbs..... 101101101010101010101-14
Hafner..... 10110101010110101011-17
Higginson..... 10110101001010100010-12
Ties on 19, Higginson won. Several sweepstakes were shot.—DAVE.

Wellington Gun Club.

WELLINGTON, Mass., Dec. 5.—There was a larger attendance than usual at the weekly shoot of the Wellington Gun Club to-day, and some good scores were made notwithstanding the strong wind which blew across the traps from the southwest. Twenty-four events were shot. C. B. Furber, one of the crack shots of Bath, Me., shot under the name of Buck.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Cresswell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is announced by "Nanit," "Gloan," "Dick Swiveller," "Sybilent," and other competent authorities to be the best treatise on the subject extant.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. *Canoe and Boat Building.* By W. P. Stephens. Price \$5.00. *Canoe Handling.* By C. B. Vaux. Price \$1. *Canoe and Camera.* By T. S. Steele. Price \$1.50. *Four Months in a Sneak-box.* By N. H. Bishop. Price \$1.50. *Canoe and Camp Cookery.* By "Seneca." Price \$1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

CHESAPEAKE BAY CANOES.

THE two vessels shown in the accompanying drawings may be classed either as canoes or yachts, being closely allied in type to the ordinary canoe, while in size and adaptability they are really yachts. The *Island Belle*, owned by Mr. E. L. Woodside, of Baltimore, Chesapeake Bay Y. C., is a racing canoe 35ft. 2in. over

The other boat, the *Daisy*, owned by R. S. Dodson, St. Michaels, Md., is described as follows by our correspondent: A novelty in canoe architecture is the canoe-yacht *Daisy*, recently constructed by R. S. Dodson, of St. Michaels, Md. The *Daisy* is the most elaborately finished vessel of her class that ever floated. The yacht is unique, having three masts and carrying foresail, mainsail, spunker and jib, containing 88yds. of light canvas. In length the *Daisy* is 40ft., breadth of beam 8ft. and in depth 3ft. The cabin is well forward and is 4ft. deep and 10ft. 8in. long. It contains two berths of ample dimensions, aft of which is a space 44x8ft., which is used as a dining-room. It is approached by two companionways with the usual slides, doors, etc., the whole constructed of Southern pine and oak. The after deck is 13ft. long. The forward ventilators of the cabin are not only used for light and air, but for the passage of the cables. Besides these are five other windows, all set in brightly burnished brass.

The deepest parts of the *Daisy's* lockers, running aft in both port and starboard sides, are 15in. The cockpit is 24x12 1/2 ft. The centerboard is 9 1/2 ft. x 33in. The foremast is 37ft., the mainmast 28ft. and the spunker 18ft. long. The *Daisy* was not rigged for speed, but for a pleasure boat for the owner's family. For racing the boat could be supplied with topsails, watersails, staysails, etc., the whole to contain not less than 200yds. of light canvas. The brass wheel is forward of the spunker, but the steering gear is so arranged that it can be unshipped in a moment and a tiller substituted.

The *Daisy* was "dug out" of five logs of Eastern Shore pine, taken from the owner's forests. The hoisting arrangements and all blocks, etc., are of Haggerty's patent, and are the second set ever used in the Chesapeake. The brass work was furnished by

be made not later than three clear days before the race on payment of double entrance fees.

A proposal by Mr. Cooper to allow a certain amount of outside ballast on canoe-yawls was negatively.

After a few remarks from Mr. Nisbet and others, suggesting sundry alterations in the arrangements of the annual regatta, the meeting dissolved.—*Field.*

CANOEISTS' WINTER HEADQUARTERS.

A MEETING of canoeists of New York and vicinity was held at the Harvard Rooms, 729 Sixth Avenue, on Dec. 4, to perfect plans for winter headquarters. Among those present were Messrs. Seavey, Palmer, Hand and Elliott (of the executive committee of the Atlantic Division), Whitlock, Scieffelin, Dudley, Farmer, Haviland, Dunnell and Burchard.

An organization was perfected, to be known as the "Canoeists' Winter Headquarters," and the following officers were elected: President, Lafayette W. Seavey; Vice-President, W. S. Elliott; Secretary, James K. Hand; Treasurer, F. L. Dunnell; Council, Wm. Whitlock. The election of the other members of the Council, four in number, was laid over until the next meeting, to be held at the Bencing Rooms, 19 West Twenty-fourth street, on Dec. 18, at 8 P. M.

A constitution was adopted, and among other business a finance committee was named by the president, consisting of Messrs. Elliott, Palmer, C. J. Stevens, H. C. Ward, Robt. H. Peebles, J. H. Bagg, Wm. Lawrence Dudley, Irving V. Dorland, and Theodore S. Osholm.

It was reported that already \$150 had been pledged for the expenses of the headquarters during the winter. The finance committee will meet at the Harvard Rooms on Dec. 11, at 8 P. M. The officers have the selection of rooms in charge. Committees on entertainment, etc., will be appointed later. The scheme calls for lectures, and talks on sailing, camping, rig, aid to the injured, etc.

Yachting.

Small Yachts. By C. P. Kunhardt. Price \$10. *Steam Yachts and Launches.* By C. P. Kunhardt. Price \$5. *Yachts, Boats and Canoes.* By S. S. Hedges. Price \$3.50. *Steam Machinery.* By Donaldson. Price \$1.50.

Yachtsmen who do not see what they want under this heading will please look under the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

SMALL YACHTS AND LARGE CANOES.—Our illustrations this week include several craft of widely different origin but of the same general type, being in fact merely larger specimens of the great canoe family. In general proportions, displacement and sail area, in their light flexible rigs, and in the nature of their ballasting, they are very closely allied to the modern 16x30 racing canoe. When we consider how completely the canoe or dugout of Chesapeake Bay is separated from the sampan pangang of Singapore, the resemblance between the two in model and rig is most remarkable. As each is reputed to be very fast, a further comparison of the complete lines would be most interesting.

THREE DAYS WITH A SMALL YACHT.

"I think that Bobby and I will take the *Sea Mew* to the race at Stony Point next week," casually remarked Max, as he stretched himself into an easier position in his steamer chair and brushed off an obtrusive mosquito with the *Evening Record*. "Wha-at? Oh Max!" I exclaimed from the depths of a hammock. "Eh? Did you speak, my dear?" he says, and I work myself to an upright position in time to catch a wicked glance of mirth over the top of his paper. "Oh, Max," I say in a wheedling tone, "you have been all summer promising to take me on a cruise, and this is such a good chance." "But, my reckless child, consider; a cruise in the *Sea Mew*. Do you realize that the yacht is only a 20ft. sloop and that the proverbial cat, if swung at any decent rate of speed in her cabin would have its head knocked off in a minute." "We shouldn't spend so much time in the cabin," I valiantly argue. "Then there are only sleeping accommodations for two, and I know Bobby won't agree to sleep on deck," Max says with a wicked grin. A brilliant thought strikes me. "We can take Nina (Bobby's wife), and she and I can stay at the Cliff House o' nights." "Well, that is one way out of it," says Max with admiration at my cleverness. Then he adds as a clincher, "but how about meals, and you'll be awful seasick." "Pooh," I retort contemptuously, "you know Nina and I are like the Captain of Pinafore fame,

'We were never known to quail
At the fury of the gale,
And we're never never sick at sea.'

and as for meals, catch you and Bobby getting your own meals on the yacht; you know when off on a 'time' you always get your breakfast and dinner on shore and only lunch on board the *Sea Mew*." "Ve-e-ill," drawled Max, in an exasperating tone of voice, "since you seem so anxious to go, and have really explained away the greatest drawbacks to your going, I might as well tell you that Bobby and I meant all the time to take you and Nina." When he makes this remark my feelings beggar description, but following my usual custom when vexed, I count ten before I answer him a word, and by that time I realize that if I want to go I had better be careful; so I content myself with looking haughty, a proceeding that affords him intense amusement, and well it might, for the effect is much marred by the fact that a hammock is not a good background for a high and haughty pose.

Sails in the *Sea Mew* are by no means new to me, for though primarily a "racer" (as sundry cups on our sideboard, of hideous design but undoubted value, can testify), she carries one or two people very well, and I have been out for long sails and in hard blows but never so far as Stonyport.

The small brown cottage on the point was in a turmoil for a week, and then one breezy morning, just as the cottagers were awaking to the fact that it was a superb yachting day, and the poor people in the old fishing town across the bay were taking up the heat and burden of another day of toil, we spread our white wings and glided from our moorings.

We stole past the crumbling old fort, past the club house from whose flagstaff the familiar tricolor was not yet floating, past the tiny lighthouse guarding the harbor entrance, out to the open sea. Once out from the lee of the land the strong east wind strikes us; it fills the white sails and heels the boat well over to port, and with a cloud of feathery foam at our bows, and an ever widening wake behind us, we are laying a straight course for Stonyport. The breeze holds fresh till afternoon, so fresh, in fact, that the process of making coffee and chocolate, over an eccentric oil stove that comprises the cook's galley of the *Sea Mew*, is a decidedly dangerous proceeding. Toward evening the breeze dies down, and just as the gun at the grim old fort booms a salute to the vanished sun, we come to anchor in front of the club house of the Rocky Bay Y. C.

The harbor is full of yachts, from the mighty *Susquehanna* to the tiny catboat on our starboard quarter, whose hilarious crew slept for one night on the planking of their little craft, with a huge rubber blanket over all.

"Hullo," says Max, pausing in his work of furling the mainsail, "there's the *Mirage*," and thereupon he utters a wild barbaric "yowl" without rhyme or reason to being a that is well understood on a small sloop just to port of us, for an answering "yowl" comes from her deck, and soon her tender, containing sundry be-capped and be-buttoned yachtmen is alongside the *Sea Mew*. Several other tenders gather with more caps and buttons, and Nina and I from our retreat in the cabin, wonder (hungrily) if they mean to make a situation of it. We are liberated at last, and recover the kindly Cliff House, to whose generous table we do ample justice.

The morning dawns clear and fair with a steady west wind, just the ideal of a yacht-racing day. It is good to leave the land behind us and feel again the motion of the boat and have the salt wind blowing in our faces. The harbor is full of the pleasant turmoil of preparation for the race. Halliards are rattling, spars are creaking, rigging is snapping, mainsails, jibs and topsails are being tugged up, only to be dropped again to the deck; yachtmen are scattered all over the yachts, from the extreme ends of the bowsprits to the topmasts, pulling, hammering, twisting, in an

CHESAPEAKE RACING CANOE "ISLAND BELLE."

all; 35ft. l.w.l., 7ft. beam, and about 10in. draft. She is a prize-winner, and recognized as one of the fastest craft on Chesapeake Bay, being specially fast in running and reaching. She was built by S. Covington, of Tighman's Island, Talbot county, Md. In all the races outriggers are used, in order to carry the large sails. The drawing was made from a very good photo sent us by Mr. J. G. Morris, secretary of the Chesapeake Bay Y. C.

Tapping & Fox, of New York. The spars are of Norway pine and the upper works of white pine.

The *Daisy's* model is considered perfect, and with the canvas she now carries cannot be surpassed in sailing qualities by any vessel in Chesapeake Bay. With a moderate breeze and under easy canvas the *Daisy* has made ten knots with ease.

FRANK A. HEYWOOD.

CHESAPEAKE CRUISING CANOE "DAISY."

ROYAL C. C.

THE autumn general meeting of this club was held at the Criterion Restaurant on Nov. 19, when there was a good muster of members. Before the business of the meeting the sailing members using the club course at Hendon, presented a very handsome album of canoeing photographs to the senior mate, Mr. George Herbert, as a slight recognition of his untiring zeal and energy in attending the races. Mr. Herbert in reply thanked the members very cordially and expressed his regret that his colleague, Mr. Baden Powell, was unfortunately unable to attend the meeting through illness. A vote of sympathy with Mr. Baden Powell was unanimously passed by the meeting. The business proceedings commenced with the reading of the annual report, which was adopted, and the meeting then re-elected the officers of this year to serve for 1892. Mr. Church having resigned his seat on the committee, Mr. J. A. H. Nicholl was elected to fill the vacancy.

Several important alterations were made in the rules, the first having regard to the classification of paddling canoes. After much discussion and several amendments to Mr. Porter's original motion the following was passed, under which races will be paddled next year: "Length not exceeding 16ft., greatest beam not less than 20in., no other limitations."

With regard to the sailing canoes there will now be no limit placed on the fore and aft position of the centerboards, and the restrictions as to well space are withdrawn.

A proposition by Mr. R. de Q. Quincey to admit sliding seats for one year led to a very animated discussion. In the end, however, the advocates of this innovation were not sufficiently numerous to carry the motion.

An important alteration was made in the conditions under which the Challenge Cup is sailed for. There will now be only one competition in the year, with a time limit of four hours. It was also decided that post entries for the challenge cups could

eager effort to have everything snug and shipshape; small boats are flying between the yachts and the shore or between different yachts, carrying crews or last-thought-of items.

In rowing among the yachts we fetch up alongside the *Mirage*. "Hello, Dick," says the saluting skipper of the yacht, who is twisting at some obstinate rope at the bows. "Going to beat today?" "Blest if I know," replied Dick, tugging at his very small racing cap to do the polite to me. "You see that racing dink?" nodding toward a rakish cutter just to starboard of us, "she knocked us all out at Marblehead last week; but she's only good for much in a slim breeze, and to-day we're in for tall sailing. When she comes to duke hunting the *Mirage* isn't it, but with a good breeze like to-day she'll show a clean stern to any boat of her size."

I suppose yacht races are much the same everywhere. There is the same officious puffing tug for the judges' boat, with its fluttering shreds of bunting, that mean so much to the watching skippers; the same sailing to and fro of the yachts all ready for the fray, but caring as if they didn't care anything for any line or any other boat, while all the time each captain is keeping a watchful eye and steady hand to get the best windward position for the rush. Suddenly "bang" goes the preparatory gun and the yachts huddle

through a glorious afternoon, with blue sky overhead and blue seas all around us, and that far off white speck, stationary in the midst of the blue water, is the tiny lighthouse that marks the home harbor. We make up for lost time during the last few miles of our voyage, laying over to the wind, and forging through the water at a rattling good speed, and just as the gun of the flagship the harbor booms "colors," and the many colored pennants flutter down from the masts like so many birds, we pick up our moorings in front of the little brown cottage, and our three days' cruise is over.

YACHT BUILDING AT BRISTOL.

THE visitor, whether yachtsman or mechanic, who turns aside from the familiar paths of travel between New York and Boston for a visit to the clean and well-ordered shops of the Herreshoff Manufacturing Company at Bristol, R. I., is certain at any time to be well repaid for his journey; and just now in particular the trip is of special interest, from the presence of two racing craft which are likely to become famous next summer. The first of these is for the same class as the renowned *Gloriana*,

ROGERS' 46-FOOTER.

a little closer together, like frightened doves, and the helmsmen are a little more wary of the line than before, for woe to the careless yacht on the outward side of the line when the last gun is fired. "Bang," goes the starting gun. A breathless pause, and then like a flash across the line swoops a white sloop, with three others following closely in her wake, the water boiling along her counter, and her crew clinging like leeches to her deck. And the first class

25FT. RACER DILEMMA.

have started and are away on the first long tack for their beat out to the stake boat. "Bang," and the second class have started, and are following in the wake of the large ones. "Bang," and the third class have started, and the blue ocean seems alive with white sails. After awhile they all disappear, not to come back till late in the afternoon.

Yachts ought always, in a race, to sail before the wind on the home stretch, and as one after another they come in sight, with mastsails, spinakers and balloon jibs spread, it seems as if the slender hulls must sink under so much canvas.

The *Mirage* crosses the line, far in advance of her dreaded rival, and a spectator skipper waves his cap in triumph to us as he passes, while Bobby nearly falls overboard from the fervor of his congratulatory salutes. We fall in behind the last straggling yachts and again pick up our moorings in front of the club house, where now the band is playing gayly.

I have begged the privilege spending one night on the yacht, and Bobby is very willing, for, as he says, "Rocking in the cradle of the vasty deep is all very well in poetry, but a stationary bed is good enough for me." The opal and crimson lights of sunset are dying out when we row to the *Sea Mew*. Each of the anchor yachts has a light hung in the rigging, and from these and from cabin lamps of the various boats long lances of light silver and shimmer across the darkening water. The jolly crew of the *Mirage* are celebrating their victory, and we hear the twang of a banjo and catch scraps of "Up dar in de sky," or "O Lord! Melissa," and other nautical melodies. A fair of cornet is vrestling with "Home, Sweet Home" and making a dismal failure of it. The *Sea Mew* rocks and sways on the swell like a cradle, the salt wind makes queer little moans and whistles as it breathes through the rigging, and the current gurgles and laps around the rudder chains under the stern. Nothing is so utterly calm and care-free as a pleasant night on board a snug yacht. Breaking in on to the peacefulness of the night, some nervous strokes from a clock measure the time, and the bells of the *Sea Mew* come "ting-ting, tang-tang, tong-tong," with many variations in tone and keys. To the music of these bells and the last passionate strains of the "M in Réve" waltz from the band, we turn in.

From a wild dream of shipwreck and disaster, I awake to the consciousness that something is wrong. The cabin is dark, save for a faint gleam that wanders in through the port holes, and which only serves to intensify the general obscurity. I lean on my elbow and listen, but hear nothing in the cabin save the measured breathing from Max's berth, that assures me he is still undisturbed. But why is the usually sober and steady *Sea Mew* leaping and plunging, and dancing round so like an excited horse. I shall never find out what is the matter if I lie still, so I feel my way to the door, which I cautiously open and look out. The faintest light is dawning in the east over a leaden sea, whose waves are lashed into foam by a strong nor'easter.

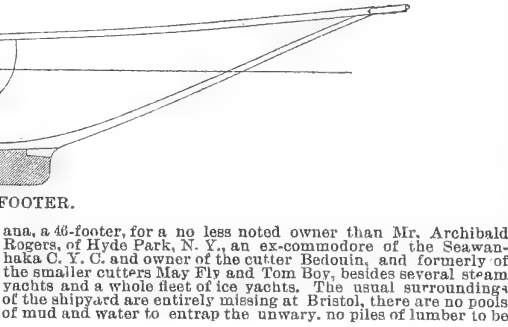

The yachts around us are tugging and pulling at their hawsers, as if to haul up bodily the rocky foundations of the harbor. The surf is breaking in thunder on the rocks and ledges beyond the harbor, and the light or two glimmers faintly from the fort, while over all the light house lantern sheds its clear and cheery rays, as if to say, amid all the clatter and tumult of wind and sea, "Sleep on, I still keep watch and ward."

Suddenly, as I turn to go back, the gale tears from my hand the door I had so cautiously opened and flings it with a crash against the side of the cabin. The racket half awakes Max, who sits up in his berth and yells in tremendous tones, "There she goes, stand by the mainmast."

I close the door and keep whist, concluding that he is the victim of nightmare, and he is soon asleep again.

By the time we row over to breakfast the gale has abated and is succeeded by a drizzly, drozzly, drenching mist that covers land and sea. The committee on ways and means are forced to the following conclusions: Whereas the two gentlemen are obliged to be at home the next day, and whereas they do not mean to leave the yacht behind them it only remains for them to face the storm and mist and sail her home. The *Sea Mew* is staunch and trim enough to face a gale, but the swell is likely to be unpleasant. Nina and I are offered a choice between a tempestuous voyage in the yacht and a safe but very ordinary trip in low bars. Sometimes we hear an answering horn, and once a spectral yacht loomed up before us, her hull and spars magnified by the thick mist into twice their natural size. As we plunged heavily past us, on the swell, no one was visible on her dripping deck but a ghostly helmsman, clad all in oilskins, at the wheel, and so weird and strange was her whole appearance that she might have well passed, to an imaginative mind, for the ill-fated *Braave*, with Yanderbroken himself at the helm.

After noon the wind freshens and comes more from the west, the mist assumes a thinner appearance and seems suffused with a golden color, and before we know it the dun-colored curtain is folded up and rolled away across the sea; and lo! we are sailing

ana, a 46-footer, for a no less noted owner than Mr. Archibald Rogers, of Hyde Park, N. Y., an ex-commander of the *Seawanhaka* C. Y. C. and owner of the cutter *Bedouin*, and formerly of the smaller cutters *May Fly* and *Tom Boy*, besides several steam yachts and a whole fleet of ice yachts. The usual surroundings of the shipyard are entirely missing at Bristol, there are no pools of mud and water to entrap the unwary, no piles of lumber to be

climbed over, no shaky planks to be traversed before reaching the inner precincts; but after a pleasant stroll through the quaint old town, and along the shores of the upper part of Narragansett Bay, the visitor steps from the street directly into the building shops, which are located, of course, on the waterside; the offices and machine shops being further inshore, on the other side of the street.

The shops consist of two high and lofty buildings, amply lighted on the sides and with galleries high above the main floors. Down the center of each house is a solidly constructed building way, the floor being removable in sections, making room for one or more yachts as required. The shops are heated by steam, and are always warm, dry, and well lighted, all the work being done therein during the winter months. The lead keels, the boiler houses, etc. The wider and newer building contains the steel plant, rolls, punches, shears and drilling machines.

On entering the main shop the visitor is confronted by the sharp stem of a most curious craft, even more extreme and unconventional in outline than her older sister. The general form of the new boat is shown in the accompanying sketches, which were made by eye only, and with no measurements other than the general dimensions heretofore published as follows: Length, over all 72ft., l.w.l. under 46ft., beam about 13ft., 3in., draft about 10ft., 6in. While the drawings do not pretend to any great accuracy in detail they are sufficiently correct to show the leading peculiarities of the new boat. The overhang is 2ft. greater than *Gloriana*'s, the waterline length being also increased, as she measured but 45ft. under the measurer's tape, or a foot under the limit of her class. The sheer, rake of sternpost and midship section, as well as the general character of the body of the boat, are so similar to *Gloriana* that the difference would be apparent only to one very familiar with the former. The great point of difference is in the shaping and placing of the lead keel, in which a wide departure has been made in the direction of the recent work of the English designers.

For several years past the work of most designers, of Eife, Watson, Gardner and Burgess, has tended in the direction of a triangular outline for the lateral plane, with the greatest draft at or near the heel, as in *Liris*, *Kathleen*, *Minerva*, *Yama* and *Gossoon*; and in *Gloriana* Mr. Herreshoff followed the general practice, but without going to such an extreme in draft and triangular outline as in *Barbara*, for instance. Within the past two seasons, especially in the smaller classes of English yachts, a very different form of lateral plane has been adopted, the keel contour from the fore end of the waterline downward being irregular and broken, the keel, in fact, taking the form of an appendage rather than an integral part of the hull. Thus far the "fin keel," as it has been named, is confined to yachts of 25 to 6-rating, or from 25 to 33ft., but Mr. Herreshoff has made bold to carry the experiment into a larger size of yacht, and has embodied the same idea in the new 46-footer. As the sketch shows, the fore edge of the lead keel drops quickly down from the bottom of the boat, being of course sharpened away to a mere vertical edge, the two vertical sides showing much the same curve as a rifle bullet. The keel contains probably 21 long tons of lead, and is bolted in the usual way to the oak keel. In each upper corner a piece is cut out and filled with wood, thus allowing the weight of the lead after trial to be made very readily by adding lead for wood at one end or the other. The keel is quite wide and deep.

The stem, keel, deadwood and sternpost are of oak, the rabbet line being so placed that all the lines of the hull are carried out than *Gloriana*'s at each end, while the same round sections in the bows and flat ones in the counters are preserved. The frames are similar to those in *Gloriana*, steel angles 13x13x1/4, spaced 16in., no wood frames being used. Outside the steel frames are four wide diagonal straps on each side, also of steel, running from keel to gunwale, two being abreast of the chainplates. The chainplates are three in number, rivetted to the steel frames, and in-

GARDNER 46FT. SCHOONER.

side of the planking. The deck beams are also of angle steel, the mast partner being a circle of angle steel, the flange of which are rivetted the ends of four wide diagonal straps which radiate from it to the sides. There are in all eight of these straps across the upper side of the deck beams, making a series of four X's covering the whole length of the deck, and adding greatly to its stiffness.

The planking for some 4ft. above the rabbet is of Georgia pine in a single thickness 1 1/2 in. Above this the skin is double, an inner skin of 3/4 in. white pine with an outer one of 3/4 in. Georgia pine. The planks are about 5in. wide, and very carefully laid, the seams of the two skins breaking joints, while at each butt of either skin an inside butt strap of wood is placed. The seams of each skin are very carefully fitted, so that no caulking is required; the result being a smooth surface of wood with no putty to swell out of the seams. The two skins are fastened to each steel frame

by screw bolts and nuts of yellow metal, and between the frames brass washers are put in from the inside, firmly uniting the inner and outer skin. The advantages of this construction are strength, tightness and a smoother surface. The sheer, rake, plank sheer and bulwarks are of oak, in single thicknesses. *Gloriana*'s deck was of 1 1/4 in. pine, matched and glued together, but the new yacht will have the usual deck of narrow pine, with seams caulked and payed with marine glue. The yacht is now planked, but the deck is not laid, and nothing has been done inside, but the interior will be similar in arrangement to *Gloriana*, a main cabin, ladies' cabin aft, and the usual toilet room and closets. The sail plan will be similar to *Gloriana*'s, but of somewhat greater area. The new yacht will be commanded by Capt. Chas. Barr, formerly in *Owene* and before that in *Minerva* and *Shona*. Captain Barr has made a very enviable reputation in but three seasons, and he is still a young man. With such an owner and so clever a skipper there is no fear that the boat will not be well sailed.

The other racing craft, Mr. Morgan's 35-footer, is now set up in the new shop; a very different boat from *Gloriana*. She is an enlarged *Dilemma*, the 25ft. racer that has been so much talked about this fall, and consequently is almost a huge canoe, and in fact is being built as a canoe is, on moulds, keel upward. *Dilemma* was designed and built late in the season by Mr. N. G. Herreshoff for experimental purposes, and in the moulding of the idea, she is a novel and interesting craft. The hull is much like a canoe, long, narrow and of little depth, with a nearly flat floor and quick bilge, though with a strong rocker to the keel and an overhang to each end. Like a canoe, she has no proper keel, but has the same flush deck with a high crown and an elliptical opening for the crew.

The chief feature is the appendage by which she obtains her stability, her beam being but 7ft., and the hull proper drawing only a couple of feet. Underneath the center of the keel is a securely bolted steel plate, some 4ft. deep and 8ft. long, to the lower edge of which is bolted a cylinder of lead with pointed ends, some 10in. in diameter. The plate weighs 889lbs. and the lead cylinder two tons, the total draft being between 5 and 6ft. The after overhang is quite long, and the sections are flat, as in *Gloriana*, but the bow is by no means so long. At the same time it overhangs the waterline considerably, while the transverse sections give it the same character as *Gloriana*'s, though at a mere glance the overhang is very different. The boat is rigged with a mainsail and jib only, the jib tack being fast to the stemhead. She is very fast, also very comfortable to sail in, being always on an even keel, or nearly so, and so far as safety from capsizing, speed, and ease of handling, she is a type admirable for day sailing and racing. What would happen if the lower part of the keel, either in this type or in the 46, should bring up against instead of on a rock, is an interesting subject for conjecture.

The Morgan boat will be 35ft. l.w.l., about 50ft. over all, 8ft. beam and 8ft. draft. She is building on the system long used by the firm for their small boats and yacht yawls, a solid mould of plank is put out for each frame, spaced some 15in. apart; the two timbers for the frame are steamed and bent on the mould, being held by iron dogs, and the floor knee is then bolted to them. The series of moulds, each with a complete frame attached, is then set up on the floor in the proper positions; the oak keel piece, after being rabbeted, is stretched on top, the frames are then beveled, ribbands are run around them, and the boat is planked up; being then turned over and the moulds removed, after which the deck frame is put in. Last week the moulds and frames were in place, the keel fastened to them, and the work of beveling has just commenced. Just ahead of the Morgan boat was a very handsome catboat of 30ft. over all and about 24ft. l.w.l., for Mr. Williams, of Philadelphia, who will use her on the New Jersey coast. There is but little overhang forward, but the bow sections are round and full. The workmanship and finish are especially good. The only other sailer the firm has built are the 25-footer, or rather 23-rater, for the Clyde, and a similar craft for an American owner, neither of which have been commenced.

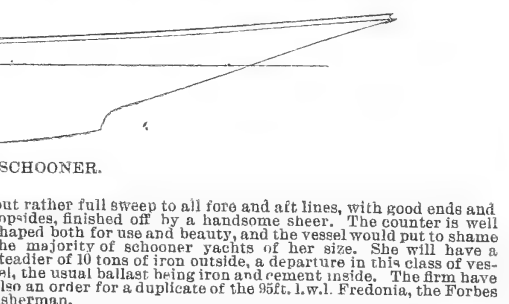

Just astern of the 46 is a steam yacht now nearly completed, for the use of Mr. J. B. Herreshoff, a very convenient and serviceable craft. She is 82ft. over all, 38ft. l.w.l., 11ft. 6in. beam and 5ft. draft. With moderate power and small engine space, there is an ample amount of room left for the owner. The deck, of one thickness, and with marine glue in the joints, is very roomy, there being flush hatches to the engine and boiler room, and the crew's quarters, the latter being aft, so that it is broken only by a rather large pilot house. Inside the pilot house a stairway gives access to the owner's quarters, there being a large and well lighted main cabin just abaft the stairs, with very good headroom. In this cabin are four sofas making up into canvas berths 32in. wide, with ample room for cushions and pillows behind them during the day. Forward of the passage is a second cabin, with two bed berths. Lockers, closets and drawers are fitted everywhere, giving no end of stowage room. The hull has steamed oak frames and double skin, thus giving a maximum of interior space for wooden construction, while the exposed portions inside are very neatly finished. The interior work is in very good taste, butternut being used in all the cabins. The engine is a two-cylinder compound, driving a 40in. screw, four-bladed, from which a speed of 10 knots is expected. The yacht has rather a high freeboard and a good sheer. She will be schooner-rigged, the foremast stepping on deck over a specially heavy deck beam, while the mainmast also steps on deck.

Across the street near the machine shop is the steel frame of a steam yacht similar to *Vivienne*, built two years since, but longer, being about 120ft. l.w.l., 5ft. beam, and 7ft. 6in. draft. The frames are ready to set up at any time, while a triple compound engine is completed in the shop, so that the yacht can be completed quite rapidly to fill an order. The light draft would make the vessel a very desirable one for the coast. The firm have also an order for a duplicate of the last No. 103, built two years since, of 73ft. over all, 36ft. 6in. beam and 4ft. draft, described in the *FOREST AND STREAM* of Aug. 7, 1890.

YACHT BUILDING IN BOSTON.

WHILE Boston is turning out no racing yachts as yet for 1892, there is a reasonable amount of activity in designing and building, and quite a number of craft are under way. The principal work just now is in the line of fishing vessels, the very successful work of Mr. Burgess a few years ago in the *Carrie E. Phillips*, followed by the *Fredonia* and other fine vessels, having brought the work of designing these vessels into the hands of recognized designers in place of the builders or fishermen who formerly cut the models for the fishing fleet. The *Carrie E. Phillips* proved a remarkable boat, having cost but \$9,500 originally, which sum she has made for her owners twice in two years, sheally selling for \$8,000. The owners, Benj. F. Phillips, Capt. Maurice Powers, and others, decided on a larger vessel of the same type, and placed the order with Messrs. Stewart & Binney, the successors to Mr. Burgess.

The new vessel, now half completed, is the largest and most powerful of the fleet, being 97ft. l.w.l., 24ft. beam and 12ft. 6in. draft. While similar to the *Phillips*, the bow has been filled out considerably, though not to the full extent which the latest fashion demands, with the fullness carried out into the overhang aloft; but the waterlines show a fair and pleasing fullness in place of the knife bows with the accompanying shoulders of so many of the older models. The whole model is one that would please a yachtsman, powerful but clean cut, with a fair and easy

but rather full sweep to all fore and aft lines, with good ends and topsides, finished off by a handsome sheer. The counter is well shaped both for use and beauty, and the vessel would put to shame the majority of schooner yachts of her size. She will have a stealer of 10 tons of iron outside, a departure in the class of vessels, the usual ballast being iron and cement inside. The firm have also an order for a duplicate of the 95ft. l.w.l. *Fredonia*, the Forbes fisherman.

In yachts they have an order for a schooner of 45ft. l.w.l. and 4ft. 6in. draft, for a New Orleans yachtsman; a 30ft. keel cutter of about 9ft. beam for a Philadelphia yachtsman; two keel boats 21ft. l.w.l., one for Dr. Franklin Dexter, and one for a Marblehead yachtsman; two keel sailing boats of 21ft. l.w.l., for Messrs. Henry Taggard and Herman Parker, and an 18ft. catboat for a Boston owner, making a total of nine vessels. The 21ft. boats are a fine little craft, of moderate cost and with

snug rigs, intended for knocking about Marblehead; they carry a mainsail and one headsail, with tack to stemhead. The firm have made a number of sales during the fall, the latest being the keel 80 Saladin, built and sailed for two seasons by Mr. Fowler.

At Lawley's yard a large fleet is laid up afloat in the basin, while the rather limited beach is crowded with the smaller craft. Volunteer lies on the railway, while among those hauled up are Tomahawk, Saladin, Glady's, Mildred, Rosalind, Alga, Thelma, Nerissa and the little cruiser Orinda, well known to all of our readers. The Lawleys have struck a popular type of boat in a steam yacht of 60 to 70 ft., of moderate power and with very fair accommodations, of which they have designed and built a number. Just now they have two 60 ft. yachts well advanced and are laying the keels for two 70 footers. On the beach to the north of the joiner shop a new and much-needed ship house is nearly completed, a much lighter and better building than the old shed;

Back again to Tarr & James yard and there is seen a third vessel by a local designer whose boats have been very successful, the construction being still further advanced, the planking being partly completed. The vessel is a large one and of good model, but quite hollow in the bows. She is built with a garboard of 4 in. thickness, the rest of the planking being but 2 1/2 in., all of oak. The thick garboard is edge bolted into the keel in order to strengthen the bottom. The next stage of construction is seen in Story's yard again, the successor to the Phillips, mentioned elsewhere. The vessel is planked and celled and ready for the deck frame. She is the finest looking of the fleet, a large, bold-looking and shapely craft.

Just across the road in Adams' yard is a fisherman, just ready for launching, a boat that has already attracted a great deal of attention about Boston. The "Gloriana fisherman," as she is called, was designed by a student of the school of designing in Charlestown, whose modesty has led him to conceal his name.

THE "GLORIANA FISHERMAN."

and in it the keel of the Gardner schooner will be laid as soon as the steel is received from the mill. From the accompanying rough sketches it will be seen that the new boat is fully up to date in the matters of ends and oddity, having a shovel snout and a chicken bone keel.

The design, which is for Mr. Louis M. Clark, of St. Louis, was made last spring, but after seeing Gloriana Mr. Gardner was not slow to appreciate the value of her full lines, and the new design was filled out in the bow until very like the Herreshoff boat. The alteration, however, was much less than would commonly be imagined, being mainly above water. As the full sections of the bow necessitate a very shallow forefoot, it became necessary to cut away freely; and this, in connection with the position of the center of lateral resistance required for the peculiar sail plan, led to the keel outline shown in the drawing. The yacht is somewhat of an anomaly; her owner has stated that he is building her for cruising and not for racing; and the draft, but 13 ft. 6 in. on 30 ft. waterline, should be nearer to 18 ft. if she is to go to windward with Volunteer. At the same time she has a sail-plan that outdoes the latter in size and proportions, the mainmast being, as stated, 6 ft. longer and stepped at the middle of the loadline, while the foremast is even further forward than Volunteer's. It is needless to say that her model is fair and easy throughout, and with a lead keel 25 in. wide on the bottom and 24 in. deep she will carry her ballast low, and with 22 ft. 6 in. beam, about 8 in. less than Volunteer, she should stand up under her rig. If she is well handled and raced in earnest the trial between the centerboard and keel will be an instructive one.

BUILDING AT ESSEX.

IT is well worth half a day of a yachtsman's time to run up to Essex for a look at the fleet of fishermen in all stages of construction in that busy little town. Within a radius of a hundred yards of the little drawbridge over the Essex River, a vessel may be traced through all the stages of her growth from the time her keel timbers are hauled on to the ground until she is finally towed away down the narrow and winding stream to the sea. In the yard of Tarr & James there was laid last week the keel of the new Fredonia model, the scarpus being cut and the first sections of the keel in place. At Story's yard, over the river, was a part of the keel with most of the frames of the forebody set up, for a fisherman of 70 ft. l.w.l. and light draft, from a design by Mr. Wm. Waterhouse. The vessel is of moderate dimensions, rather wide and shoal, with little deadrise and a quick bilge. The work of timbering her out was going on rapidly and she is probably in frame before this.

While a good look at her is enough to stamp as a myth the current rumor that she was really designed by Herreshoff to demoralize the fishing fleet, her likeness to her famous prototype is plainly seen. Her general outline is shown in the drawing, the dimensions being 88 ft. over all, 79 ft. l.w.l., 22 ft. 9 in. beam, 12 ft. draft, 10 ft. depth of hold. The forward overhang is 13 ft. and the after overhang 15 ft. As yet she has no outside ballast, but there is talk of adding some, and she is likely to need it. The bowsprit is 23 ft. outboard, main boom 61 ft. and fore boom 23 ft. 9 in. While laying claim to the salient features of Gloriana, the whole character of the design is different, the bow being much deeper, consequently calling for fuller sections, while the after body is finer. The vessel does not show the same distribution of the displacement as in Gloriana, even making a full allowance for the difference between a yacht and a fisherman. She has, at the same time, met with a general approval from the many critics who have inspected her, and may turn out a success. She will be launched this week.

Back again to Tarr & James' yard, and the last vessel is found, lying afloat beside the bulkhead nearly ready to be towed away, a duplicate of one of the later Burgess designs; the original, built this year, having been christened Gloriana. This is a large vessel, but with a hollow bow, which results in a marked fullness forward of the chain plates to a degree that is unfair to the eye. As one boat leaves, another is launched, a third is decked in, and so the work goes on until the visitor is led to wonder what becomes of the old vessels.

A YACHTSMAN DROWNED AT SEA.—A very strange story was cabled from Gibraltar to New York on Dec. 7, announcing the drowning of Mr. Oswald Jackson, a well known New York yachtsman. From the meagre details given it appears that Mr. Jackson, who sailed from New York on Nov. 28 on the Fulda, of the new Mediterranean line, fell or was washed overboard on Nov. 30. On the evening of that day a man was seen swimming astern of the ship and every effort was made to save him, but by the time the great vessel had been turned and stopped he could not be found. It was not for some time that Mr. Jackson was missed, and nothing is known as to the way in which he fell from the ship. Mr. Jackson built the sloops Mistral and Iola, and later the schooner Fenella. He was 53 years old and served with credit in the rebellion, reaching the rank of major. He leaves a wife and two children.

CAIMAN.—The new Lorillard houseboat recently put into Norfolk, having sustained considerable damage to her topsides. She sailed from Wilmington, Del., for Jacksonville.

TITANIA.—It is reported that Mr. C. Oliver Iselin, who has

just returned from Europe, will race Titania next season, with Capt. John Barr at the wheel.

WADENA, steam yacht, Mr. J. H. Wade, has arrived at Boston.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

X. T. X., Philadelphia.—A few days ago while tramping through a marsh I had the misfortune to get my new hip gum boots filled with salt water. Do you know of any method or process to adopt for thoroughly drying the same? The boots have felt lining, and my boatman tells me they can never be made dry again. Ans. Hang them up in a warm dry place and they will dry out, or heat up some oats or sand and pour in and out.

S. C., Chillicothe, O.—Last evening some of our hunters got into a discussion as to the breed we call the quail and the Southern partridge. I remember reading an article in your paper in which the bird was discussed, and the writer suggested we call it "Bob White." If it is possible to find that paper I should like very much to have it, and if not please refer me to some inexpensive book by the authority of which we can settle our questions. Ans. The writer who suggested "Bob White" was the late Walter L. Steele, of Rockingham, N. C. The best book on the subject is Trumbull's "Names and Portraits of Birds which Interest Gunners." Price \$2.50, for sale by Forest and Stream Publishing Company.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy \$4 per year, \$3 for six months. Rates for clubs of annual subscribers:

Three Copies, \$10. Five Copies, \$16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.

DECEMBER DAYS.

FEWER and more chill have become the hours of sunlight, and longer stretch the noontide shadows of the desolate trees athwart the tawny fields and the dead leaves that mat the floor of the woods.

The brook makes its shrunken strands of brown water with a hushed murmur over a bed of sodden leaves between borders of spiny ice crystals, or in the pools swirl in slow circles the imprisoned fleets of bubbles beneath a steadfast roof of glass.

Dark and sullen the river sulks its cheerless way, enlivened but by the sheldrake that still courses his prey in the icy water, and the mink, that like a fleet black shadow, steals along the silent banks. Gaudy woodduck and swift-winged teal have long since departed and left stream and shore to these marauders and to the trapper who now gathers here his latest harvest.

The marshes are silent and make no sign of life, though beneath the domes of many a sedge-built roof, the unseen muskrats are astir and under the icy cover of the channels fare to and fro on their affairs of life, undisturbed by any turmoil of the upper world.

When the winds are asleep the lake bears on its placid breast the moveless images of its quiet shores, deserted now by the latest pleasure seekers among whose tenantless camps the wild woodfolk wander as fearlessly as if the foot of man had never trodden here. From the still midwaters far away, a loon halloo to the winds to come forth from their caves, and yells out his mad laughter in anticipation of the coming storm.

A herald breeze blackens the water with its advancing steps, and with a roar of its trumpets the angry wind sweeps down, driving the white-crested ranks of waves to assault the shores.

Far up the long incline of pebbly beaches they rush, and leaping up the walls of rock hang fetters of ice upon the writhing trees. Out of the seething waters arise lofty columns of vapor that like a host of gigantic phantoms stalk, silent and majestic, above the turmoil, till they fall in rain-tossed showers of frost flakes.

These are days when almost complete silence possesses the woods, yet listening intently one may hear the continual movement of myriads of snow fleas pattering on the fallen leaves like the soft purr of such showers as one might imagine would fall in Lilliput.

With footfall so light that he is seen close at hand sooner than heard, a hare limps past; too early clad in his white fur that shall make him inconspicuous amid the winter snow, his coming shines from afar through the gray underbrush and on the tawny leaves.

Unseen amid his dun and gray environment, the ruffed grouse skulks unheard, till he bursts away in thundrous flight. Overhead, invisible in the lofty thicket of a hemlock's foliage, a squirrel drops a slow patter of cone chips, while undisturbed a nuthatch winds his spiral way down the smooth trunk.

Faint and far away, yet clear, resound the axe strokes of a chopper, and at intervals the muffled roar of a tree's downfall.

Silent and moveless cascades of ice veil the rocky steeps where in more genial days tiny rivulets dripped

down the ledges and mingled their musical tinkle with the songs of birds and the flutter of green leaves.

Winterberries and bittersweet still give here and there a fleck of bright color to the universal gray and dun of the trees, and their carpet of cast-off leaves and the dull hue of the evergreens but scarcely relieve the somberness of the woodland landscape.

Spanning forest and field with a low flat arch of even gray hangs a sky as cold as the landscape it domes and whose mountain borders lie hidden in its hazy foundations. Through this canopy of suspended snow the low noontide sun shows but a blotch of yellowish gray, rayless and giving forth no warmth and, as it slants toward its brief decline, grows yet dimmer till it is quite blotted out in the gloom of the half-spent afternoon.

The expectant hush that broods over the forlorn and naked earth is broken only by the twitter of a flock of snow buntings that, like a straight-blown flurry of flakes, drift across the fields, and sounding solemnly from the depths of the woods the hollow hoot of a great owl. Then the first flakes come wavering down, then blurring all the landscape into vague unreality they fall faster, with a soft purr on frozen grass and leaves till it becomes unheard on the thickening noiseless mantle of snow. Deeper and deeper it enfolds the earth, covering all its unsightliness of death and desolation.

Now white-furred hare and white-feathered bunting are at one with the white-clad world wherein they move, and we, so lately accustomed to the greenness of summer and the gorgeousness of autumn, wondering at the ease wherewith we accept this marvel of transformation, welcome these white December days and in them still find content.

SALMON AND NETS IN CANADIAN RIVERS.

IT HAS been the general experience of the lessees and owners of the fishing privileges in Canada of late that salmon have been growing more and more scarce each year. At the majority of the rivers the fishing this year has been a failure. There is no longer any doubt that the cause of this growing scarcity is the constant and excessive netting of these fish on their journey from the ocean to their fresh-water spawning beds. Instinct directs the fish, when about to breed, to fresh waters, where the young can be hatched under favorable conditions for survival and growth; and so strong is this instinct that once started the fish never turn back. Their habit is invariably to closely follow the line of the shore as they ascend to the rivers in which they breed; and the result is that the perfected net appliances now in use along the shore line of the lower waters are fatally effective. When one considers the great number of nets now in use, and the long shore line over which they are set at the points most favorable for their purpose, the wonder is not that salmon are now scarce in the upper waters, but that any escape successively all the snares planted on their paths from the sea.

Persons most familiar with the facts are of the opinion that unless the Dominion Government promptly adopts some decided and effective measures to enable a larger number of the fish safely to reach their spawning grounds great danger of total extermination of the species will be incurred. At present all nets are supposed to be raised from 6 o'clock P. M. on Saturday to 6 o'clock A. M. on Monday of each week. But it is asserted positively by numerous and reliable witnesses that even this regulation is in many instances not complied with. The owners and lessees of the river privileges believe that they are entitled to somewhat more generous treatment, and propose a petition to the Government that those nets be hereafter raised during three full days and nights of each week, which shall be the same stated three days and nights for all nets. In this they ask only just consideration and fair play. The owner or lessee, besides paying a large sum for his right to angle, is obliged to contribute at considerable expense to guard and protect the salmon while in fresh water. He provides employment during the fishing season for no inconsiderable number of persons, and he incidentally makes a market for supplies which in the aggregate are heavy, and the proposed plan, if adopted, would not in reality prejudice the interests of the net fishermen, but in the long run would actually benefit him, by allowing a larger number of fish safely to pass up and cast their spawn, and thus increase the now diminishing supply. The sportsmen remain at the salmon streams but a comparatively short season; and no amount of angling, by however expert fishermen, can possibly de-

plete a stream, since it is a well-known fact that only a small portion of salmon can be induced to rise to a fly. Not so with the net fisherman. Instinct keeps the ascending fish unfalteringly near the shore, and there the trapper sets his nets, and keeps them set day and night between two and three months of each year. If the fish escape the first net they must still encounter scores of others, some perhaps more skillfully arranged to make their capture certain. Their chance of reaching the spawning ground and perpetuating their species is infinitely small. A large proportion of those that do escape are either wounded or are badly scarred by the nets, as any angler can attest.

One important fact should be borne in mind by the authorities to whose charge the interest of the Canadian salmon rivers are entrusted, viz., the salmon always return to breed in the same waters where they themselves were bred. If the families native to those streams are prevented from reproducing their species as nature intended, they will have no successors of their kind, and the grandest fish that swims must there become extinct.

Besides this evident interest which the Government ought to feel to guard and preserve and perpetuate its salmon, it ought in justice to recognize the right of the anglers to a fair consideration for the large sums which they contribute to the revenue for their privileges. The net-fishermen pays out a nominal sum for the right to set his nets, and seems to be reaping a harvest at the expense of the angler. It is an injustice which should be remedied, and the intended petition seems to be a reasonable one, which should meet with favorable consideration, especially as the salmon rivers would thereby become more valuable and return increased revenue to the Government for rentals.

SNAP SHOTS.

THE members of the international fish and game committee met in Hamilton, Ont., last week, and adopted a resolution approving the New York codification bill, save as to the wild fowl open season, which it was thought should extend from Sept. 15 to Dec. 15 or Dec. 30, and a resolution asking the Canadian Fish Commissioners to secure a law as to nets and seasons for St. Lawrence River waters uniform with the New York law.

The match between the new and old champion at the Fountain Gun Club grounds on Saturday last was an admirable exhibition of the capabilities of men and arms in modern trap work. It was an exciting match for the spectators, with the neck and neck race which the men were making from start almost to finish. Everything worked smoothly, the arms were of the best and fully up to the skill of the men, while the birds were the best ever put into traps hereabout. With such a match of so high an order it is befitting that the pen picture report of it should be of similar grade. Such a report FOREST AND STREAM presents to its readers in the present number. Our trap reporter was fully up to the occasion, and every thing which any trap enthusiast would care to know of the match is embodied in his admirable report.

Our enterprising and alert Chicago correspondent sends us by wire the new shooting rules of the Illinois State Sportsmen's Association, and the FOREST AND STREAM is thus enabled to print them in advance of all other journals. Our Trap department is full of interest this week. The interest will be maintained through the new year without encroachment on the space usually given to other departments.

The Delmonico woodcock case may after all come to trial. At the expiration last week of their last stay the defendants put in an answer denying their guilt, and now, it is to be hoped, there may be a speedy trial.

The New York Tribune did some "fine writing" the other day about the sportsman who sees "the feathered tail of his pointer" stiffen on point. Horace Greeley would have known better than that.

Our National Park correspondent sends us an extremely interesting and instructive account of the tameness shown by wild animals when secured from pursuit by man.

The list of papers for our "Boyhood Number," which we promised to print to-day, has been unavoidably crowded out. Look for it next week.

The Sportsman Tourist.

IN MAINE WOODS.—IV.

IN CAMP, Piscataquis County, Me., Oct. 28.—Our traps are undisturbed this morning, and the great question whether it was a bear or a fisher that dragged away the entrails of the deer remains unanswered. Next to the fun of solving such a question is the fun of having it to speculate about and discuss. It is another glorious "camp day."

The wind is high and the lake wild, with the white caps chasing each other like wild horses across its surface. The rain of last night was snow on the mountains, and what we can see of Katahdin is white and the lesser peaks all wear powdered wigs. Whew! How the wind must tear across those peaks! The sight reminds me again of Lieut. Peary and his faithful wife and his little party left away up on the western coast of Greenland. I have thought much about them of late, and wonder whether his broken leg has healed and whether they will succeed in their attempt to reach the northernmost point of Greenland, and if they will ever succeed in getting back in their little eggshell of a boat across Melville Bay, with its jostling and grinding icebergs.

This again reminds me to look for a newspaper clipping which I preserved from the account by the "special correspondence of the New York Herald," which I find, and from which I want to quote a few lines. The correspondent of the *Herald* who accompanied the expedition on the steamer Kite, which landed Peary's party on the Greenland coast, writes from the Straits of Belle Isle, Newfoundland, under date of June 15. The portion of the account which I give is as disgusting as one often reads. It will be remembered that the expedition was a "scientific" one, and was under the patronage of the Philadelphia Academy of Sciences, one of whose representatives was in charge, if I mistake not:

AFTER WHALES WITH RIFLES.

"We have sighted large numbers of whales coming up to the Straits. Half a dozen sportsmen gunned for them with rifles. Mr. Gibson, I believe, hit one, for the monster bellowed as if in distress. We shot many ducks and puffins, but did not succeed in getting a single one."

"If the firearms are discharged at the rate at which they are going off now for a few more hours we shall reach Greenland helpless and the bears will be saved."

What a truly scientific procedure and what an edifying spectacle this must have been! Think of these "scientific gents," as "Truthful James, of Table Mountain," would have called them, sailing along serenely on the deck of their steamer and pouring rifle bullets into the sides of whales till they were afforded the refined pleasure of hearing the wounded monsters "bellow in distress." Think of these same people blazing away at the sea fowl and slaughtering myriads, not one of which did they recover.

In the same way have alligators been shot from the decks of Florida steamers, and buffalo from the windows and platforms of Union Pacific trains. Well, what is to be done about it? Nothing except to hold it up to the execration it deserves, and to publish the names of the doers wherever they can be found out, and to preach at all times and places the better gospel. "All honor to FOREST AND STREAM for the good work it is doing in this cause," say I.

It will tell in the end. Would that it might tell before the end! But the humane sentiment may come about in season to save a few robins and bluebirds that our children's children may see for themselves and not have to depend on tradition to prove to them how marvelous a thing was the flight of a bird through the air.

It is plain, however, that before that time women will so far become—what shall I say?—enlightened that they will see the enormity of wearing crushed and mutilated song birds on their hats. Will you let me quote the words which Longfellow puts into the mouth of the Preceptor in his "Birds of Killingworth":

"Do you ne'er think what wondrous beings these?
Do you ne'er think who made them, and who taught.
The dialect they speak, where melodies
Alone are the interpreters of thought?
Whose household words are songs in many keys,
Sweeter than instrument of man e'er caught?
Whose habitations in the treetops even
Are halfway houses on the road to heaven!"

"Think every morning when the sun peeps through
The dim leaf-latticed window of the grove,
How jubilant the happy birds renew
Their old melodious madrigals of love.
And when you think of this, remember, too,
'Tis always morning somewhere, and above
The awakening continents, from shore to shore,
Somewhere the birds are singing evermore."

Let us, in mercy's name, teach our children such words and sentiments as these if we would hope for better things. We shall wake up some day to the real nature of this slaughter. The rage to kill we can forgive in the boy, but in the man it is shameful. The boy's healthy impulse we can guide into good channels without depriving him of his enjoyment. The noxious beast shall still be trapped or shot, and legitimate game shall still be lawfully pursued, but for the rest the camera and the aquarium shall come in to help, and life preserving shall absorb the healthy energy and furnish delight more helpful to the coming man than slaughter ever could have done.

I am, it seems, in a quoting and wrathful mood to-day, and while it is with me let me ask space for one more quotation. It is from a New York *Tribune* review of the book "New Light on Dark Africa" (remember the title), by Dr. Carl Peters, leader of the German Emin Pasha relief expedition of 1889.

The movement was set on foot by German statesmen and in behalf of German interests, and among its avowed purposes was not only the advancement of German commerce but to "fulfill a debt of honor." Fifteen thousand pounds were subscribed for it, and into Africa went Dr. Peters with a small army of soldiers and carriers. What ideas of "honor" governed the leader, and how much "new light" he carried into "Dark Africa" let the following tell:

"From Dr. Peters's standpoint the Massais had no rights

which the Germans were bound to respect, and their demand for compensation in return for safe conduct through their country was looked upon as a species of insolence to be answered only by bullets. At one place a large force of natives seemed determined that their rights as lords of the soil should be recognized, and made a strong hostile showing. An insult like this to the great German nation could not be for an instant tolerated, and Dr. Peters at once determined to punish its perpetrators. Waiting till they were sound asleep in their village he arranged his men for an attack. On their way they met an old native in charge of a large herd of cattle. In answer to his request that they would not frighten the cattle, says Dr. Peters, 'a bullet passed through his ribs and permanently silenced his insolent tongue.' A sudden charge was then made upon the village, and the Massais were shot down like sheep as they sprang frightened from their huts. Naturally the survivors resented the action of the white men, and it was only by the greatest good luck that any of the party escaped from the country alive. In traversing the region occupied by another tribe, driving a flock of stolen goats and sheep, the older natives refrained from any attempt at annoyance, but some of the young boys of the tribe tried several times to steal a sheep. On each occasion the party fired volleys into the bushes, and the shrieks of the children 'proclaimed that just punishment had overtaken the evildoer.' Evidently both the natives in the employ of the party and those of the different tribes encountered were alike regarded as of no account. One of the carriers fell ill and could not travel. He was left to die on the road, and Dr. Peters naively remarks, 'The lions, which roared on that night louder than usual behind us, unfortunately left no doubt as to the poor fellow's fate.'"

I know of no form of comment that can add to the bare statement.

Evidently our game protective associations will have to include wild men with the wild birds and animals they seek to protect, if they are to be comprehensive and do their full duty.

I have shot but one bird since I came into the woods. It was a ruffed grouse and it was shot with a .45cal. Winchester, and properly, too, the body remaining intact, the back part of the head and a portion of the neck being carried away by the ball. It was not sport. It did not "advertise to be." It was mere chicken killing and because we wanted partridge stew.

Guide killed another and in precisely the same way, and our appetites were good. In former years I have often taken a shotgun into the Maine woods, but latterly I have taken only my Winchester and relied solely on what I could do with that.

Evidently shotguns have been here, for on a tree I found hung up a noble specimen of that now all too rare bird which Antoine Bissette calls the "pill-beatin' woodpecker" and for which the wanton killer could find no better use than to hang it up on a tree for a target. I dissected the fine creature—in my way—wishing I had Dr. Shufeldt at my elbow to tell me the hundredth part of what he knows about it.

I preserved his crimson crest, his wonderful chisel bill and ivory skull, his needle-sharp claws and his stiff and bristly tail, on which he rests so much of his weight when he taps out his telegraph message on a dead stub. He proved of interest enough to fill one long evening. He will outlast his larger cousin of the Southern States, him of the ivory bill, but he will finally go down before the breechloading shotgun and the man who must shoot at everything that flies.

To-morrow we hope for a good day on the hogs and something to make subject of a different sort of letter.

C. H. AMES.

THE FALL HUNT.

AT the foot of the range on the headwaters of the noisy little brook which crawled out from under the rocks and went dancing along on its merry way down the deep cañon to the sound of its own sweet music, the camp was made under the drooping firs; and near by a steep hillside, carpeted with bunch grass, offered sustenance to the sweating ponies, tired out with their long climb up the mountains. A hearty dinner was next in order, and a plump blue grouse, the head of which had been neatly clipped with a rifle ball by my eldest son Byron while on the toilsome climb up the mountain, and now dressed, cut up and broiled on the bed of hot coals, was pronounced too good for a king.

As the sun was rapidly sinking behind the range, no time was lost; and while the two younger members of the party climbed the mountain to the north and north-west, the old uncle followed the little brook down the cañon to begin his climb further to the southward. Half a mile downstream I turned to the west and began the toilsome ascent of the mountain, cheered to something of the oldtime eagerness by the fresh deer sign along the brook and the old game trail I was now following.

On the first shoulder of the mountain I found myself leg-weary and out of breath; and as a big tree was found fallen across the trail, I seated myself on its trunk to rest and scan carefully the hillside above. About 150yds. above me, across a small ravine, something was seen shaped like a pair of ears, but in color blending perfectly with the background beyond and difficult to distinguish with certainty.

A slight movement of the creature's head soon satisfied me that it was a deer, and also of the fact that it was watching me intently. Its body could not be seen, and as I dared not move and the deer appeared to be lying down with its body hidden behind a big log, no other plan save that of a careful shot at its head seemed at the time at all feasible. The distance was too great for a sure shot, but taking the best aim possible to me I touched the hair trigger. At the sound of the rifle the ears disappeared and a lucky headshot seemed to have been the result. A moment after the ears again appeared, slowly rising to their original position, and it became evident that the ball had passed just above the head, causing the ears to droop, but a clean miss after all. On trying to eject the empty shell it was found to be wedged fast and could not be ejected. Nothing remained save to find a stick or rod with which to punch out the clinging shell. A stick was found with but slight movement on my part, but in my haste to trim and prepare it for the emergency, a hurried slash of the knife blade cut the thing off three inches too short. Still the patient deer waited motionless upon the

necessary pantomime and I grew wildly excited as I crawled back along the tree in search of still another rod. Found at last and the villainous shell ejected, another shell was hurriedly inserted, and as I rose to see if the Job-like patience of the courteous deer still held out, I was amazed to observe that my change of position revealed the fact that the deer had all this time been standing up broadside to, and that the drooping bough of a fir tree growing in the little ravine between us had heretofore completely hidden its whole body, now plainly in sight. The waning light on the east side of the range, already in deep shadow, tended to obscure everything in view. A second shot was more successful and dropped the deer in its tracks. It proved to be a buck fawn, which, by the way, always seemed to me to be the fool of the deer family. Certainly he had only himself to blame, as his inordinate curiosity had proved his ruin. Night having come by the time the deer was dressed, I returned to camp, and soon both the unlucky boys appeared empty handed.

The daylight of the next morning found us breakfasted and girt for another weary climb. Each having chosen his own route, we separated and again the toil began. Up, up, higher and still higher the old uncle toiled wearily, until the summit was reached without the sight of a single deer.

The sun was now far above the eastern horizon, and the wary deer were already well hidden in the dense thickets which clothed the mountain side, in places entirely to the crest of the range.

Following along the crest to the northward, suddenly the plunging jumps of a deer were heard just below me in a dense thicket, and as the sound indicated that the direction of his run was campward diagonally down the mountain, I followed as silently as possible. Coming at length into a grassy opening, the deer sprang into view from the edge of the thicket and went bounding off down the open hillside with the strange bound of the mule deer, every foot leaving and striking the ground together, and with all its legs hanging down like table legs while in its bounding flight through the air, and as the gun came instinctively to my shoulder I saw at a glance that its next jump would land it on the very crest of a knoll in front and the next would carry it down the steep pitch beyond, possibly entirely out of view, so steeply did the mountain side break down at this point. It was evident that the deer must be caught on the next rise, and although I have no recollection of cooking or aiming the gun, the whole thing was done instantly "with the finger of instinct and the eye of faith" (never was there a truer expression) and as the graceful body, bunched together in its plunging flight, rose again like a glass ball from a trap, the sharp crack rang out; and I stood in delighted astonishment, wondering whether the deadly stricken animal ever would stop rolling and tumbling down the steep mountain side. However, he brought up at last against some bushes, and I hurried down to find a young buck with the most beautiful antlers I had ever secured. Their beauty seemed perfection itself. Two slender tines without prong or spur, and perfectly matched, they rose nearly a foot above his shapely head, and curving gracefully inward they gave him the appearance of an African antelope. I inwardly resolved to attempt the impossible and mount the beautiful head at all hazards. But alas for the unexpected! On our return homeward late that night (the hunt for the two boys having proved a blank) while one of them was unloading the deer from the pony it slipped and fell heavily to the ground, breaking one of the antlers off short.

"'Twas ever thus from childhood's hour!"

ORIN BELKNAP.

Natural History.

WAYS OF THE RUFFED GROUSE.

IN several ways the grouse alights on the ground. Although for this purpose the bird maneuvers according to circumstances, and adapts himself to his surroundings, yet it appears to be his object and desire to place himself in such a position that the moment he touches the ground he can instantly look in the direction of the danger he has left behind.

For this reason, perhaps, it is, as well likewise as to lead his pursuer astray, that the bird usually before alighting turns off to the right or left, and describes in his flight the segment of a circle.

The grouse always lights in an opening or on ground that is comparatively free from shrubbery. And he often stands and gazes intently through the covert at the person approaching.

Rarely indeed the grouse completes a circuit. I have seen one only do this, and it was a grand sight. This bird started 200yds. away, and being shot, came toward me, standing in the shadow of the forest trees. When nearly opposite, he swerved suddenly and went sailing round in a circle of about 20ft. in diameter, and alighted within it, facing his pursuer. In no other way could the bird have stopped at this point, flying as he did, while to have done so immediately would have been perhaps disastrous.

Occasionally a grouse, by a mere flourish of one of his wings, will whirl round, hardly more than on his own axis, and then drop on the ground.

But the ruffed grouse at times in his flight does not deviate at all, alighting in a straight line. When the bird does this, he sometimes sails along till he reaches the ground, and the moment he does so he runs on swiftly. Or perhaps he may take refuge under a dwarf evergreen or other thick cover beside which he has come down. Under the evergreen he stands on the ground with his back against the body of the shrub, precisely as he stands on a limb with his back against the body of the tree.

DORR.

SCHENECTADY, N. Y.

FAVORED TEXAS.—Norris, Texas.—I am a thorough sportsman, and think I live in the best game country in the United States, there being bear, panther, deer, turkey and quail without number, besides the finest black bass fishing imaginable in Devil's River, which is about five miles from the ranch. I keep a pack of hounds and a pointer. Have killed 13 panthers in a little over twelve months.—H. C. G.

GAME IN THE YELLOWSTONE.

YELLOWSTONE NATIONAL PARK, Dec. 10.—*Editor Forest and Stream:* Our summer's gone long ago. Winter is here, and with it everything settles down for a long rest. The game can now travel the wagon roads and trails; even look into the hotel windows without being disturbed. It is now the turn of the animals to enjoy themselves and go on sight seeing and pleasure excursions. The other day a party of blacktail deer came to the Hot Springs to see the captive elk and other animals in the wire inclosure. They walked up and down one side for some time, looking at the animals and trying to get into where they could get a better view of the elk, deer and foxes. They showed more curiosity than the usual visitors who have never seen captives before. They walked about the old camp grounds, then up over "the formation" out of sight in the timber. Even the coyotes call on the captive foxes in the evenings and unite with them in giving us a prairie concert, sometimes ending in a fight. I believe the coyotes would kill the foxes were it not for the boxes in which the foxes can hide and "stand off" their enemies. Since the two antelope were killed last summer the elk and deer have been shut up nights to keep them away from any night prowler with a taste for tender meat.

All the animals are soon to be shipped to the National Zoological Park, Washington, D. C. There are two black bears, Johnnie and Sue; two elk, Rain-in-the-face and Billy; one blacktail deer, Laura; three foxes, one beaver, two porcupines, one eagle, one osprey. A few nights ago the beaver escaped from his tin-lined box. It was supposed that he would make for the nearest water, and follow down stream to Gardiner River; but when found he was up on the Hot Spring terraces, where McCartney used to coat specimens. Although somewhat crippled, and having the use of only one forefoot, he had tunneled into the Hot Spring deposit several feet; he was all covered with white formation, and was "working like a beaver" when recaptured. If he works as hard in his Washington quarters he will soon have a comfortable home there.

All the animals are in fine condition. The elk and deer are as large as those running wild, the beaver and foxes are even larger and fatter than those of the same age in a free state, showing how well they have been cared for by Private Welch, their soldier attendant.

The capture of these animals was volunteer work on my part, and represent only part of the total number captured. Two elk died, two antelope were killed, one bear escaped, and another was killed and eaten by a larger one while chained up to a post at Yancey's. One beaver drowned himself while in a trap. Not much use mentioning four muskrats that would get into the traps set for beaver. A great many full-grown bears could have been captured in the Park during the summer if we had had suitable cages to keep them in. A full-grown wild grizzly when first trapped will make such desperate efforts to escape that no ordinary cage would hold one five minutes. They will smash through very heavy planks and timbers of native lumber. Even a common lynx will go through an inch board. Nothing but hard wood and iron will hold them.

Of late years a number of bears have made a practice of living about the hotels and camps in the Park. They are becoming "parasites" or bruin tramps, taking what they want, making no effort for self-support, and living on the table waste. They are "hog robbers," no longer worthy a sportsman's attention. One very large bear at the Upper Geyser Basin Hotel is as regular about coming to his meals as a "star boarder." Once when the yard man was taking a large piece of waste meat to the pig pen, bruin met him in the trail. The yard man, not at all frightened, held out the meat. The bear walked up, took it from his hand, went to one side a short distance, and ate the grub as unconcerned as though it was the proper thing to have his meals brought to him. The bears get in the pens, eat with the pigs, or rather drive them to one side and eat what they want. I believe but one hog has been killed by them the past summer. At the slaughter house in Swan Lake Basin, at least nine bears live on the refuse which is thrown to the hogs. They get into the pen, quarrel with the pigs, cuff them out of the way, often making them squeal with pain, and fight each other, the big ones driving the others off. So far they have not attempted to kill any of the pigs or sheep that are corralled near by every night. The herder and butcher have become so used to the bears that they do not fear them much, except when they meet them after dark; then they are willing to give half the road. There are about twenty-five bears who are living about this way during the season: they are in color black, brown, grizzly-gray and cinnamon.

All game appears to have increased in and about the Park. Even the mountain lions are more numerous; more have been seen this fall than for years past. As he

was pulling into camp on Little Specimen Creek a freighter on the Cooke City road saw a very large lion cross the road and enter a thick bunch of willows fifty yards from where he camped. His dog would bark at the brush, but would not enter. Going in he found an elk had been killed and buried. The lion had taken one meal. When the man returned a few days later the elk was all gone: nothing but bones remained to mark the cache. Another elk killed by a lion was found on Upper Soda Butte Creek a short time ago. These animals must kill quite a number of elk, deer and sheep during the year; I have no idea how many there are in the Park; the number may be anywhere from ten to fifty or even a hundred.

The Government scout, Felix Burgess, was out looking up the buffalo. He succeeded in finding seven bands, three on Nez Perces Creek, four in Hayden Valley or Alum Creek country, where they mostly winter. He reports the largest of the bands to number about 100, the next in size about 75, while the smallest has about 20 in all; he thinks there are not less than 350. He did not succeed in locating the buffalo that are known to range on the east side of the Yellowstone, where they have often been seen in summer by members of the Geological Survey, and in winter by Scout Willson. All the buffalo are well toward the center of the reservation, where they can be protected from poachers and specimen hunters. This is important, as \$1,000 spot cash has been offered by Eastern parties for three specimens (head and hides) three years old or over—quite an inducement for any one to kill the animals wanted if they could get them out of the

vents his men covering as much country as he would like. Since the new Forest Reserve has been placed under his control he has a section of country 69 miles north and south by 72 miles east and west, almost 5,000 square miles to look after, to keep down the fires and protect the game. This whole section, with hundreds of square miles about it, is without settlements, and is a rough, mountainous and timbered country. The parties who are doing the poaching are well known to the officers, and like the pitcher that goes too often to the well, will get taken in some day. Occasionally some one gets inside the Park line, kills an elk, and is out at once. A few days ago the sergeant stationed at Soda Butte found a camp of this kind with the elk meat hanging up in the trees, but could not find the men. He brought the whole camp to Fort Yellowstone and turned it over to the commanding officer.

The troop stationed here have been moved to their new quarters; all the buildings are well designed and comfortable; they are much more attractive than the old rough structures at Camp Sheridan.

I must not forget to mention the fish planted by the U. S. Fish Commission in 1889 and '90. I find all the plants doing well, much better than many expected. In October I saw trout rise to the surface in Shoshone Lake. These were lake trout, planted in 1890. I saw several others a short distance out in the lake as I was riding along the shore, they looked to be about 6 in. long; and in a beaver dam on Heron Creek I saw a few more, the dam was about one and a half miles from the lake.

While looking for beaver sign along Nez Perces Creek, I saw a native black spotted trout at least 15 in. long. Several fish of this kind and size were seen by Capt. Edwards's men while camped on the creek last summer. How these fish got into Nez Perces Creek I am unable to learn. Von Behr trout were planted there by the U. S. Fish Commission; if there are many of the large trout seen by myself and others they will prove destructive to the small ones planted. Several of the plant were seen during the summer; they were about 6 in. long. I did not succeed in finding any in October. Possibly they were higher up the creek than where I looked; neither could I find nor learn of any of the whitefish planted in the Yellowstone above the falls. Another thing about this fish, I have never seen one up as far as the mouth of Hellroaring Creek. I have inquired of most every one who has fished the Yellowstone in the Park if they ever caught a whitefish or saw one

IN THE SAWTOOTH RANGE.

From a photograph by Mr. F. BRACHT, of New York.

Park. There is little danger of our buffalo getting outside the reservation lines this winter. Soldiers are stationed at the Lower Geyser Basin, Norris and Soda Butte; then there are the watchmen at the hotels; and frequent snowshoe scouting parties will be sent out from Fort Yellowstone at the Mammoth Hot Springs. If all are vigilant no one can get near the buffalo without being seen.

Mr. Burgess tells of elk by the thousand. He says they are very numerous in Hayden Valley and the open country along Pelican Creek. He also tells of the familiarity of the foxes, who stole his belt from under his head, and one in daylight stole his riding bridle; he had to chase the bold thief quite a way to recover the bridle. I suppose the foxes are no tamer nor more impudent here than elsewhere. Yet I have known them to cut the strings off a saddle within two feet of the head of the sleeping owner, to steal bridles and straps, cut harness and rob the mess box. I have had them come within a few feet of the camp-fire while several men were standing around. They are often as tame here as Indian dogs when no other dogs are about.

The mountain-sheep and antelope have returned to Mt. Evans and the Gardiner Cañon, coming down on the flat, in sight of the town, to their winter camp ground. A year ago last winter, it is said by parties who wintered in Jackson's Hole, south of the Park, several thousand elk starved to death in that section of the country. My informant says that the ranchmen had to camp by their haystack every night after the snow got deep to keep the elk out of the hay yards. Dogs were of no use, for they would get at the hay in spite of dogs or fences. He killed twelve elk one day in going eight miles. They were so poor and weak that they could not get up even when he tried to help them with his snowshoe pole; he killed them to end their misery. In the spring he dragged off his meadow over one hundred dead elk. Other ranchmen had to haul away from their ranches, meadows and stock yards hundreds of elk. One man threw into a stream 200 taken from 160 acres of land. That same winter—1889-90—I found very few carcasses in the northern part of the Park; the elk got very thin and quite a number died; but not more than were to be expected. Last winter was very open; game could live anywhere and do well. This winter promises to be rather hard.

There has been some hunting in the Park this summer and fall. The limited number of men at the disposal of the acting superintendent who can be used as scouts pre-

in the Yellowstone, or its branches above the mouth of Hellroaring. I could learn of nothing but trout being taken or seen.

I saw several small fish in the Fire Hole River below the Lower Geyser Basin. I think they were young of the Loch Leven trout, planted above Keppeler's Falls, 33 miles above Old Faithful. No fish were planted by the Commission in 1891. Prof. Everman, Asst. U. S. Fish Commissioner, Prof. Jenkins, of Bloomington, Ind., and Mr. Lapham were out on a twenty days trip looking over the country, with a view to the establishment of a fish hatchery, investigating the condition of the various plants made in 1889-'90 and doing much scientific work connected with the fish interest in the Park.

Prof. Forbes, of Champaign, Ill., spent a few days here completing the work commenced last year—a scientific investigation of the fish food supply.

The snow is considerably deeper here now than last year a month later. We also had a cold snap in November; the thermometer registered at the Hot Springs—16° at Soda Butte—28° and in other parts of the Park as low as -32°.

NEW YORK ASSOCIATION.—The first meeting of this season of the New York Association for the Protection of Game was held last Monday evening. The president, Hon. Robert B. Roosevelt, entertained the club at dinner, after which the regular business of the Association was transacted. The counsel, Mr. Thos. N. Cuthbert, reported that their suit against the Hotel Brunswick for serving grouse out of season had been brought to a successful end by the payment of the full amount claimed by the Association. The suit against Murello had not been reached, neither had the suit against Keyser. A committee was appointed to draw up proper resolutions of regret at the loss of their late member Clinton Gilbert, at one time president of the Association, and for many years a regular attendant at their meetings. A unanimous resolution was passed thanking Dr. Kidd for his services in bringing offenders against the game laws in this district to justice. "More power to his elbow!"—W. H.

If your shooting friend does not read FOREST AND STREAM why not give him a Christmas present and do a little missionary work at the same time by subscribing to the paper for him. It will give him pleasure fifty-two times a year. Do you realize that next year \$4 will buy you 1662 of these big pages, and all of them devoted to wholesome, manly sport.

A WEEK AMONG THE TOAD HILLS.

DETROIT CITY, Minn.—"Uncle Amuel wants to see you," so said Eddie Stephens one November morning, as I was putting on my coat to go down town. "All right," I replied, "I'll stop and see him as I go down the street." I had a suspicion as to what I was wanted for, and my suspicion proved correct, for the first words Amuel said were, "Let's get ready and go up in the Toad Lake country next week after deer." I thought a moment before replying, and he continued, "Now don't say no, but come along and we'll have a grand good week out in the woods, if we do not get a single deer." "I'll go," I replied. "You get all the camping outfit ready and I'll see to the team," he said. It made a busy Saturday for me, but when evening came all was ready for our start Monday morning. Amuel is the youngest brother of my all-around friend and chum Stephens; we were off a year ago together after deer and had so pleasant a time we were willing to try it again. Monday morning found us started for the long drive to the Toad Lake region. Our party consisted of three, as Walter Hayden, a surveyor and "cruiser," wanted to go with us for a couple of days. How rough the road was. It had frozen quite hard during the night, and to drive faster than a walk was impossible in many places, sometimes for miles at a stretch. None of us knew exactly where we were going. Hayden thought he had a pretty clear idea, and as one of his hobbies is map making, he had drawn and given me a couple, supposed to represent the most prominent features of the country we were going to; but, as he was puzzled to tell the bottom from the top of the best one he had drawn, I did not trust too entirely to finding our way or locating according to map. The first excitement came when we had gone about eight miles on our way. Amuel suddenly told the driver to stop, and the following dialogue took place between him and Hayden:

"There's a deer over there."
"Where? I don't see it."
"On that brush point that runs out into the marsh."
"Oh, that white thing! I don't think that's a deer."
"Yes, it is; look close now."
"I believe it is. There, see it move?"
"You go around that side, Hayden, and I'll go this, and we'll get it."

Away they went, and by this time the driver and I had climbed up on top of the baggage and were trying to see the deer. The driver was greatly excited, and exclaimed, "I've never seen a deer yet, and if there is one there I want to see it." I pointed out the white object to him, and at the same time assured him that it was no deer, for Amuel and Hayden were quite close now, and no deer with ordinary deer sense would let itself be approached in the open like that. "I saw it move," said the driver. "Oh, why don't they shoot?" The seeing it move was certainly imaginary, for the hunters were now soberly retracing their steps to the wagon, and the large white rock was left in peace. It was a tender subject with them all the trip, and is still, and I had an effective weapon to crush them with when they grew too hilarious. But they repaid the account with interest before we had been long in camp. On we went, enlivening the way by anecdote and incident; on that bluff yonder to the north of the pine slashing Stephens shot the big buck that he and I had chased all the afternoon; just east of that Amuel had shot his first deer of this season, and a little beyond the Ottertail River, which we soon crossed, was where Hayden helped a man kill a bear; and still further along was a great pine hollow at the butt, which hollow had furnished him a camping place all one long winter night.

About noon we left the main road and turned east toward the Toad Lakes. On and on we went. The driver was in despair at the roughness of the road. At length we saw a lake on our right which Hayden declared was Little Toad. We gave up trying to reach the junction of the Toad rivers, where we had thought to camp, and concluded to stop on the shore of Little Toad Lake. We turned toward the lake, drove through a beautiful grove of jack pines, crossed one marsh, came to another that was impassable, concluded that we did not want to get to the lake, turned about and made our camp in the grove of pines we had just passed through. A more beautiful place I never camped in. We could think of no name that just fitted it, so said, "Let it be Nameless," and Nameless Camp it was. Dinner was soon ready and the driver started back with the team.

We made everything snug about the camp and then started to explore the country. Deer signs there were everywhere, runways like well beaten sheep paths. If a light fall of snow would come we would be in for rare sport. We went as far as the junction of Big and Little Toad rivers, then returned to camp. Neither Hayden nor myself saw a deer, but Amuel caught sight of one a long way off. Soon after supper we went to bed, filled with anticipations of the morrow.

At daylight we had our breakfast eaten and were off. I was put on a runway while the others went on east. For two hours I staid at my post. The first living thing I saw, aside from the squirrels, was a hunter coming stealthily through the woods. He was nearly on me before he saw me and was vastly astonished to find a stranger away off there. He had killed four deer in one day the week before and was now on his way up into the Toad Hills on a hunt. After he went on silence reigned for a long time, till suddenly the sharp cracking of a breaking stick down the trail aroused me. At the first glance I saw nothing, then I caught a glimpse of a gray object in the brush, I stepped out on the trail to get a better view, with my Marlin ready, for I never shoot at anything in the brush until I know what it is. I was

sure a deer would be in sight in a few seconds, when to my disgust an Indian appeared, and his large pack, covered with a gray blanket, was what had so fooled me. Just as he appeared I heard Hayden just behind me say, "Look out, don't you shoot," and from that time on he and Amuel insisted that I had better keep still about the "white rock," for had not I mistaken an Indian for a deer? But I felt that I was justified in being ready just as I was for what might appear.

We now went north to Twin Lakes. Here Amuel started three deer, of which he badly wounded one, but it got away, and although we tracked it a way by the blood the trail was soon lost. Feeling somewhat discouraged we went north of the lakes toward the hills, then concluding to go east to Big Toad Lake, which Hayden said was only a mile or so away. We tramped for more than an hour, and then finding ourselves in a seemingly interminable thicket of poplars and brush, and the lake apparently as far off as ever, we decided to go back and make a drive at Twin Lakes and then to camp.

We separated, Hayden and I going one way and Amuel the other. We had gone about a quarter of a mile, when the crack of Amuel's Colts rang out. "He's shot a deer," we both said, and paused a moment; but hearing nothing further started on, when the rifle cracked again five times in quick succession. "That's a signal for us to come," said I. "No," said Hayden, "he's wounded a deer and is shooting at it." "I know better; that's Amuel's signal for us, and you can do as you please, but I'm going back!" "Well, if you insist on going back I'm going too." So back we went. We found Amuel standing by one of the largest bucks I had ever seen. He had a standing shot over 350 yds. away, hit him full in the neck, the ball going through into the spine, dropping him where he stood. He was a magnificent creature, and four days later weighed 208 lbs. dressed. The first words Amuel said when I came to him were, "That head is yours." The head is now in the taxidermist's hands, and I expect will soon be placed on the walls of my study.

We soon had the deer hung up and dressed, and then we decided to carry out our original programme, only Hayden and I were to stop at a house we had seen in the woods on our way over and find out if they had a horse team that we could get on the morrow to haul the deer to camp for us. We found an old German at the house, who said he had a horse team, but it was at Detroit City then and would not be home until night.

We made the drive as planned, but without success. Amuel started a deer that ran toward Hayden and in plain sight of him, but just before coming within range turned from its course and disappeared behind a bluff, to be seen no more. Hayden was grievously disappointed at not getting a shot, and all the more so that he must go home in the morning. "When I saw that deer coming, I said 'you are my meat,'" he lamented, "and now it looks as though I've got to go back home like the ordinary gang who go out every year and never bring in anything."

We were very gay, however, in camp that night, and Hayden began a Chippewa war dance in the tent, from which I promptly ejected him, and he finished his dance out under the pine trees, emitting meanwhile a succession of whoops that must have caused profound astonishment to all the beasts and birds within five miles of Nameless Camp.

At daylight the next morning we were out, and a drive was made at Twin Lakes, but without success. Hayden now bid Amuel and I good-bye, and went back to camp to get a lunch and start on his long walk to Detroit City. He was obliged to go, as he was under contract to go north with a party to survey and mark a lot of pine timber. We told him to order a team to come out after us Saturday, and I agreed to hang a white handkerchief on a jack pine at the place to turn off to get into where the camp was. Reluctantly he left us.

We at once started for the old German's to see about getting the buck hauled to camp, for, as Amuel said, "I can't hunt until I get that deer out of there." We reached the house, and in response to our knock were told to "come in." We entered, greeted by the savage barking of a large dog. The one room of the house was small, and in it we found five men, one woman, the dog, a bed, six hundred-pound sacks of flour, sacks and barrels of potatoes, feed for the pigs, the harness for the horses, and in fact everything that belonged to the farm except the live stock. Six rifles and one shotgun stood in the corner, three beautifully ornamented German pipes hung on the wall, but in all my experience of roughing it I never saw as many different things in one small room as there. We were most heartily welcomed, however, and as soon as our errand was explained, in which explanation all their limited English, my equally limited German and Amuel's Danish (which he speaks fluently) were brought into use. They gladly hitched up the team and went for the deer. Fortunately we had to cut a road only a short distance, and at 11 o'clock had the deer hanging up by its tent.

What course should we take for the afternoon? We finally decided to try and reach Big Toad Lake. We put in that whole afternoon tramping through the woods in the direction we supposed the lake to be, but failed to reach its shores. We had a very enjoyable afternoon, however, passing through the big pine woods, groves of jack pines and also hard wood, and once for a long distance we skirted the edge of an immense spruce and tamarac swamp. We also crossed the bed of what had been quite a large lake, marked on the maps (not Hayden's) as Mud Lake, but now entirely dry and the bottom a mass of white sand. Not a deer did we catch sight of, although tracks and runways were found everywhere. At length we brought up at an uninhabited house on the Big Toad River. I do not wonder that no one lived there, for a more dreary, desolate-looking place I never saw. The body of the house was made of tamarac poles, the gables shingled *à la* Queen Anne, and the steep roof thatched with marsh grass. The board shutters were tightly closed and the door secured by an immense padlock. Turning our back upon this deserted home, we went down the river to the ford, and then separated for our four-mile walk to camp, which I reached at dusk without having seen a deer, and Amuel came in a few minutes later, having had the same experience.

We woke many times in the night to find the tent all lighted up by the glory of the full moon. Toward morning Amuel awoke me to ask if I heard that thing crying

out there. I listened and heard the same peculiar cry that had waked us a year ago while we were in camp on the Little Falls cut-off of the Northern Pacific Railroad. Then the cry beginning far off finally came near the tent, and the picture is still very vivid to me of Amuel scantily attired, just as he crawled from bed, standing in front of the tent, in the nipping November air, peering up into the branches of a tall pine, trying to locate by the fitful light of the waning moon, as it shone through the tops of the waving pines, the beast or bird that had disturbed us. "I see it," he said, "a great dark bunch up there; what it is I can't tell, but I'll find out." Just as he raised his rifle to find out, with a final cry the thing left the tree, and a great owl flew noiselessly on into the woods, while Amuel with many a shiver crawled back by my side to get warm.

As soon as light the next morning we were off, and at 10 o'clock found us about a mile north of the Toad hills, and neither of us had had a shot at a deer. I had caught a glimpse of the tail of one in a dense poplar thicket, but that was all. "Let's go up on one of the hills and look at the country," said Amuel. We selected the one that looked the highest, a perfect cone, rising sheer from the level ground about 200 ft., I judge, without a tree on it. Short of breath we were when at last we stood on the top; but what a superb view! North, east, south and west, as far as eye could see, stretched the forest, the dark green of pine and spruce, intermingled here and there by the gray of the hard woods or tamarac, and unbroken save by the lakes and here and there a pine slashing. We could see Island Lake, Height of Land, East and West Twins, Little Toad, the bed of Mud Lake that we had crossed the afternoon before, and Big Toad. Between us and Big Toad were the other Toad hills, one of which we now found was a little higher than the one we were on. "What shall we do?" said Amuel. "Let's go to Big Toad if it takes all the rest of the day," I replied. "All right," he responded. So taking the direction we started in a direct line through the woods and across marshes. After a two hours' tramp we stood at length upon the shore of the lake. It is a large lake, with a beautiful gravel beach, and we resolved to try its waters next summer for bass. I felt rather discouraged that night as we lay in bed, for we had only one day more and I had not had a shot at a deer.

The next morning we found that a very light snow had fallen; not enough for tracking, however. We separated to make a drive at the Twin Lakes. Soon I heard Amuel shoot three times. When I found him I learned that he had wounded a big buck, and had also started a doe and fawn.

We took the slight trail and followed those deer until 1 o'clock, when in disgust Amuel said, "Let them go. I'll go up through here and you go down across the slashing, and we'll swing around toward camp." I started off, but had gone only a short distance when I heard Amuel shoot. I turned and saw him on a rise of ground, and just then he shot again and yet again, and then whistled for me. I went up, and there lay a great fawn nearly full grown, killed by the first shot, which severed the spinal cord.

"I think I've got another one down here." We went a few rods down the old trail and there lay as fine a doe as I ever saw. They were the ones we had been following so long. On leaving the trail and cutting across had brought Amuel and the deer almost face to face in the old logging trail. Oh, the perversity of things! If Amuel had been a few rods further back he would not have seen the deer, and they would have run right on to me. But such was my lot, I was not to get a shot at a deer on the trip.

We hung the deer up and dressed them, then started for the old German's again to get his team to haul them out. We were about five miles from camp by the trail, and it was dark by the time these deer were hung alongside the buck at Nameless Camp. The old German and his wife and sons were as much pleased at our success as we were, and in every manner possible tried to express their pleasure. After we had gone to bed, Amuel straightened himself out, gave a big sigh of supreme content and said, "Well, we've had a good time, and I'm satisfied."

In the morning, as we went to make our last drive, I hung the handkerchief on the pine at the place to leave the road for camp. It was growing cold fast. We found the Twin Lakes all frozen over, and on our return to camp from an unsuccessful morning hunt, we found the well which Amuel had dug in the edge of the marsh frozen so that an ax was necessary to get to the water. There were two buffalo birds at the tent, which Amuel said was a certain sign of cold and snow. The birds were about the size of bluejays, only instead of being blue, white and black, had the dun, black and white color of the chickadee. I had never seen any before, and was surprised at their tameness, coming within three feet of us again and again. Shortly after dinner the team arrived, driven by one of the proprietors of the lively stable himself; the driver who brought us out having given up his position rather than come in for us over the bad roads. We broke camp, loaded up, and as we left the pine grove to turn into the road homeward, I reached up and took the handkerchief from the limb of the jack pine and with it waved a farewell to Nameless Camp.

MYRON COOLEY.

DETROIT CITY, Minn., Dec. 2.

VIRGINIA LANDS POSTED.

WASHINGTON, D. C., Nov. 23.—*Editor Forest and Stream:* I have received so many letters of inquiry of late from Northern sportsmen, asking about the shooting in Virginia and North Carolina, that I find it impossible to answer them as I would like to—individually. I will therefore respond through the columns of the FOREST AND STREAM, all the more readily from the fact as that journal is publishing for its patrons all the information it can obtain about the shooting status of the Old Dominion and Tar Heel State. By writing a plain statement I will at least save some sportsman a long fruitless trip, to say nothing of loss of time, temper and tin.

I often meet in my travels during the shooting season parties of disgruntled Northerners who have left home with glowing visions of glorious sport, and retracing their steps sadder and madder men. It is a safe and sound rule for a stranger never to start for either of the sister States without having an objective point and completed arrangements with some reputable native. Many,

too many, Northerners set off to visit certain Southern sections that they learn by hearsay is a good game region, and they are almost sure to fall into the hands of irresponsible parties, whose sole object is to make all out of them they can.

I have just returned from a hunting trip of several weeks' duration in Tidewater, Virginia, being to the manor born, and knowing everybody, have had all the sport I desired both in quail and wildfowl shooting. I found that the posting of land both in Virginia and North Carolina had become an actual mania. Old barren meadows, where a field lark would starve; swamps that a prowling coon would turn up his nose at, piny woods that nothing that runs on four legs, or birds of any feather could exist, all posted. The sign meets the eye everywhere, and even neighbors are warned off—the generous character of the people all changed. Away in the backwoods, where the foot of a stranger never treads, one sees the proclamation and promulgation, often written in barbarous lettering, warning persons "from gunning on these yer premisses."

In a measure the Eastern sportsmen are responsible for this state of affairs. I know of an incident that happened last fall. A party of strangers chartered a car and had it switched off at a station not a hundred miles from Norfolk, Va., and roamed over the neighboring country at will, breaking down fences, leaving gates open, shooting at everything that had wings, and shipping their game home, without any courtesy shown at all to the Grangers. Now every acre of land in that section is posted.

A small unknown farmer can offer but few inducements to his guests. It is only the large land owner, well-known and popular, that can give his friends a *carte blanche* to shoot where and when they please.

It is the same way in the North Carolina Sounds, the best grounds are club preserves and rigidly guarded, and they, under the present indiscriminate incessant gunning, are almost worthless—but few clubmen have gone there for the past three or four years. Miss Midgett has a resort for sportsmen in the Sound, but the whole adjacent territory is so lined with batteries, blinds and sink-boxes that the ducks are driven away, and only on wild stormy days can any shooting be had. In Currituck every day but Sunday is open, and irresponsible parties shoot in the night and slaughter the wildfowl in every conceivable way. The game laws are practically inoperative. I belong to three Currituck clubs and know whereof I speak. The keepers of my Currituck clubs write me that they have never in their experience known ducks to be so few in numbers, and so shy.

It is true I had some very fine duck shooting at the Ragged Islands, in Back Bay, adjacent to Currituck Sound, which is situated in Princess Anne county. I was a guest of Mr. C. A. Woodward, of Norfolk, Va., who, by the way, is president of the club. A Norfolk syndicate has bought these islands, thirty-two in number, after a hard legal fight and tedious litigation. This property is a sporting principality. Under the Virginia county and State law wildfowl can only be shot on Monday, Tuesday, Friday and Saturday, thus giving the ducks three days rest. The result is obvious. I believe a few Eastern gentlemen of unexceptionable references might get into that club. It certainly is the finest shooting grounds I have ever seen north of Florida.

My advice to those contemplating a "go-as-you-please" trip to Currituck is like the advice of Puck to those contemplating matrimony, "Don't."

About the Dismal Swamp shooting, I would advise inquiring sportsmen to write to Messrs. Driver & Hargrove, Driver's Post Office, Nansemond county, Va.

ALEX. HUNTER.

WILDFOWL IN OREGON.

Editor Forest and Stream:

Tuesday, Dec. 1, was a red-letter day in my hunting experience. It was a day, which for general sport with shotgun and retriever, is seldom equaled. So I shall request FOREST AND STREAM to tell our Eastern brethren about it.

Messrs. W. A. Story, Harry Beal and the Sewell brothers have a fine lake just outside the limits of the city of Portland, on Columbia Slough; and as the weather was suggestive of ducks Mr. Storey invited me to have a day's shoot with him. He also invited two young friends, Freddy Beal and Al. Versteeg. It seems that nothing pleases my friend S. better than to be teaching the young idea how to shoot, and he never loses an opportunity to interest the boys in this direction. He always has a gang of kids at his heels, and some of these self same kids are becoming so expert with the shotgun that we older sportsmen must look well to our laurels or take a back seat.

We boarded the Vancouver motor at 7 A. M., and in half an hour were at the cabin. This "cabin" is a very neat house that would furnish comfortable quarters for a good-sized family. After placing the boys in a good blind at the lower end of the lake S. took me into a blind at the upper end of the lake, where we were to shoot side by side for the day. I believe that he had good reasons for having both of us in one blind, although he gave but one.

This was my old Irish setter Mike's eighth birthday and he celebrated it in grand style. He seemed to forget all his aches and pains. Rheumatism, gray hairs and stiffening bones were "not in it," and nothing short of a regular puppy spree would do him.

A rheumatic old dog seldom retrieves a wounded canvas even on his birthday; but on this particular day the old dog held his own pretty well with Storey's Pat, the most powerful and ambitious dog in Oregon. Pat is Mike's younger half brother, and he seemed disposed to entertain his old relative according to the strictest rules of dog etiquette.

By 8:30 A. M. we had our decoys out and our guns in our hands ready for the day's work. It was the same spiteful sort of weather that had ushered in one other well-remembered day two years before when we killed a sledload of canvasbacks. The wind came in gusts on our left; the dark clouds rolled up from the south in a fretful sort of way; the mountains off to the east looked cold and gray, and the bluffs along down the Columbia were spotted with alternate rain and sunshine. The decoys nodded and bowed gracefully, and again we saw that we had struck a "canvas" day. "Mark west," said Storey. A moment of silence and then four quick reports in rapid succession announced the fate of three out of

a band of five canvas that had swung in to investigate. The trio struck the water dead, but not without those involuntary plunges peculiar to the canvasback in the death struggle. But their momentary struggles only the more reddened the wavelets with their rich crimson life blood.

"Mark! north!" and the simultaneous cracks of our guns brought down a pair of fine mallards that had split on the blind. And so it went on throughout the day, with now and then some shot or incident that called forth hearty congratulation, joke or laughter.

"Shake! Now we are even," said Storey, as he neatly dropped a single that I had missed clean with both right and left. Then we shook, and our ha-has would have decoyed a band of laughing hyenas, as he explained that I had served him the same trick four years ago at Don's. What a memory!

He had wiped my eye after four years waiting. I felt proud that he had been forced to wait so long. A drake canvas plunged straight from the clouds at the decoys. My old Parker sent him a greeting that met him squarely in the face, and the blood spurted as if he had been lanced on the jugular as he fell dead in the blind. A band of three all fell at the crack of Storey's left, two stone dead and one tipped. Never in my experience have I seen so many dead birds with so few cripples in a day's shoot as yesterday.

The wind blew our dead birds ashore, and the dogs took care of the cripples. The bays at the other end of the lake were making things lively, and we were surprised to see the birds falling so rapidly at their hands.

At four o'clock in the afternoon our decoys were all stowed away and we proceeded to count up. Mr. Storey and I had bagged 141, while the boys counted out 75, a grand total of 216 birds.

I feel that much of our success was due to the fact that both Harry Beal and Mr. Storey have been untiring in their efforts to make this a model preserve.

The birds have plenty of feed and are guaranteed absolute rest five days in each week, but they must fly high the balance of the time.

S. H. GREENE.

PORTLAND, Oregon.

CHICAGO AND THE WEST.

CHICAGO, Ill., Dec. 12.—Mr. R. S. Cox, the young man with the pleasantest smile in Chicago, has returned from his favorite shooting grounds at Rice Lake, Ont. Mr. Cox is not above swatting a duck on the water, if he gets a chance. At Rice Lake, the other day, there drew in to his decoys a mixed flock of ducks, six teal, four mergansers and two mallards. These lit among the decoys, by Mr. Cox's permission, and immediately thereafter Mr. Cox accomplished the difficult feat of taking a general shot at the bunch and killing all six of the teal, and two of his inflated decoys, worth \$1.25 a piece. The rest got away. "I never kill any but good ducks," says Dick. And then he smiles.

Last Saturday night Mr. C. D. Gammon, Mr. H. Parlington and Mr. Ed. Hughes left for Ontario, Canada, for a moose hunt. They do not divulge the exact nature of their plans, but say they have a sure thing.

Mr. Harry Higginbottom and two friends are back from a big game hunt in the country below the Yellowstone Park. They killed 14 elk. This is hurried. I do not know whether or not they were in Wyoming.

Mr. J. W. Schultz, of Piegan, Mont., perhaps the best outfitting guide of the Northwest country, writes me that during the week preceding Nov. 17 Baron von Grothuss and a hunting friend killed, at Two Medicine Lake, not far from Piegan, six mountain sheep (big-horns), two elk and a bear. Two of the sheep were large rams. Mr. Schultz would be the best man to write to for any one wanting to kill a bear. He offers to secure at least four shots at bear for any party he takes out or no pay, which is fair enough. This is for the bear season, which is best in May. Mr. R. D. Perry, of Braintree, Mass., who was out with Schultz last May, killed four bears. Unquestionably a big game hunt can be made successful in that country.

The taste for a wild, desperate, blood-curdling, awfully awful Western time after savage beasts seems to have broken out in the East, and I expect a whole lot of folks back there think they are regular devils. This is what the Associated Press thinks about it under the head of "Brutal Killing of Wolves."

GREENSBURG, Pa., Dec. 9.—Paul H. Hacke, owner of a stock farm near here, conducted a "wolf hunt" there to-day. Two Western wolves were the victims of the "chase," the dogs being Russian wolfhounds. Neither of the wolves was given a chance for his life, the first being turned loose in about an acre of ground surrounded by a high board fence. Four dogs were let at him, but the wolf was not hurt and would have won the terrific fight had not three more dogs been turned loose. The wolf was then driven in a few moments amid the yells and shouts of a delighted mob. Believing that the second wolf would give a lively chase, even against the entire pack of wolfhounds, fourteen in number, Hacke had it turned loose in a ten-acre field. For a few moments a wild scene ensued, but the wolf was easily captured. Just as it was crouching for a leap over the fence and into a thicket the leading hound caught it by the neck and dragged it back to the howling pack, by which it was torn in pieces in a moment. The chase is the first of a proposed series to be held on the Hacke farm during the winter unless the authorities prevent.

The authorities ought to prevent. The Barzois ought to be taken to the place where the wolves live wild and not have trapped wolves brought to them. To kill an animal in a pen or against odds which make escape impossible is not sport in any sense; and it disgraces good dogs to engage them in that way. This is precisely similar to a "coyote chase" which I once saw at Hutchinson, Kan., and which I took pleasure in censuring as severely as I knew how. Penned game is not game, and to kill it is butchery and not sport. Even a wolf should have his chance. The Associated Press is right, if it has its facts right.

Mr. W. L. Shepard, of Chicago, is the most unfortunate man in the world. He always has a grievance with Fate, and something is always happening to him. Mr. Shepard was duck hunting with Mr. Abner Price, guests of Mr. Fahnestock, on the grounds below Peoria, on the Illinois River. Abner is an oldtime duck shooter, but he says he never saw more mallards even in the oldtime days. He located pretty quick, and in a couple of days walked out of the marsh with 165 mallards in his pocket. Mr. Shepard was not so fortunate, and the mallards shunned him, so that when the time came to start for home he was in deep chagrin over the smallest of his string. Mr. Price took pity on him and gave him a few dozen ducks, so that in all he had fifty or more. These he put in a big carry-all bag, which he put on top the luggage in the wagon, and then the party started for the

railway station. Somewhere on the road the bag fell out of the wagon and was lost. Then Abner sweetened Mr. Shepard for another fifty mallards. Then they came home.

Mr. P. F. Stone and brother were at Paducah, Ky., last week, and while there Mr. E. Rhinehart, of that city, took them out quail shooting. They got 45 birds in six hours. Mr. Stone says that mallards were reported plenty at Reelfoot Lake, Tenn., and mourned the necessary refusal of an invitation to go over to that famous ground.

Mr. R. A. Turtle and two friends were rabbit hunting this week on the Kankakee, and killed 60 rabbits. Mr. John Earle, Mr. McCabe and Mr. A. J. Atwater, of this city, with Mr. G. C. Noble, of Goshen, Ind., had a quail hunt last week. Mr. Atwater attributes their lack of success to a red calf, which flushed all the birds. This beast took a great notion to Mr. Earle, and persistently followed the party wherever they went.

Recently we had a wild-wolf chase in the Chicago streets. Now it is a bear chase. Yesterday a brown bear belonging to an Italian escaped and was pursued all through Hyde Park precinct by an excited populace. The bear finally treed and was captured. Chicago is getting to be an awfully wild place. It will be a royal Bengal tiger next.

Some Chicago inventions: It was a Western man, I am told, who invented the Mack automatic weedless trolling gang. This is now handled by the Sportsmen's Novelty Co., of Chicago, in which, I believe, Col. C. E. Felton is largely interested. This gang can be put on any spoon. The hooks are guarded so that they skate over weeds or through rushes, but are sensitive to the strike of a fish. Being automatic, they need no setting or adjustment. This is a device which should save much profanity. Col. Felton tells me it is very practical.

Messrs. Von Lengerke & Antoine, well-known in the Chicago sporting goods trade, point out an improvement in their red V. L. & A. shell, consisting of a further widening of the conical pocket. This, with the treble No. 2 primer, they think make the shell hard to beat.

Jimmy Nicholls, of the late Jenney & Graham Gun Co., is now acting as agent for the gelbite product, the invention of Dr. Emmons, of the East. Of this I had not heard much until lately. It was formerly handled here by the American Powder Co. The explosive was billed for improvement, and this may have transpired. This week Nicholls had some of it out at Burnside and asked the boys to try it. Mr. Mussey and Mr. Wilcox were shooting a 25-bird race, the result of which was 17 to 16 in favor of Mr. Mussey. The latter used gelbite shells for his last three shots and they killed the birds with remarkable keenness, so he thought.

Mr. Fred Allen, of Monmouth, Ill., the inventor of the world-known Allen duck call, was in town yesterday. He says he never saw a heavier south-bound flight of mallards down the Mississippi than there was this fall, though they kept in mid-river and gave little shooting. From the heavy fall flight he predicts a heavy flight up for next spring, and says he never knew this to fail.

Mr. A. Hirth, of the Spalding's tackle department, has been off duty for a week with a bad knee, the lingering result of a street car accident.

E. HOUGH.

QUAIL IN KANSAS.

FORT SCOTT, Kan.—It has been the fortune of the writer to shoot quail in almost every State between the Allegheny and the Rocky Mountains, over every kind of cover, assisted by all kinds of dogs and in company with all kinds of men, from the most contemptible pot-hunter up to the thorough sportsman who would scorn to shoot a bird on the ground, although he knew the bird had five chances out of six if he undertook to kill it on the wing. Some recent experiences in Kansas were so different from all previous ones, that they may interest others who have always shot quail in thick, brushy cover.

The land around Lyons is almost level, and is all prairie, with no brush even along the little streams. The land where the quail are found is mostly under cultivation, and at this time of year one-half of it is in winter wheat and the rest in cornstalks that are eaten down by cattle till they afford but little cover. The farms are fenced with hedges, many of them 15 to 20 ft. high, and there is a strip of weeds and grass several feet wide on each side; and if there is a road on either side it is usually grown up the same way, except a single track along the middle, and as the roads are all four rods wide, they afford a good deal of cover. In addition there is along each hedge a large amount of tickle grass, tumble weeds and corn husks, lodged there by the winds. At this time of year the quail are nearly all found right along the hedges, because there and nowhere else are found food, shelter and protection from the hawks, which always abound where quail are numerous. The reader will see from the above that it is an ideal place to make a heavy bag with little labor, if the birds are there; and I can assure him that they are, or were there, for there are not so many as there were by 250 to the writer's certain knowledge. When the birds are flushed they fly along the hedge twenty to forty rods and alight close to it, so there is no bother about marking them. There is a good prospect for getting half a dozen shots at a bird if he is not killed.

My trip to Lyons was a business one, but there is always a shotgun and shooting suit in my trunk at this time of year, and finding that a few days could be spared for sport I inquired of the landlord and he referred me to George Hibler. Yes, George said, there were a good many and he would go with me. He was on hand in the morning with a pointer and a 12-gauge Greener that looked as if it had seen a vast amount of service. "Now," said George, as we drove out of town, "this pointer is a great dog to run along the hedges and find coveys, and that is about all he's good for. We'll go by Sherm. Podge's and get his black bitch. She's great on singles and dead birds." We took the bitch into the buggy and let the pointer run. He trotted along the road some 200 yds. ahead of us, looking neither right nor left and apparently thinking of anything else than birds. Presently he turned into the weeds at the roadside and stood looking back at us and wagging his tail. "Covey of birds there," said George. "Don't believe it," said I. "Yes there is, for money, marbles or chalk," said George. "Put the bitch out and see what she will do," said I. She went along the road at a fast run, but when opposite the pointer she stopped short, in the very act of crouching for another leap, turned her head toward the roadside

and became an ebony statue. "Give it up now?" asked George. "Stop a little bit," said I, "I want to enjoy that sight a minute longer." "Well, enjoy it till I go back to where I can get through the hedge."

When George came up on the other side we put them up; about fifteen plump fat fellows, that went off with such whirr and speed that I only fired one barrel. We got one apiece. The pointer found one of the dead ones, and after carrying it into the road dropped it and trotted along as before, but the bitch kept along the hedge, working the ground very closely, and about thirty rods along the hedge came to a point. Birds got up in quick succession, one, two and three at a time, and six were killed in a few seconds. Before we gathered the dead birds and got into the buggy the pointer found another covey further along the hedge and we had a good time with them, getting five.

George said, "Now we will take the dogs in and drive to Bill Porter's place, where we can put the horse up and hunt right." As we drove along seven prairie chickens flew across in front of us, too high and far away for a shot, but we stood up in the buggy and marked them into some prairie grass a full half-mile away, and were fortunate in marking them exactly by the end of a hedge and a haystack way beyond them. Prairie chickens are very wild so late as this in the season, but these were evidently tired by a long flight and we decided to try them. We drove to within 200 yds. of them on the leeward side, and then walked rapidly but silently toward the spot, keeping the dogs to heel. They gave us a 40 yd. rise. I got lots of feathers the first shot but did not stop the bird, but the second barrel dropped one. George's first barrel snapped, but he crippled one badly with the next, and it came down some 50 rods away, where we found it dead. I had paid no further attention to the one I feathered so freely, but as we drove along the road in the direction of their flight the dogs smelled something, and running quite away along the hedge found a place they could get through. They came back and found the chicken alive, but unable to fly. With a little coaxing the bitch brought it to the hedge and, with a good deal of pushing, got it within my reach. This certainly was a display of unusual intelligence in the dog.

It was 1 o'clock when we reached Porter's place. After putting away the horse, George said, "Let's see what Uncle Pete put in the picnic basket." Eggs, beefsteak, ham sandwiches, mince pie, pickles, and cake. Then we were ready for quail.

"Now," said George, "here's a solid mile of hedge, and there are half a dozen coveys along it." We soon raised a covey, and shortly afterwards a second and a third one, all flying ahead of us, and before long every few steps got up one or more birds. They generally darted through the hedge from the man that flushed them, but the man on the other side had a good shot. Most of them flew far enough out from the hedges to drop on bare ground when shot, so but little time was lost hunting dead ones. When we had worked about two-thirds the length of the hedge we made a detour and began hunting back from the far end, so as to double them up and save walking. It would take too long to detail this part of the day's shooting. It would be impossible anyway, for it was too lively to be remembered, except in a general way. We put in four busy hours along that mile of hedge and bagged 50 quail.

We hunted five other days, but owing to bad weather and poorer hunting grounds our bags dropped to 32 one day and did not exceed 45 any other day.

If any of you want to shoot quail at Lyons, call on George Hibler. He is a gentleman and a sportsman.

O. H. HAMPTON.

WELLSVILLE, N. Y., Dec. 11.—Sportsmen have enjoyed excellent shooting in this vicinity this fall. Plenty of rabbits and squirrels. Partridges and gray squirrels have been exceedingly plenty this year. Otters have been caught near here; they were supposed to be extinct in this county, the last having been caught years ago.—E. H. B.

OHIO QUAIL.—Barberton, O., Dec. 11.—We are having beautiful weather, which makes it delightful quail shooting. I can go out on an afternoon with Royalty II. and Bruce S., and in a couple of hours make a good bag, and we are still leaving plenty for seed.—STANSTEAD.

AN ENLARGED "FOREST AND STREAM."

WITH the issue of Jan. 7 next, which will be the first number of its thirty-eighth volume, the FOREST AND STREAM will be permanently enlarged from twenty-eight to thirty-two pages.

This change has been made necessary by the growth of the special interests to which the paper is devoted, and by the corresponding requirement of more space for their adequate presentation. The enlargement is to be taken as an earnest of our purpose to increase the interest, usefulness and value of the FOREST AND STREAM; and by means of the better opportunities thus afforded, to maintain for it the character it has so long enjoyed as the representative sportsman's journal of America.

Each of the departments will be benefited by the change—Sportsman Tourist, Natural History, Game Bag and Gun, Sea and River Fishing—and, in particular, our news columns—the Kennel, Yacht and Canoe, Rifle and Trap. The generous amount of space now given to Kennel will be maintained, and the room devoted to Trap Shooting will be so enlarged as to make the department the most comprehensive and the best arranged contemporary record of that sport.

Since this journal was established eighteen years ago, the popularity of sports with the rod and the gun has advanced with giant strides; and in the development of those many recreations the FOREST AND STREAM has taken no unimportant part. With their growth it has kept equal pace in worth, in influence, in circulation and in generous public recognition. What it has been it will be. The record of the past contains the abundant promise for the future.

In 1892 and the years that shall follow, as in 1891 and the years that have passed, the FOREST AND STREAM will stand for all that is best and truest in field sportsmanship; and it will strive to merit from its growing hosts of friends a continuation of that warm appreciation and indorsement with which it is now favored.

One word remains to be said: The price will remain unchanged; \$1 per year. Subscribe now.

TROUTING IN THE CASCADES.—I.

THE MOLALLA COUNTRY.

IRA MOODY, an old friend of mine, had written me that if I would notify him when I could come out he would meet me at Willamantic Falls with his grays and spring wagon and take me where I could find some trout.

Now, although Ira was an old settler in the Molalla country, and as Bob Bailey says, "had driven back the howling wolf and killed the bar," I knew that his knowledge of trout, at least, was decidedly limited. Bear and cougar hunters generally catch trout with pin-hooks and worms. Did you ever observe with what skepticism and suspicion a regular old moss-back bear hunter examines a book of flies? Courtesy forbidding rudeness he generally compromises with his feelings and suggests that it might be a good plan to take a few worms or salmon eggs along, as the trout out his way "might not be catchin' with them things." The boy would dig all the worms for you and no bother at all. You are always referred to "the boy" in trouting matters, as it is rather beneath the dignity of a man who kills panthers and bears for pastime to know much about such trivial matters as trout fishing. And the boy, conscious of the responsibilities resting upon the son of such a sire, gravely condescends to give you a little information, but with a curl of contempt on his lips that says louder than words, "These city fellows think they can fish, they have my sympathy."

I had seen a little of the Molalla country in a business way and felt satisfied that there must be fine trouting out there. So after consulting with Billy Newman and my wife (it is always a good plan to consult your wife about such matters, even if it does humiliate you), we concluded that we would notify Ira to meet us at the Falls on June 1. Promptly the Latona blew her whistle at 12 M., the first day of June for her landing below the falls. There was Ira with his son Fay, the grays and the spring wagon; and ashore went four happy beings, my wife, Billy, myself, and last but not least happy, Mike, my red Irish. By the way, the last-mentioned individual is particularly fond of these fishing trips. He has more leisure time to devote to rabbits and such on these trips than when hunting canvasbacks.

Ira was fairly luminous with joy and Fay's 6x8 grin prognosticated plenty of worms and information. The tents, cooking utensils, rods and other luggage were soon loaded and everything was ready for the start, but Ira thought that "the woman" and Fay had better mind the team a minute while we went up street, as he wanted to see a man before going out. Of course, we found the "man" (that same old man) at the usual place, and, although we all took modest drinks Ira's cheerfulness was not in the least diminished.

Away we went, everybody happy. Ira, however, now and then cast reproachful glances at the tents and cooking utensils, for undoubtedly he had counted on entertaining us as his guests. A better man never lived than generous, plain-spoken Ira Moody, but my plans for the trip did not include any soft beds with shingles over them.

The sun was low down in the west when the grays stopped in front of the rude but neat house on the Molalla. I wanted to go on to the mouth of Canyon Creek and pitch our camp that night, but I felt that the suggestion of such an idea would be an insult to Ira and his family. I think my wife suspected me, for catching my eye, she frowned ominously. That settled it, and we gladly stopped. Billy of course was highly pleased with the decision. Of all men I ever knew none likes a hot supper and feather bed better than Billy. However, he is an admirable man in camp—a regular fuss and feathers, who would rather cook, carry water, cut wood, smoke his pipe and tell yarns than fish. I do not wish to be understood as speaking disparagingly of his qualifications as an angler, for he can catch trout when he wants to, but he dearly loves camp. Everybody was happy. The horses were glad to get home, for it had been a long, tedious trip; even Mike and Ira's "bar" dog after the customary sniffs and snarls became chums and doubled teams on the diggers and pine squirrels.

After supper, while the women were chatting over their tea and Billy and Ira were swapping whoppers, Fay and I strayed out into the yard. You see I was trying to stand in with the boy, and I am glad to say that he and I were soon fast friends. Standing there we could look right up into the Cascade Mountains: on and up "where Nature's heart beats strong amid the hills," all somber and gloomy in the shade of the seemingly endless primeval forests, now softly wrapping themselves in their night robes of fog lifted up from the lovely valley of the Molalla.

"Nature with folded hands seemed there,
Kneeling at her evening prayer."

Fay pointed out the course of Cañon Creek, which seemed almost to drop down from between two mountain peaks away off to the east. Eight miles above us Cañon Creek emptied into Milk Creek, which empties into the Molalla, which empties into Pudding River, which empties into the Willamette, which empties into the great Columbia, and on to the sea.

I had known Ira for many years, and of course we had a great deal to talk about that night. He was in his glory, and so it was not surprising that my wife found it necessary to intimate that we were keeping the good people up very late. I glanced at the old clock on the wall, which was significantly pointing at the XI mark. Ira, speaking one word for us and two for himself, suggested that it was too early for city folks to go to bed; but, notwithstanding the fact that we were cutting short one of Ira's best stories, we retired.

"To sleep! perchance to dream—"

No, not a bit of it. That poetical lullaby does not fit our case.

A flea is about the smallest but most active agent His Satanic Majesty has on earth. Webster defines an imp to be a puny devil. Eureka! For size, appetite and general cussedness I will back the Oregon flea against any other representative of his tribe on earth. On the Molalla they are all full grown and have attained the thirty-second degree. They are as big as kernels of wheat, striped like Bengal tigers, omnivorous and omnipresent.

Eastern people will not believe this until they visit this country. Then they will probably conclude that a judgment has been visited upon them for their disbelief. At Portland it is proverbial that even at church you can always distinguish the Eastern lady from the native. While the Eastern lady will twist and wriggle in agony, her face suffused with blushes of confusion, her Oregon sister will coolly moisten her finger and go for Mr. Flea as unconcernedly as if it was part of the service.

The flea is the plague of this country, which without his impish would be altogether too blissful for mortals.

With glassy eyes and haggard faces we were up early, accidentally kicking over a few stools and other furniture to bring our friends to an awakening sense of the fact that it was time to get up. Of course they thought that visions of trout had hurried us out of bed. But it wasn't—it was fleas. I cannot understand how a human being with a skin less thick than that of a rhinoceros can sleep not only soundly but sweetly with these puny devils chewing at him and running hurdle races over his anatomy.

I have lived in this country many years and yet must admit that one full grown healthy flea will keep me awake all night; and when the second night comes and "exhausted nature seeks repose," if he crawls under me, lies on his back and applies teeth and toe-nails simultaneously, he will land me flea-footed in the middle of the floor. I learned, long since, that a box of flea powder is as much a necessity on a trip into the country, either summer or winter, as hat and boots.

S. H. GREENE.

PORTLAND, OREGON.

WORLD'S FAIR FISHES.

IN our issue of Nov. 5 was published a synopsis of the exhibit now in course of preparation by the U. S. Fish Commission for the World's Columbian Exposition. It is our intention to keep FOREST AND STREAM readers advised of the progress made in carrying out the details of this most comprehensive display, and to call their attention more particularly to some of the rare and curious fishes which will form an attractive part of the exhibit. In the article referred to mention was made of the opah and the escolar—two remarkable fishes recently obtained on La Hava Bank by Gloucester fishermen. As these were the first examples of the kind taken in waters adjacent to our east coast, as far as we know, they are proper subjects of a popular description.

THE ESCOLAR (*Ruvettus pretiosus*).

This large and showy fish is related to the mackerels, which it resembles in shape. The escolar is found occasionally in the Mediterranean, at the Canary Islands and Madeira, and in the West Indies. The name here adopted for the fish is Portuguese, and is thought to have been derived from the Spanish *asscolar*, which means to scour or burnish, in allusion either to the extreme sand-paper-like roughness of the skin or the active laxative properties of the oil secreted by the bones of this species. Lowe applies the name *scourfish* to the escolar, and older writers use for it the designation *ruveto*.

At the Canaries the escolar arrives during winter in great schools, and is caught with hooks in a depth of 100 fathoms. In Madeira it is recorded by Lowe as a common and well known species, which is never long absent from the markets. It is caught, however, only in deep water, far from the shore, in fine weather, at depths varying from 300 to 420 fathoms. Here its associates are the cherna (*Polyprius cernium*) and the coelho (*Præmetheus atlanticus*), fishes which live habitually near the bottom. According to Poey the escolar is rarely seen at Havana. It may be caught, however, on dark nights in depths of 300 fathoms. The fishing occurs in September and lasts until the middle of October, when fishing for sailfish (*Tetrapturus*) has closed and before the arrival of the red snapper (*Lutjanus blackfordi*). Poey says it is seen at the surface of the water enveloped in a luminous mass which surrounds its body.

In the Mediterranean the escolar reaches the weight of 40 lbs., at Madeira Lowe heard of individuals weighing

THE OPAH (*Lampris guttatus*). Length about 4 ft.

30 lbs., Poey believed it to grow to the weight of 100 lbs. and the larger individual obtained by the U. S. Fish Commission was upward of 6 ft. long and must have approximated 100 lbs. in weight.

At Malta the fish is highly esteemed for food; at the Canaries its flesh is considered a great delicacy. At Madeira Lowe described its qualities in the following terms:

"The flesh when cooked is delicately white and flaky, but soft and insipid; and both before and after it is dressed abounds, as if it had been steeped, in a pure limpid oil, which is not, however, at all rank or strong in taste. On this account, and from the unsightly color of its skin and general coarseness, it is but rarely seen at English tables, and, eaten incautiously, it is moreover said to cause speedy diarrhoea. It may, however, cer-

MASSACHUSETTS ASSOCIATION.

THE regular monthly meeting of the association was held at Young's Hotel, Boston, Thursday evening Dec. 10. Vice-President Edward E. Hardy in the chair and fifty members being present.

Eleven applications for membership were presented and referred to the committee on membership. The following were elected members: Roland C. Nickerson (life), Chas. H. Andrews, Edw. J. Andrews, G. W. Cramp-ton, Wm. L. Davis, G. W. M. Guild, Geo. H. Perry, Robt. W. Sise, L. F. Whitney, Ithamar Howe, Eugene A. Loomis, Chas. H. Curtis, Wm. A. Morris, Wm. E. Litch-field, Jabez B. Fellows, Chas. H. Eastman, Frank P. Black, Wm. Thos. Warren and W. P. Harris.

Mr. H. H. Kimball, chairman of the nominating committee appointed to present a list of candidates for officers for 1892, made the following report: That the nominating committee had unanimously tendered the nomination for president to President Edw. A. Samuels, but that he had declined a renomination.

The following ticket was then presented and accepted to be voted on at the annual meeting in January: For President, Hon. Geo. W. Wiggins; Vice-Presidents, Edw. A. Samuels, Augustus Hemenway, Edw. E. Hardy, Ivers W. Adams, Hon. James F. Dwinell, Dr. John T. Stetson and Horace T. Rockwell; Treasurer, Andrew J. Lloyd; Secretary, Richard O. Harding; Librarian, John Fottler, Jr.; Executive Committee: H. H. Kimball, Chas. G. Gibson, John N. Roberts, Dr. M. A. Morris, C. J. H. Woodbury, Dr. W. G. Kendall, Dr. Heber Bishop, W. F. Keith, Wm. C. Thairwall, Rollin Jones, Wm. B. Smart and Fred. R. Shattuck. Membership Committee: Edw. T. Barker, Arthur W. Robinson and Walter C. Prescott. Fund Committee: Benj. C. Clark, Edward Brooks and Dr. W. A. Power.

Mr. Ivers W. Adams, chairman of the committee on

DOG SHOWS.

Dec. 30 to Jan. 2.—Gloversville, N. Y. F. B. Zimmer, Sec'y.

1892.

Jan. 5 to 8.—Albany, N. Y. W. C. House, Fort Plain, N. Y., Sec'y.
Jan. 5 to 9.—Charleston, S. C. Benj. McInnis, Sec'y.
Jan. 13 to 16.—Columbia, S. C. F. F. Capers, Greenville, Sec'y.
Jan. 21 to 25.—Elmira, N. Y. C. A. Rowman, Sec'y.
Feb. 9 to 12.—Chicago, Ill. John L. Lincoln, Jr., Sec'y.
Feb. 16 to 19.—Jackson, Mich. Chas. H. Ruhl, Sec'y.
Feb. 23 to 26.—New York. James Mortimer, Supt.
March 1 to 4.—Philadelphia, Pa. F. S. Brown, Sec'y.
March 8 to 11.—Washington, D. C. F. S. Webster, 733 B'way, N. Y.
March 15 to 18.—Pittsburgh, Pa. W. E. Littell, Sec'y.
April 7 to 10.—Boston, Mass. E. H. Moore, Sec'y.
April 20 to 23.—Los Angeles, Cal. C. A. Sumner, Sec'y.
May 4 to 7.—San Francisco, Cal. H. L. Miller, Sec'y.

FIELD TRIALS.

1892.

Jan. 11-12.—Bexar Field Trials, San Antonio, Texas.
Jan. 18.—Pacific Field Trials, Bakerville, Cal.
—Southern Field Trials, New Albany, Miss.

THE CENTRAL FIELD TRIALS.

THESE trials were brought to a close on Saturday last, and must be chronicled a success. The club was seriously handicapped by the absence of Mr. Churchill, whose inability to attend should have been made known to

THE ESCOLAR (*Ruvettus pretiosus*). NEARLY ONE-FIFTH NATURAL SIZE.

perfectly well-known and regular annual visitor to that island, and to be found in the market in its proper season.

This fish attains to the length of about 4 ft. and its depth is nearly two-thirds of its length. The specimen taken by Capt. Lee weighed upward of 100 lbs. The young has not been recorded; only adults or individuals nearly full grown have been obtained.

Although the jaws of the mature opah are toothless the stomach has proved to contain cuttlefish, crustaceans and remains of fish. Iceland fishermen claim that trout are pursued by this species. The bait used in fishing for it at Madeira is a whole fish (cavalla or chicharro), and the favorite depths of 50 to 100 fathoms are found not far off shore. The season is in spring in the early tunny fishing. It is probable that the opah comes near the island for spawning, as Lowe records a female, about 3 ft. in length, full of roe on March 30.

The flesh is partly red, like beef, and partly white; it is said to look well when boiled, but is somewhat dry and insipid, resembling that of the dolphin (*Coryphæna hippuritis*). At one time it was so highly esteemed in Madeira that every opah taken was carried to the governor of the island, and could not be sold without his license.

This is one of the most beautiful of the Atlantic fishes, having attracted the admiration of even the dull Portuguese fishermen, whose name for it (*peixe cravo*) signifies "the pink of beauty." As Lowe had the opportunity to examine a number of fresh specimens, and described their colors with great fidelity, we cannot do better than quote from his description:

"The colors are truly splendid. When quite fresh and uninjured the whole body appears covered with a rich brocade of silver and rose or lilac, formed by the scales, reflecting on the middle of the sides golden tints; but pure silver and rose-lilac on the back, silver and more rose than lilac on the belly. The whole sides, cheeks and opercles are spotted with round and oval pale or silvery whitish spots, shining through the scales; becoming toward the throat and sides of the breast or belly irregular and confluent, forming wavy mosaic marks or bands. The raised sides of the groove embracing the base of the dorsal and anal fins, and the rows of imbricated scales running up between the rays of the caudal fin, are bright pure silver. The head, opercles and back reflect bright iridescent ultramarine tints. * * * The naked keel of the breast and throat is dark rose color mottled with brownish black. The naked muzzle before the eyes, the lips and lower jaw are rich vermilion. The upper lip and top of the muzzle are tinged with olive brown; the lower lip and jaw beneath blend into white. The tongue is white, tinged with vermilion. The ends of the maxillaries are silvery. Their iris is clouded with gold and vermilion on a silver ground; the pupil is a bluish black. The edges of the orbits are dusky brownish.

"The fins are of the brightest vermilion, as if varnished with red sealing-wax; a little paler and transparent toward the edges."

T. H. B.

Books make good holiday gifts, and give more pleasure in proportion to the money expended than anything else. If you want a good book on shooting, fishing, natural history, or any other subject connected with outdoor life, consult the list of the Sportsman's Library in this paper, or better still, send for FOREST AND STREAM's free illustrated catalogue of works on outdoor sports.

arranging for the annual dinner, reported that it was to be held at Hotel Brunswick, Boston, Thursday evening, Dec. 17, at 6:30 o'clock; that the committee had secured a number of distinguished speakers and that the '91 dinner promises to be a grand success.

Messrs. Chas. F. Munroe, Wm. Howe Mills and Geo. B. Appleton were appointed as a committee to audit the treasurer's accounts and report at the annual meeting.

Mr. Ivers W. Adams moved that the association employ an officer whose duties in part shall be to investigate complaints of violations of the fish and game laws of this Commonwealth, to obtain evidence leading to convictions, to confer with officials of the State when advisable and assist in any other work the Board of Management may desire. Compensation to be determined by the Board, one-half of expense to be paid by voluntary contribution.

After discussion it was referred to the Board of Management.

RICHARD O. HARDING, Sec'y.

CITY SEWAGE AND BASS.—Chicago, Ill., Dec. 12.—I have noticed some discussion over the effect of the Chicago sewage on the fish of the Des Plaines and Illinois rivers. This sewage empties into the Des Plaines River and runs down that stream, which empties into the Illinois River opposite the Kankakee River. Discoloration of the water below this point is noticeable, but fish are taken even in the low water of the summer, at Marseilles and points above Marseilles and below the mouth of the Des Plaines. At Willow Springs, on the Des Plaines River, some of the best big-mouth bass fishing around Chicago was had this summer. Mr. J. M. Clark and others, of this city, will certify to this. In the high water of the spring there is no question in the world that bass run up the Illinois River, the Kankakee River, and even the Des Plaines River. Still better proof of this than the summer fishing is the vast number of game fish netted this very spring, illegally, under the Riverside dam on the Des Plaines River, which has no fishway. The talk of Mr. E. S. Waters, of Holyoke, Mass., as to the uselessness of fishways on these streams because of the sewage, is altogether ill-founded. I would rather have anything against me than just plain facts. These are them.—E. HOUGH.

CHICAGO FLY-FISHING CLUB.—Chicago, Ill., Dec. 9.—A movement is on foot among a few of the rather few Chicago fly-fishers to organize a club for practice and for the development of the sport in this region. A meeting is called for Wednesday evening next week. After a year or so of work, a tournament will probably be held. This prettiest branch of angling has been quite too much neglected here.—E. HOUGH.

TO DENVER VIA BURLINGTON ROUTE.—Only one night on the road. Leave Chicago at 1 P. M. or St. Louis at 8:25 A. M., and arrive Denver 8:15 P. M. the next day. Through sleepers, chair cars and dining cars. All railroads from the East connect with these trains and with similar trains via Burlington route to Denver, leaving Chicago at 5:45 P. M., St. Louis at 8:15 P. M., and Peoria at 8:30 P. M. and 7:50 P. M. All trains daily. Additional express trains, making as quick time as those of any other road, from Chicago, St. Louis and Peoria to St. Paul, Minneapolis, Council Bluffs, Omaha, Cheyenne, Blue Hills, Atchison, Kansas City, Houston and all points West, Northwest and Southwest.—Adv.

THE VELVET TRAIN of the Monon Route between Chicago and Cincinnati offers the best and most luxurious service obtainable between these points.—Adv.

the club before the meeting commenced, so that they could have made other arrangements. We have in previous issues stated all the news connected with the meeting, so that there is little more to be said. The visitors and handlers present were well pleased with the way Mrs. March, of the March House, looked after our creature comforts, providing a generous table and comfortable quarters to the best of her ability, and her charges were not exorbitant.

LEXINGTON, N. C., Tuesday, Dec. 8.—After the bleak, raw weather of yesterday the genial sun and mild temperature of to-day was very grateful to those condemned to sit in the saddle all the time with no greater excitement to keep us warm than points and backs. There were only two more braces to run off in the

ALL-AGE POINTER STAKE.

First Series.

BARKER'S GROUSE—GROUSEDALE were cast off at 8:41 in the open sedge field near the village. Barker's Grouse (Mainspring—Swain's Fly), handled by S. C. Bradley, and Grouse (Underwriter—Trix), handled by John Lewis. Soon after, Grouse found a bevy in sedge and Barker's Grouse went in front and flushed. He redeemed himself in part by afterward pointing a bevy, in cover, which flushed wild. His next move was to nail a single of these birds. Bradley shot and missed, dogs steady. Several opportunities to find singles were not taken advantage of and both should have been spotted out. Grouse was, however, the best of the two in range and bird work, but was not near his proper form. They were called up at 9:35. Grouse raged round handler most of the time and pattered to some extent.

MAID OF KENT—FRANK W.—This heat livened us up a little. Maid of Kent (King of Kent—Hops) was handled by C. E. Buckle and Frank W. (Duke of Vernon—Royal Cute) by John Lewis. They were cast off at 9:38 in sedge. Nothing was done for some time, and then Frank was the first to find and pointed a bevy in good style in the open; Maid honored the point, Lewis fired and Frank retrieved the wounded bird very well. Then Maid pointed and was backed by Frank; no result. Maid roared and then pointed a single, Buckle fired and missed. On out of cover and we traversed considerable likely ground before Maid pointed false, Frank backed. At edge of dwarf pines Maid pointed, roared, but nothing found. Frank backed. Afterward at edge of woods Maid stopped to a good point on a bevy. Buckle fired, missed, dog steady. In cover soon after Maid stepped up a single, and knowing she had no excuse to offer, meekly dropped and turned to Buckle with a look of "Yes, I know, but get it over quick." Buckle gave her a tap or two and on she went again. Frank then pointed in the open, drew on and roared to a bevy, side of woods, which flushed wild. Then dogs were ordered up at 10:26, and this finished the first series.

Second Series.

After a little consultation the judges called for DUKE OF HESSON—WILD DAMON.—They were cast off in sedge and ragweed at 10:35. Soon after, Wild Damon pointed a bevy which Buckle flushed, dog steady. To one side Duke pointed too, but nothing more was found. Following the bevy, no work was done on them. After this Wild Damon came up with a bevy in the open. Buckle flushed, fired and killed, dog retrieved in good style, following the scattered birds into pines. In cover, Wild Damon found a single which flushed wild. Then Duke dropped to a point, then roared, footscent probably. Going out of cover, Wild Damon pointed another bevy and Duke honored him, when birds flushed wild. Going into cover after them, Wild Damon drew up suddenly and Duke backed, but the former was mistaken. Dogs ordered up at 11:11. The work done in heat was much in Wild Damon's favor; ranged well and showed good sense and nose.

BARKER'S GROUSE—ROCK II.—Why the former was called

up on the work he had done is not discernible, and he still further hurt his previous good reputation by poor work in this heat. The only work done in the few minutes' run was a point by Rock II., and Bradley flushed the bevy, dog steady. Bradley killed and Rock retrieved nicely. Up at 11:27.

MAID OF KENT—FRANK W., were then called out again. Maid pointed a bevy, to which Frank backed. Buckle flushed the birds and dogs were steady. Following the birds into cover to the woods where Frank dropped to a single, which flushed wild; and dogs were called up at 11:55, and judges, after consulting, decided that Duke of Hessen, Maid of Kent, Wild Damon and Frank W. should fight the battle out after lunch. It was certainly apparent that Rock II. had done equally as good work as any of those named and better than one, Duke of Hessen; and Nick of Naso, who had put up a better race than Duke in the first series, should also have had another look in, though of course Duke had a little the best in pace and range in that heat, Nick found the birds, and that is what we are after generally. Plenty of time was taken for lunch, the sun was warm and it was no use hurrying with only two heats to run.

DUKE OF HESSEN—MAID OF KENT.—Starting off in open sedge field at 1:23, dogs were soon separated, Duke being lost, and then when found we waited for Judge Wallace, who was looking for him. Then Duke pointed his first bevy. White fired at the flush, killed, and Duke retrieved in good style. Maid had honored the point with style. Down in woods to the left Maid then pointed a bevy. Then dogs were separated again, Duke being lost. Found, some time after Maid pointed another bevy, which Duke honored, and Buckle firing, killed, and Maid retrieved very nicely. This closed the heat at 2:23.

WILD DAMON—FRANK W.—They were put down in corn-patch at 2:23. After going 20m, without finding game they were held up and a move made along the road to fresh fields and pastures new. Soon after being put down again, in cotton patch and at edge of woods, Wild Damon pointed a bevy, which Buckle flushed, dogs steady. Then Frank W. pointed by a fence, but nothing came of it. Dogs then ranged for a long time; birds seemed scarce, and we were all getting out of patience, when Frank W. nailed a bevy in the open; Wild Damon backed well, and Lewis fired and killed, and Frank retrieved in good shape. Dogs were immediately called up, and judges soon decided that the prizes should be awarded, Maid of Kent first, Duke of Hessen second, and Frank W. third. In this decision there were two dogs, whose work had fully entitled them to consideration in the stake money, left out in the cold, and popular opinion placed Wild Damon first, Rock II. or Frank W. second, and Maid of Kent third.

WEDNESDAY.

The All-Age Stake—Absolute Winner.

PAUL BO—MAID OF KENT.—This morning was admirably suited for an early start and had we begun proceedings at 7:30 A.M. we might have run two heats in the four-hour race as well as the absolute winner heat in the All-Age Stake. As it was we did not commence till almost 10 o'clock, having ridden about four miles to the Hargreaves farm. The above brace was cast off at 9:56 in the open fields. The English setter Paul Bo was handled by Frank Richards and the pointer Maid of Kent was handled by C. E. Buckle. Both ranged off well and Paul Bo was the first to find, pointing a bevy, which when flushed Richards shot and killed and, as usual, Paul refused to back. As rules in this meeting call for retrieving it is a matter for surprise that Paul has not had his education made complete by being taught this simple adjunct. However, it is not unlikely that, following the example of the Eastern Field Trials Club, the rule requiring retrieving will soon become a dead letter. It is a mere matter of education and has little to do with a dog's natural field qualities. To resume the work of the heat, the scattered birds were followed into woods, when both dogs ranging out of sight they were found on points and both behaved well to wing. Still on the track of these birds, in bottom land at edge of woods, Paul pointed twice on singles. Then we passed into open country to look for another bevy. It was not long before Paul's good nose spotted the whereabouts of another bevy, at which Richards shot and missed. Maid was not near to back. Then dogs were called up at 12:28. The heat in nearly every particular was in favor of Paul Bo in range, pace and intelligent beating out of ground and in handling his game. The heat was awarded to Paul Bo.

SUMMARY.

Richard Merrill's English setter Paul Bo (Paul Gladstone—Bohemian Girl) against Charlotteville Kennels' Maid of Kent (King of Kent—Hops).

Paul Bo declared absolute winner of All-Age Stake and \$250.

An intermission of about two hours then ensued, till the lunch baskets arrived, which time the Hawkeye and Kodak friends used to good advantage. No time was wasted over lunch, and the first brace in the

FREE-FOR-ALL STAKE, First Series.

RIP RAP—COUNT ERIC. were cast off at 12:05 in ragweed near the farmhouse. Rip Rap, the pointer, by King of Kent—Hops, was in charge of that veteran handler Capt. McMurdo. Count Eric, the English setter, by Count Noble—Fannie W., was handled by S. C. Bradley. The dog may have been somewhat handicapped at first by a strange handler, his regular handler, N. B. Nesbitt, being compelled by his indisposition to give up the task and leave for home. In our opinion, however, the dog ran a better race than he has yet shown at the trials. Mr. Bradley seemingly being able to get more work out of him than he has previously shown. Almost at the start Rip Rap found a bevy of four or five birds and was steady to flush. Then he pointed several yards further on, but there was no result. In woods Rip Rap pointed another bevy, Count backed, McMurdo fired and missed. Roading out of woods Rip Rap pointed. Then he pointed again, footscent very likely. At this time Count was hunting off by himself as usual. In some sedge, just out of woods, Rip pointed a bevy and was steady to wing. Then the other dog was found higher up. It was not very long before Rip Rap nailed two birds by a plum thicket, McMurdo put them up, fired, but missed. Higher up in sedge Rip Rap got another one which McMurdo killed and dog retrieved very well. At 12:46 the dogs were brought together again, Count having been lost. He was, as usual, paying little heed to his handler, but soon improved in this under Bradley's careful management. Rip Rap was running an excellent race, never getting too far from the gun, but still hunting with good range and intelligence. The difference in style was very noticeable, Rip running in his usual snappy, high-headed manner, but Count looks more like a lost dog with drooping stern as he gets along over the fields at a slouching, but fast gait. After traveling about half an hour, Rip Rap found another bevy at edge of woods and Count honored the point; McMurdo missed the birds and Rap was steadier than the other dog, who moved forward a little. Following these birds Rap found a single, and Count pointed but nothing found. Down by the railroad Rap found a single, Count backing, and bird flushed wild, after waiting for the dogs to be "photoed." Now it was Count's turn to get a bevy and Rap honored in his stylish manner and dogs were steady to the flush; Bradley fired and wounded bird, and while Count was finding, the bird flew in front of Rap, who made a grab for it and took the consequences meekly. Of these birds Rap got a single, Count backing. Then Count pointed false twice, Rap backing the last one from the front with style. The atti-

tudes this pointer strikes in the field fill both the artist and the sportsman with admiration and one forgets his rather plain head when viewing his fine quivering frame. After this McMurdo walked up a bevy that Count had been pointing; Bradley fired and killed, but bird was not retrieved, as Count was not near to see it shot. Following them into thick cover Rap stiffened out to another point. Count backed well and McMurdo put up these birds, both dogs being steady. Then Rap just stopped as a single flushed wild. Just out of this cover, in ragweed, Count pointed, but nothing found. Here Count was hunting well and was under good control. He soon nailed a bevy near the woods. Rap honored his point stylishly, and Bradley firing, killed and the Count retrieved nicely. Count followed this up at edge of woods with another point to his credit, Rap backing and Count moving as a single rose to one side. Then he nailed another bird, which Bradley killed, but the bird fell too far away. This was at 2:20 and both dogs were going strong, and we realized that this was going to be a banner heat if they kept it up. Count's next work was to find a bevy; Bradley killed and Count made a good retrieve. Outside of oaks Count nailed a fine bevy and was held for Rap to back; then Bradley flushed, but missed the birds; both dogs steady. At edge of pines Count followed this up by getting another bevy, but there was no kill. Ranging into swamp, in bottoms, Rap pointed a bevy which McMurdo put up, and dog was steady to wing. Count was ranging off to one side. About a hundred yards further on Count pointed a single, and then Rap nailed another one, Count backing him, and dogs were steady to the flush. Count was not to be denied, however, and getting into corn stubble he scented another bevy, which Bradley flushed. Then Rap in same place made a no-game point, footscent probably. By some woods Count did the same, but roading on, at edge of woods he caught up with the birds and pointed; below him Rap nailed a single, which flushed wild. Both dogs roaded further into woods, and soon Rap dropped to a single, McMurdo fired and missed, dog behaving nicely. Down in some corn stubble Rap came up with another bevy, stiffened out as usual, and McMurdo shooting, missed, but a crippled bird in the bevy tried to rise at the same time as the others and dropped within a foot of Rap's nose, but he behaved admirably, not moving till ordered, when he at once picked the flutterer up and retrieved. Down in a ditch Rap pointed, drew on, pointed again, but McMurdo could find nothing; dog roaded and at last in sedge came up with the bird, McMurdo killed and Rap retrieved nicely. Moving across some sedge fields Rap pointed in a thick briar patch and a single flushed wild, dog steady. Dogs now separated, Count going off to the right. Meanwhile Rap pointed unsteadily in pines and roaded on, nothing found. Rap was still going well, but Count had slowed down to a walk and was a very tired dog. In sedge just before the finish he pointed fur. Dogs were called up at 4:05, Rap still going strong. Considering the excellent record Count Eric had made on birds in this heat he had every one's sympathy during the last half hour, as he was a very plucky dog, answering his handler's motions when he could hardly put one leg ahead of the other. On bird work he was the best, but Rip Rap had the speed and endurance and was given the heat. This was a splendid heat, the dogs finding fifteen bevy with the consequent singles. Obedience was also in Rip Rap's favor, though to Mr. Bradley's credit be it said, he handled a strange dog in a masterly manner, getting the good work out of him that we knew was in him.

THURSDAY.

MAID OF KENT—CHANCE.—The air this morning was frosty and nipping, and the hoar frost lay thick on leaves and the blades of the sedge grass, but the warm sun soon evaporated all this and as the day wore on it was quite warm. This brace was put down near the town at 8:11. Maid of Kent, the pointer (King of Kent—Hops), was handled by C. E. Buckle, and Chance, the English setter (Roderigo—Bo Peep), was handled by his part owner J. M. Avert. They both went off well and kept up a good range, but it was nearly an hour before game was found, when at the edge of pines Chance flushed a bevy and was soon lost to view. Searchers scattered in all directions to find him, and Avert fired twice to attract the dog's attention, which had the desired effect. Meanwhile Maid of Kent had been keeping to the course and ranging on through corn stubble. Then Chance was brought up and at once went off into pines, when he pointed false near the outside. Going through sedge field Maid retrieved a dead rabbit in most approved style, and she must have thought her handler had a queer way of expressing his thanks when the whip tingled her hide. At 9:49, at the edge of pines, Maid just stopped on or flushed, could not see which, a bevy, the bitch dropped to wing. Then she was held up for Chance, and following the singles, when Chance dropped to a point and Maid backed, but nothing found. Some yards further Maid pointed a single, and to the left Chance also nailed a bird, which Avert killed and dog retrieved. Then Maid pointed, drew on and nailed one under a tree. Dogs separated again and Chance while away pointed false twice. Lower down in woods Maid pointed a bevy and Chance was brought round to back, when Buckle killed, and Maid retrieved fairly well. Following these birds Maid secured one, Chance honoring her point; Maid was steady at the flush but Chance was not; Buckle killed and Maid retrieved well. Then an uncertain point for Maid and the bird flushed wild, Chance also pointing directly after near same place, with no apparent result. In woods near the main road Chance went off on another of his explorations, and Avert had to mount and go after him, the dog was eventually found by the guides and brought up to business again. Chance then soon found a bevy and Maid showed lots of style when she honored the point; Avert shot and missed, dogs steady. Following the scattered birds toward cover, both dogs got singles before getting to the woods, and Chance also nailed another just before entering. At the edge, Maid secured two more points on the singles. About half an hour after, Maid pointed a bevy, Buckle killed and the bitch retrieved just fairly from cover. Chance, meanwhile, under no control, hunting some distance off to the right, and Maid was held up for him to follow the birds. Edge of cover Maid pointed twice, on singles each time. On and into corn patch Chance pointed false, backed by Maid. After awhile he pointed again in a clump of firs without result. Both dogs were now, at 11:25, hunting pretty close to the guns, but still going strong. In sedge, Maid's action denoted game, and roading she finally drew to a point at the edge of a wheat patch, and Buckle flushing, shot and wounded the bird which Maid did not retrieve. These birds were not followed. Then Chance pointed false in ragweed, and at 11:55 he began to slow down in his gait, and nothing more was done in the way of game finding. At 12:11, Maid still going the freshest of the two, they were called up and the heat awarded to Maid of Kent. Both dogs had plenty of hunt in them at the finish. Maid showed good intelligent range, a keen nose, and was better on her birds. She always hunted well to the gun, which cannot be said of Chance till the freshness was worked out of him. The decision was entirely approved.

After lunch the two setters

PAUL BO—KING OF KENT. were cast off at 12:45. Paul Bo (Paul Gladstone—Bohemian Girl), winner of the All-Age Setter Stake, was handled by Frank Richards and King's Mark (King's Noble—Belle Belton) was under the care of S. C. Bradley this time. Both ranged out well and King's Mark was the first to point and was held on it some time for Paul Bo to back, when he moved on alongside the woods, but nothing found. Lower down he pointed false and Paul

dropped to the back. Down in bottoms, in cover, Paul pointed false, then pointed again by the side of woods and was held for King's Mark, and judges, going on in front for King's Mark, flushed several birds and Paul moved on. King's Mark further up pointed and Paul crossed him right in front without backing. No game found. After ranging out different lots of ground Paul pointed in swamp, Mark backed, but nothing again and this was getting monotonous. Down in a hollow in swamp King's Mark pointed a single and Paul backed. Bradley shot and missed. In the open, in corn stubble, King's Mark dropped to a point and Bradley firing at a single that flushed wild, the balance of bevy rose, a bird was killed and Mark retrieved nicely. Lower down Mark sat down to another point. Paul backing across him. No birds found. Here at 2:40 Paul began to slow a bit, but it seems near the start he had fallen into a deep hole of water and, unable to get up the sides, had nearly exhausted himself when his handler found him and hauled him out of his chilly quarters. Then Paul ran right into a bevy, which flushed into woods, the dog stopping to wing. Paul then pointed and roaded on without locating anything. Higher up King's Mark nailed the bevy almost at the same time, and Bradley killed the dog retrieving. Then Paul came up to his bird in swampy cover, others flushing all round after, so his former point was on game after all. In a patch of grass in corn higher up, King's Mark pointed, roaded on, pointed again, but failed to locate. At 3:15, both getting down to a walk for a while, King's Mark going at a snail's pace nailed a bevy, which flushed wild. Then he thought he had had enough of it and came to heel. At 3:30 he quit, with a look at his handler as much as to say, "If you want to hunt any more with that crowd you can, but I'm through." It is not that he gets tired out, but he sulks, and as he is rather wise in his generation, he knows when he has had enough of it and no coaxing can move him on after. He did the same with Barker last year. Take him out alone he goes hopping around for several hours when required. Down in bottom Paul dropped to a point and birds flushed wild further on; then he dropped to a point, roaded on, and a single got up as he was passing to the left of it, and he should have done closer work. Out in the open Paul seemed to get his second wind and was going fairly well when called up at 4:45, and of course was awarded the heat. There was not much game found, and neither dog showed winning form for a four-hour race.

FRIDAY.

Second Series.

The morning was again a lovely one, perhaps a trifle too warm toward the middle of the day, and uncomfortable for the dogs but pleasant for the spectators. We were getting things down to a focus now, and to all intents and purposes it looked as if this heat would find a winner for the final.

RIP RAP—ANTONIO. were cast off at 8:17 about three miles from town. Antonio had run his bye on Tuesday afternoon with one of the stewards, and Rip Rap had not run since Wednesday. Both started well, and near the start in pines Antonio pointed uncertainly several times, then drew on, but Rip Rap was the first to find the game and pointed. By a fence afterwards Antonio pointed false and was backed by Rip Rap. Antonio was then lost for some time by the bridge, and Rip Rap hunted on the course to Hargreaves' farm. At 9 o'clock Antonio was brought up after half a dozen people had been looking for him. Soon after the judges separated again owing to Antonio's lack of control, and after ten minutes ranging on his own account he came in. Then working to the right Antonio pointed false, but was hunting at random and not to the prescribed course. Down in sedge in open ground Rip Rap got a good point on a bevy, McMurdo fired and missed. Birds were followed and in cover Rap got two singles; McMurdo killed and Rap retrieved well. Antonio then pointed by the water just below and then pointed false again. Above this swamp Rap pointed, roaded on but failed to just locate it, and bird flushed to one side afterwards. In open further on, Antonio pointed a bevy which flushed as Avert came up. After the scattered birds, and to Antonio's point two got up wild, then he got another and Rap pointed, Antonio backed but nothing raised, Antonio rushing in before point was left. Then Antonio made an uncertain point. In sedge in the open Antonio pointed, and roading on uncertainly at last nailed some birds which flushed wild, dog steady; Avert fired and missed. Both dogs then pointed singles. In fence bottom Rap nailed a single stylishly and after pointed false, Antonio backing. Then Antonio side of pines in sedge flushed a bevy, and lower down made a point but nothing found. Going toward some woods Rap scored again, getting a bevy, and Antonio honored stylishly. A false point, then a point on a single followed for Antonio. Rap afterwards scored well on a bevy which flushed wild while we waited for Antonio to back. In sedge to the right the latter pointed false. Dogs then brought together and sent off in sedge, when Antonio came to a point, then left it. Antonio was still ranging the fastest, but Rip Rap was also going a good steady gait. Then Antonio by a ditch pointed a bevy, and Rap backed well; Avert fired and missed. A point on birds by a spinney then followed for Antonio, well backed by Rip Rap. Then he nailed a single down in swamp, backed by Rap from the hilltop, and near the railroad he flushed another, and was working well to the gun now. Meanwhile down in the same swamp Rap had pointed twice on singles. Then by the railroad Antonio found a bevy, Rap backed well, and dogs were steady to Avert's shot. This Antonio followed up with another bevy on the hilltop at edge of woods. In woods after the singles, Antonio pointed, roaded on, pointed again, and a single was flushed. Avert missed, as usual. There were no birds killed over this dog. Rap ranging out of woods, came up with a bevy; McMurdo fired and missed. By the side of the woods Antonio nailed a single; Avert fired and missed. In open ag-in and Rap pointed a wounded bird; sent after it, chased and bounced on it and retrieved to the Captain, Antonio backing with style some distance away. Dogs called up at 12:17, Antonio showing the best disposition to hunt, Rip Rap loading a little, but still had a gallop in him, speed at finish about equal. Antonio won the heat.

The next heat should have been between Paul Bo and Maid of Kent, but Paul's previous heat the day before had not agreed with him and he was withdrawn, owing to sickness, by consent of judges. Maid of Kent then ran a bye with one of the stewards, and the company took plenty of time for lunch and rode leisurely home.

SATURDAY.

Final Heat.

ANTONIO—MAID OF KENT.—To give the pointer a little more rest, as she had run later than Antonio, the judges went out for a little amusement, and had some pretty sport, the rendezvous being the Grimes place at 12:45. When luncheon was over, the dogs were cast off at that time just near the farm buildings in ragweed. Five minutes after Maid nailed a bevy, Buckle killed and Maid retrieved in good style; Antonio at this time being off in the woods to the left. Previous to starting the judges announced that only the guides and judges and handlers should hunt for lost dogs, and this was right, as it is not fair to the dog which is keeping well to the course for others, including Mr. Avert's kennelman, to mount and hunt for Antonio, who is the principal offender in this sort of thing. To resume my tale, following the scattered birds Maid found singles. Higher up, in sedge, divided from the judges' view by a row of small trees, a bevy was seen to rise in the air, and one of the judges galloping ahead found Maid there, and she was cred-

THE ALBANY DECISION.

FOLLOWING we give the full text of the decision of the Supreme Court of this State in *Geo. B. Gallup vs. August Belmont et al.* This case, owing to the bearing it had on other suits which would have been brought against the A. K. C., assumes an importance that cannot be overestimated. Owing to the decision and opinion, which we give below, these suits have now been abandoned, and the question as to whether a club can legally publish the names of its disqualified members is definitely settled in the affirmative:

SUPREME COURT—GENERAL TERM, THIRD DEPARTMENT.

LEARNED, P. J., and LANDON, J. SARATOGA, September, 1891.
 GEORGE B. GALLUP, Respondent,
 against
 AUGUST BELMONT, et al., Appellants.
 Lowrey, Stone & Auerbach (Grosvenor P. Lowrey, of Counsel) for appellants.
 Parker & Fiero (J. Newton Fiero, of Counsel) for respondents.

OPINION.

LEARNED, P. J.:
 The complaint charges that the defendants, excepting Rogers, were the authors of the insertion of the names of the publishers of the *American Kennel Gazette*; and that Rogers was the printer of that newspaper; that the plaintiff was a member of the Albany Kennel Club, and that said club in March, 1889, held a bench show and awarded prizes; that in February, 1890, the defendants published concerning plaintiff a certain libel, which is set forth at length.

A second count, after stating the same preliminary matter, alleges the publication in the same paper, subsequently, of a certain other libel, also set forth at length.

The defendants demurred to the complaint as not stating facts sufficient to constitute a case of action. The demurrer was overruled at Special Term, and the defendants appealed.

The meaning of the words cannot be extended by innuendo beyond their natural import, aided by reference to the extrinsic facts, which may be connected. *Woodruff vs. Bradstreet Co.*, 118 N. Y. 217.

The allegations in the complaint preliminary to the alleged libel are useful to explain its meaning. But the question whether the publication is libelous must be judged by the publication itself.

This is not a case where the publications were made in regard to the plaintiff in connection with his business, as the plaintiff alleges that he is a librarian of the Young Men's Association for Mutual Improvement in Albany, and that he holds many private trusts. But this publication has no connection with this office of librarian. Even neglect to pay prizes awarded at a dog show would not affect one's competency to perform the duties of that office. Nor do these private trusts constitute any trade or occupation as to which the publications were made. *Moore vs. Brown*, 121 N. Y. 109. *Sanderson vs. Caldwell*, 45 N. Y. 17.

The question must be, then, whether these publications held the plaintiff up to scorn or ridicule, or disgraced or degraded him in the eyes of men, or tended to do this. *Bergeman vs. Jones*, 91 N. Y. 51. *Moffatt vs. Cauldwell*, 3 Hun, 26. *Cooper vs. Greeley*, 1 Denio, 347.

The words are not ambiguous, nor do they permit of more than one interpretation. *Lewis vs. Chapman*, 16 N. Y. 308. *Hunt vs. Bennett*, 19 N. Y. 173.

The plaintiff claims that the words published tend to degrade him. The defendants say that they have no such tendency.

The first publication purports, from its language, to be the report of some committee of the American Kennel Club, and the action of the Executive Committee thereon. It states that the Advisory Committee in September, 1889, ordered the suspension of the Albany Kennel Club for non-payment of its prizes awarded in March, 1889; that thirty days had expired, and no official notice of such payment had reached the office; that President Belmont had suspended all officers of said club, under Rule 28, and that notice to that effect had been sent to certain officers of that club, naming them, among them the plaintiff. Thereupon the publication states that the secretary was instructed by the Executive Committee to notify these persons, naming them (including the plaintiff), "that they are disqualified until the awards given by that club are paid in full."

Now it is to be observed that there is no statement of any wrongful act on the part of the person thus disqualified. It is only stated that a club of which they were officers had neglected to pay the prizes which they had awarded. And that no official inquiry had been subsequently received by the Executive Committee. Neither of these persons is described as treasurer, and neither of them is stated to have neglected any duty. It would seem that if any kennel club does not pay its prizes, then the American Kennel Club disqualifies the officers. Or, rather, to state the matter more carefully, if the American Kennel Club is not officially notified of such payment, then it votes such disqualification. So that the only charges against these officers are that they neglected the American Kennel Club officially of the payment of those prizes.

The effect of such disqualification is not set forth. What these officers are disqualified from doing is not told to the public in the alleged libel. The question here is not as to the actual effect of the vote of the committee, but relates to the effect on the public of the publication, as to the character of the plaintiff. There is nothing disgraceful in being thus disqualified. A failure to pay prizes is a pecuniary obligation of the persons named, viz., the plaintiff, C. Hudson, Amasa J. Parker and Robert C. Pruyn. If these prizes were pecuniary obligations of these persons, there would have been no hesitation as to their payment. To publish that a judgment has been recovered against the plaintiff was held not to be libelous in *Woodruff vs. Bradstreet*, *ut supra*. Still less then would it be libelous on this plaintiff to state that the association had not paid a debt of which association this plaintiff was officer. It is not charged that the non-payment was the plaintiff's fault. We may infer that in the organization of the American Kennel Club it is the rule that its privileges shall not be enjoyed by officers of any other club which has not paid its prizes. But this rule and action under it impute no fraud or dishonesty of these officers in being thus disqualified. A failure to pay prizes is not reasonable might prevent the club from paying. And neither the rule nor the action of the American Kennel Club makes a charge of dishonesty, it cannot be that a publication of such action gives publicity to any such charge.

Nor can such a charge be inferred from the mere statement that for such non-payment by the association the plaintiff was disqualified. Even if this was the case, which it is not, the plaintiff is not deprived of the privilege of the American Kennel Club, there is nothing disgraceful in that statement. Unless it were known what the qualifications were for the enjoyment of such privilege, it would not be disgraceful not to possess them.

It would seem that prior to Dec. 19, 1889, the officers of this Albany Kennel Club had possessed these privileges, whatever they may have been, and that they believed that they had lost them because the club (not they themselves) had not paid its awards. If it had been published that this non-payment was owing to dishonesty or negligence of these officers, another question would have arisen. But nothing of that kind appears. Nor does the publication mean, as alleged in the complaint, that the plaintiff cheated and defrauded the exhibitors at the bench show. On the contrary, there is nothing in the publication which implies that the officers owed these prizes, or that the non-payment was caused by them.

The second count charges the publication of a list of persons headed "Disqualified," and containing the plaintiff's name, followed by an explanation that no person under sentence of disqualification can exhibit or take a prize, or act as agent for any person at any show held by a member of the American Kennel Club. In this as in the former count we must take the words for what they fairly mean. They are not equivocal. The meaning of "Disqualified" is here explained. It is that for some reason the American Kennel Club refuses to these persons the privilege of exhibiting, etc., at any show held by one of its members. The plaintiff avers that this publication set forth in the second count was intended to deprive him of the prizes which he had won, and that the Albany Kennel Club did not pay its awards, and that the members thereof defrauded the exhibitors. Nothing is stated in that publication as to the Albany Kennel Club or its exhibition. The article merely gives a list of the disqualified persons, and explains what such persons may not do. It does not state the cause of disqualification, so that if there is any injurious effect in the publication, it is in that statement that these persons may not do certain things. Can it then tend to disgrace a person

to publish that he is not allowed to exhibit or take a prize at a bench show held by a member of the American Kennel Club? Is the exhibition at a bench show of this club such a very moral act that to be excluded is disgraceful or disreputable? We think not. If it were a matter of public knowledge that to exhibit or take prizes at such a show required the possession of high intellectual, moral or social qualities, then the publication of a statement that one was disqualified might be considered a statement that he did not possess these qualities, and therefore "one calculated to injure his character."

The article is undoubtedly, as plaintiff claims, a statement that he, not the Albany Kennel Club, is deprived of a privilege of exhibiting. But this is no injurious statement. Construing the language according to the principle laid down in *Cooper vs. Greeley*, it imputes no wrongdoing to the plaintiff. And there is not the ambiguity in the language which leaves it open for the jury to give a construction to it.

We are of the opinion that the interlocutory judgment overruling the demurrer should be reversed, and that defendants should have judgment on the demurrer, with costs.

I concur. J. S. L.

AMERICAN KENNEL CLUB MEETING.

THE quarterly meeting of the American Kennel Club was held Dec. 10 at their offices, at 44 Broadway, New York city. It was one of the best attended meetings the club has yet held, drawn together no doubt owing to the many important matters that had to be considered and passed upon by the executive committee.

There were fifteen delegates present, not including Mr. Belmont, who was in the chair.

The amendments proposed by Dr. H. T. Foote, under Art. XIV. of the constitution were adopted with some slight changes as follows:

Rule XII. A dog suffering from (eczema) mange or any contagious (or objectionable) disease shall be disqualified, and forfeit any prize which may have been awarded to it, and shall be removed at once from the show building. The regularly appointed veterinary shall alone decide as to the condition of the dog, and his decision must be given in writing.

Rule XVII. Bench show committees may provide (such classes for dogs of established breeds as they choose).

1. The Miscellaneous class shall comprise all dogs for which no regular class has been provided in the Premium Lists. Entries in this class must specify the breed of the exhibit, and it must be so published in the Catalogue.

2. The Selling Class shall be for dogs to be sold for a maximum price, to be stated in the Premium List. An exhibitor may catalogue his dog in this class for any sum less than the maximum.

3. The Novice Class shall be for a breed for which a regular class has been provided, and for competition in which a dog shall not have won a prize in an open class at any American Kennel Club show, or which has not won (such) a prize in a recognized show held in England or Canada.

4. The Puppy Class shall be for dogs over six months and under twelve months of age.

5. The Open Class shall be for dogs of any age, which have not already qualified for the Challenge Class, and for which no Challenge Class has been provided.

6. The Challenge Class shall be for all dogs having won four first prizes in the open classes. A dog having won three first prizes in this class (one of which shall have been won at a show having not less than 500 entries) shall have the privilege of the title of champion, without further competition.

Rule XXI. Special prizes shall only be offered for dogs of established breeds, and no dog eligible for special prizes can be withdrawn from competition, unless it has been stated on entry blanks, "Will not compete for special prizes."

Rule XXXIII. (Additional Rule.) No show shall extend over four days, including the last day of receiving and the first day of liberating the exhibits.

NOTE.—All clauses in italics are the added amendments.

After this the question of the New Jersey Kennel Club was taken up. No one appeared for them. Mr. Richards read the charges formulated by the advisory committee against the N. J. K. C., which were as follows: The undersigned, individually, and as the advisory committee of the American Kennel Club, do hereby charge the New Jersey Kennel Club, one of the members of the American Kennel Club, with conduct prejudicial to the welfare of the association, and do charge that the membership of said New Jersey Kennel Club, and the continuation of such membership is prejudicial to the welfare of the American Kennel Club.

SPECIFICATIONS.

Specification 1. That whereas the executive committee of the American Kennel Club did at its first regular quarterly meeting, held on Sept. 25, 1890, impose a sentence of disqualification upon one Charles J. Peshall upon charges theretofore made against said Peshall, due notice of which sentence of disqualification was given to all the members of said American Kennel Club, the said New Jersey Kennel Club did thereafter, on or about the 15th day of May, 1891, elect and appoint said Peshall to the office of President of said New Jersey Kennel Club.

Specification 2. That whereas the executive committee of the American Kennel Club did at its regular quarterly meeting, held on Sept. 25, 1890, impose a sentence of disqualification upon one Charles J. Peshall, upon charges theretofore made against said Peshall, due notice of which sentence of disqualification was given to all the members of said American Kennel Club, the said New Jersey Kennel Club did thereafter, on or about the 15th day of May, 1891, elect said Peshall as the delegate and representative of said New Jersey Kennel Club in the American Kennel Club.

Specification 3. That whereas after the said election and appointment of the said Peshall as delegate and representative of said New Jersey Kennel Club in the American Kennel Club, to wit, on or about May 25, 1891, said Peshall presented his credentials as such delegate and representative at the regular quarterly meeting of the executive committee of the American Kennel Club held upon said day, and said executive committee declined to receive said Peshall as the delegate of the New Jersey Kennel Club, and rejected his credentials, the said New Jersey Kennel Club did again re-elect and reappoint the said Peshall as the delegate and representative of said New Jersey Kennel Club in the American Kennel Club.

Specification 4. That the said conduct of the New Jersey Kennel Club, set forth in specification 1, and the said conduct of said New Jersey Kennel Club, set forth in specification 3, is in each instance, and in all said instances conduct amounting to a refusal to recognize the sentence of disqualification imposed by the American Kennel Club upon said Charles J. Peshall, and conduct amounting to a refusal upon the part of said New Jersey Kennel Club to abide by the action of the American Kennel Club in imposing such penalty, and conduct subversive of the authority of the American Kennel Club in the performance of the functions for which it was organized, and therefore hostile to American kennel interests which said American Kennel Club was formed to promote and protect.

Dated New York, Nov. 9, 1891.

 AUGUST BELMONT,
 JAMES L. ANTHONY,
 THOS. H. TERRY.

The charges had been served by messenger on Mr. Geo. Wilms, secretary of the N. J. K. C., but no notice was taken of them. In accordance with a motion passed at the last meeting it was then moved and seconded that the New Jersey Club be expelled. A vote was then taken, which resulted in the expulsion of the New Jersey Club by a practically unanimous vote, Max Wenzel and A. B. Blossom de-

ited with a flush. She was standing wagging her tail when first seen. At 1:05 Antonio was lost and Maid went on alone by the railroad. Antonio was brought up again at 1:20. During this time Antonio had found a single and made two false points. Maid found another bevy and two different singles, and Antonio pointed false, and ranging to one side pointed again uncertainly; nothing found. Maid was now hunting with good sense and alone. Maid, by cover, stopped as a bevy flushed down wind, and in woods she pointed two singles of these. Buckle fired, killed and Maid retrieved nicely. Buckle is evidently a good shot, too good at times for the best interests of his dog, as in retrieving the bird the bitch lost time once or twice which Antonio placed to his advantage by meanwhile finding a single or two. Antonio, after a false point, was again lost to view at 2:03, Maid working out the ground nicely and with good range. At 2:30 Antonio came up with the procession again, Aven following on horseback; the dog had found a single while away. At 2:40 Antonio off again. Aven mounted to look for him, and the dog was seen to cross our path soon after going like a steam engine straight for some woods to the right, where Aven was put on his trail, and at 2:55 the dog was secured after finding a bevy in the woods. Down in a spinney Antonio then found a single, which flushed wild. Antonio then pointed in ragweed, but left the point as Aven came up. Then Maid, backed by Antonio, made a no-point, and by the ditch Antonio found some birds, which flushed wild, and followed this up by a point on a single; pointed again without decision, bird getting up to one side. Further on each got singles, and Buckle killed that to his dog and Maid retrieved. After this Antonio nailed a bird in plum thicket. Antonio afterward made game and roamed into a bevy. Aven fired and missed, and the dog going on pointed, foot-scent probably. In sedge further on he pointed false, but down in a hollow he secured one bird. Maid now pointed fur. At 4:30 Antonio dawdled a bit, Maid ranging out well and showing little signs of fatigue. In sedge Antonio then pointed uncertainly, roamed, pointed again, but nothing found he showing little interest in his work. At 4:35 Maid slipped her handler, going back on the track and was not found till close of heat, when not far behind, one of the guides came up with her while she was pointing stiff and had been for some time evidently, what turned out to be a rabbit, dogs had then been called up, as it was 4:45. Then the judges went off to consult and had a long confab before riding toward the crowd, when to the astonishment of a good many it was announced that Antonio had won the Free For All Stake of \$1,000. Judge Tracy also announced that they were unable to decide between the two dogs on the work done in this heat and were compelled to draw their reasons from the previous work done in the stake. This was hardly fair to Maid of Kent, as this race was not run under the spotting system, the judges having distinctly stated in answer to the question that it was a heat race. Besides, to judge the two dogs on this basis the judges should have also seen the two dogs run in their byes, which they did not do. The decision was hardly consistent and Antonio was again a lucky dog, for he was beaten on birds and his numerous false points, to say nothing of his lack of control till he tired down, should have materially affected his chances; added to this his not retrieving a bird during the heat or stake, while Maid retrieved all shot over her. This brought the meeting to a close, and shows conclusively the need of a third judge, for the lack of which the other two were necessarily handicapped. Messrs. Tracy and Wallace worked hard and conscientiously to arrive at the decisions and were always attentive to the work of the dogs throughout the meeting, and both are very capable men.

Summary, First Series.

Charlotteville Kennels' pointer Rip Rap beat Edward Gray's English setter Count Eric.

Charlotteville Kennels' pointer Maid of Kent beat J. M. Aven and Bayard Thayer's English setter Chance.

Richard Merrill's English setter Paul Bo beat B. Ridgway and P. S. Brown's English setter King's Mark.

J. M. Aven and N. T. Harris's English setter Antonio a bye.

Second Series.

Antonio beat Rip Rap.
 Maid of Kent a bye. Paul Bo withdrawn.

Final.

Antonio beat Maid of Kent and won the prize, \$1,000.

PHILADELPHIA KENNEL CLUB FIELD TRIALS.

DEATONSVILLE, Va., Tuesday A. M. (Special to *Forest and Stream*).—The attendance at the trials this year is very light. Several members, including Messrs. D. C. Connell, F. G. Taylor and F. S. Brown, are detained at home by sickness. Among those present are Col. B. Ridgway, J. H. Winslow, Dr. Glass, J. C. Mitchell, L. Smith, S. C. Bradley, Chas. Barker, John White, Major Taylor, J. F. Johnson, Chas. Heath, W. A. Coster, Col. Merriam and J. O'H. Denny. The Members' Stake closed with only five entries, drawn to run as follows: Lena with King's Mark, Sport with Ben Hur, Joe Lewis a bye. The opening day is favorable for good work.

THE ALBANY SHOW.

Editor Forest and Stream:

The New York and New England Poultry and Kennel Club has perfected arrangements for holding its first show at Albany, N. Y., Jan. 5 to 8, 1892, under A. K. C. rules, and from the way entries are pouring in it promises to be a "rouser." A number of well known kennels have made entries for nearly all their dogs.

The prizes are large, \$10 to first and \$5 to second, and \$10 for kennels of four best specimens, besides a long list of cash specials on nearly every breed. No Yankee notions, etc., but the cold cash, and as they have a large guarantee fund, exhibitors will be sure of their money.

The dogs will be benched with new clean benches and everything will be done for the comfort of the dogs. That noted judge, Jas. Mortimer, will pass judgment on the quality of the stock shown, and C. E. Rockenstyre, known far and near as "Rocky," will superintend the dogs, and T. Gordon Lillico, a noted veterinarian from England, will care for the health of the stock.

The show will be held in the mammoth Lark street Rink (Academy of Music), which is well lighted by electricity by night, is well ventilated and heated, and all notable events take place here. The club is composed of progressive breeders, and nothing will be left undone for the comfort of exhibitors. The hotels and railroads will give reduced rates during the show. Send for prize lists, etc., to me.

C. E. ROCKENSTYRE, Press Com.

ALBANY, N. Y., Dec. 12.

PLAN FOR A BEAGLE KENNEL.—Eliott City, Md.—*Editor Forest and Stream:* Would your kennel editor or some reader kindly give in your columns a short description and a working plan of a kennel to accommodate twelve beagles, part of them puppies, and three setters? It is understood that an acre of ground will be given for the buildings and inclosure, and the dogs to be kept confined to this inclosure except when hunting or out for exercise. The owner desires to breed beagles for sale and his own use, and desires to be as economical as possible in point of expense of building. By giving such plans a great favor would be conferred upon myself and possibly others, who, like myself, possess little or no mechanical skill.—SAMUEL J. FORT.

clining to vote. The vote stood 11 in favor of expulsion and 2 blank.

The following clubs were elected to membership: The Freeport Poultry and Pet Stock Association, of Freeport, Ill.; the New England Field Trial Club, of Boston, and the Bexar Field Trial Club, of San Antonio, Texas. Resignations were received from the following clubs: The Philadelphia Kennel Club, St. Paul and Minnesota Kennel Club, and the Toledo Kennel Club.

ROCKFORD DOG SHOW.

THE dog show held by the Northern Illinois Poultry and Pet Stock Association at Rockford, Ill., must be set down a success. The quality of dogs present was decidedly better than former years, though the number of dogs did not show much increase. The only hitch was in the matter of delay in judging, the judge unfortunately being also the superintendent, a state of things by which the best interests of dog shows are not subserved. The delay in getting out a catalogue was also detrimental to the interests of the club. It is a praiseworthy matter when a club gets out a marked catalogue, but exhibitors would rather have just the plain catalogue if they have to wait till near the close of the show for the marked one, as was the case in this instance.

Mr. Tim Donoghue made his debut in the ring as a judge, though he is well known to all as an oldtime exhibitor, and his cheerful temperament has put life into many a show gathering. He judged pointers, setters, foxhounds and beagles, while Mr. Harry L. Goodman, the superintendent, took all the other classes. The judging gave good satisfaction. Ben Lewis has got together another good string of dogs, and I hope he can keep up his winning gait right through till the flowers bloom again, and the same applies to Mr. Naylor.

The dogs were fed on Spratts biscuits, and the disinfectant used was Sanitas powder. The old style wooden benches were used. Most of the winners are well known, so a detailed criticism need not be given. The following is the prize list:

MASTIFFS, OPEN—Dogs: 1st, Chas. E. Bunn's Ormonde; 2d and very high com., Colin C. McLain's Cyrus and Sraosha. **Bitches:** 1st and 2d, Chas. E. Bunn's Mattella and Sianola. Very high com., reserve, Colin C. McLain's Armali. Very high com., Chas. E. Bunn's Lady Cobey. **Puppies:** 1st and 2d, Colin C. McLain's Sraosha and Armali.

GREAT DANES, OPEN—Dogs: 1st, Imperial Kennels' Imperator; 2d, Jos. Zulligan's Grover Cleveland. **Bitches:** 1st, Geo. W. Clayton's Minca; 2d, F. S. Anderson's Columbian Daphne. Very high com., F. S. Anderson's Columbian Flora and Jas. A. Lawrence's Trene II.

ST. BERNARDS, ROUGH-COATED—OPEN—Dogs: 1st, W. C. Hickox's Fernwood Bruce; 2d, Dr. John W. Dunlop's Othello. Very high com., reserve, Whitewater Kennels' Royalty. Very high com., Whitewater Kennels' Gen. Bedivere and F. A. Anderson's Knight. **Bitches:** 1st and 2d, Fernwood Kennels' I. O. and Plodwin. Very high com., Whitewater Kennels' Clara. **Puppies:** 1st, J. E. Wright's Tot.

ST. BERNARDS, SMOOTH-COATED—CHALLENGE—1st, Fernwood Kennels' Lord Hector. **OPEN—Dogs:** 1st, South Bend Kennels' Sir Eldred. **Bitches:** 1st, Capital City Kennels' Nell II.

BLOODHOUNDS, 1st, R. G. H. Huntington's Jack Shepherd.

GREYHOUNDS, 1st, F. S. Anderson's Kentucky Blue.

FOXHOUNDS, Dogs: 2d, Derwent Bros.'s Radical. **Bitches:** 2d, Derwent Bros.'s Passion.

POINTERS—Dogs: 1st, J. H. Winslow's Inspiration; 2d, J. G. Earle's Chief Amo. **Bitches:** 2d, G. F. Rohr's Bird.

ENGLISH SETTERS, CHALLENGE—1st, P. H. Gotzian's Monk of Furness. **OPEN—Dogs:** 1st, H. Northwood's Benzine. **Bitches:** 1st, Dr. J. A. Hartman's Albert's Nellie; 2d, A. J. Kiofand's Paxia Maid. Very high com., P. H. Gotzian's Minnesota. **Puppies:** 1st, T. E. Taylor's Buster Billings.

IRISH SETTERS, CHALLENGE—1st and 2d, Oak Grove Kennels' Kildare and Seminoles. **OPEN—Dogs:** 1st, Oak Grove Kennels' Kildare Glenmore; 2d, Seminoles Kennels' Lord Elcho. **Bitches:** 1st, Dr. Wesley Mills's Elfreda; 2d, Seminoles Kennels' Bessie Glencho II.

GORDON SETTERS, CHALLENGE—1st, Dr. Samuel G. Dixon's Duchess Waverly. **OPEN—Dogs:** 1st, E. Lewis's Asp. **Bitches:** 1st, Dr. Samuel G. Dixon's Countess Richmond.

FIELD SPANIELS, CHALLENGE—1st, B. F. Lewis's Black Diamond. **OPEN—Dogs:** 1st, T. E. Taylor's Newton Abbot Porro; 2d, Mrs. A. P. Smith's Arko. **Bitches:** 1st, Ancient and Modern Spaniel Kennels' What Not.

COCKER SPANIELS, CHALLENGE—Bitches: 1st, Ancient and Modern Spaniel Kennels' I Say. **OPEN—Dogs:** 1st, J. P. Wiley's Jersey Obor; 2d, Ancient and Modern Spaniel Kennels' Gothamite. **Bitches:** 1st, Ancient and Modern Spaniel Kennels' Lady Obor; 2d, J. P. Wiley's Black Duchess. **Puppies:** 1st, Ancient and Modern Spaniel Kennels' Woodland Pete.

COLLIES, ROUGH—CHALLENGE—Dogs: 1st, Seminoles Kennels' champion Roslyn Dandy. **Bitches:** 1st, Seminoles Kennels' Metchy Surprise. **OPEN—Dogs:** 1st, Seminoles Kennels' Rowdy; 2d, John Hawkes's Walter Scott III. Very high com. and reserve, S. J. Black's Wooley. Very high com., H. R. Smith's Griefenstein. High com., E. A. Rogers's Banker. **Bitches:** 1st, John Hawkes's Grange Nellie; 2d, Seminoles Kennels' Dot. Very high com., H. R. Smith's Pine Grove Queen and Pine Grove Maid. High com., E. A. Rogers's Nellie, S. J. Black's Perty and Lili. Com., H. R. Smith's Willis. **Puppies:** 1st, Seminoles Kennels' Scotia IV.

BULLDOGS, CHALLENGE—1st, E. A. Woodward's Bo'swain. **OPEN—Bitches:** 1st, E. A. Woodward's Duchess of Parma.

BULL-TERRIERS, CHALLENGE—1st, Wm. J. Bryson's Duff-aria. **OPEN—Dogs:** 1st, W. Clayton's Chautauqua Sam. **Bitches:** 1st, Geo. W. Clayton's White Gipsey. **Puppies:** 1st and 2d, Geo. W. Clayton's Chautauqua Tam and Chautauqua Bird.

DACHSHUNDE, CHALLENGE—1st, B. F. Lewis's Gill. **OPEN—1st and 2d,** Wm. Locffer's Lina K. and Hundesport Bergman.

POODLES, Bitches: 1st, Mrs. W. P. Woodard's Pera.

BEAGLES, OPEN—Dogs: 1st, Wm. H. Child's Tony Weller. **Bitches:** 1st, Middleton Kennels' June Rose; 2d, Wm. H. Child's Oak View Juliet. Very high com., Rudolph Engleman's Sadie and R. C. Rinearson's Dottie K. and Bettie R.

SMOOTH FOX-TERRIERS, OPEN—Dogs: 1st, R. E. Fishbourn's Glendon Spark; 2d, Harry Northwood's Painter. **Bitches:** 1st, Anglo-American Terrier Kennels' Venus; 2d, G. R. Halden's Auburn Beauty.

WIRE-HAIRED FOX-TERRIERS, 1st, Anglo-American Terrier Kennels' Barton Stung.

IRISH TERRIERS, 1st, H. O'Connor's Galtees; 2d, Anglo-American Terrier Kennels' Ballymoony.

SCOTCH TERRIERS, 1st, W. P. Frazer's Grey.

DANDIE DUMMOT TERRIERS, 1st, H. J. Linzen's Border Clunker II.

SKYE TERRIERS, 1st, Clifford A. Shinn's Sir Stafford.

BLACK AND TAN TERRIERS, 1st, Anglo-American Terrier Kennels' Prince Raglan.

PUGS—CHALLENGE—Dogs: 1st, M. H. Cryer's Bob Ivy. **Bitches:** 1st, Howard Kennels' sateen. **OPEN—Dogs:** 1st, Howard Kennels' Penrice; 2d, Mrs. M. M. Ballantine's Curtis. Very high com. reserve, Seminoles Kennels' Kash, Jr. Very high com., Geo. H. McLain's Bobbie Mae and Eberhart Pug Kennels' Seven Dollars. **Bitches:** 1st, Eberhart Pug Kennels' Mable K.; 2d, Howard Kennels' Lady Clover. Very high com. reserve, Geo. H. McLain's Peggie Gillivan. Very high com., M. H. Cryer's Cribbage. High com., Seminoles Kennels' Little Duchess. **PUPPIES—Dogs:** 1st, Howard Kennels' Penrice Boy. **Bitches:** 1st, Eberhart Pug Kennels' Peggy Pryde; 2d, Seminoles Kennels' Little Duchess.

SPECIALS.

Best kennel Irish setters, Oak Grove Kennels; best kennel collies, Seminoles Kennels; best kennel Gordon setters, Dr. S. G. Dixon; best kennel mastiffs, C. E. Bunn; best kennel spaniels, Ancient and Modern Spaniel Kennels; best kennel St. Bernards, Fernwood Kennels; best kennel pugs, Howard Kennels; best kennel of any other breed, C. C. McLain's mastiffs; best dog in the show, Inspiration; best litter of puppies, H. R. Smith's collies; best poodle, Pera; best pug bitch in open class, Mable K.; largest exhibit of dogs, Seminoles Kennels; best English setter, Monk of Furness; best pointer, Inspiration; best Irish setter bitch, Elfreda; best setter dog, Kildare; best St. Bernard, Fernwood Bruce; best pug in open classes, Penrice; best fox-terrier, Glendon Spark; best collie, Roslyn Dandy.

DOG CHAT.

WE are very much interested in the call that Mr. Millais makes, on behalf of Dr. Romanes, for instances to either refute or prove the popularly accepted idea that a mesalliance will more or less mark the subsequent litters the bitch may have. There have been desultory proofs advanced on both sides the question, but we do not believe there has as yet been any decided movement to bring such a number of cases to light as will prove the theory one way or the other. From the questions on this subject that we receive from time to time we know that, should some definite conclusion be arrived at, it will ease the minds of many dog owners who, when such a *contradictum* occurs, are in a dilemma as to the right course to pursue, especially in the case of a valuable breeding bitch. Our own experience has been, happily, a very limited one in this respect, not enough to form a decided opinion one way or the other, and we shall follow the instances that may be published with much interest. We shall be pleased to publish the experiences of any of our readers who may be able to throw light on this dark subject, for it is one of vital importance to present and future breeders of dogs.

Among the new kennel advertisements this week we notice that Fairmead Kennels and A. M. Jaggard have great Dane pups for sale; Huddersfield Kennels, prick-eared Skye terriers; F. H. Perry, Irish setters; "Tilton Place," pointers and setters; Geo. Collingwood, broken English setter; M. A. Hanchett, Irish setters; 107 Bergen avenue, collie dog; Frank F. Dole, noted bulldogs; H. Blaisdell, beagle pups; W. H. Hyland, pointer bitch; G. W. Patterson, St. Bernards; P. H. Coombs, Yorkshire terrier pups. At stud: Gleucose Kennels' beagles and Frank F. Dole's bulldogs. We also draw attention to the coming sale of St. Bernards at the American Horse Exchange.

Our progressive contemporary the *Fanciers' Journal* has issued a Christmas number that is replete with good articles on dog and poultry subjects by well-known writers, which will afford a pleasant hour's reading to any one.

We were sorry to miss Mr. Frank Dole when he called the other day but we are glad to say he was not allowed to depart without leaving his little budget of news. He has imported for Mr. John E. Thayer the well-known fox terriers Miss Dollar and Brockenhurst Tyke. Both have won numerous prizes on the other side and will be welcome additions to the fox terrier company here. Mr. Thayer, we hear, is well pleased with them. Mr. Thayer has exported a deerhound bitch; note the ex carefully as we believe it about the first dog exported in a bona fide sale, at any rate of this breed. The bitch goes to Mr. W. X. Sellar of the Union Club, London. Mr. Dole himself has imported the bull terrier champion Sir Monty II., winner of about fifty prizes. There is likely to be keen competition in the bull terrier classes this coming year, and evidently friend Frank is not going to lose any of his well-earned laurels. For Mr. Manice, who already owns Windrush Riotor and Janet, he has imported the dachshund bitch Venus II., a big winner on the other side, among others having won a challenge cup and special for best in show and for best brood bitch. We are very pleased to see the attention that is being given to this hitherto neglected breed, for despite his rather awkward appearance there is no more merry or companionable dog than the dachshund.

If the death list of our principal dogs increases at the rate it is doing, kennel papers will have to publish an obituary column. It is really distressing to hear of the death of so many fine dogs as have taken place this year, by far the most unfortunate in this respect that this country has yet experienced. There have been rumors in the air for some time that the great Plinlimmon had gone the way of all flesh. But for some reason his owner deferred making the matter public. Owing to a direct inquiry to Mr. Moore we have obtained authentic information of his death. Mr. Moore writes:

In reply to your inquiry asking if Plinlimmon was dead or not I would say that he is. Your space has been occupied so much lately, making mention of different dogs that have died, I thought I would make no mention of this one.—F. H. Moore.

That we and all St. Bernard lovers condole with Mr. Moore in his loss goes without saying. No information is given as to the time or cause of his death, but no doubt the drain on his constitution from the several tumors he was relieved of by Dr. Glover, may have been the cause of his demise, and add to this the fact of his peculiar conditions of life while on the stage with his former master, "Fritz" Emmett, and his increasing years, the cause of his death is not far to seek.

We remember the last time we saw him, not long before his sale to Mr. Moore, he seemed, although apparently in full bloom as to condition, to have some difficulty in lying down on the stage, acting something like old champion Ohso used to do. Plinlimmon was whelped June 29, 1883, and was by Mr. W. M. Potheary's Pilgrim out of his breeder's, Mr. T. Hall, Bessie II., so it will be seen that the dog was getting well on in years. After Mr. Hall the Rev. Arthur Carter owned him, and he in turn, we believe, sold him to Mr. J. F. Smith, and he sold him to Mr. H. R. Chapman, who then sold him to Mr. Sydney W. Smith, and from the latter well-known St. Bernard man, "Fritz" Emmett, on the lookout for a canine sensation, purchased him for the then large price of \$5,000, and his departure from England with an almost practically unbeaten record, Prince Battenberg, we believe, being the only dog that loved his colors, was a matter of regret to all English St. Bernard breeders, who, however, quickly forgot their loss in the charms of the now great Sir Bedivere. Plinlimmon had won the St. Bernard challenge cup five times, a record unattained by any other dog. His winnings—well, it is needless to repeat them here, for does not the above record tell the story, suffice it to say his list comprises first and specials at the cream of the English shows. It has always been a matter of regret that he was not shown on the bench in this country, but his actor owner was obdurate on the point, not to say mercenary, and also carried his objection so far as to allow no stud service to any one, at least there is no public record of his doing so. Mr. Emmett imported him in 1888 and his record on the stage is known to every one who delighted in the performances of his noted master. Of course, such an animal as he was was necessarily extensively used in the stud on the other side, and he numbers many well-known prize winners among his progeny. Prince Regent, we believe, was the best of his get and Pliny, Scout, Young Plinlimmon, Refuge II., etc., are names that occur to us at the moment as celebrated sons of his. Again we say, Mr. Moore has our sincere sympathy.

In the loss of champion Ilford Chancellor Mr. James W. Whitney, proprietor of the Flour City Kennels, has lost a mastiff that he will find difficult to replace, though we are pleased to know that his young dog Cardinal Beaufort will be a worthy successor when he attains his "majority." Mr. Whitney is now tasting some of the bitter side of valuable dog keeping, and it is needless to say that we as well as the mastiff breeders will condole with him in his loss. When we visited his kennel recently we remarked that he never looked better and seemed as active as a kitten. Apoplexy, we are told, was the cause of his death. He died Dec. 9, Ilford Chancellor was whelped May 15, 1885, so must be said to have been far from an old dog. He was by the well-known champion Ilford Caution out of Brenda Secunda, by Turk out of Brenda. Turk, by Colonel out of Motive, and as his

name would imply, was bred by Mr. R. Cook, of England. His winnings in England number some twenty-five first prizes, and since he was imported by Mr. E. H. Moore in 1889, he has won about the same number here. He was purchased by Mr. Whitney in 1890 from Mr. Moore. Ilford Chancellor has been a success in the stud, his principal get being Ingleside Maximilian, that takes after his grandsire, and Crown Prince Maximilian. Mr. Whitney, in view of the death of this dog, was doubly fortunate in securing such a good young dog as the now head of the kennels, Cardinal Beaufort.

Mr. Mortimer writes us that Mr. Geo. Raper, the noted judge in England, will be one of the judges at the forthcoming New York show. This is a good selection and will be a benefit to many breeds, notably the terriers, greyhounds, etc.

About the Duke of Maplecroft, a dark horse in St. Bernard, the *Stock-Keeper* has a good deal to say and goes to the trouble of exploding very effectually the idea that he was to beat Sir Bedivere hands down, as was the report put about here when some of our moneyed St. Bernard breeders were advised to buy him. Mr. Ruppert cabled for his price and was told \$7,500 was the rock bottom figure, so he was left severely alone, and fortunately, as it turned out, for instead of setting the St. Bernard world on fire, he only won, under Mr. Betterton, second prize at the late Birmingham show. This is what Mr. Betterton says in his notes for the *Kennel Gazette*, which he gives *Stock-Keeper* the privilege of publishing: "Beautiful head, bitchy head, well marked, well shown, but thin. Legs, good bone, but alas, forelegs weak (and here follows a drawing of crooked legs), lacks squareness in muzzle, weak in hind legs. Beautiful tail, well carried." Mr. Betterton says he is a nice dog, of medium height only (his height is 31in.), and nothing behind this to make any fuss about. And this is the dog that would have been bought by New York parties had the price been anywhere near the \$5,000 mark. Verily the old proverb, "Look before you leap" is very applicable to St. Bernard buying just at present.

For lack of space this week English notes and many queries must go over till next week.

Mr. C. E. Buckle, of the Charlottesville Kennels, has gone down to Mississippi to locate a winter training ground for their young pointers.

Messrs. Geo. E. Gray and Frank Richards will locate this winter together somewhere in the Mississippi State to train their Derby dogs.

Mr. D. A. Upson did not keep the now celebrated pointer Promotion, winner of the Pointer Derby and absolute Derby winner at Central Field Trials and second Pointer Derby at U. S. Field Trials, very long. Col. B. Ridgway, of Philadelphia, Pa., purchased him last week. This well-known member of the P. K. C. must be congratulated on his purchase of a good dog.

The \$500 trophy that will be given at the New York show by Messrs. Reick, Ruppert and the W. K. C., for the best American-bred St. Bernard whelped after 1890, is now being made and will be a very fine work of art. Figures of Prince Regent, Scottish Prince and Princess Florence, the two latter his finest get, will be modeled in relief. The New York *Herald* is also donating 25 bronze medals for the best in different breeds at the New York show. The medals, we are told, will be very fine and well worth winning.

Dr. Foote has had a touch of distemper in his kennel, which now we are pleased to say is clear of it. But not before his Rochelle Otero had succumbed and one very promising dog pup. Otero was sold and only awaiting her visit to Broomfield Sultan.

The South Bend Kennels, of South Bend, Ind., are making strenuous efforts to come to the front in St. Bernard breeding, and have just bred their bitch Nymph to Sir Bedivere. Their Sir Eldred, we see, won out at Rockford, Ill., show the other day. They have two good pups by this dog Sir Eldred, one weighing 49lbs. at three months old.

Those who are wont to look upon the size of a dog as its most valuable requisite, will be delighted to hear that the proportions some dogs attain are not limited to those of the dogs we are familiar with at our shows—St. Bernards, for instance. When the editor of the *Stock-Keeper*, England, tells us that he has, through Mr. J. L. Wilson, the well known fancier, had the opportunity of seeing a dog that would make the largest St. Bernard look small, we should think the limit of appreciable size has been reached. This dog is a Thibet shepherd's dog, and resembles an enormous sheepdog, with frill, tail and rough coat of a yellow fawn color. He is said to be as gentle as he is big; and this would seem to be just the breed for some of those who are ever on the lookout for sensation, even in dogs.

If there is not much money in collie breeding in this country quite the opposite seems to be the case on the other side providing one has the proper stock in the kennel. We have several times lately made mention of large prices for puppies of this breed, and now a Mr. T. Powers has sold three Edgaston Marvel—Barwell Pearl pups to the well-known collie man, Mr. A. H. Megson, for \$1,000. The latter gentleman has also paid \$2,000 for the collie Southport Pilot, that beat the crack Sefton Hero. Mr. Megson also allowing the late owner five stud services of the dog. At the late King's Lynn (Eng.) show, held a fortnight since, the Prince and Princess of Wales exhibited thirteen dogs, winning several prizes. If this piece of information could only be disseminated among the "Doncherknos" of this city who pattern their ties by that of his Highness, the next W. K. C. show would be a crowded one.

NOTES AND NOTIONS.

THE broil about the pedigree of the pug dog Lord Clover is in a very unsatisfactory condition. Whether readers are "concerned" or not as to the facts about this, very many are certainly "interested," as the display of keen interest on Mr. Ballentine's part was certainly of a very interesting character. But be we ever so little concerned as to the subject matter of such a brilliant fight as this has been, we cannot avoid an interest growing up in our minds as to what the real truth is concerning a matter which has evolved such pyrotechnics, and there has been no real proof submitted on either side of the question. I am very far from advising that smouldering embers be rekindled, but it is not wise to drop any subject in such a half-chewed state (if you will pardon the inelegance of the simile), and Mr. Ballentine should produce the evidence of the English authorities he cites as indorsing the pedigree and Dr. Cryer show what foundation he has for his doubts.

I have just happened on a little Christmas book called "Fop and Mop," issued by *Home Words*, London, Eng., the canine illustrations of which strike me as superior to anything I have seen. The artist is one W. W. Lloyd, of whom I have never heard before, and he displays in a most marked degree the faculty of seizing the most characteristic features of dogs, a point most artists fail in. THE OSLUCKER.

MR. HACKE'S BARZOIS.

MR. PAUL HACKE'S large farm, located some two miles east and south of Greensburg, was the scene of an exciting and thrilling wolf hunt.

The idea of the chase grew out of the fact that Mr. Hacke's large family of Barzois or Russian wolfhounds are kept at his farm. Among others who had a curiosity to see how the Hacke kennel would perform in the presence of a wolf, was Dr. Grimes, who was largely instrumental in inducing Mr. Hacke to purchase the hounds. After some dickering two wolves were secured from the Schenley Park Zoo. They were of the prairie variety, and were shipped from the Far West last spring. Since that time the best at the command of Supt. McKnight was none too good for them, and they were in prime condition for a battle and a run.

A party of about fifty gentlemen watched this novel hunt with interest. A more delightful day could not have been selected.

The first performance, which was somewhat lacking in sportsmanlike qualities, was the trial of a party of seven young dogs that had never had an encounter with a wolf. The wolf was turned out in the inclosure of the kennel with little chance of escape. He seemed to regard it as a hopeless case and at once made a rush for an angle in the high and strong wire fence. The young hounds regarded him with a feeling of natural enmity, but with hair erect, eyes blazing and his fierce jaw set he held them at bay for some moments. Then the veteran Osniaday was brought out. As he bounded from the kennel he sniffed the air and in an instant he leaped across the yard, fairly brushed the younger dogs aside and began a life and death battle with his natural foe. Swift as an arrow from the bow, says the correspondent of the Pittsburgh Dispatch, his long white head and nose shot out toward the wolf. The next instant two long gleaming rows of merciless teeth sank into a death grip upon the wolf's throat and the struggle began. The young dogs now joined in the unequal battle and the victim was soon killed and left a torn and bleeding mass. The dogs did not escape, however, without punishment. One of them ventured too near the jaws of the wolf and the desperate animal took a farewell grip upon his nose, sinking his teeth clear through that member and leaving an ugly wound.

The second wolf was released in the middle of a 20-acre field, with fields on every side and a heavy wood stretching away in the distance. Although the odds were against the wolf, it still had some advantage in this particular, that it could dodge along the fences more readily than the dogs. The full pack of fourteen hounds were turned loose in pursuit, and then began a desperate run. The hounds did not have a chance to extend themselves freely, owing to the turns and smallness of the lot, and the wolf managed to out-foot them in the first mad chase around the field. Then the terrific pace began to tell upon the wolf, and with one grand leap he cleared the fence and made a wild dash for freedom down the straight road. The hounds followed in hot pursuit, fairly leaping and tumbling over each other in their eagerness to reach the victim. The wolf kept to the road until he could fairly feel the hot breath of his pursuers, when he gained a point by turning suddenly, clearing the fence, and leading the way across another great field. The whole pack, wolf and all, soon disappeared over a rise of ground, and when the spectators arrived the fragments of the wolf alone told how the chase had ended. No one saw what dog first reached the doomed animal, but the fact had been clearly established that the Barzoi hounds are certain death on the track of a wolf.

It is possible that during the winter another hunt will be given, in which the chances of the wolves will be made nearer even.

THE INFLUENCE OF A PREVIOUS SIRE.

Editor Forest and Stream:

Mr. Everett Millais writes to the *Fanciers' Gazette* that the distinguished investigator, Dr. G. J. Romanes, has undertaken an investigation of the notion that when a bitch has an alliance with a dog of another breed her subsequent offspring exhibit traces of the first alliance, and he asks that breeders will communicate with him what their experience has been as to this. May I not ask that American breeders will join in so excellent a work and will communicate, either direct to Everett Millais, Esq., 31 Grosvenor road, Westminster, to me, or to your journal? Mr. Millais rightly points out that owing to the lack of accurate information on this subject owners of a bitch which has suffered "a misfortune" are apt to deem her ruined for future breeding, and give away or dispose of for a song what might otherwise be a most valuable animal. Any who communicate incidents, either of bitches who have exhibited this influence in subsequent offspring, or of bitches that have contracted mongrel alliances with no harm following, need not hold back for fear that the knowledge may in any way inure to their detriment, for all they need to do is to express a wish that their names shall be withheld from publicity of any kind.

My own observation and experience has been so overwhelmingly against the influencing theory, except as occurring only in the most insignificant minority of cases, that I earnestly hope all the instances known will be collected, when I feel quite satisfied as to what the outcome will be.

W. WADE.

HULTON, Pa., Dec. 1.

NATIONAL BEAGLE CLUB MEETING.

BOSTON, Mass., Dec. 12.—A meeting of the National Beagle Club was called to order by O. W. Brooking at 8 P. M. Present F. W. Chapman, W. S. Clark, W. A. Power, H. V. Jamieson and O. W. Brooking. Voted that communication of F. McKee Thayer be placed on file. Voted to lay communication of Mascotah Kennel Club on table, and that the secretary correspond with said club for more information. Voted to correspond with the A.K.C. secretary relative to a 15th, class on bench. Voted to offer the following specials at New York show, February, 1892: Five dollars each for best dog and bitch entered by breeder, open to the world; \$5 each for best dog and bitch in show; club medal for best kennel of four owned and entered by one person or kennel, open to members only. Communication from H. F. Schellbass read, commented on and placed on file. Voted to postpone annual meeting until Jan. 9, 1892, at Young's Hotel. Voted to adjourn.

F. W. CHAPMAN.

It is hard work to select an acceptable Christmas present, something that will give real pleasure. For the sportsman there is nothing more pleasing than a book which deals with his favorite topic. He enjoys its perusal, and the satisfaction it gives him is a lasting one. FOREST AND STREAM'S free illustrated catalogue gives the intending purchaser a wide range of selection and offers many suggestions which at this season of the year are very timely.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—Adv.

Rifle Range and Gallery.

THE REVOLVER CHAMPIONSHIP.

THERE was a shoot for the Winans Trophy in the Amateur Revolver Championship match at Philadelphia on Saturday eve last. It was held in the gallery of the Wurflein Pistol and Rifle Association, 227 North Eighth street. It is a most convenient gallery, in a central part of town, and some remarkably fine rifle scoring has been done on the range. The revolver shooting was not so remarkably fine, in some instances being below the average. Among those who shot were E. Travis, who is a son of the well-known Capt. Travis, of pistol shooting fame; J. J. Mountjoy, Dr. Gardiner, R. L. Dubbs and Mr. Yost, of the Wayne Gun Club. The shooting editor of FOREST AND STREAM was present and supervised the shooting done. To-morrow, Friday evening, Dec. 18, and Saturday evening, Dec. 19, the match will be on at

Conlin's well-known gallery, Thirty-first street and Broadway this city. Mr. Conlin has extended his shooting screens so that pistol or revolver shots may shoot either at 12 yds. in the open or at the French gallery range of 16 meters (52 1/2 ft.), or at the championship range of 20 yds. This is one of the most convenient and enjoyable ranges to visit in the city, and the matches will be open to all comers without cost of entrance fees. Those who may not have their own weapons ready for use will find the armory of Mr. Conlin admirably provided with everything in the shooting line, and scores can be accurately and expeditiously made.

New Jersey Riflemen.

[Specially Reported for Forest and Stream.]

HEADQUARTERS OF CLUBS.

Miller R. C., 80 Hudson street, Hoboken.
Union R. C., 223 First street, Hoboken.
Friday Night R. C., 210 Washington street, Hoboken.
Excelsior R. C., 78 Montgomery street, Jersey City.
Seitz R. C., 354 Palisade avenue, Jersey City Heights.
Palisade R. C., 254 Palisade avenue, Jersey City Heights.

EXCELSIOR RIFLE CLUB, Jersey City, N. J., Dec. 8.—Ten shots, off-hand, 25-ring target, possible 250. The scores made in the shoot for weekly class medals are appended below:

W H Hollowell.....	25	25	24	24	23	23	22	21	234
W J Channing.....	25	25	24	24	23	23	22	21	233
C Boag.....	25	25	24	24	23	22	22	21	232
W J Hennessy.....	25	25	24	24	23	22	22	21	232
W Weber.....	25	25	24	23	23	22	22	20	231
H Hansen.....	25	24	23	23	22	22	21	21	227
C L Pinney.....	25	25	24	24	23	22	21	20	226
J Speicher.....	25	24	23	23	22	22	22	21	225
Tbos Hughes.....	25	24	23	22	22	22	21	20	221
C Bauble.....	25	24	23	22	21	21	20	20	219
J Hughes.....	25	23	22	22	22	21	21	20	218
O Gore.....	25	24	23	22	21	21	20	19	215

The medal winners in their respective classes were: 1st, Hollowell; 2d, Bauble; 3d, Boag. A merry time followed. Chris Bauble, famed for his mixed ale drops, told of several narrow escapes from massacre which Chris went through back in the fifties. Geo. C. Varick, of flash light fame, has gone down South and will remain there for the winter.

MILLER RIFLE CLUB, Hoboken.—Capt. Richard W. Dewey, Dec. 9. Ten shots, off-hand, 25-ring target, possible 250. The scores made in the shoot for class medals were:

L Sohl.....	25	25	25	24	24	23	22	22	240
E Fischer.....	25	25	25	24	24	23	22	22	238
C Judson.....	25	25	24	24	24	23	22	22	237
D Miller.....	25	25	25	24	23	23	22	21	236
F Liell.....	25	25	24	24	24	23	22	20	236
D Hencken.....	25	24	24	23	23	23	22	21	234
F Brandt.....	25	25	24	24	23	22	22	21	233
Capt Dewey.....	25	25	24	23	23	22	22	21	230

First class medal won by Lou Sohl, 240.
Second Class.
J Carragher.....25 24 24 24 24 23 23 22 22 235
J H Kruse.....25 25 24 24 24 23 23 22 21 234
Second class medal won by J. Carragher, 235.

Third Class.
A Stadler.....25 25 24 24 23 23 22 22 20 228
H Seltenreich.....25 24 23 23 22 20 20 20 20 220
F Dunsteadt.....25 24 23 22 21 20 18 18 18 209
F Kammel.....25 24 23 22 21 20 20 19 19 207
Third class medal won by A. Stadler, 228.

The club is rapidly coming up to its old form and will no doubt make some of the best scores of the season before long. Team shooting followed between teams captained by E. Fischer and L. Sohl, resulting in a tie, as follows:

E Fischer.....	237	L Sohl.....	236
C Judson.....	235	D Miller.....	235
F Liell.....	234	F Brandt.....	236
D Hencken.....	235	J Carragher.....	235
J H Kruse.....	234	Capt Dewey.....	235
F Brandt.....	235	H Seltenreich.....	229
F Kammel.....	210-1610	F Dunsteadt.....	206-1610

GREENVILLE RIFLE CLUB.—Greenville, N. J., Friday, Dec. 11.—Ten shots off-hand, 25-ring target, possible 250:

Gotthardt.....	25	25	24	24	24	23	23	23	240
C Boag.....	25	25	24	24	23	23	22	22	237
Scheelein.....	25	25	24	24	23	23	22	21	230
Robidoux.....	25	24	24	24	23	23	22	21	228
Perkins.....	25	24	23	23	23	22	21	20	227
Charant.....	25	24	24	23	22	21	21	21	221
Collins.....	25	24	23	23	22	21	21	20	221
Spahn.....	25	25	24	24	23	21	20	19	220
J Dodds.....	25	24	23	22	21	19	18	18	211
Hill.....	24	23	22	22	21	19	18	16	207

A meeting was held immediately after. The club decided to challenge the Palisade Rifle Club, of Jersey City Heights, to a team match. The secretary announced that the challenge sent to the Excelsior Rifle Club, of Jersey City, had been accepted. A merry social session followed.

NOTES.

The Miller Rifle Club (Capt. Richard W. Dewey) hold a two-days' shoot at headquarters, 80 Hudson street, Hoboken, on Friday, Dec. 25 (Christmas Day), commencing at 8 P. M., and Sunday, Dec. 27, shooting commencing at 9 P. M. The prizes are: First, \$20; second, \$15; third, \$10; fourth, \$5; fifth, \$3; sixth, \$2; seventh, \$1; eighth, \$5; ninth, \$4; tenth, \$3; eleventh, \$2; twelfth, \$1; thirteenth, \$2; fourteenth, \$2; fifteenth, \$1. Best two tickets to count. Any 25-cal. rifle will be allowed. The shooting committee are: David Miller, Chairman; E. Fischer, Chas. Judson, J. H. Kruse, and Capt. Dewey.

Herman Klem is the vocalist of the Friday Night Rifle Club of Hoboken. Frequently Herman entertains his fellow members with the rendering of fine tenor solos. Those who also share in entertaining are Ed. Phalon and J. Chavanne. The club in regards to membership and popularity ranks among the first of Hudson county. It is just packed with jolly good fellows and there isn't a crank among them.

The Seacucus Gun Club will hold a live pigeon shoot at Bergkamp's, Seacucus, on Christmas Day, for turkeys.

Geo. L. Graf and James Johnson, members of the Palisade Rifle

Club of Jersey City Heights, have lately devoted their spare time to what they term "trick, fancy and diff. ul shooting." They are becoming quite adept in this line, and it is said that they are already billed to appear at a local theater as G. G. Thompson and J. J. Daly, the champions of the State in pistol, revolver and rifle shooting. We wish them success.

Capt. John R. Inhardt of the Palisades is a most conscientious officer, and is always wide awake for an opportunity to advance the membership and social standing of his club.

Secretary Gus Finger of the Palisade Rifle Club is quite an adept in what he terms the "black art." Gus hopes some day to equal Hermann.

Alson Stadler is the Adonis representative of the Miller Rifle Club. His handsome appearance frequently causes much jealousy among his fellow members. He is "way up" in social matters.

Capt. Henry L. Hansen of the Hudson River club is a fine shot without doubt, he now leading the entire club in percentage.

J. H. Kruse of the Miller Rifle Club was awarded the handsome gold medal at the meeting of the Hoboken Turn Verein, which he won by a score of 25, 25, 25—75 out of a possible 75. The protest therefor of L. Schmidt was set aside.

The Schuetzen Club Hansa is the youngest club in Hoboken, and it appears as though for anything, it will be one of the most prominent in a short time, as the membership list is swelling. The Club's headquarters are at the Hansa Hotel, First street, near Hudson, Hoboken. The gentlemen who are "booming" things up for the club are Messrs. Seitz, G. Wangersheim and J. Wangersheim. They have already secured 25 members.

The Miller Rifle Club's team men are doing more practicing since the match was made with the Manhattan Shooting Club.

Once more the rifle shooting season is on us, and a glance at the scores will show that every club is regaining its old form. The Miller Club's present with the medal and promoted a class higher. Heber over 235, out of a possible 250. This shows that the members are once again shooting in their old form. A glance at the scores made will show this.

One good feature of the Miller Rifle Club's management is the idea of presenting class medals every week. The club is divided into three classes, first, second and third. A medal is put up in each class to be competed for for 26 weeks. The man making the highest score in his class every shooting night wears the medal until the next. The man winning the medal the most times in the 26 weeks is presented with the medal and promoted a class higher. This latter rule, however, relates only to second and third class members. The idea has been followed by several clubs in the county, as it is a practicable one, spurring the men on, as it were, to make their best score. The score in the first class in the medal competition if about evenly divided between Schli, Miller, Schlicht, Fitzimmons and Judson. In the second G. C. Varick has won it once, J. Carragher twice and J. H. Kruse six times. In the third H. Katzenkamp has won it once, H. Seltenreich three and A. Stadler five times.

J. H. K.

The Our Owns Win.

NEWARK, Dec. 15.—The first series of the best-two-out-of-three matches between the Our Own Club and the Puritan Rifle Club took place on the former's ranges to-night, the result being two straight victories for the home team, by the appended scores:

First Match.—Our Own.	
G Goerk.....	12 11 11 9 11 11 11—109
F A Freisenhuier.....	11 12 11 12 11 12 9 11 11—112
C H Townsend.....	11 11 11 12 10 11 11 12 11—111
J Heber.....	7 12 11 10 6 11 11 12 10—102
A Cherry.....	11 11 12 10 9 10 11 11 12—109—548

Puritan.	
C Sauer.....	9 11 11 11 8 11 10 10 8—170
C Carpenter.....	10 10 10 10 10 10 12 11 10—107
E Heib.....	10 11 9 12 12 10 10 10 11—105
W Hauselman.....	11 11 10 8 11 12 12 11 7 10—105
C Kopf.....	10 11 12 12 9 9 11 12 10—110—525

Second Match.—Our Own.	
Goerk.....	10 11 12 11 12 12 10 11 11—111
Freisenhuier.....	11 10 9 11 10 11 9 10 12—105
Townsend.....	12 11 11 10 11 10 12 12 11—112
Heber.....	10 8 11 10 9 11 12 8 12—102
Cherry.....	12 9 10 9 10 11 11 11 12—105—586

Puritan.	
Sauer.....	8 8 11 7 10 8 12 12 9 11—97
Carpenter.....	9 8 12 12 11 10 11 12 11—107
Heib.....	11 10 8 11 11 12 12 11 10—107
Hauselman.....	12 10 10 11 11 10 12 12 11—112
Kopf.....	12 11 10 10 10 10 12 12 12 9—100—582

All the contestants except Townsend used Ballard rifles. He used a Wurflein special gallery rifle, his average being the highest in the two matches.

The return series will be shot early in January. Next Tuesday evening the Our Own's second team will shoot against the first team of the Independent Rifle Club on the latter's range.

The Rifle at Walnut Hill.

BOSTON, Dec. 12.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day, with a large attendance of riflemen. The shooting conditions were good. Following are the best scores in the to-day, distance 200 yds., standard American target; all cup off-hand matches:

J B Fellows.....	82	H D Martin.....	78	W Conway.....	87
W C Johnson.....	79				

All-Comers' Best Match.					
J Francis.....	109	A S Hunt.....	98	A Guild.....	89
F Daniels.....	108	W C Corney.....	97	D N Winn.....	87
A H Ballard.....	105	J F Jones.....	94	S P Smith.....	87
D Martin.....	103				

All-Comers' Off-Hand Match.					
W Charles.....	82	A M Snow.....	73	W C Corney.....	70
B Mason.....	79	D Martin.....	72	F Lowell.....	61
Pistol Match, 50yds.					
H Severance.....	91	E Parsons.....	86	M T Day.....	82
W C Jones.....	87	A D Stevens.....	84	O Moore.....	81
G L Hosmer.....	87				

The Turtle Bays Alive.

The Turtle Bay Rifle Club has again come to the front under the efficient management of its captain, G. E. Jantzer. The club's headquarters in Forty-second street near Lexington avenue have been refurbished and are very cosy and comfortable. The club has succeeded in getting the great problem of perfect ventilation, a solution of which has been the cause of the club's perfect ventilation has again been set down as practice evening, while the continuous prize contest, similar to that of last year, will take place on Tuesday of each week. The conditions are scores of ten shots, number of targets unlimited, the three best scores of each man to count. To make the contest more even the less experienced members will receive an allowance on each score. Fifteen handsome prizes will be divided among the winners at the close of the season.

Wurflein Scores.

PHILADELPHIA, Dec. 11.—The regular weekly scores of the Wurflein Rifle and Pistol Association, at 25 yds., possible 260, ring target, using Wurflein 22-cal. rifles, off-hand, were made at 228 West Eighth street as follows:

E Travis.....	25	23	23	24	25	25	25	23	241
J J Mountjoy.....	24	22	24	25	25	23	23	25	241
J J Mehard.....	25	24	23	22	24	24	23	23	239
A J Yager.....	22	25	21	23	25	24	24	23	236
Dr Gardiner.....	24	22	24	24	24	24	21	25	231
J C Wurflein.....	25	23	21	23	21	19	23	23	224
R L Dubbs.....	22	21	25	19	20	24	24	24	224
W Wurflein.....	22	21	17	23	24	23	22	24	221
Leslie Woods.....	21	22	15	23	21	23	22	21	220
J B Newton.....	22	25	22	19	22	24	25	17	219

Empire Rifle Club.

NEW YORK, Dec. 11.—The following scores were made Tuesday, Dec. 8, by members of the Empire Rifle Club at the club's range, 12 St. Marks Place; distance 100 ft., possible 250:

Chas Zittler.....	232	W Miller.....	221

The Harlem Rifle Club.

A PRIZE shoot will take place on the range of this club, 202 1/2 Third avenue, on Jan. 15, when \$20 in cash will be distributed.

forth all his skill, as it made for the right boundary, but a well-timed second grassed it. Fulford's eleventh and twelfth were both very fast right-quartering drivers, and showed elegant first barrel work. His fourteenth was another of the same direction and caliber and was neatly killed with a fine first. Brewer's seventeenth bird was a very tricky left-quartering driver, a fine first; his twenty-fourth, a driver, awfully fast and a climber, fell dead over the fence. Fulford's twentieth bird was a circling left-quarterer that dropped dead a foot over the boundary; his twenty-fourth, a fast driver, climbed out of both loads and escaped. Score 131 each, and the betting still even.

THE SEVENTH ROUND.

Brewer killed a fast right-quarterer with a clever second and Fulford followed with a miss on a left-quartering driver that climbed over his second. Brewer's third was a dandy driver that caught both loads full and struck the fence before he would stop; his eighth and ninth were left-quartering drivers, the first calling for a beautiful second, and the last falling on a superb first. [Ful-

ford's sixth, a fast left-quartering driver, fell on the first. Brewer lost his twelfth, an ugly zig-zag driver; his fourteenth ditto and his fifteenth, a fast and tricky left-quartering driver; his sixteenth was a left-quartering driver that flew like a demon the instant the trap was pulled, was brought down by a magnificent second; his fifteenth went in the same direction, but dropped on the first, although it was awfully fast work; his twenty-third, which was a left-quartering driver, refused to stop on the first,

but came down at 70yds. on the second, an elegant kill. Fulford lost his twentieth, another climbing driver; his twenty-fourth was aumping climber that dropped on a masterly first. Score, Fulford 154, Brewer 153.

THE EIGHTH ROUND.

On the opening shot Jack put a quick first into a left-quartering blue bird, and Fulford followed with a pretty second at long range on a chocolate left-quartering driver, that tried in vain to circle out of the charge. Jack's third, a left-quartering driver,

was terribly fast and went away to join some of its friends outside. Fulford's sixth, a fast driver, followed suit. Jack's ninth was a vicious left-quartering driver, killed with an awfully quick first which doubled it up in the air. His fourteenth went like a streak and kept out of the dead line both times he fired; this was a blue right-quartering driver. His fifteenth started straight for the front, but twisted out of the first load; Jack sent in his second and the feathers flew in all directions, but much to the surprise of everybody the bird flew to the fence and gave up the ghost on the outside. His twenty-third was a fast left-quartering driver that dropped dead all the way over the field, but refused to fall. Fulford's thirteenth, a left-quartering driver, was a hustler, and having climbed out of the first concluded to twist out of the second and get away. His twenty-fifth, from No. 5 trap, was also a left-quartering driver, that twisted and zigzagged in vain to keep out of the shot line, but had to fold its wings and drop when Ed fired his second at full 70yds. Score at this stage: Fulford 177,

The following tabulated score will show at a glance the relative position of the men at all stages of the match:

Match at Woodland Park, L. I., Dec. 12, between E. D. Fulford and J. L. Brewer, 250 live birds each, for \$1,000 a side, Hurlingham rules, excepting that the inclosure was the boundary, 30 yds. rise, 12-bore guns.

Figure 2 denotes second barrel, o dead out of bounds.

Fulford had 18 right-quarterers, 50 left-quarterers, 47 straight drivers, 21 right-quartering drivers, 75 left-quartering drivers, 2 incomers, 11 right-quartering incomers, 5 left-quartering incomers, 2 hovers, 18 circles and twisters, 3 dead out of bounds.

Brewer had 14 right-quarterers, 46 left-quarterers, 42 straight drivers, 13 right-quartering drivers, 84 left-quartering drivers, 1 incomer, 7 right-quartering incomers, 12 left-quartering incomers, 4 hovers, 27 circles and twisters, 9 dead out of bounds.

The guns and loads used were as follows: Brewer—W. W. Greener "Princess" hammerless, weight 7lbs. 154oz., barrels 30-inch, shells Ely's "Tournament," length of shell 3 inches, Ely primers, powder American Wood, 3/4dr. in both barrels, Squires' grease and waterproof and Ely's thick felt wad on top of powder, 1/4 z Tatham's No. 7 chilled shot in right and 1/4oz. No. 6 do. in left barrel, Squires' top shot wads, Squires' special crimp. Loaded by Henry C. Squires on Dec. 11.

Fulford—W. W. Greener hammerless gun, weight 7lb. 7oz., 30-inch barrels, shells Ely's "Tournament," length 3 inches, Ely primers, powder Schultz, 4dr. in each barrel, Squires' salmon felt and Ely's thick felt wads on powder, 1/4oz. No. 7 Tatham's chilled shot in right and 1/4oz. No. 6 do. in left barrel, Squires' top shot wads, Squires' special crimp. Loaded by H. C. Squires Dec. 11.

The summary of all the matches shot by the two men shows: Fulford.....100 99 94 24 223-540 Brewer.....99 98 94 25 216-532

Brewer 174. At this point Brewer began to be vexed at what he termed his poor shooting, and said to the writer, 'I've not shot so nearly in ten years, and don't know what the trouble is. I know I held right on the last birds I missed!' Fulford also got out of patience at losing birds which he thought he hit hard with his second, but which seemed to have urgent business elsewhere. Dick Irwin, who knows Brewer like a book, was amazed at his loss of so many drivers. "A bird which goes in that direction is a cinch for him," said Dick, "and I don't see how they get away." But get away they did.

THE NINTH ROUND.

On the sixth bird, a twister that flew like a demon and made all sorts of motions, the giant from Hammonton expended both

barrels and scattered feathers, but stop it would not. Not to be out of the fashion, Fulford caught a fast driver which scurried over the fence after climbing out of both barrels. His seventh showed pretty work with the first; his eighth, another left-quartering driver, followed number seven over the fence. This out his lead down to two birds, but on the thirteenth, a bad circling towerer, his opponent scored another miss. Brewer's seventeenth, a chocolate colored left-quartering driver, called for one of the finest shots of the day, being folded in the air with a beautiful second at full 80yds.; his twenty-third, same direction, was another splendid exhibition shot. Fulford's thirteenth and fifteenth were both fast drivers, but good judgment on the first barrel in each instance brought both to grass; his twenty-first was a hummer that made a bee-line for the left boundary, but had to step when it caught the second at long range. Now the score stood 200 kills for Fulford, 197 kills for Brewer, with 25 more birds to go for each man. At this juncture very few bets were offered. Some of

Brewer's friends were still confident of his ability to win, although they acknowledged that his chances were rather slim.

THE FINAL ROUND.

Both men were now in dead earnest and watched one another's shots very closely. Their eyes began to look bad from the constant blowing back of the smoke and dust, as before mentioned, and it was surprising that they were able to see to use their second barrels. There was no perceptible tiring on either side, nor did either man show in the slightest degree the effect of the terrible strain on their nerves. The Hammonton man caught a Tartar in his second bird, a left-quartering incomer, which got away from both barrels; his seventh was a zig-zagger that also went away, as did his tenth, a terribly fast driver, and his eleventh, a climbing left-quartering driver. Fulford's first eleven were killed, but his dozen, which described a baker's dozen of circles, left him to go over the woods. Jack's sixteenth, a twisting driver, caught two full charges of shot but managed to struggle over the fence to die. Ed's nineteenth was another cirler that

escaped from the field. Brewer lost his twenty-second, a fast driver. On the 245th bird Brewer was shot out, as even had he killed his last five birds and Fulford lost his last five the latter would have won by 218 to 217. On the twenty-third and twenty-fourth birds Brewer did splendid work with the second barrel, the former being an ugly cirler and the latter a very fast right-quarterer. Fulford's twenty-second was a fast driver and killed handsomely with a long second.

At 3:18 the last shot was fired and two minutes later Referee Kiggott made the announcement quoted at the head of this story.

Thus ended one of the greatest matches ever held in America, both as regards the caliber of the men, the issue, the quality of the birds and the management in general. Of the birds too much cannot be said. They were the finest lot, without exception, ever trapped in this country, as vouched for by old veterans who have been "in the swim" for many years. Mr. Brewer says they were the finest lot he ever saw, outside of England, and that even there it would be hard to beat them. Just think of five

hundred birds being trapped in a single day and only three of the lot needing a shaking up! The wonder is that even these men, noted experts of iron nerve and marvellous skill that they are, should have crassed even 430 of them inside the boundary, or 449 including those which fell dead outside of the bounds.

During the earlier part of the race Brewer had slightly the luck of the birds; from the fiftieth to the one hundredth round the luck was slightly on Fulford's side; on the next hundred it was about even; from the two hundredth to the two hundred and fiftieth Fulford was favored, but on the last twenty-five there was little if any difference. Taken from start to finish the luck of the birds had little or nothing to do with the result of the match.

As far as the men were concerned a volume might be written. As stated before, Brewer declared that he "had not shot so badly for ten years," as having witnessed his work at various times and places I am inclined to think that he was correct. Every bird lost was a "rasper," so that on that score the shooters can rest easily. It was noticed, however, that at times Brewer would strike a brilliant gait and put in both barrels with his old time rapidity on a number of rounds, and then again would be seem to be slow in getting on for a while. Only one of his lost birds made a clean miss, the feathers being knocked out of each

BREWER'S SCORE.

Fac-simile from original official score.

of the others. For the first time in his career he shot American wood powder. His friends say he made a mistake in not practicing with this powder previous to the date of the match and acquainting himself with its velocity. He says the penetration was perfect but that it was either faster or slower than he had calculated on, the result being that he would shoot slightly ahead or behind the birds. For this, of course, the responsibility rests with the man and not with the powder. Another mistake that he acknowledged having made was in not using the same gun he used when he shot against Fulford at Marion. The gun he used last Saturday was his old one, with which he won his honors in England, a first-class weapon, but one which he was not accustomed to use lately.

In a conversation with Fulford in the Astor House, on Saturday

night, the writer remarked that he seemed to be slightly off in his second barrel. "Yes," he replied, "that is true, but it was the fault of the gun, and not myself. I never shot a better first barrel in my life, and never did I hold any better with my second, but while the former is a perfect shooter, the latter at 50 yds. makes a pattern that is open enough to let a pigeon find more than one loop-hole for escape." He is going to send the gun back to Mr. Greener with an order for a new one, made to shoot, regardless of cost. His old hammerless gun, which he used at Marion in November, had a deadly second barrel, in which he had perfect confidence.

At the conclusion of the match Brewer turned toward his opponent and said, "Fulford, you're a dandy!" and then turning toward

the crowd, and raising his voice, he continued, "Now, I'd like to make a match for the championship of the world, won by me in England in 1888, and have never been asked to defend. I will shoot for the title and \$5,000 or \$10,000 a side, under Hurlingham or London Gun Club rules, and will bar nobody." As he concluded he looked full at Fulford, who quietly said, "I ain't in it, Jack." Later in the evening Mr. Fulford said to the writer that he would not talk match until after he had received his new gun and given it a thorough trial. "If it is satisfactory," he said, "I will be ready for business. After that," he continued, "I will back Mr. Brewer and myself for a team match against any two men in the world for from \$5,000 to \$10,000 a corner!"

During Saturday's match the principals were on the most friendly terms throughout, and occasionally would exchange bartering remarks. On one occasion Brewer's gun was discharged before he had said ready, and Fulford in a laughing tone said: "Don't get rattled, Jack; you're a little nervous!" Brewer smiled, said "Yes, you're right," and walking to the score made one of the finest kills of the day on a twisting right-quarterer that caught both barrels before it struck the ground. As he returned to his seat he remarked that it was a good thing to have a double-barreled gun. When Jack's 1021 bird appeared as though it would scale the fence the crowd began to yell, but they stopped as it struck full against the lower panel and fell dead. "You shouted too soon that time," said Captain Jack. His ninety-seventh bird was a rustler, and as it went over the fence, Fulford's admirers hooted at a great rate. This caused Jack's dander to rise and he

snapped out, "Never mind, I'll make some of you suckers cry your eyes out before you're six months older."

During the shoot some one asked Miles Johnson, "Who is this Fulford?"

"Don't know; never heard of him before these matches," said the Newtown veteran; "guess he's like the mushroom—came up with the last shower."

Above will be found detailed scores of the great match, along with a photographic reproduction of the official score sheet, which shows the flight of every bird. This is the first time in the history of trap-shooting that any such table has been published. The arrow heads denote the direction of flight from the moment the bird left the trap; a dash across the shaft of the arrow denotes that the second barrel was used; a dot on the butt of the arrow denotes a lost bird; a star alongside the arrow shows that the bird fell dead out of bounds; where an H is shown the bird was a hoverer; T denotes that the bird towered in addition to its other course. The figures over the arrows show the trap from which the bird was sprung.

O. H. TOWNSEND.

FULFORD-BREWER.

Set of fourteen photos, 4x5, artistic positions, \$2.50; single pictures, 25 cents. J. B. BURNHAM, 464 W. 20th st., N.Y.—Adv.

Captain Money Wins Again.

CAPT. A. W. MONEY, the gentlily expert who is representing the E. C. powder company to such good advantage in this country, added another to his long list of trap victories by defeating L. T. Davenport at the Carteret grounds, at Bergen Point, on Tuesday. The birds were a very fine lot and the Captain in splendid fettle, while Davenport seemed to be out of form. The conditions were 100 birds per man, 30 yds. rise, 50 yds. boundary, for \$500 a side. J. S. Van Lengerke was referee. The score was: Money 80, Davenport 80.

THE ILLINOIS RULES.

[Special to Forest and Stream.]

CHICAGO, Ill., Dec. 16.—Editor Forest and Stream: Here are the new live bird rules as adopted by the Illinois State Sportsmen's Association. They are given in the full text, put on the wires directly from the official copy, and now for the first time published. Thus do the trap-shooters of "Chicago and the West" look not in vain for the freshest news.—E. HUGH.

LIVE BIRDS.

Rule 1.—An inclosure as a boundary shall be established, its base being a so-called dead line, which shall be 100 yds. long, the sides of which said dead line shall be 40 yds. long, and shall be at right angles to, and connect with the ends of said dead line, thus forming three parts of an oblong square, and its front being a half-circle, connecting with the unclosed sides of said oblong square, thereby forming an inclosure 100 yds. wide at its base or dead line, and also 100 yds. wide at a point 40 yds. distant from either end of such dead line; and the extreme length of such inclosure shall be 80 yds., as measured from the center of the dead line over the center trap, as hereafter located, to the center of the line forming the circumference of the said half circle.

Rule 2.—The boundary line should be a wire fence not exceeding 2 ft. in height, or where a fence has not been constructed, flags or posts shall be set, not exceeding 25 yds. apart on the straight lines of the ground, and not exceeding 10 yds. apart on the half circle; and such fence when constructed, or such flags or posts when so set (a line being drawn from post to post), shall be recognized as constituting the boundary lines of the grounds. If a fence of greater height than 2 ft. is on a line with any part of the boundary (as measured as above), a line or fence shall be established at least

2 yds. within such fence, where it so encroaches, and such line shall be recognized as the boundary line.

Rule 3.—The center of the dead line shall be called the score, and the traps shall be located on the segment of a circle, set 6 yds. apart, and directly in front of and 80 yds. from such score, the location of the center trap being at right angles with the line of the dead line.

Rule 4.—All contests at live birds shall be shot from 5 ground d traps, which shall be numbered from 1 to 5 inclusive. Plunge e

traps may be used, however, when so directed by the Board of Directors.

Rule 5.—The standard gun shall be a 12-bore weighing less than 8 lbs. Guns of less caliber shall receive a handicap allowance of 1/2 yd. for each sized bore less than the standard bore, provided the weight of such gun shall not exceed 6 1/2 lbs.; 10-gauge guns shall be penalized 2 yds. by handicap. Any gun weighing 8 lbs. or over shall be classed at the handicap distance of a 10-bore. No gun of larger caliber than a 10-bore shall be used. Any gun

weighing less than 6 lbs. shall receive a handicap allowance of 2 yds. in excess of that given for reason of its gauge.

Rule 6.—The standard distance from the traps for the standard gun in single bird shooting shall be 30 yds., and at double bird shooting 25 yds.

Rule 7.—The standard charge of shot shall be not to exceed 1 1/2 oz. as measured in a Dixon Cup No. 1,106, or No. 1,107 struck measure. The charge of powder shall not be limited.

Rule 8.—Two judges and a referee and a scorer, who shall keep the score under the direction of the referee, shall be appointed before the shooting commences. The judges and the referee shall appoint a shot judge. One judge shall call the shooter to the score and shall act for him, watching his interest under these rules. The other judge shall call the attention of the referee, and not of the shooter, to any supposed violation of these rules by the shooter, as in case of not holding gun properly, not standing at score, etc.; and the referee shall call the shooter's attention prior to shooting, if possible. The order of shooting shall be determined by drawing for place, and each contestant shall be in readiness within five minutes after his number has been called, unless, for cause, he is granted further time by the referee. He may exchange places with any contestant, however, with the approval of such contestant and the referee. In team contests the drawing shall be for position of teams. The representative who shall go to the score shall be determined by the team itself. All entries shall close prior to the drawing for place, and no guns shall be fired until after such drawing.

Rule 9.—The shot judge shall examine one or more of the cartridges of each contestant prior to their use, and if they contain more shot than the standard quantity the shooter shall obtain

other cartridges. Such cartridges as have been accepted by the shot judge shall not be liable to after challenge. All contestants shall keep their cartridges at the stand, or near to the score, exposed to view, and shall remove only such as may be required for immediate use, and shall use no others. Any contestant who shall load from any others than those which have been accepted by the shot judge shall forfeit all right in the contest.

Rule 10.—The shot judge shall be judge of the gun, and determine as to its handicap. Guns shall not be loaded before going to score. Missiles, if not caused by the negligence or ignorance of the shooter, shall not operate against him. Breechloaders shall not be considered as loaded until the breech and barrels are closed. Muzzleloaders shall not be used.

Rule 11.—When a person is at the score and ready to shoot he shall call "Pull," when the puller shall immediately release the bird or birds. Should the bird or birds not take wing immediately upon pulling the trap or traps, the shooter may declare "no bird," and if a bird does not take wing within thirty seconds after the trap has been sprung, the referee shall declare "no bird," if requested to do so by any contestant. In case a bird takes wing he shall be accepted by the shooter. The referee shall declare as "no

bird" any bird which shall walk one yard from the trap. In double-bird shooting both traps shall be sprung and both birds must take wing simultaneously, and both birds must be on the wing when the first is shot at. If both birds are killed by one barrel they shall be scored. Birds may be made to take wing by pulling a cord having on it any artificial means for alarming the birds; but the same shall be used uniformly for each contestant. No other means shall be used to make a bird take wing. In single-bird shooting should more than one trap be opened at a time and both birds take wing, the shooter may take a bird or not, at his pleasure. If he shoots, a bird must be scored.

Rule 12.—The gun shall not be carried to the shoulder until the shooter [has] called "Pull." In case of an infringement of this provision and [if] the bird [is] as been killed, the referee shall order a new bird to be shot at. Should the trap or traps be pulled before the word "Pull" is given, the shooter may take the bird or birds, or not; but if he shoots, the bird or birds shall be scored.

Rule 13.—No bird shall be declared a dead bird until it has been

retrieved within the boundary lines. Three minutes only from the time the bird was shot at shall be allowed in which to retrieve the bird. The referee shall declare as a lost bird any bird that has been shot at and has passed beyond the boundary lines; any bird that lights upon any building, fence or other object out of the reach of the gatherer while he is standing on the ground, and shall have closed its wings; any bird that is not retrieved in the time limit; any bird which perches upon the boundary fence and has closed its wings; any bird which has been challenged and does not show flesh shot marks; any bird which is shot at while not clearly on the wing, with the first barrel, and not killed with either barrel, but if killed it shall be declared "no bird;" any bird shot at with the second barrel after the shooter has left the score, or has opened his gun, or has ordered the bird to be retrieved after his having used the first barrel. A bird shall be scored as a dead bird which has been shot at by a contestant under these rules and has been killed and gathered and shown to the referee within the time allowance for gathering a bird.

Rule 14.—If any bird shall fly so that to shoot at it would be to

endanger a person or property, it shall not be shot at, but the referee shall allow another bird in its stead. If a bird be shot at at original distance, and it shall be shot off at 5 birds until the match is decided. Ties in double bird shooting shall be shot off at five double rises each contestant, unless otherwise agreed.

Rule 15.—A shooter may gather his own bird, or appoint a person, or send a dog for that purpose; but no extraneous means shall be used to gather it, and no other person shall be allowed to assist in gathering. In case the gatherer is interfered with by the referee [shall] allow the shooter another bird. No person other than the gatherer shall go between the referee and the bird being gathered. In case of doubt as to which bird is to be gathered, the referee shall show the bird to the gatherer.

Rule 16.—In case of a tie at single birds, the distance shall be at original distance, and it shall be shot off at 5 birds until the match is decided. Ties in double bird shooting shall be shot off at five double rises each contestant, unless otherwise agreed.

Rule 17.—In handicap shooting no contestant shall be placed at a greater distance from the trap than the standard requirement as to the size of the bore of the gun. Ties shall be shot off immediately after the main contest and before another has been resumed on the following morning. In private contests at single birds, ties shall be shot off as follows: In 100-bird contests, to

each contestant 50 single birds to each man; in 50-bird contests, 25 birds to each man; in 25-bird contests, 10 birds to each man; in contests of less than 25 birds, 5 birds to each contestant. Double-bird contests shall be shot off under the same rules, substituting pairs for single numbers. In sweep-stake contests any contestant who has tied for a money prize may elect to withdraw from the contest; and his pro-rata of the prize shall be paid him if he so elects; but he must announce his intention to the referee before the first tie bird in his class has been shot at.

Rule 18.—All matches shall be in class shooting, unless otherwise agreed. Any contestant who shall intentionally miss a bird for the purpose of getting into a class lower than the one he would otherwise have been in had he killed the bird, shall be debarred from receiving any prize in that contest. If a referee is in doubt as to the intention of the shooter he may order him to shoot at another bird.

Rule 19.—No shooting within the enclosure; or in case there is no enclosure, no shooting within 200 yds. of the score shall be allowed other than as provided in these rules.

Rule 20.—No pulling of the feathers or otherwise maiming or injuring a bird shall be allowed.

Rule 21.—No person whose conduct is ungentlemanly upon the grounds, or who shall persistently violate any rules after his attention has been called to the fact, shall be permitted to participate in a contest, and the referee shall so determine.

Rule 22.—A referee's decision in all cases shall be final.

Rule 23.—In 5 ground trap contests the shooter cannot be appraised as to the trap which is to be opened. The selection of the trap shall be by hazard, with dice box and numbers, or otherwise, in such manner as to be totally fair to each contestant, and the number shall only be known to the puller and referee until the trap has been sprung. The shooter may use one or both barrels at each bird. A bird shot at with the first barrel, and on the wing may be killed with the second barrel either while on the ground or on the wing, and shall be scored. If the first barrel misses fire and the second is used while the bird is on the wing, it shall be scored. If the second is not used the referee shall declare "no bird." If the first is used and the second misses fire and the bird is not retrieved, the bird shall not be scored, but a new bird shall be given around except at the score, for shooting at a bird after it has been killed. The bird shall be scored. Missives caused by negligence of the shooter shall be scored against him. Ties shall be decided at original rise.

Rule 24.—Spectators shall not be allowed nearer than 20 yds. from, and only in rear of, the score line.

Rule 25.—Entrance money shall include the price of birds and be secured from purses unless otherwise agreed.

Rule 26.—Pool selling or betting or other gambling upon the result will not be recognized.

Rule 27.—In addition to other penalties imposed by these rules, fines of \$1 for each offense shall be imposed by the referee for pointing a gun at any person under any circumstances, turning around or leaving the score with a gun having a loaded or unloaded shell in its chamber, having a loaded gun anywhere on the ground except at the score, for shooting at a bird after it has passed the dead line. All fines when collected shall be divided among the trappers. No fine shall be remitted, and no contestant shall be permitted to continue in a contest after a fine has been imposed on him until he shall have paid such fine. The referee is required to see that these rules are strictly observed, and if he sees a contestant violating them he must so declare and impose the penalty whether a challenge has been entered or not. A referee's decision in all matters shall be final.

CHICAGO TRAPS.

CHICAGO, Ill., Dec. 11.—There has been considerable trouble in the air of trap circles here of late, and some of it is liable to be precipitated almost any day. Everybody is pestering everybody else for a match, and feels bad if he don't get it. If C. G. Breese and Gen. Fulford should happen out this way it is altogether likely that they could get a race, either one, and if they think either one, that they can kill 100, or 99, or 98, or 97, or may be even 95 out of 100 of the present Chicago flight of pigeons stamped J. Watson, they can break Chicago and take the World's Fair back East with them.

Arrangements were about concluded to bring off the long-deferred match between Mr. J. A. B. Elliott, of Kansas City, and Mr. A. E. Thomas, of this city, which was to have been shot here at an early date. Mr. Thomas, however, was taken seriously ill, and is only now just out of bed, so that word had to be sent to Mr. Elliott that his next Chicago shooting match must be postponed for a time. This was qualified, however, to the effect that if Mr. Elliott was feeling better, and not being in the mood to shoot, the boys would try to arrange it so that Mr. Elii it could come to Chicago and shoot not one, but three different matches, and may be more. In fact this would not be a difficult thing at all. Charlie Budd has just written that he would like to shoot matches, and he would not decline a match with Jim Elliott in Chicago. Frank Parmelee, of Omaha, has within the past three days expressed a similar desire, and he is a good shot. Jack Winston, of St. Louis, is hawking to come to Chicago and shoot any number of matches with any number of men, of any sort under the starry canopy. This rattle-head youth sells cigars. To his customers he sends out printed postal cards announcing the dates when he will probably favor them with a call. He has issued a series of such cards for the benefit of his Chicago acquaintance, and has given out seven or eight postal cards the other evening addressed in his care for as many Chicago shooters. Mr. Wins on says on these cards that he will call on or about Christmas on Mr. Andy Thomas, Mr. W. P. Mussey, Mr. Geo. Hofmann, Mr. Geo. Kleinman, Capt. A. C. Anson and Mr. R. B. Organ "with a full line of cigars." Mr. Winston further announces on a card addressed "All Chicago, care Mussey's Billiard Hall," that he will also call on said Chicago shooters on about Christmas with a full line of cigars. This is Mr. Winston's way of making a match. There is little doubt that Winston, Parmelee and Budd can be, and they may be assembled in Chicago on short notice, and in case Mr. Elliott wishes to shoot a match for a couple of million dollars, or say \$1, or \$4.50, the boys will try to arrange it. G. O. Kleinman cannot shoot any match just now, for he has no suitable gun on hand. He is a good shot, and has a most serious case, which threatened the loss of his right eye, he having slipped on the pavement and fallen, striking an iron water plug. He was taken to the hospital insensible, and has as yet no use whatever of the hurt eye.

Of the numerous friendly contests among our own shooters, usually 50 or 100-bird events, Mr. John Watson, the owner of Watson's Park, at Burnside, where these events invariably come off, has kindly kept the readers of Forest and Stream informed over his signature of "Kavelrig." It will be remembered that a few days ago Capt. A. C. Anson and Mr. W. P. Mussey had a 100-bird race, Mr. Mussey winning by one bird. The result of this was another challenge from the redoubtable base ball warrior, and the second match was shot to-day. The 1040 train carried a good little crowd of shooters, among others Mr. Mussey, Mr. R. B. Organ, Mr. Shaw, Mr. D. S. Dyer, Mr. Mark and Mr. Latchaw, of St. Louis. On the train a superlative ragged and dirty specimen of the Dago street musician, a boy perhaps 10 years of age, was collared and taken bodily along, accordeon and all, to serve as a mascot, he being rewarded therefor with more money than he ever saw before. With the boy in front, playing martial airs, the party marched over from the station and took possession of the grounds. At Burnside, where these events invariably come off, the readers of Forest and Stream were informed over his signature of "Kavelrig." It will be remembered that a few days ago Capt. A. C. Anson and Mr. W. P. Mussey had a 100-bird race, Mr. Mussey winning by one bird. The result of this was another challenge from the redoubtable base ball warrior, and the second match was shot to-day. The 1040 train carried a good little crowd of shooters, among others Mr. Mussey, Mr. R. B. Organ, Mr. Shaw, Mr. D. S. Dyer, Mr. Mark and Mr. Latchaw, of St. Louis. On the train a superlative ragged and dirty specimen of the Dago street musician, a boy perhaps 10 years of age, was collared and taken bodily along, accordeon and all, to serve as a mascot, he being rewarded therefor with more money than he ever saw before. Anson and Mr. W. P. Mussey had a 100-bird race, Mr. Mussey winning by one bird. The result of this was another challenge from the redoubtable base ball warrior, and the second match was shot to-day. The 1040 train carried a good little crowd of shooters, among others Mr. Mussey, Mr. R. B. Organ, Mr. Shaw, Mr. D. S. Dyer, Mr. Mark and Mr. Latchaw, of St. Louis. On the train a superlative ragged and dirty specimen of the Dago street musician, a boy perhaps 10 years of age, was collared and taken bodily along, accordeon and all, to serve as a mascot, he being rewarded therefor with more money than he ever saw before. With the boy in front, playing martial airs, the party marched over from the station and took possession of the grounds. At Burnside, where these events invariably come off, the readers of Forest and Stream were informed over his signature of "Kavelrig." It will be remembered that a few days ago Capt. A. C. Anson and Mr. W. P. Mussey had a 100-bird race, Mr. Mussey winning by one bird. The result of this was another challenge from the redoubtable base ball warrior, and the second match was shot to-day. The 1040 train carried a good little crowd of shooters, among others Mr. Mussey, Mr. R. B. Organ, Mr. Shaw, Mr. D. S. Dyer, Mr. Mark and Mr. Latchaw, of St. Louis. FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Dec. 19.—Boiling Springs Fish and Gun Club, open sweepstakes at 50 artificials, at Rutherford, N. J.
Dec. 19.—Open sweepstakes at live birds, on John Erb's grounds, Newark, N. J.
Dec. 19.—Maplewood Gun Club, practice shoot at artificials, at Maplewood, N. J.
Dec. 19.—South Side Gun Club, regular club and open shoot, on club grounds, near Emmet street station, Newark, N. J.
Dec. 25.—Athens, Pa., tournament, at kingbirds and live pigeons. W. K. Park, Sec'y.
Dec. 25.—Boiling Springs Fish and Gun Club, open tournament at artificials, at Rutherford, N. J.
Dec. 25.—Maplewood Gun Club, open tournament at artificials.
Dec. 25.—Amateur Gun Club, all day's shoot at artificials, on Fifth avenue grounds, Newark, N. J.
Dec. 25.—John Erb's grounds, all day's shoot at live birds, Bloomfield avenue, Newark, N. J.
Dec. 25.—Woodside Gun Club, all day tournament at live birds and artificials, club grounds, foot of Riverside avenue, Newark, N. J.

1892.

Jan. 1.—South Side Gun Club, open tournament at artificials, on club grounds, near Emmet street station, Newark, N. J.
Jan. 26.—Hamilton Gun Club, live pigeon and artificial target shoot, at Hamilton, Ontario, Canada.
June 13-18.—New York State Association's Thirty-fourth Annual Convention, at Syracuse, N. Y. Chas. H. Mowry, Sec'y.

DRIVERS AND TWISTERS.

THOSE who care to take a pleasant ride over the D. L. & W. road for the sake of a good day's sport at live-pigeon shooting will have an opportunity to do so to-morrow, when an all-day's shoot will be held on the grounds of the Union Gun Club at Springfield, N. J., about two miles from the Millburn station. The fun will begin at 10 A. M., there being four events on the programme. The first will be at 5 birds each, \$5 entry; second at 7 birds, \$5 entry; third at 5 birds, \$5 entry, second-barrel kills to count one-half a bird; fourth at 10 birds, \$10 entry. All excepting the third event will be under Hurlingham rules. When under ten entries the money will be divided into 50, 30 and 20 per cent.; over ten entries, 40, 30, 20 and 10 per cent. Hacks will meet all trains at Millburn. Birds are included in the above entries. Other events, either at live birds or targets, will be arranged to suit the contestants.

A great many shooters have recently expressed adverse criticism upon the practice followed by managers of club grounds of shooting in programme events and taking the bulk of the money expended by those who had perhaps traveled a number of miles for the sake of a day's sport. A few weeks ago the writer attended a shoot not a hundred miles from Newark. The manager had offered two cash prizes for the first and second best averages in the programme events, and when the summing up was reached it was found that the said manager had won the first average money, besides securing a goodly share of the pots and the money for the targets. One of the contestants on this day told the writer that he was "done with the grounds." Where the manager knows himself to be a superior marksman he should keep out of all events, if he wishes to attract outsiders.

Last week I commented upon the foolish custom of a number of clubs arranging tournaments for one day and announced that both the Boiling Springs and Maplewood Gun Clubs had arranged open shoots for Xmas Day. Since that time I have received notices stating that both the Woodsie, Amateur and Independent Gun Clubs, of Newark, would also hold tournaments on Dec. 25. As the time between Christmas and New Year days are usually marked by a cessation of business and sportsmen will all look around for a chance to enjoy themselves, it would be feasible for these clubs to fix upon separate dates when each one could attract a big list of shooters.

Next Thursday will be a great day for sport unless all signs fail, about four-fifths of the clubs around New York and New Jersey having announced all-day shoots at either live birds or artificial targets.

John Erb's Old Stone House Grounds, on Bloomfield avenue, Newark, N. J., will be the scene of some lively pigeon shooting on Xmas Day, a big crowd of local and visiting experts being expected. If the birds are anywhere as good as the ones furnished the Newark Gun Club at the last monthly shoot, full scores will be the exception rather than the rule.

R. Heber Breintnall and William Hayes, of the Essex Gun Club, of Newark, started on Sunday for a southern shooting trip, to last for a week or ten days, on Monday. The party recently spent a week in Virginia and had some rare sport. While there he killed a partridge which he says was the first one seen in the State in thirty years. Mr. Hayes, who is well-known as the most expert Schuetzen rifleman in this country, if not in the world, is also a splendid wing shot and never comes home without a goodly store of game.

H. A. Penrose and James Clinton, of the Standard Keystone Manufacturing Company, were in town last week and report a tremendous drive of business at the New London factory.

[The Hamilton Gun Club, of Hamilton, Ont., is out with a big programme for a shoot at live pigeons and artificial targets, to be held on Jan. 26, 1892. Over \$100 in prizes will be offered, in prizes and special inducements will be made to American experts to attend.

Crockery smashers will have a chance at a big pot on Saturday on the finely appointed grounds of the Boiling Springs Gun Club, at Rutherford. The main event will be at 50 bluebirds, \$5 entry, targets to be deducted from the entrance fee. The fun will begin at 1:15, and Secretary Jeanneret assures a good time to all who attend.

Tuesday and Wednesday of next week will be great days on the new grounds of the Riverton Gun Club, when the "Champion cup," "Winter cup," and "Anybody's cup," will be shot for, the contests being open to members of the Country Club, of Westchester county; Larchmont Y. C.; Carteret Club; Country Club, of San Francisco, Cal.; Blooming Grove Park Association, Philadelphia Gun Club, Westminster Kennel Club, Tuxedo Club, and members and guests of the Riverton Gun Club. The conditions of the "Champion cup" contest to be held on Tuesday are \$50 entry, 25 live birds, 30yds. rise, three misses out. On Wednesday the first match will be for the "Anybody's cup," miss out, \$10 entry, handicap. The second match will be a miss and out, \$10 entry, handicap rises, for the "Winter cup." Riverton Gun Club rules will govern. Shooting each day will begin on the arrival of the 10:30 A. M. train from Philadelphia. On Dec. 26 the "President's cup" and special prizes will be shot for by club members.

The Atlantic Rod and Gun Club held a special meeting on Dec. 12, and made some radical changes in its by-laws. The initiation fee was raised to \$10. Hereafter the regular shoots of the club will be held on the grounds, West End, Coney Island, on the second and fourth Thursday, in October, November, December, January, February and March, and on the fourth Thursday in May, June, July, August and September in each year. The shoot will be at 10 birds each, instead of 7, under modified Hurlingham rules. The club will shoot in three classes, A, B and C, 25 to 30yds., 25 to 27yds., and 21 to 24yds. inclusive.

The trap experts of the Manhattan Athletic Club are booming the sport under the efficient leadership of James Pilkington, who is as expert with the smooth-bore as with the sculls. On Dec. 11 two sweepstakes were held at Manhattan Field, the conditions being 10 kingbirds per man in each. In the first sweep the result was as follows: James Looney 8, T. Nearing 7, J. A. Herrity 4, F. Brinlinger 7, J. Pilkington 9, J. E. Nagle 6. In the second shoot the scores were as follows: James Looney 9, F. Nearing 7, Herrity 6, Brinlinger 8, Pilkington 8, Nagle 5. Pilkington and Looney then shot at 25 birds, Pilkington breaking 24 and Looney 18.

Some of the young and enthusiastic shooters in Dexter Park, L. I., have organized a club called "The Dark Secret Gun Club." They shoot at bluebirds on a moonlight night, when President H. Knebel, Jr., calls them together. J. Brennan, A. Andrews, J. Fay, M. Fay, W. Simmering, F. Markhopf, H. Bomerman, and F. Ashwood are the founders of the club. In their first shoot H. Knebel broke 7 out of 10 and J. Brennan 6 out of 10.

Western shooters and those of their Eastern brethren who visit

them will have a rare treat on May 17, 18, 19 and 20, 1892, judging from the fine "bill of fare" received for the third annual tournament of the Kansas State Sportsmen's Association, to be held at Council Grove, Kansas. On each day there will be six State events, and six open to all events, the programme comprising contests at both live birds and targets. Programmes may be procured from S. W. Cleek, Council Grove, Kansas.

C. H. TOWNSEND.

Trap in Brooklyn.

BROOKLYN, Dec. 10.—There was a keen contest for the Duryea cup at the regular monthly shoot of the Fountain Gun Club at Woodlawn Park, Long Island, to-day. The club shoot is at 10 live birds, modified Hurlingham rules, club handicap, for a series of prizes donated by members of the club. The first prize is the Duryea silver cup. Yesterday L. T. Davenport won it for the first time. The score of the ties, 3 birds miss and out, was: A. Purdy 2, D. Shields 2, L. T. Davenport 7, C. E. Morris 6, West 1. Club shoot—A. Purdy 10, D. Shields 10, C. E. Morris 8, L. T. Davenport 10, A. C. Hunt 9, W. Lark 8, M. Lindsey 9, Mr. Fred 9, "Wanda" 9, C. Fisher 9, J. R. Woods 7, J. E. Lake 9, C. E. Morris 10, D. J. G. Knowlton 8, J. B. Voorhees 7, D. Van Ord 9, B. West 10, H. W. Blattmacher 9, C. W. Wheeler 6, W. Gilman 10.

The Parkway Rod and Gun Club made poor scores to-day at Dexter Park. The birds were good and only two straight scores were made, one of those by an invited guest. The club shoots at 7 live birds, modified Hurlingham rules, for a gold medal, club handicap. H. Bookman and G. Pföhlmann, non members of the club, killed their straight. Score of the shoot: A. Andrews 5, E. Helgans 5, A. Botty 4, T. T. Edgerton 5, H. Bookman 7, H. W. Bramwell 4, L. Miller 5, M. Borden 3, G. Pföhlmann 7, P. Ganns 4. A match at 5 live birds each was shot by A. Botty and T. T. Edgerton for \$10 and the price of birds. Botty won, killing 3 to his opponent's 2. It was almost dark when they shot. C. E. Morris and G. H. Garrison shot a match at 15 birds each, \$25 a side, just before the club shoot commenced. They tied with 15 straight and agreed to shoot another match at the next shoot of the club.

"Clinkers" at John Erb's.

THE monthly shoot of the Newark Gun Club was held at John Erb's on Dec. 10, the attendance being rather light. The birds were a splendid lot of flyers, being helped in their flight by a stiff breeze which came across the line of traps from the left. The day's fun began with a series of 4-bird sweeps, \$3 entry, two moneys, Hurlingham rules governing. The scores are summarized as follows, ties being divided:

M. F. Lindsey.....1101 2121 2221—11	G. Griffin.....1102 1121 2022—10
M. F. Lindsey.....1022 2122 2121—9	R. Breintnall (28).....1221 0220 10—7
C. M. Hedden (28).....1111 3030 10—8	A. Heritage, Jr. (30).....2230 0102 10—7
G. Griffin (28).....1011 1222 21—8	W. Hollis (28).....0202 1201 01—6
J. Erb (28).....2110 0111 11—8	

Four-bird sweeps, same conditions as first three events:
C. Hedden.....2221 1211 2112—12
W. Hollis.....2121 1101 1001—9
M. Lindsey.....2122 1112 0211 222—14
Heritage, Jr. 1111 1021—5
R. Breintnall.....2232 1103 1121—11
E. Francis.....2102 110—5
G. Griffin.....2121 2303 2102 0—10
C. H. T.

The Trap at Watson's Park.

Dec. 3 the Fort Dearborn Gun Club held its monthly shoot, each man firing at 15 live birds, under American Association rules. The scores:

F. O. Griffin.....211000111210212—10	Al Hoffman.....22020020221201—9
Dr. Hutchinson.....221030111210120—11	H. Loveday.....10210212221012—12

G. T. Farmer.....111211020112112—13	

* Medal winner. * Not members.

RAVELRIGG.

Unknown Gun Club.

THE members of the Unknown Gun Club held their last monthly shoot of the year at Dexter Park, L. I., on Dec. 11. The weather was delightful for shooting and the birds good: D. Monsees 7, M. Brown 8, J. Bohling 7, E. A. Vroom 5, J. Cahill 5, D. Saine 11, H. Van Staden 6, J. Sampson 3, J. Schumacher 11, H. Kroft 3, J. Hyde 7, J. Flynn 6, C. Plate 6, Dr. Schwartz 8, G. Pföhlmann 5, A. Langenberg 7, Henry Boemermann 6. Referee, Mr. H. Knebel, Sr.

Cleveland Gun Club.

THE regular shoot of the Cleveland Gun Club was held at the traps of that organization on the afternoon of Dec. 10. There was a fair attendance and some good work. The following are the scores made at 25 birds each: Rudolph 21, Elworthy 20, Tabblyn 19, Sterling 18, Flick 21, Watts 18, Alberts 15, Jones 14, Saffold 14, Ward 20, North 23, Bell 11, Althans 9. Tie for first, Rudolph 9, Flick 8.

Prize Shoot in Williamsburgh.

THE Williamsburgh Shooting Society proposes to have a prize gallery shoot on Feb. 15, 1892, at its new gallery. Prizes to the amount of \$150 will be awarded to the winners, and the event is open to members of other rifle clubs. The club intends having an international shooting festival at Ridgewood in the summer of 1892, at which handsome prizes will be awarded. Capt. G. Krause of the club is the prime mover in this matter and is meeting with good success in his efforts to have the "crack" amateur rifleman of the country compete at the festival.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price \$2.00. Canoe Handling. By C. B. Vaux. Price \$1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneak-box. By N. H. Bishop. Price \$1.50. Canoe and Camp Cookery. By "Seneca." Price \$1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

OVERHANG IN CANOES.—A correspondent this week brings up the question of overhang in canoes, though his suggestion is not very definite. So far as the 16x30 canoe is concerned, the A. C. A. rule permits a man to shorten the keel and add an overhang other than a counter stern or transom, provided the total limit of length does not exceed 16ft. At intervals of three or four years the proposition comes up to make the limit 16ft. waterline, but there are two objections to this, the waterline can never be exactly and finally determined in so small a craft, and besides the extreme length would be run out to such dimensions that the canoes would be very difficult to house and transport. While on a limit of 16ft. L.W.L., 30in. beam and 10in. draft, it might be possible to build a faster and safer craft than the standard canoe, a large part of the gain would be due to size alone, and the type would be unfitted for the purposes for which the canoe is now chiefly used. Whatever advantages may seem possible from increased bulk above water, it must be remembered that they can be fully realized only in a craft of considerable depth and displacement, or at least in one of great beam. If our correspondent refers to the canoe-yawl, the most suitable craft for his waters, there is nothing to prevent experiment with overhang, there being no existing class, as boats of this type have never visited the meets in sufficient numbers to make successful the attempts that have been made to create a class for them. The modern canoe belongs to the most ancient and excellent of all families of boats, one of whose chief characteristics is the possession of a moderate and by no means an exaggerated overhang at each end. In certain sizes and types of canoes, overhanging ends may be added with advantage, but never to the extent that is possible in the case of a moderate yacht with greater beam, ballast and displacement. One great advantage of both the canoe and canoe-yawl is the handiness when ashore, which is due to the compact form, and this would disappear at once if an attempt were made to build a "Gloriana" canoe.

THE REGATTA PROGRAMME.—If silence gives consent the proposed regatta programme recently given out by the committee evidently meets with general approbation, as no comments nor criticisms of any kind have thus far reached us. It must be admitted that the programme is a very good one, and if properly carried out the racing of '92 should be in every way satisfactory. The programme being published much earlier than last year, and there being very little chance that the present committee will attempt a change of rule before the meet, the racing men can start in before the new year to plan and prepare for the events they wish to start in. Such changes as have been made from the '91 programme are all improvements, and none are of such a nature as to disturb in any way the established events. One excellent addition is the paddling race for service canoes, open, and propelled by a single blade, the weight limit, 55lbs., keeping out the racing shells, and admitting only a strong and substantially-built open canoe. The removal of the limit of weight in the principal paddling class, and the recognition by the regatta committee of a second paddling class of service or cruising canoes, places paddling in a very satisfactory condition. The cruising race for general purpose canoes, which last year was over a 6-mile course, has been reduced to 3 miles, a combined race precisely like the record event. The sailing upset race, which last year was restricted to general purpose canoes, a great mistake as events proved, has been restored to its old place, all canoes being eligible. A time limit has been added in each of the races, the allowance in each case being large enough. The committee has made a good start in giving out the programme at such an early date, an earnest that the rest of their work will be equally well done.

SMALL CRUISERS.—The letter of Mr. Wicksteed, which we published several weeks since, has brought out several similar communications concerning the smaller cruising craft, which, with another letter from him, we publish this week. There is a

SAIL PLAN OF CANOE YAWL "SO-SO."

general interest in such craft among boating men in all parts of the country, and many new and useful craft have been built of late, though as they do not race they are little heard of. Descriptions, and particularly drawings of these boats and their rigs are always welcome, and we will gladly publish them.

NEW YORK C. C.—The New York C. C. did a graceful thing in remembering its namesake, the new cruiser New York, and adding its share to the service of plate subscription now being raised by the *Herald*. The only other club on the subscription list is the Oswego Y. C., which was one of the first subscribers.

CANOE YAWLS AND SMALL CRUISERS.

Editor Forest and Stream:
I send you with this the lines of the canoe yawl whose sail plan you were kind enough to publish in your last issue and which I hope will be on the stocks in a few days. The more I study the thing out and experiment the more I am satisfied with the governing ideas of the design, the cutting away of deadwoods and keel and the use of two centerboards, one a little forward of the ordinary position and the other in the form of a more than ordinarily powerful rudder. Madcap has at any rate been a decided success, and I hope the new boat will be even more so. Looking over some of your back numbers I came across the lines of the Heathen Chinese, a very successful boat on the Thames. In your remarks you said the success of the peculiar design was probably due in great measure to the Chinese lugsails which she carried; but are not the same features present in her design, a big centerboard and rudder giving lateral resistance in plenty and a full middle body tapering not only horizontally but vertically to the ends and the absence of any fore or after deadwood or skeg.
I pointed out in a letter to you some years ago that of all sailing craft the canoes, and only the canoes, were adhering to straight

keels, and I still believe that the greatest improvement in model which can now be effected is in cambering and rockering the sides upward and reducing the frictional surface to the minimum amount possible. In windward work especially I believe that the excessive fining of the waterlines is of comparatively small importance.

Coburg, Ont., Dec. 5.
Editor Forest and Stream:
Probably many of your readers are, like myself, interested in an all-round boat that is not too large to be handled alone in putting in and out of a boat house, that is easily managed by one man under sail, but has room enough for a friend if company is wanted. To such, a description of my boat may prove of interest. Two years ago I came into possession of a canoe 16ft. long, 40in. beam, 21in. deep at ends and 15in. amidships; fully decked, with 8in. waterways; a keel boat with straight keel 18in. deep running her full length, rigged with two leg-of-mutton sails of good size. Before the wind she would run like a witch, but close-hauled, the lee way she would make was surprising. Unfortunately, on the Delaware one cannot keep the wind continually aft, and I finally got tired of being beaten by boats in every other way inferior, so early this season I began a great overhauling of old numbers of the *FOREST AND STREAM*, a comparison of canoe rigs of various kinds, and the covering of any blank paper that came under my hand with various designs of rigs. Each seemed lacking in some important particular, but I finally settled on the following plan:
To avoid sacrificing the room in cockpit the centerboard well was put forward under the deck, using a steel-plate board 2in. thick, the keel enabling me to do with a small board well forward. The forward mast tube was moved forward right into the eyes, the after one 12in. further aft. The steering gear was a heavy yoke of my own contrivance, bolting through deck and connected with yoke or rudder by wire rope. Nearly twenty years' experience in Delaware River hikers, tuckups and duckers failed to make me see the many defects claimed for the gaffsail, and I have never yet seen a sail with as many good all-round qualities, if properly cut and fitted; so the sails of the So-So are both gaffs, with all halliards leading to clutch cleats right at the helmsman's hand. By letting go peak halliards sail is reduced one-half very

quickly, but it has to be bad weather indeed when her sails are scandalized or even reefed.
Under her new rig, So-So was tried early in March last and was given the benefit of all the hard spring winds, before most of the summer sailors began to think of refitting. She proved fast, safe and weatherly, cuts right into the eye of the wind, is stiff as a church, rarely requiring one's weight to be thrown outside her gunwale. Our fastest small boats are the tuckups, and so far the So-So has beaten every one she sailed against. In July, after a hard spring's sailing, accompanied by my wife, I cruised along the upper waters of the Chesapeake, making headquarters at a fine old farm house on the eastern shore. We took the weather as we found it, and found some of it pretty bad, So-So would ride a sea that would drench the crews of the fishing boats, and she would keep dry and out-sail them besides, several times beating boats that she could have been set inside of easily. With my wife for crew, I explored the rivers that form the head of the bay, Northeast, Elk, Bohemia, etc., quickly and comfortably. Her fastest sailing is done when handled by one man, with small sandbag just aft of cockpit to put her down by the stern, but no other ballast. I may sometime put a racing rig on her and sail her with a crew on the gunwale.
PALMYRA, N. J., Dec. 7.

Editor Forest and Stream:
I have been much interested in reading from time to time descriptions of small cruisers and the many different rigs for this class of boat.
The one described in your issue of Nov. 26 while good, would not do so well where there is much shoal water. I have a Barnegat cruiser, one of Mr. Bishop's building, 16ft. long, 5ft. beam, and 21in. deep, as described in the *FOREST AND STREAM* of Jan. 14, 1886. The rig is a simple leg-of-mutton sail, laced to boom, and in place of mast hoops I have small brass castings sliding on a jack screwed to after side of mast. Only one halliard is used, running over a sheave on masthead and having spliced into one end a snap hook, which is snapped into a ring in head of sail, then when putting sail on the boat all that is required is to put the slides on the jack and hoist away.
The advantages of this rig are, first, simplicity, no clumsy arrangement of the blocks and halliards; second, it can be taken very quickly from the mast, which cannot be done with most rigs on boats of this size, thus enabling the cruiser to keep his sail always dry.
The jack is a strip of oak 3/4in. square, having a groove in two opposite sides 3/4in. wide, in which the flanges of the slides work. It commences about 1ft. above deck, running to masthead. A stop can be put to prevent the slides from dropping off when the sail is lowered or reefed. The centerboard is well forward, and the rudder has a small drop plate.
This type of boat is very able and comfortable for cruising, and the rig, I think, is very good for such purposes.
The sail contains 120sq. ft., 16ft. hoist, 15ft. boom, 21ft. leach; and I have carried full sail on Barnegat Bay when large catboats were reefed.
A boat of this kind can sail over flats where the small cruisers with low-hung metal rudders and boards could not go.
TOM'S RIVER, N. J., Dec. 1.

Editor Forest and Stream:
Of late I have become very much interested in reading the *FOREST AND STREAM*, and I was much taken with Mr. H. K. Wicksteed's plan for single-hander in the issue of Nov. 26, under the head of Canoeing.
Only the fear of a breach of etiquette in canoeing prevented me from building a canoe with overhanging ends. Why not have a shorter keel, with overhanging stem and stern, on a canoe as well as on a yacht? Is it not a safer boat on a rough sea? Such a boat has proved to be fast in a yacht. Why not in a canoe? We have no organized club here in Silver Creek, although we should have. We have a number of canoes and small yachts, and one would think by the boating talk that we would have a large fleet of new white wings in the spring.
Our sailing is on open water—Lake Erie—and yet we find men who think that a single-hander should be light enough to take under one's arm and swim ashore if upset. For myself, like Mr. Wicksteed, I desire a canoe that I can take some comfort in on a cruise, and in a race can invent something for ballast that will get her there in time single-handed.
Another obstacle in my way has been the centerboard trunk in the cabin. And I have now designed an oscillating centerboard that wholly does away with the centerboard trunk in the middle portion of the boat. The centerboard is of extra length, and goes home to its house as quickly as a folding board when coming in contact with an obstruction. I would like to have the opinion of some good boating man as to its merits, and would cheerfully give the details in full to any reader of the *FOREST AND STREAM* who would like to test the practicability of the device.
J. H. H.
SILVER CREEK, N. Y.
[We would be glad to publish the plans of the centerboard, as some such invention is much needed. If it is at all practicable there is no doubt that some of our readers will be quick to test the actual merits.]

WAR CANOE RACING.

A VERY decided change has been noticeable in canoe racing during the past two seasons, and it now seems likely that for a long time to come the paddle will have an equal share of popularity with the sail in racing at the meets, and to a certain extent in local events as well. The sailing events have thus far been the great racing attraction of the meets, the entries being far more numerous and the races consequently being of greater interest and more closely contested than the paddling events. In paddling there have always been one or two men of known ability, like Johnson, Rice and others, whom the average paddler has not cared to face; but in sailing the conditions have been different, though it is hard to say why, and though a number of recognized experts, like Butler, Brokaw, Gibson, Jones and a score more, were entered, there have always been a host of new men to start with them. At Jessup's Neck in 1890 and at Willsborough Point this year, the principal paddling race assumed an importance which it never before possessed, and next year the various paddling races promise to be still more exciting. Canoe sailing can never lose its popularity, but just now the amount of time and money required to build and work up a first-class racing canoe is beginning to operate against large fields of starters, so that relatively there will be a more equal division of the racing men and programme events between the paddling and sailing than has ever before existed.
A proposition has been made within a year by Mr. Barney looking to the utilization of this boom in paddling to increase the excitement and interest of the racing week, especially to the spectators, whether canoeists or transient visitors to the camp. The proposal is to the effect that each of the four divisions shall own and bring to the meet a war canoe, manned by four men within the division; the four crews to paddle a race in these picturesque craft. Mr. Barney has given considerable thought to the details, his idea being that the canoes should be of exactly the same size and model, alike in every respect, and of course manned by the same number of men, probably sixteen and a helmsman. For convenience of transportation, each canoe would be built in three sections, a middle part some 16ft. long, and two 7ft. ends, making a total length of 30ft., the three being bolted together by metal connections. In shipping, the two ends would be placed in the central portion, all going into an ordinary box car. A captain would be appointed in each division, whose duty it would be to favor the change, and appoint the crew who would be present at the meet, and from whom he would pick a crew. Of course the time for crew practice would be short, probably a week, but with enough good paddlers in fair condition a very good crew might be made up for each boat.
Any one who has seen a war canoe like the Unktahee, the Kokonoro or the Mohican under way can form an idea of what a race would be like with four of these canoes, manned by seven men each, the crews uniformed in bright colors and the big single blades flashing. From a picturesque standpoint, the sight would far surpass a rowing race such as the Harvard-Yale and with the rivalry between the four divisions the interest and excitement would be fully as great. If such a race can be made an established feature of the A. C. A. meet, it will in a few years become one of the principal racing events.

NEW YORK C. C.—The annual meeting of the New York C. C. was held on Dec. 14, at the Fiercing Rooms, with Com. Howard in the chair. The question of removing the house to Bensonhurst, on Gravesend Bay, and giving up the station on Staten Island, was fully discussed, the sense of the meeting being strongly in favor of the change, and it is probable that it will be decided on when the matter comes up at a meeting next month. A proposal to enlarge the house by adding another story was also discussed, and favorably received. The following officers were elected: Com. Wm. Whitlock; Vice-Com. J. R. Lake; Sec'y-Treas. C. J. Stevens; Trustee (for 3 years), G. H. Daley. The incoming regatta com-

mittee was instructed to revise the conditions under which the international challenge cup is held. A subscription of \$21 was taken up toward the service of plate for the new cruiser New York. On motion of Mr. Burchard, it was resolved that the club send its greeting to Mr. Pauliney Bigelow, with congratulations on the successful completion of his cruise down the Danube. A very handsome copy of the new constitution and bylaws, together with a list of the members and canoes, and of all officers since the club's organization, has just been printed; the gift to the club of Com. Howard, Mr. Whitlock, the newly-elected commodore, is one of the oldest members of the club and an ex-commodore, and the plans now under consideration are likely to be fully carried out next year under his direction, in a manner that will greatly benefit the club.

DIVISION PRIZES.

THE following circular has been sent to each of the canoe clubs in the Eastern Division, A. C. A. At the present time, of course, it is understood that many club treasuries are low, the expenses of the year, and the fact that dues for 1892 have not been collected, having produced that condition. During January the fund will doubtless assume larger proportions. The promoters wish gratefully to acknowledge the following contributions:

Putnam, C. B. Eaton, Mass. \$100
Stanhope, C. C. Winchester, Mass. 10

The circular reads:

EASTERN DIVISION.

Boston, Oct. 1, 1891.—Mr. Secretary.—Dear Sir: At the recent annual meeting of the Eastern Division, A. C. A., it was decided to endeavor to collect by voluntary contribution a sum of money, to be used at the discretion of the executive committee of the Division for the purchase of two trophies. It was further voted, that the Division support the fund by a contribution not exceeding \$50. The trophies are intended to represent the sailing and paddling supremacy of our Division, and shall be raced for each year at the Division meet. We have in the Eastern Division enough clubs to defray the expense, if a reasonable proportion will contribute the sum of \$10 to the fund. Your club is respectfully solicited to contribute, that it may do its part toward increasing the activity of our members in both branches of the sport. Any such favor as that desired, together with the name of the contributing club, may be forwarded to your fraternal, James W. Cawright, Jr., Vice-Commodore Eastern Division, A. C. A. (P. O. box 123, Boston, Mass.).

BRITISH CANOE ASSOCIATION.—On Dec. 12 the general committee meeting of the B. C. A. was held at Newcastle-on-Tyne, England, with a camp-fire of the Association in the evening. The chief work before the committee was to select the site of the next meet, the proposed sites being Menai Straits, Loch Long and Loch Erne.

Pachting.

Small Yachts. By C. P. Kunhardt. Price \$10. Steam Yachts and Launches. By C. P. Kunhardt. Price \$10. Yachts, Boats and Canoes. By C. Stanfield-Hicks. Price \$3.50. Steam Machinery. By Davidson. Price \$1.50.

Yachtsmen who do not see what they want under this heading will please look under the hatches of the canoe, peep into the Keel, squint down the barrel of the rifle, open the Fish Car and Game Bag, inquire of the Sportsman Tourist, and if their yearnings are still unsatisfied, push their explorations into the Editorial and Advertising Departments.

LAKE ERIE AND INTER-LAKE RACING.—We are glad to see that the yachtsmen of Lake Erie are bestirring themselves in emulation of their more progressive brothers on Lake Ontario, and are inaugurating a movement which is likely to result in an organization on Lake Erie similar to, and working in harmony with, that on Lake Ontario. In 1885, the year following the organization of the Lake Y. R. A. on Ontario, an attempt of a similar nature was made at Balast Island, or more properly, Put-in-Bay, in Lake Erie, but without success, one cause of failure being the adoption of a poor measurement rule which prevented the attendance of the Lake Ontario yachts in the races, and served to divide rather than to unite the two lakes. What was an experiment on Lake Ontario in 1885 has since proved a complete success, and the Lake Erie yachtsmen need no better guide in organization than the constitution of the Lake Y. R. A. There is every reason on both sides why a common system of rules should prevail, and why the fleets of the two lakes should interchange friendly visits. In the event of a Lake Erie association being formed it is proposed that the Lake Y. R. A. fleet should visit Lake Erie for a season, omitting the annual round of Lake Ontario, the visit being returned a year later by the Lake Erie fleet. Yachting has made great progress on Lake Erie since 1885, and a modern and progressive organization including all the yacht clubs on the lake is urgently needed.

NEW YORK Y. C. PRIZES.—The prizes given by the New York Y. C. this year, thirty-six in number, are now on exhibition at Tiffany's, in New York. The collection surpasses in cost and beauty all previous ones, the chief feature being the cup won by Gloriaana in the special race at Newport.

INTERNATIONAL RACING.

THE present condition of racing in the larger classes is far from satisfactory on both sides of the Atlantic; with us there is this year and last but a single strong racing class, and there is reason to doubt whether this year's season will be any better than last year's. On the other side much the same state of affairs is found, our 40ft. class being paralleled by the 20-rating class there being at the same time one larger class, the 40-raters. While the causes of the decrease of racing tonnage in the two countries are many and complex, a number of them being beyond any remedies which yachtsmen can apply; there can be no doubt that international competition, in the sort that played such an important part in the racing of 1887, would at once give a strong stimulus to racing on both sides. American yachtsmen, and British as well, would welcome a renewal of the friendly contests that enlivened the three years from 1885 to 1887. It is needless now to discuss the reason for the stoppage of a work that was doing so much for both parties, the plain facts are that international racing has stopped, to the detriment of the sport, and that there is no prospect of its re-establishment under the old conditions. If there is, as we believe, a desire on the part of American yachtsmen to put an end to the present deadlock, there is a way to do so which is at once graceful and sportsmanlike.

For over a dozen years almost the whole brunt of international racing has been borne by British yachtsmen: the venture of Mr. James Coats in tendering our Magde to test her against America's craft was a bold and spirited than the voyage of the Amer can under Com. Stevens in 1851; Clara was brought out by Mr. Sweet in a similar way in 1885; and Genesta, Galatea and Thistle each gave up a season at home and came out here in ignorance of what formidable adversary might confront them at the last moment. All of these yachts, with others such as Muggie, Ulinda, Slona, Stranger and Miranda, brought out by American owners, raced under heavy and handicaps, having been built under a fierce and very peculiar rule, for different local conditions, such as wind, water and courses, and as a matter of course each stranger having to meet alone either the fleet in the open regatta or the best single boat that could be picked to meet her.

The natural handicap which attends every vessel who leaves her home waters can hardly be overestimated, different rules for building, different waters and winds, strange courses, strange yachts, strange marks and headlands, a new climate for the crew, combine to make a heavy total in favor of the home yacht and against the stranger. So much is this the case that it is noticeable within very limited distances, as between New York and Boston, or the Clyde and the Solent, the victor at home being easily vanquished when he in turn is the visitor, there is nothing unfair in all this, it is simply the chances of war; but it has happened

that in twelve seasons of international racing, or from Madge to the latest Fife boats, Barbara and Jessica, the chances have been entirely on the side of the American yachts in home waters, and against the visiting British craft. We have not forgotten that several yachts, such as Thistle, Minerva and Barbara, were specially intended to race here, and so suffered little from the difference of rule, nor have we overlooked the fact that some of the visitors would have been beaten by their American rivals had all the odds been reversed; but at the same time it must be evident to every one who is familiar with recent international races that circumstances and conditions have uniformly favored the home boats.

Just at this time the idea is prevalent, and it is most probably true, that America possesses the fastest yacht of her size afloat. However much Gloriaana's good qualities may have been overestimated by popular enthusiasm, two facts appear very clearly on the face of the season's record, that the leading boats of the 40ft. class are proportionately much faster than any of the 70ft. or smaller classes, ancient or modern, that have sailed beside them; and also that Gloriaana is easily ahead of all her class. While it would be difficult to gauge her definitely with the single stick Volunteer, of doubtful her length, she has beaten a much larger number of her own class and relatively faster boats, than Volunteer defeated in the old 60ft. class, and she stands to-day as the foremost embodiment of American progress in yachting. If the admiration and confidence which American yachtsmen have expressed is at all genuine, it would be most natural and at the same time graceful act to send her as Mr. Coats sent Madge, or as the Earl of Sandwich sent the Lieut. and the Lieut. would have sought to seek for worthy opponents away from home.

While a trip across the Atlantic on the part of Gloriaana, and a participation in the season races in British waters would bring in again the international element which adds so much zest to yacht racing, there are some reasons why she would not be the best boat for such a venture. Although the measurement rule is practically the same in both countries, the different methods of classification, with local conditions, have produced a great disparity in yachts, and Gloriaana would no more fit a class in British waters than Jessica does here. By the Y. R. A. rule she is of 31-rating, and so would come between two classes, there being no racing yachts of intermediate sizes between 20-rating and 40-rating. While she would be much too large for one class, she would be too small for the other, in either case she would sail at an amount of time as to destroy the interest in the races; and at the same time it is very doubtful whether her type and general proportions are the best for racing abroad.

The proper course then which presents itself is the designing of a new Gloriaana for British waters and British rules, either a 20-rater, of about 40ft. l.w.l., or a 40-rater, of about 50ft. l.w.l. No doubt the designing of such a yacht would be a welcome work to Mr. Herreshoff and but little more difficult now than was the conception of Gloriaana a year ago. The working of the new Y. R. A. rule, and the type which it has produced, are so well known to him that the conditions of the problem would be hardly more complicated than in the case of the 40ft. class last winter, with a dozen promised boats.

Concerning the reception which such a "Yankee" visitor would meet in England to-day, whatever the case may have been in the past, there is now nothing in the rule which would militate in the least against a yacht built for the purpose, and as for the feeling to be expected from clubs and members, there is no reason to believe that she would not be welcomed in the regular open events of the season as heartily as Genesta and Galatea were in America; being allowed to sail on the same footing with the home yachts. There is no reason to believe that she would not be welcomed in the regular open events of the season as heartily as Genesta and Galatea were in America; being allowed to sail on the same footing with the home yachts. There is no reason to believe that she would not be welcomed in the regular open events of the season as heartily as Genesta and Galatea were in America; being allowed to sail on the same footing with the home yachts. There is no reason to believe that she would not be welcomed in the regular open events of the season as heartily as Genesta and Galatea were in America; being allowed to sail on the same footing with the home yachts.

However ably American yachtsmen have acquitted themselves in the part of defenders, there is nothing specially creditable in resting content with such a part and leaving to others the risks and honors of the challenge's part. It is well enough to have defended ourselves with credit against attacks at home, but after a long series of successes in this direction it is time to put on a bolder front, and if there is anything honest or genuine in the belief that we possess a champion, to send him forth to do battle against all he may meet.

NEW YORK Y. C. PRIZES AND WINNERS, 1891.

In their window on Union Square, Tiffany & Co. have on exhibition for a few days the thirty-six sterling silver cups just completed by that firm for the New York Y. C. prizes for the season of 1891. Each cup was especially designed so as to be appropriate in its form and decoration for the class in which it is offered. The collection is the largest in number, as well as the costliest set of prizes ever offered by any club. The prizes are in the form of bowls, loving cups, pitchers, tankards, beer mugs, vases, cigar holders, etc. The name of the winner, date, class and course is etched on each cup. The following is the list:

16th Annual Regatta, June 18.

Class 3. Sloops, Cutters and Yawls.—First prize, Katrina.
Class 6. Sloops, Cutters and Yawls.—First prize, Gloriaana; second prize, Jessica.

SCHOONER LIST.

Squadron Runs, August, 1891.

Prize won by Constellation for the following runs: First, Huntington to New London; first, Newport to Vineyard Haven; first, Vineyard Haven to New Bedford; first, New Bedford to Newport.
Prize won by Quickstep for the following runs: First, Huntington to New London; first, New London to Newport; first, Newport to Vineyard Haven; first, Vineyard Haven to New Bedford.
Prize won by Mayflower for the following runs: First, Huntington to New London; first, New London to Newport; first, Newport to Vineyard Haven.

Prize won by Marguerite for the following runs: Second, Huntington to New London; first, New London to Newport; first, Newport to Vineyard Haven.
Prize won by Fortuna for the following runs: First, Huntington to New London; first, New London to Newport.
Prize won by Merlin for the following runs: First, Vineyard Haven to New Bedford; first, New Bedford to Newport.

Prize won by Iroquois for the following run: First, Huntington to New London.
Prize won by Volunteer for the following run: Second, New London to Newport.

Prize won by Palmer for the following run: Second, Huntington to New London.
Prize won by Enone for the following run: Newport to Vineyard Haven.

SLOOP LIST.

Squadron Runs, August, 1891.

Prize won by Hildegarde for the following runs: First, Huntington to New London; first, New London to Newport; first, Vineyard Haven to New Bedford; first, New Bedford to Newport.

Prizes won by Clara for the following runs: First, New London to Newport; first, Newport to Vineyard Haven; first, New Bedford to Newport.

Prize won by Sayonara for the following runs: Second, Huntington to New London; second, New London to Newport; second, Vineyard Haven to New Bedford; first, New Bedford to Newport.

Prize won by Katrina for the following runs: First, Huntington to New London; first, New London to Newport.

Prize won by Loris for the following runs: First, Huntington to New London; first, New London to Newport.

Prize won by Gossoon for the following runs: First, Newport to Vineyard Haven; first, Vineyard Haven to New Bedford.

Prize won by Cinderella for the following runs: First, Huntington to New London; first, Vineyard Haven to New Bedford.

Prize won by Oweene for the following runs: First, Huntington to New London; first, New London to Newport; second, New Bedford to Newport.

Prize won by Mineola for the following runs: Second, Huntington to New London; first, Newport to Vineyard Haven.

Prize won by Mischief for the following run: First, Newport to Vineyard Haven.

Prize won by Bedouin for the following run: Second, Huntington to New London.

Prize won by Nautilus for the following run: Second, Newport to Vineyard Haven.

SPECIAL PRIZES.

Martha's Vineyard, Aug. 10, 1891.

Classes 1, 2 and 3—Schooners—Special prize won by Mayflower.
Classes 4 and 5—Schooners—Special prize won by Quickstep.
All classes—Keel schooners—Special prize won by Enone.
Class 3—Sloops, cutters and yawls—Special prize won by Bedouin.

Classes 4 and 5—Sloops, cutters and yawls—Special prize won by Cinderella.

Class 6—Sloops, cutters and yawls—Special prize won by Sayonara.
Class 7—Sloops, cutters and yawls—Special prize won by Gossoon.

SPECIAL PRIZES.

Newport, Aug. 13, 1891.

Class 6. Sloops, Cutters and Yawls.—First prize, special cup, value \$50, won by Gloriaana. Second prize, special cup, won by Sayonara. Third prize, special cup, won by Ulira.
The Gloriaana is a loving cup, 15 1/2 in. in height and 7 1/2 in. in diameter, weighing 120 z. and of strictly nautical type, the body being decorated with two graceful and beautifully modelled mermaids forming the handles. The cup is supported by one arm clasping the upper edge, while the other is extended, holding the laurel wreath of victory. The hair is interlaced with strings of pearls, and has the appearance of being blown about by the wind, blending gracefully into the intersection of the body and neck, around which is inscribed the words "Won by Gloriaana," in letters of seaweed, while the remainder of the inscription is on the body. The base is composed of a border of scroll-like shells and seaweed, growing from the foot and terminating in graceful lines around the lower part of body.

The above official list was not completed at the time our tables of winners were published, but the only important differences are that Volunteer is second in place of third on the second run; Cinderella, and not Hildegarde, wins the special race at Vineyard Haven, and Sayonara is tied with Mineola for second place on first run. It is also worth noting that Clara was not regularly entered in the Vineyard Haven race, but sailed a special sweepstakes race with Cinderella. With these corrections of record, as we believe, correct as it places the exact number of prizes won is a very difficult matter to settle, as will be seen from the above list, the various wins being combined in a single prize.

CLUB ELECTIONS.

Patuxent Y. C., Jersey City, Dec. 8.—Com. Norman L. Rowe; Vice-Com. W. A. Smith; Treas. Louis Mittlestodt; Fin. Sec'y, W. F. Tobin; Cor. Sec'y, Benjamin J. Soper; Meas. Wm. Chester; Fleet Surgeon, J. H. Van Meter; Fleet Captain, Geo. W. James; House Committee, A. B. Bennett, Archie White, and J. L. Mores; Anchorage Committee, L. M. Karver, John Bell and A. F. Roe; Delegates to the New York Yacht Club Association, L. J. Rowe, Wm. A. Smith, and B. Bennett; Board of Trustees, Wm. Kent, Dr. R. E. Freeman, C. E. Baldwin, E. J. Smith and Nat. Pritchard.

Orange Lake Ice Y. C., Newburgh, Dec. 8.—Com. Henry C. Haggins; Vice-Com. Dr. Willcutt C. Kidd; Treas. Gardner Van Nostrand; Sec'y, Wm. H. Smith; Treas., Chas. Dixon.

Audubon Y. C., New York, Dec. 7.—Com. S. J. Ramford; Vice-Com. Frederick Decker; Fin. Sec'y, Howard Crampden; Treas., H. B. St. John; Fleet Surgeon, H. B. St. John; Fleet Surgeon, Dr. J. J. Quigley; Meas., George Mason.

Rochester Y. C.—The annual meeting and dinner of the Rochester Y. C. was held on Dec. 7, with Com. White in the chair and sixty members present. The officers elected were: Com. Matt Cartwright; Vice-Com. E. N. Walbridge; Capt., J. George Cramer; Rec. Sec. T. B. Pritchard; Treas. W. H. Briggs; Cor. Sec. E. G. Newell; Meas. J. J. Pell; Fleet Surgeon, Dr. F. H. Sawers; Executive Committee—R. K. Driver, A. T. Hagen, Geo. H. Newell, J. R. White. The reports of the various officers showed the club to be in a very prosperous condition, financially and in other ways, with a large and united membership and a growing fleet. Com. Cartwright is one of the best known and most popular yachtsmen on Lake Ontario, the newly-elected president of the Lake Y. R. A., and under his administration the club may look for a very successful season in '92.

SMALL RACING YACHTS.—To meet the growing demand for a small yacht for racing, pleasure sailing and cruising work, the New York Yacht Club, the American Yacht Club and the St. Lawrence Yacht Club, have recently ordered a design from Mr. William Gardner for a yacht of 18ft. corrected length, and is now prepared to build a number of boats at a very low figure during the winter. The yacht is a handsome flush-decked cutter, 23ft. 6 in. over all, 18ft. 1 in. l.w.l., 5ft. 6 in. beam, 4ft. draft and 324 sq. ft. sail area. The cockpit is large and made watertight, and is self-bailing. For cruising a tent may be used, while there is a large cuddy under the forward deck. The rig is a simple boom and gaff mainsail with a jib set on a short bowsprit. The yacht is handsome in outline and has a neat overhang at each end. A lead keel makes her non-capsizeable. With three or four such craft, all of one build and model, a club might do a great deal of good racing, each boat carrying two or even three men, while from their safety they are well suited for ladies' use.

MODEL YACHT RACING.—A correspondent asks for a rule for measuring and classifying model yachts. There is now no uniformity among model yacht clubs, many rules being used; but the length and sail area rule is steadily superseding all others. Probably the simplest form of this rule would be to measure the actual size of each sail carried, extracting the square root of the total area. To this root add the waterline length, and divide the number by 2, which will give the "corrected length." The yachts may be classed by this corrected length, or by waterline length, but the former is the more desirable. The sail measurement may also be made by the Seawanhaka rule, which we have frequently published, the length of spars being the basis of measurement.

STEAM YACHT RACING.—Some interest has been excited in the States this year in the movement of a steam-yacht race, which, however, did not come off, owing to the breakdown of one competitor and the grounding of another. Some little excitement would doubtless be caused by a good steam-yacht race, but it is difficult to see what genuine sport could be got out of it. Speed under steam is a question of construction and of engine power only, or at most of management in the engine room and stove hold. The interest of racing between sailing yachts consists in the tact and in addition to the contest between the various designs there is the further element of seamanship and skillful management under sail.—Nautical Magazine.

VESTA, sclr., one of the three American yachts which raced across the Atlantic in mid-winter just 25 years ago, has been sold for \$7,000 to the Rev. J. J. Dougherty, the head of the Mount Loretto institution at Pricess Bay, Staten Island. She will be square-rigged and used as a training vessel for the boys under the command of Cap. Geo. E. Reeves.

REPRESENTATIVE AMERICAN YACHTS.—We have received from Mr. H. G. Peabody parts 4 and 5 of this elegant publication, the former containing views of the 30-footers and smaller racing craft, and the latter of the entire 40ft. fleet. Part 5 has been also issued as a separate volume, bound in cloth. Mr. Geo. A. Stewart has furnished the letter press.

SEAWANAHKA CORINTHIAN Y. C.—The Oyster Bay Y. C. has recently been consolidated with the Seawanhaka Corinthian Y. C., adding 75 new members to the latter organization. The establishment of the latter club at Oyster Bay has made the move a most desirable one for both clubs.

Answers to Correspondents.

Names and Portraits of Birds
Which Interest Gunners; with descriptions in language understood of the people.
BY G. TRUMBULL.
Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.
OPINIONS OF THE PRESS:
It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*
To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it.—*Boston Evening Traveller.*
The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*
There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should he meet it in the woods or on the water—is not compelled to shut the book, drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means.—*New York Herald.*

GEORGE B. GRINNELL.

AFTER a brief illness, developing into pneumonia, George B. Grinnell passed away from earth, on the morning of Saturday, Dec. 19, at his home in Audubon Park. His age was 68.

Born in Greenfield, Mass., in 1823, Mr. Grinnell came of an old New England family, and from it he inherited those high traits of character which in after years won for him the regard of the commercial world. He was a resident of New York city for nearly fifty years, and was for a long period one of its prominent merchants. In 1873 he retired from active business life to his home in Audubon Park, in this city.

Mr. Grinnell was one of the trustees of the Forest and Stream Publishing Company, of which his son, George Bird Grinnell, is president. He had a warm interest in this journal and its prosperity. The sense of their loss felt by his associates may not be told in words; but with the tender sorrow they feel will always be mingled the grateful memory of the rare personal qualities which endeared him to them.

OUR BOYHOOD NUMBER.

THE FOREST AND STREAM of Jan. 7 (the first issue of the enlarged paper) will be the Boyhood Number. A generous proportion of its pages will be filled with reminiscent chat and story by men whose souls have not been soured by age nor their sunny memories of youthful days with rod and gun obliterated by the passing years. Here is a partial list of the papers, and an inviting one it is:

Episodes in the Life of a Bad Boy—PODGERS.
Cleaning the Old Gun—ROWLAND E. ROBINSON.
A Snap-Shot—A SENIOR SNAPPER.
"Us Boys"—H. P. UFFORD.
Nights with the Coons—L. S. EDDINS.
My First Repeater—NUTMEG.
Long Wash—CHARLES H. SHINN.
In Old Times—SANDPATH.
Was It Bewitched?—ORIN BELKNAP.
Old Times and New—DIDYMUS.
My First Deer Hunt—MYRON COOLEY.
Angling Annals—S. C. C.
The Trout I Lost—HUNTER.
Trout Canning—B. F. HENLEY.
A Boy's Troubles—G. L.
My First Wild Turkey—C. C. R.
In the Fifties—NUTMEG.
A Reminiscence—ONCE A BOY.
My First Shooting Lesson—W. TOWNSEND.

WINTER VOICES.

OUT of her sleep nature yet gives forth voices betokening that life abides beneath the semblance of death, that her warm heart still beats under the white shroud that enfolds her rigid breast.

A smothered tinkle as of muffled bells comes up from the streams through their double roofing of snow and ice, and the frozen pulse of the trees complain of its thrall-dom with a resonant twang as of a strained cord snapped asunder.

Beneath their frozen plains, the lakes bewail their imprisonment with hollow moans that awaken a wild and mournful chorus of echoes from sleeping shores that answer now no caress of ripples nor angry stroke of waves nor dip and splash of oar and paddle.

The breeze stirs leafless trees and shaggy evergreens to a murmur that is sweet, if sadder than they gave it, in the leafy days of summer, when it bore the perfume of flowers and the odor of green fields, and one may imagine the spirit of springtime and summer lingers among the naked boughs, voicing memory and hope.

Amid all the desolation of their woodland haunts the squirrels chatter their delight in windless days of sunshine and scoff at biting cold and wintry blasts. The nuthatch winds his tiny trumpet, the titmouse pipes his cheery note, the jay tries the innumerable tricks of his unmusical voice, and from their rollicking flight athwart

the wavering slant of snowflakes drifts the creaking twitter of buntings.

The sharp, resonant strokes of the woodman's axe and the groaning downfall of the monarchs that it lays low, the shouts of teamsters, the occasional report of a gun, the various sounds of distant farmstead life, the jangle of sleigh bells on far-off highways, the rumbling roar of a railroad train rushing and panting along its iron path, and the bellowing of its far-echoed signals, all proclaim how busily affairs of life and pleasure still go on while the summer-wearied earth lies wrapped in her winter sleep.

Night, stealing upon her in dusky pallor, under cloudy skies, or silvering her face with moonbeams and starlight, brings other and wilder voices. Solemnly the unearthly trumpet of the owl resounds from his woodland hermitage, the foxes' gasping bark, wild and uncanny, marks at intervals his wayward course across the frozen fields on some errand of love or freebooting, and swelling and falling with puff and lapse of the night wind, as mournful and lonesome as the voice of a vagrant spirit, comes from the mountain ridges the baying of a bound, hunting alone and unheeded, while his master basks in the comfort of his fireside.

JURISDICTION OVER THE LAKES.

WE publish here the opinion of the Supreme Court of Pennsylvania, delivered by Mr. Justice Gordon, March 30, 1885, in the case brought to test the extent of jurisdiction of the State of Pennsylvania over the waters of Lake Erie. In 1884 the strife between the gill-net and pound-net fishermen led to prohibitive legislation, first against the pound-nets, which were operated along the shore, while the gill-nets which were set at a greater distance than three miles from the land were allowed to continue their vocation. The pound-net fishermen then secured legislation against gill-netting beyond the three-mile limit, and in the suit which followed, the authority of the State over the waters of Lake Erie to the treaty line was affirmed by the Court of Quarter Sessions. The case was then appealed to the Supreme Court, where the decision of the lower court was sustained.

The only rights which the States have surrendered to the general Government extend to admiralty and maritime cases. The fishery is regulated by the State. We have, therefore, along the chain of Great Lakes a body of waters controlled to their middle line by the States, while the other half is under the jurisdiction of Canada; but concurrent legislation in the interests of the fisheries cannot originate between the States and Canada jointly, for no agreement would be binding upon the latter government as against a commonwealth, which has not the treaty-making power. This is the present cause of serious difficulty in the establishment and operation by the United States of a fish hatchery in the State of New York to stock the waters of Lake Ontario. In the resolution of Congress carrying an appropriation for such a hatchery the stipulation was made that the U. S. Fish Commissioner must first be satisfied that "New York has taken efficient measures for the regulation of periods for fishing and for proper protection of fish in the spawning season in the waters of northern New York." Just how New York or any other State is to arrive at concerted action with Canada, except through the intervention of the general Government, is hard to see; but there exists a strong and perfectly natural public sentiment in most of the States bordering on the Lakes against surrendering to the Government such control of the fishery as may be thought necessary for the success of artificial stocking of the waters. The alternative is to prevail upon the Canadian Government to give up to the Provinces control of the Lake waters ceded to them and place them on the same footing in fishery matters as the States. At the present time there is conflict between the provincial and the federal laws in some of the Canadian provinces, and until this is reconciled there is little hope of arriving at a satisfactory basis for fish protective legislation.

DUNLAP VS. THE COMMONWEALTH.

MR. JUSTICE GORDON delivered the opinion of the court March 30, 1885, as follows:

The only question in this case is one of jurisdiction, for the 40th section of the Act of June 8, 1878, in express terms provides that its provisions shall not apply to any stream forming the boundary line between this State and any other having a concurrent jurisdiction over such stream, nor any lake partly within the boundary thereof. Hence, without troubling ourselves about the question of repeal by implication, we conclude with the learned judge of

the lower court, that the local Act of May 16, 1878, is operative if the State of Pennsylvania has jurisdiction over any part of Lake Erie. But on this subject we have no doubt whatever; we are, indeed, surprised that such a question should have been raised in the lower court, and have been thought worthy of discussion in this court.

When the Government of the United States ceded to Pennsylvania the triangular tract on Lake Erie it retained nothing, and in the resolution of cession it was expressly declared that the laws and public acts of the said State should extend to every part of said tract, to all interests and intents and purposes as if the same had been within the charter bounds of the said State. But had it been originally within the charter bounds of the State there could be no doubt about its jurisdiction over the adjacent waters of the lake. It was only after the Act of Congress of Feb. 26, 1845, that even an admiralty jurisdiction was claimed for the United States over the waters of the Lakes, and the constitutionality of that Act was seriously doubted until it was settled in 1851 by the Supreme Court in the case of the propeller *Genesee Chief vs. Fitzhugh*, 12 How., 443. Previously to this time the doctrine was held, as established by the case of *Thomas Jefferson, 10 Wheat.*, 423, and the steamboat *Orleans vs. Phoebus*, 11 Pet., 173, that the jurisdiction did not extend beyond tidewater. It is, therefore, obvious that previous to the Act of 1845 the courts of the States bordering on the Great Lakes must, *ex necessitate*, have had jurisdiction over them to the treaty line, for it could not be that they were altogether without law, and that crimes of every character could be committed thereon with impunity.

Indeed we must regard the decision in the two cases last above cited as declarative of the exclusive jurisdiction of the States, while the case of the *Genesee Chief vs. Fitzhugh* put the jurisdiction of those States bordering on or having in them navigable rivers or lakes on precisely the same footing as those bordering on the seaboard. But the general jurisdiction of these over their adjacent tidewaters has never been doubted. There is not now, and never has been, any room for such doubt. The States, immediately before the adoption of the Federal Constitution, were independent sovereignties, and as such had right over the seas of their coasts to the extent of a marine league from the shores. Upon the adoption of that Constitution there was a partial surrender of that right, in that it was provided the judicial power of the Federal Courts should extend to all admiralty and maritime cases. Nevertheless, as was said by Mr. Chief Justice Marshall in the case of the *United States vs. Bevans*, 3 Wheat., 336, "The general jurisdiction over the place, subject to this grant of power, adheres to the territory as a portion of sovereignty not yet given away."

Hence, in the case cited, it was held that where a homicide had been committed by a marine on board a United States ship of war anchored in the Boston harbor, the courts of Massachusetts had power to arrest and try the offender, and this not because Congress had not the power by its legislation to bring a crime thus committed within the jurisdiction of the Federal courts, but because it had not so legislated. As an illustration of the power of a State to enforce its laws over its tidewaters, notwithstanding the maritime jurisdiction of the United States, the learned Chief Justice asks the question: If two citizens of Massachusetts should step into the shallow water, when the tide flows, and fight a duel, are they not within the jurisdiction and punishable by the laws of that State? There can, of course, be but one answer to a question of this kind. Yet this question may be just as pertinently put with reference to the waters of Lake Erie. In support of this line of argument may be cited the language of Mr. Chief Justice Taney in the case of *Martin et al. vs. The Lessee of Waddell*, 16 Pet., 367, that when the revolution took place the States themselves became sovereign, and as such possessed the absolute right over all their navigable waters and the soils under them, and that they are, even now, so held subject to the rights surrendered by the Constitution to the General Government. The case of *Dunham vs. Lamphere*, 3 Gray, 268, though not of equal authority as the cases above cited, is undoubtedly sound law, and direct in point. It was there held by an act regulating the time and manner of taking fish in the sea, within a mile of the shore is within the authority of the State Legislature and binding on the citizens of other States and on vessels enrolled and licensed as fishing vessels under the laws of the United States. One of the authorities cited in support of this ruling is *Bennett vs. Boggs*, Bald., 60, where it was held that a law of Delaware prohibiting the use of a gilling net in tide waters within the limits of the State was valid, and that the Legislature had power to regulate the fisheries in the Delaware by the prohibition of a common law right.

Thus, from what has been shown, it follows: (1) By the act of cession the jurisdiction of Pennsylvania over the waters of Lake Erie, adjacent to the ceded territory, is the same as though that territory had been embraced in the original charter to William Penn. (2) That the legislative powers of this Commonwealth over these waters are absolute, except so far as they may be restrained by Congress for the purpose of carrying into effect the admiralty and maritime laws of the United States; and (3), the consequent of the above propositions, the jurisdiction of the Commonwealth to regulate fisheries in these waters, in the absence of any Act of the Federal Legislature abridging it, is plenary and cannot be called in question by any other power short of the Government of the United States. The judgment of the Court of Quarter Sessions is affirmed.

If all deer hunters blew their horns as loudly in the woods as some of them do after coming out, fewer of them would be shot by their fellow men who take them for game.

The enlarged FOREST AND STREAM will be a better paper in all the departments, for we shall have more room for discussing the several phases of our special field.

The Sportsman Tourist.

THE DESERTED NEST.

BARE are the boughs, save to their tips still clinging,
The vagrant orioles' deserted nest,
Its tattered fragments in the breezes swinging,
In idle mockery of its summer rest.

The patient weaver, at her labors busy,
Has waked us often with the morning light,
Or darting downward from her summit dizzy,
Flashed like a meteor across our sight.

Sombre in hue, like Portia's leaden casket,
Once filled like that, with a most precious prize,
It hangs in air, a broken, ragged basket,
Its contents scattered under sunnier skies.

Beneath the sheltering foliage closely shaded
It shunned the prying schoolboy's eager gaze,
While the slim twig, to which 'twixt deftly braided,
Offered no foothold for the squirrel's ways.

Naught cares the bird for her deserted dwelling,
Free as the air on which she spreads her wing,
Her breast ere now with warmer breezes swelling,
Perchance another melody she sings.

So with ourselves, through many a clime and nation,
In search of wealth or fame, we wander wide,
Knowing for years no settled habitation,
To no one spot on earth's fair surface tied.

Still, as the bird with summer's sun returning,
Finds the old tree in which to hang her nest;
So we, our hearts for childhood's pleasures yearning,
Seek the old home, our wanderings o'er, to rest!

"Pilgrims on earth, with no abiding city,"
Through what far planet are we yet to roam?
Where shall we rest when heavenly love and pity
Shall end our toils in our eternal home?

DEC. 16, 1891.

VON W.

IN MAINE WOODS.—V.

IN CAMP, Piscataquis County, Me., Oct. 30.—At last our good weather has come. Yesterday and to-day have been great days for hunting on the caribou bogs, and great days we have had. Yesterday morning we started for a long paddle across the lake to the carry—my first real chance in a canoe this season. Glorious in their snowy mantle stood the mountains. If in summer they are fine, in winter they are transcendent. Moreover, this morning we can enjoy the winter view while we ourselves are bathed in the mild, delicious air of an Indian summer day. We reach the carry and in light marching order start across. Part of the pleasure of this trip is the remembrance of the morning three years ago when I went over this same path.

In fact, the only thing I have against these Maine woods is that I cannot go anywhere else for my annual outing, or if I do, I am thinking of the old haunts. It is like fishing a familiar stream, and every angler knows the fun of trying the same pool where he took that particularly big and gamy trout last year, or the rifle where he lost the still bigger one the year before.

We reached the "thoroughfare" at the other end of the carry only to find it frozen over for nearly a mile. It is sheltered from the wind and closes up long before the lake. No use to get out the canoe which we know is hidden in the thicket. It means a nearly three-mile walk to the bog. While we stand inspecting the shores we see deer across the bend. The glass shows them to be a doe and two fawns. It would be hard to see a prettier sight. Shyly the mother reconnoiters and sniffs the air for danger, turning her large ears this way and that. The wind is right for us and she fears no harm, and the glass shows us their every motion. They are a long rifle-shot away, but we would not even startle the pretty trio. The doe steps down to the edge and we can hear her dainty hoof as she stamps to try the ice. The two fawns crowd up, one on each side, and for a minute their three heads are bunched as closely as they can crowd. "No, children, it isn't strong enough yet." That is plainly what she says, and they nibble a twig or two and step back into the thicket. So do we, and start for the bog. The sight we have seen alone pays us for the tramp.

So here again is my fine old bog, half covered with young larches, with here and there an open pool of water. Here is where I shot the caribou on my last trip. Most of the wood-dwellers that I know come out to see us—all, in fact, but the caribou and the white-throated sparrows, whose clear whistle usually greets me here. We circle around the edge of the bog. A cock spruce partridge flusters up into a young tree, and at short range for ten minutes we inspect him through the glass. How fine a fellow he is! He croons and cackles to himself in a self-satisfied and conceited tone, and puffs out his side pouches and tufts of cheek feathers till it looks as though he wore bushy and projecting side and chin whiskers. The band of scarlet over his eye is the most brilliant imaginable. Finally, when he and we are fully satisfied with the interview he takes a short flight and we move on. A Canada jay comes along with noiseless flight, and most curious and fearless of birds, alights nearer and nearer to us, looks us over, preens his loose and almost hairy feathers a bit and passes on. A fine buck and doe have been watching us under a leaning tree a little way within the edge of the woods. The wind suddenly gives them our scent, and with a great snort they burst away, and we merely catch an instant's glimpse of them and a flirt of their white pocket-handkerchiefs.

We are after caribou, but not a sign of them even do we discover on the whole bog—not even an old track. To-morrow, like as not, a dozen may be here. They are the greatest travelers and most capricious animals in the woods, one day on the bogs, the next clambering around the highest cliffs of the mountains, and the next investigating matters in the next county.

Two or three ruffed grouse burst up and fly away as we return. I think with amusement of the many articles recently published in FOREST AND STREAM on "The Habits of Ruffed Grouse"—the funny thing about them being that they differ so much and yet are, doubtless, all true, while each writer records his experience as the uni-

versal rule. The truth is that these birds vary in their habits and behavior toward man as their experience varies. Your ruffed grouse learns readily from experience. While a drumming grouse may, as one correspondent relates, be far from shy in Aroostook county, he is, as Miss Hardy relates, a marvelously wary one in other counties—for example, Piscataquis, as I have many a time proved, and that, too, in the depths of the forest.

Though our caribou hunt had nothing to do with caribou, it was a glorious day and full of rewards. We found at the camp three men and one dog. They were here a few days ago. They have dogged several deer on another lake, and are back here to harry these woods again.

Another night and another warm, still day is ours, and we start for another pull across the lake in another direction, to visit some other bogs and some hard-wood ridges famed for deer. As we paddle away from shore we see one of these men posted on a point with rifle and canoe, while another has gone to put the hound on the track. We a little later hear the single rifle shot, the signal that a deer has been started. Later, the yelp of the fox-hound is heard, and later still, the three successive rifle shots that tell us that the deer is dying.

We chose the mountain side instead of the bogs. The day was so still that every footfall in the new-fallen leaves could be heard. We started two deer, could hear them bounding away, and then the thrice-repeated whoof of the buck as he snorted his astonishment. The wind was again wrong for us, we were lazy, the sunlight was warm and delightful, and we sat long on the top of a ridge in full and happy enjoyment of it, not caring in the least that we had in the two days fired only one shot. That shot decapitated another partridge and was the work of the guide. But the day was full of happiness to its close, which finds me wrathful and unhappy. As we paddled down the lake we hoped our visitors of the night before had taken their deer and left. But they had staid, and two more parties of two each had arrived, and two others are camping a mile or two down the lake. Two deer were hung up, and we arrived just in season to see the death of the third. The dog was yelping on its track, soon it appeared in the water a half mile away, and instantly three canoes, each manned by two men, started in hot pursuit. A shot, and the deer, its head killed by buckshot, yields its life. All three of the deer killed here to-day are does. There are camped on this point to-night nine men, and two more are further down the lake. The homes of all but myself are in this county. There are here to-night six dogs.

It is a butchering place, a shambles for deer. Active preparations have been made for to-morrow's "sport," meanwhile the fitting finale of the day has come, and the one I anticipated when I saw the big jug of rum which formed a part of their duffle. A drunken shindy is going on in the cooking camp, and the air resounds with the noise of their breakdowns and vile shouts and curses, which in our sleeping tent we cannot choose but hear.

C. H. AMES.

SPORT AT PALMER'S LAKE, TEXAS.

"OUT for a day?" was the pleasant greeting we received from our old companion G. one bright morning about the middle of last October, while mounted on top of our stores in a country wagon, which was to convey us that paradise of sportsmen, beautiful Palmer's Lake.

"Not for a day, but a week," I reply. After a warm shake of the hand, God speed, and a promise to visit us during the week, we whip up our horses and proceed toward our destination, 25 miles distant.

The party consisted of Dr. J. Keef, myself and Matt, our man of all work—all first class lovers of sport and jolly good fellows. We reach the lake about 4 o'clock P. M., and Matt, our Man Friday, soon has things in shape, our tents up and camp cots arranged for solid comfort, with mosquito netting well stretched, to "keep out the pesky varmints" as they are called by the Doctor. The next move was to get our Osgood boat in trim, and in a few minutes it floated gracefully upon the surface of the lake, that lay like a gem in the heart of Trinity bottom forest, surrounded by large cypress trees, from which the gray moss hangs in festoons of sombre hue, contrasting strangely with the whiteness of the water lilies that line the shores of the lake in great profusion. Our Man Friday soon had a roaring fire, which when reduced to coals was to furnish our Indian oven with heat necessary to bake rolls for supper. Keef and I take the boat to try our hand at croppery, while the Doctor glides like a phantom into the dark forest to a path about a mile distant that leads to an old Indian crossing on the Trinity, to try his luck for venison, this being a favorite watering place for deer.

Keef and I paddle noiselessly about half a mile and finally anchor, or rather tie up to a bunch of snags of an old pine tree, which had evidently drifted and settled there years before, about a quarter distant from the shore. We sit patiently about half an hour before we catch a fish, upon which we depend for bait, for croppery do not readily take the worm. Keef lands the first one, and a beautiful specimen it was, with its armor of silver scales, dotted here and there with spots "dark as the raven's wing." It seemed a shame that such a thing of beauty would have to be sacrificed for bait, and I could not forbear a sigh of pity as Keef ruthlessly tore the scales from the side of his fluttering victim. He proceeds to cut the fish into strips about the length of a minnow, and soon we have a dozen fine specimens of about 1 lb. each in weight. That being enough for supper, we pull for camp.

"Strange we have not heard the Doctor fire," says Keef.

"Guess he has had no occasion to," I reply; "but I hope to taste venison ere another sun gilds the eastern horizon."

Boom! boom! comes the dull report of Doctor's "trusty." "Venison, by George!" shouts Keef. "Venison, by George!" replies the echo, so startlingly distinct that it almost seemed the Doctor was standing at the edge of the opposite shore and had repeated Keef's words.

In a little while we reach shore, and soon Matt has the pan sizzling merrily over the fire, chanting while at work, "Eat sheep meat and gnaw the bones," in negro dialect. His chant in the gathering shadows of the forest, his ebony hue flitting before the fire and the who, who of the owl combine to make surroundings that involuntarily

stir the superstitious feelings of one, which will crop out at times.

The crashing of branches announces the arrival of the Doctor, but no soft-eyed deer has fallen under the fire of his "trusty"; however, what is equally as palatable—a fine gobbler—hangs limp and lifeless from his shoulder, and is duly admired by Keef and myself. Matt announces supper. The way those rolls, fish and potatoes disappeared would cause a dyspeptic to grow green with envy. After satisfying the inner man and swapping yarns, we turn in, to live over in dreams the incidents of our evening's sport.

The Doctor is first to wake next morning, and after his coffee, with a cold lunch in his knapsack to keep the wolf away, he starts again in quest of noble game, calling to us as he leaves, "Boys, if I do not get back in time for supper, do not feel uneasy, for I have promised you venison, and venison you shall have, if it takes me a week." And he was soon out of sight.

"Jim, suppose we see what we can do with bass this morning."

"Good," he replied; and after a hearty breakfast we step lightly into the boat.

"Now, old boy," I remark, "if you do not catch bass it will not be for want of artistic work of the paddle."

"You work the paddle and I'll do the rest," grunted Jim.

The words were scarcely spoken, when splash, splash, goes the water, and two immense bass rush for the deer-tail fly at the same time. A vigorous tug, and away dashes the king of game fishes, the reel meanwhile singing the sweetest strain that ever gladdened the heart of an ardent fisherman. "Keep cool," I call in low tones, "for he is a dandy."

Hither and thither rushes the frenzied victim, at times leaping high in the air, its side glistening in the sunlight, rivaling in beauty the tints of the matchless opal. Too much slack tells the story, and as Jim reels in the now empty line, sorrowfully quotes:

"Of all sad words of tongue or pen,
The saddest are, 'There! I'm left again!'"

The bass continue to rise almost at every cast, much to the gratification of Keef, who by 10 o'clock has landed eighteen specimens of this magnificent fish, as fine as one would wish to see. Jim now reels in his line, and soon we lie beneath the spreading branches of a large magnolia tree, inhaling the balmy, pine-scented air of the forest, lazily watching Matt digging a trench in which to bake our turkey Indian fashion. Reader, if you have never eaten game cooked in this style, just try it the first opportunity, and my word for it, you will pronounce it the most toothsome morsel it has ever been your good fortune to taste. But in this I am like the two darkies who could find no subject to discuss, when Pomp suggested they talk of something good to eat. "Well, how erbout baked possum an' sweet taters?" said Sam. Pomp replied, "Hush your mouf, nigger, dat's too good to talk erbout. I'se hungry now." Like Pomp, even as I write, the memory of that feast makes me absolutely hungry.

The Doctor arrived about the time our evening meal was ready, accompanied by Mr. Morgan, the veteran b'ar hunter of that section, carrying between them, tied to a pole, a magnificent buck. Morgan yelled as they move in sight, "Here we come. Somebody head us off," which Keef and I immediately do, executing an Indian war dance in our delight at the prospect for venison steaks.

The next afternoon G. arrived and expressed astonishment at our display of fish and game, there being at the time about 40 lbs. of bass and croppery in the fish can, all alive and kicking; the most of the deer and eleven squirrels, all skinned and skewered on sticks ready to barbecue.

G. and the Doctor decide to try for another deer the next morning, Keef, Morgan and the writer conclude to cut a bee tree that Morgan has located at the head of the lake. After all arrangements are completed Morgan regales us with an account of a lively tussle he had with a bear a few days before. The bear had entered his pen in broad daylight and attempted to carry off a young pig.

"Wall, boys," he told us "me and Martha [his wife] was talking about the log-rolling that war to come off the next night, when I heard a pig squeal, and on going to the door, what did I see but ole Cuff taking off one of my shoats, carrying him in his arms just the same as a mother carries a child. The pig was hollering fit to kill hisself, but bruin kept a-walking. Every once in a while he'd give the shoat a slap to kinder hush him up. I called to Martha to hand me Old Dob, that war standing in the corner, and I run, jumped the fence and cut loose. Cuff war hard hit, he dropped the shoat and made for me, but Morgan was thar, all ready to entertain Mr. Bruin, so I pulled out my hunting knife and waded in. Boys, we fit much; and I got some putty hard licks, but if you will come over to the house I will show you a b'ar skin worth seeing."

Morgan continued to relate backwoods adventures, many of them very entertaining, until 10 o'clock, when all retired and slept as only tired hunters can sleep.

The morning broke clear and cool, and we all departed from camp according to previous arrangements. Our party soon reach the base of operation, which proves to be a large gum tree; the sound of the ax awakens the echoes of the forest, and in a little while the mighty gum falls with a deafening crash. The bees swarm out and give battle. They attack Keef and me vigorously, and being tenderfeet in robbing bee trees we beat a hasty retreat, fighting wildly with hats, arms and legs, much to the amusement of Morgan, who proceeds to rob the tree as though it was a most pleasant task. The plunder is five gallons of pure white honey. We return to camp, and after a free use of arnica strain our honey.

The Doctor and G. get back about 5 o'clock and report having killed two deer, which are brought in on horseback a little later by an old darky whom they had met in the woods trying to locate some stray hogs.

Early next morning we break camp and return to the city, having spent one of the most successful and pleasant outings we have ever had, all happy and healthy, looking forward with delight to our next trip, which will be early in the spring of 1892.

J. C. W.

If your shooting friend does not read FOREST AND STREAM why not give him a Christmas present and do a little missionary work at the same time by subscribing to the paper for him. It will give him pleasure fifty-two times a year. Do you realize that next year \$4 will buy you 1864 of these big pages, and all of them devoted to wholesome, manly sport.

Natural History.

SUMMER ROBIN ROOSTS.

IN the October number of the *Auk* Mr. Wm. Brewster discusses at some length a subject which to many readers will be entirely novel. This matter is so interesting that we quote very fully from the article in question. Mr. Brewster says:

"Perhaps the greatest charm of ornithology is that its pursuit yields surprises when they are least expected. Especially true is this of the study of birds' habits, for a close watch kept on even the commoner species is sure, sooner or later, to reveal facts not in the books. Nor is this strange, for a lifetime is not long enough for fathoming all the secrets of the woods and fields immediately about one's home, while the general subject is inexhaustible. Moreover, a discovery which comes early and easily to one may long elude others equally vigilant. Yet who would suspect that at this late day there could be an unwritten page in the life history of our robin (*Merula migratoria*), a species of unusually general distribution, abundant nearly everywhere, and probably familiar to a larger number of people than any other bird on this continent? Nevertheless no author whom I have consulted so much as mentions the fact that robins, while still in their summer haunts, form roosts* which are resorted to regularly night after night and season after season by hundreds or even thousands. Such gatherings, however, are by no means uncommon in Massachusetts, and they doubtless occur throughout the entire North, wherever robins abound.

"Possibly they have been neglected rather than overlooked. In either case I wish to show that they are not without importance. What I have to say of them proceeds chiefly from personal experience, but I have also drawn freely from the notes of Messrs. Faxon, Batchelder and Torrey†, to all of whom I am indebted for much valuable aid in the preparation of this paper.

"Our Massachusetts robin roosts are invariably in low-lying woods, which are usually swampy and are composed of such deciduous trees as maples, oaks, chestnuts and birches, sometimes mixed with white pines. I have never known robins to actually spend the night, however, in the latter, or indeed in any species of evergreen, except at Falmouth, Mass., where there has been a small gathering these past two seasons in a white cedar swamp. The trees in the roost may be tall and old, with spreading tops, or crowded saplings only 20 to 30 ft. in height, but it is essential that they furnish a dense canopy of foliage of sufficient extent to accommodate the birds which assemble there. As a rule, the woods are remote from buildings and surrounded by open fields or meadows, but the latter may be hemmed in closely by houses, as is the case with a roost which at present exists in the very heart of Cambridge. A roost once established is resorted to nightly, not only during an entire season, but for many successive seasons. Nevertheless it is sometimes abandoned either with or without obvious cause, as the following account of the movements of the Cambridge robins during the past twenty odd years will show."

Mr. Brewster then describes at some length the several robin roosts near Cambridge, Mass., which he and others observed between the years 1867 and 1889 and gives estimates of the actual numbers of birds which occupied such roosts. It appears that these numbers vary widely and that while some are small others may have had 25,000 inhabitants. As to the time when the roosts begin to be used Mr. Brewster says:

"During the past season Mr. Faxon saw a few robins going to the Beaver Brook roost as early as June 11, but I have never observed any well-marked flights at Cambridge before the 20th of that month. The time probably depends somewhat on the date at which the first broods of young are strong enough to make the necessary effort, for the earlier gatherings are composed chiefly of young birds still in spotted plumage. Perhaps not all of those able to undertake the journey actually perform it at this period, for the movement, at its inception, is slight, and it gains momentum slowly. After July 1 it increases more rapidly, and by the middle of July becomes widespread and general, although it does not usually reach its height until the latter part of that month or early in August. By this time the old birds have brought out their second broods, and old and young of both sexes and all ages and conditions join the general throng. In fact it is nearly certain that during August practically all our robins visit some roost nightly.

It is by no means equally clear that individual birds or flocks go always to the same roost. If this were so the number at any given roost should remain uniform for a time after it has reached its maximum and before the migration. But it not only varies from week to week, but from night to night. Thus at the Norton roost, where, owing to the small size of the colony and to the fact that most of its members enter at one side over a wide opening, it is possible to count the birds with close approach to accuracy, Mr. Batchelder counted 861 on July 23, and on the next evening 1,062, an increase of about 23 per cent. On the evening of Aug. 15 following, standing at precisely the same point, I counted only 518; on that of Sept. 4, 1,251. Mr. Faxon's counts at Belmont and Mr. Torrey's at Melrose Highlands show similar variations. As already stated, Mr. Faxon's largest count was made Sept. 2, 1889, the next largest Aug. 28 of the same year. The Melrose roost, during the last two seasons, was apparently most populous in the latter part of July. More observations are perhaps necessary before the cause of these fluctuations can be definitely ascertained; but as robins, when not tied down by family cares, are addicted to wandering more or less widely in pursuit of food or recreation, it seems more than likely that during August and early September they sometimes pass outside the limits of the region—often, he it remembered, only a few miles in extent—tributary to their chosen roosts. If this is true—and it can scarcely be doubted—what more natural than that they should join at nightfall the general exodus from the surrounding fields and woods, even though it leads in a direction con-

trary to that which they have been accustomed to take? In support of this assumption is the fact that, as far as I have seen, the evening flights over any given place are invariably in one direction, that is there are never two sets of robins passing in different directions at the same time, as would be the case were such rovers to return at evening straight to their own roosts. This theory, it will be observed, is only necessary to account for the acquisition of the habit by the young, for after it has become established a knowledge of the existence and position of several roosts would certainly be taken advantage of more or less frequently. Another factor which possibly has some influence on the fluctuations under consideration is the robin population of the country along the boundaries between two contiguous roosting areas. Why may not this constitute a neutral ground, its inhabitants sometimes visiting one roost, sometimes the other, as fancy or the condition of wind and weather dictate? This suggestion, however, is pure speculation unsupported by any data.

After the middle of September the roosting flights diminish rapidly, and by the end of the first week in October the roosts are practically deserted.

I had supposed that the old birds which accompany the young in the earlier flights to the roosts are individuals of both sexes that for one reason or another have not attempted to rear second broods. But Mr. Faxon informs me that as far as he has seen they are invariably males, and in disproof of the rest of my assumption furnishes the following interesting bit of evidence. The observations quoted were made in July, 1890, a little over a mile from the Beaver Brook roost.

"The numbers of adult males in song, and the lack of females shown whenever I scrutinized the individual birds on their way to the roost—together with the fact that the robins hereabouts seemed to be generally engaged at that time in rearing new broods—led me to doubt your theory and to attempt observations that would throw some light on the subject. It happened that on the 22d of July there were two robins' nests on the place, one with three young, well advanced, and one with three eggs (female sitting). I had noticed several times that the male belonging to nest No. 1 carried food to his young late in the afternoon, while the flight to the roost was going on. On the day above named, therefore, I began watching him closely toward evening, and saw him—after feeding the young—fly straight off for the roost, 1½ miles away, at 7:30 P. M. You remember I have an unobstructed view from the house to the north and northwest, so the bird's course could be readily followed till he disappeared over the 'Granite Ledge.' On his departure the female came and took possession of the nest for the night. I saw her brooding the young until it became so dark that I could distinguish nothing, even at near range with opera-glasses. On the following evening the male again fed the young at about the same hour, then flew to the top of a spruce tree, and, after singing a good-night to his wife and babies, took a direct flight for the roost. The female then fed the young and settled in the nest. This was all repeated again on the 24th. While this was going on female No. 2 was sitting closely and I saw nothing of her mate, although the young hatched out on or before the 30th. The young in nest No. 1 left it on the 26th. This male has been on the place all summer, and by long familiarity we have come to distinguish him readily by a peculiar high note in his song. On the morning of the 24th I was awake from 3 to 4 o'clock, and our model husband and father returned to his family at 3:40 (sunrise 4:29), his arrival being announced by his glad call and morning song. On the morning of the 26th (which was cloudy) his salute was not heard from the favorite tree till 4 o'clock. He was singing pretty freely, even through the day, up to the time the young left the nest. Since then, although the whole family has remained about the nest up to this time, he has been almost silent (at least so far as singing is concerned), like the rest of his tribe at the present time.

"Now, although these observations were all made on one family of robins, I have no doubt that they show, when taken in connection with the other facts, that the early flights to the roost are composed of the first brood young together with the old males. The later augmentation of the roost will come from the younger broods plus the females. What possibilities are suggested—if this be so—through the persistence of mutual relations between the old males and their offspring! The old birds must guide the young birds to the old roosting ground, and who shall say that this hegemony of the roost may not continue in a greater or less degree throughout the season? I do not mean to imply that each parent takes his own offspring in tow—but the nightly re-union of old and young *en masse* cannot but be an education for the youngsters. It was a revelation to me to find the male robins taking care of their younger broods and wives by day, and going off nightly to sleep with their elder children!"

Most of the roosts which I have visited are resorted to by other birds besides robins.

[TO BE CONCLUDED NEXT WEEK.]

BIRDS OF LONG ISLAND.—No. 525 Manhattan Avenue, New York City, Dec. 15.—*Editor Forest and Stream:* I am still engaged in gathering information regarding the birds of Long Island for use in preparing and publishing a history of the avian-fauna of that section. I shall use as the basis of my work the list of Long Island birds written and published 1884 by the late J. P. Giraud, Jr. His collection of specimens is now the property of Vassar College, Poughkeepsie, N. Y. I will appreciate any of the facts which may be sent me about the habits, food, breeding, migrations, etc., of all Long Island birds, and especially desire to get specimens of such birds as rarely appear on the island or are not common. For such I will pay as much as marketmen or others, and will in addition pay the transportation charges, if sent to me by express at 51 Liberty street. During the winter months many birds from the Arctic regions are liable to reach Long Island; all such I greatly desire, whether they are land or water birds. I will be glad to identify and name any specimen sent to me for that purpose. Correspondence relative to Long Island birds is solicited.—WM. DUTCHER.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—Adp.

KEEP YOUR EYE ON THE BIRD.

Editor Forest and Stream:

Of the many valuable ideas received from your always welcome journal that brief but potent advice of a contributor in one of your last fall editions caps the climax. He said, "Keep your eye on the bird!"

I have the misfortune to be deaf, and the strain and wear on a man doing active merchandising with that infirmity is very trying to nerves, temper and disposition. My salvation is my gun. That takes me out and away from business afternoons when the business of the day is about done or can be run by the boys and cashier.

So after our noon dinner to-day (for we are old-fashioned people down here—breakfast at 7, dinner at 12, supper at 6 or when you get home from gunning) I put my old gray to the road wagon, and with gun, a few shells and just two wooden block duck decoys, all I want to lug over the marsh, started out.

I am pretty sure of a duck that lights within a reasonable distance, but at wing shooting I was positively ashamed of myself for any one to be in sight when I tried it, have looked around many a time to see if any one was going to witness my trial before firing. Have not some of my brother gunners been there too?

We make a blind here by ripping off a few boards from an old fence, slanting them from the top to the ground and covering with seaweed or salt hay that the ducks are accustomed to see. They are about the shiest of their species, and anything new they give a wide berth to.

They begin to appear between sunset and dark, with a decided leaning toward the latter; and when I saw my first one to-night it was time to shoot, for I could not see his approach in the dusk. I remembered the advice and never took my eye off him, but threw up my gun and the instant it felt snug to my shoulder I pulled and down the black duck came with a splash. I went out to him at once and had some difficulty to detect him in the grass of the marsh, although I marked him down. So you see it was pretty dark. I had barely got behind my screen with him when another fellow loomed up. Again I jerked my piece to my shoulder, straining my eye on the duck only, fired, and down he came stone dead right at the edge of the pond hole, so that I got him without difficulty.

By now it was sure enough dark, I could just distinguish the two decoys in the pond hole. Directly something darted across my view and plumped down a little way off one side of the decoys. I could just make him out. I was in the shadow of the screen and could not see the gun barrels. My eye never left that duck, and I let go, causing him to kick and splash round and round until I let him have the other barrel, not taking my gun down or altering my position, on one knee, and that killed him. I had to leave him for I could not get to him on account of mud and water.

Now, I have no impression of aiming at either of those birds, that is, of sighting along the barrels, finding the bird at the end of them, and taking the required space ahead to have the shot meet them. In fact there isn't time in a case like this. But instead I kept my eye right on the bird and where I wanted the shot to meet him, and sure enough the connection was made every time on that occasion.

"Now tell us about the times you 'didn't connect.'" I seem to hear the old gunners say. Well, there have been lots of them, but it has been when there was lots of light and sunshine and I paid too much attention to my old habit of sighting along the gun and to the inevitable misses that we all make, and that are indispensable to make the attractive uncertainty that renders the pursuit of gunning ever interesting. For, when you get under cover from a cold and disagreeable wind with never a duck to show for it, what makes you ready and eager the very next day to try it over again? And did it ever occur to you how few of us ever get sick from these exposures, compared to the many of us who do get laid up by coming out of a hot and stuffy theater and riding home in a chilly car or carriage?

I do wish more of our gunners would write their experiences and make the "Game Bag and Gun" department twice as large as it usually is.

WEBFOOT.

NANTUCKET, Mass., Dec. 11.

ST. LOUIS NOTES.—Dec. 18.—Mr. Bud Weaver and party have just returned from an eight days' hunt near Bald Knob, Ark. The net result was one wild turkey. Mr. Weaver wishes through FOREST AND STREAM to warn hunters against the so-called guides who will conduct parties to regions where game is scarce, which was the experience his party had. He says the only safe way is to pay a guide a lump sum after he has conducted the party to where game abounds, then pay and discharge him. There is plenty of game in that section and the above method is the safe way to get there. Wm. Harner in a two days' trip to Sullivan, Mo., got 30 quail. A party of three tried Montgomery county, this State, and in there got 32 quail and a number of rabbits. The weather has been fine for two weeks past and hunters have been active. With the end of the month quail shooting closes. Trap-shooting is taking a rest. There is absolutely nothing on the Christmas programme.—ABERDEEN.

Books make good holiday gifts, and give more pleasure in proportion to the money expended than anything else. If you want a good book on shooting, fishing, natural history, or any other subject connect with our list, consult the list of the Sportsman's Library in this paper, or better still, send for FOREST AND STREAM's free illustrated catalogue of works on outdoor sports.

* It has been known for some time of course, that robins form large roosts while in their winter quarters in the South, but no very exact or precise information concerning these roosts seems to have been thus far recorded.

† Mr. Torrey has written an article on this subject for the *Atlantic Monthly*. It will relate, I understand, chiefly to a roost at Melrose Highlands, which he has studied closely.

CHICAGO AND THE WEST.

CHICAGO, Ill., Dec. 18.—Rather a good showing, certainly, is that made by the game records of the Hennepin Club, of the Illinois River country. These show that for the past fall the daily average for each man, counting all the hunters and all the days, was 164.4 ducks. Some of the less skillful shots did not do so well as that, of course, but the total of the shooting was very good indeed, with a large per cent. of mallards and big ducks therein. Of quail, woodcock, snipe and rabbits large numbers were also killed. There are two flocks of wild turkeys on Hennepin Club grounds this winter, one of eight and one of eleven birds, and a good tracking snow will probably call out a party after them. Hennepin Club elected officers last week, Mr. W. W. McFarland being chosen President for a third term; Mr. E. P. Hilliard, Secretary and Treasurer; Messrs. W. K. Reed, G. M. Davis and Alex. White, Board of Directors. This lucky little club is in a highly prosperous condition.

Diana Club is to elect officers this week. Mr. Henry Ehlers, a foremost spirit in that body, wishes the club to take up more trap-shooting, believing that a good way to make a little more income for the club. Mr. Ehlers is easily first hunter of the Dianans. This fall he had the singular fortune to kill two otters. There were six otters in this family, but the natives have all the others but one. The other is still found once in a while on the Kankakee marshes. Hathaway, a pusher, near Davis, killed two one winter not long ago.

Mak-saw-ba Club elected officers at their late meeting, Mr. T. Benton Leiter, President; Mr. C. S. Petrie, Vice-President; Mr. Wm. R. Smith, Secretary; Messrs. R. B. Organ, Jos. P. Card and W. H. Haskell. Plans are on foot for the large undertaking of fencing and protecting the marsh, which is now much infested, night and day, in season and out, by rattlers, frogs, turtle trappers, spears and shooters, all of whom are persistent in their belief that they are on the marsh of ancient right. Odd folk, these marsh dwellers, and some day they will have their historian. Their day is now well run.

Grand Calumet Heights Club held a business meeting last Tuesday, adjourned till Jan. 6. The absorbing question for this club still remains that of grounds. The great syndicates operating in the vicinity of the present grounds may not occupy the site for ten years, but, on the other hand, such an event may transpire the following spring. This unsettled state of affairs is much against the health of the club, as none can tell what the future will be. In the opinion of Mr. Bissell, the secretary, the club should re-organize into a trap club, holding the present grounds as long as possible.

The tremendous growth of the city to the southward has ousted yet another shooting club, the Lake George, whose grounds are no longer land, but "real estate." Lake George is looking for grounds. An attempt has been made for grounds near Camp Lake, north of Chicago, but I do not learn that much has come of it. It might be well for the old Lake George Club and the Camp Lake contingent to unite with the Grand Calumet Heights Club, if so highly undesirable a thing as the disbandment of the latter organization should take place. Out of these elements a very good new club could be built up.

That sturdy and honorable old body, the Cumberland Club of Chicago, has had rather hard luck with the ducks this fall. Mr. Harry Loveday says the fall shooting was unusually poor. The shooting is usually best there in the spring.

Horicon Club has been troubled with low water during the shooting season, though two dams are now at work and holding the water when there is no need of it. Notwithstanding all the drawbacks, some good sport was had on this great marsh this fall, and the snipe shooting was magnificent. Mr. C. L. Hunter tells me that he and a friend bagged over 100 there one day, and similar large bags I have reported earlier.

From the English Lake people I do not get so much news as I would like, but believe there has been very little shooting on their marsh this fall. Of the fine October mallard shooting at Swan Lake I have already spoken.

Chicago men do not seem to shoot big game very much, their exploits in that line seeming to be confined to an occasional trip to Wisconsin or Michigan after deer. I lately mentioned the trip of Mr. C. D. Gammon and party to Ontario after moose. Mr. Gammon is back. He tells a lurid tale of branching antlers and forest bowed down beneath thunderous tread of herds of moose. "I didn't know till I got over there that you can't kill moose till 1895," says Mr. Gammon. "If it wasn't for the law I could have killed a carload."

The quail season closes Sunday next, Dec. 20, for Indiana. The fall has been a phenomenal one. The last bag of which I hear is that by Mr. Organ of 20 birds, 7 rabbits also confessed.

A singular and pitiable accident of the field is reported in the despatches this week from Quincy, of this State, the matter being thus described: "A party of four Quincy men started hunting yesterday. Late last night one of them was brought back a corpse. His name was John Sandham. The party had landed on a sandbar just below the city, and had dug pits about waist deep in which to lie concealed for ducks and geese. Sandham was in a pit with his cocked shotgun on the sand with the muzzle pointing toward him. His dog, in frolicking around, stepped on the trigger and the gun was discharged, the lead taking effect in Sandham's body. He lived but a few minutes. He was fifty years old and leaves a widow and two grown daughters."

THE TOLLESTON GAME DINNER.

Dec. 19.—Doubtless the most interesting incident of the week's doings in field sports here is the annual game dinner of the Tolleston Club, which transpired, duly to-day. This annual field day and dinner make an ancient and honorable custom of the Tollestons, and while it is established in no imitation of any other game dinner or any field day, it is a usage worthy of imitation by clubs less closely solidified by intimate friendships than the Tollestons, or by any who care for the full flower of the amenities of sport. It is a recognized holiday of the Tollestons, ranking with Washington's birthday and the Fourth of July, and is patronized with a fervor which would delight the founder of the institution, if such founder be now known.

He would have been a much dried up and worthless man who could feel no enthusiasm in the clear cool air of the sandhills this morning in the drive from the rail-

way over to the club house. The day was simply perfect, morning, noon and evening, just cold enough to cut cobwebs and just warm enough to melt the chill out of every cold-blooded man. Many of the house party came down the evening before. Of members and guests the following were present: Messrs. F. A. Howe, Jas. Wright, G. A. Schwartz, C. C. Moeller, Geo. Prussing, Geo. Breeze, A. H. Roche, W. R. Linn, S. B. Raymond, Jas. G. Dwenn, C. E. Felton, J. Gillespie, D. S. Babcock, L. C. Huck, H. F. Griswold, Frank Floyd, A. J. White, C. P. Johnson, Peter Van Vlissingen, A. M. Tully, A. H. Farnum, C. L. Hunter, E. Hunter, E. H. Phelps.

During the entire day match shooting at live pigeons progressed, captains and teams alternating or changing as one side seemed to have the better of it. Nothing was up but the price of the birds, and the team that lost had to "settle." This seems to me to be a very pleasant way for a club to practice, and it obviates the old trouble over the usual presence of one or two experts in a club who win practically all the sweepstakes. There can not be any club whose members are even enough in skill to compete on an equitable basis in sweepstakes, but by the process of dividing up the good shots and poors as equally as possible, more zeal and confidence is inspired in the less skillful, and a greater interest taken in the result.

I never saw a prettier pigeon shoot in my life than that at Tolleston to-day, and I believe that some trap clubs which often languish for attendance might well consider the two-teams arrangement. Under it the total penalty for a man is to pay for two men's birds, and not for all to pay for two or three men's birds and give them something besides. Pigeon shooting at Tolleston is purely social, the birds being shot at fifteen cents, so nobody makes any money at it, and nobody loses very much unless, as at the close of to-day's shooting, there arises some speculation as to the relative merits of two dark horses of unknown capabilities. Nearly 500 birds were shot to-day, some very good ones after the sun became warmer. Col. Felton shot very well, running 27 out of 28. Mr. S. H. Roche, who has done some phenomenal shooting on these grounds, was not at the traps much of the time. Mr. Linn, Mr. Schwartz, Mr. Raymond and Commodore Griswold all did very nice work also. The pigeon traps claimed the entire party, and the turkeys and the rifle range were quite neglected. Tolleston Club uses the King automatic traps and Mr. Schwartz's automatic retriever, the spaniel Roxie.

Of the game dinner itself, served in the evening, it would be best comment to say that it was, like all that Tolleston is, has or does, simply thorough and elegant. A roast pig, smuggled into the bill of fare, elicited much praise, and so did a genuine Indiana possum. Thence down there was a wide variety of game. The chefs of the large hotels might well go and consult with Mr. and Mrs. West, who attend to the material comforts at the lodge in the near by wilderness.

You are thirty miles from a lemon at Tolleston, and while the creature comforts of the annual game dinner are not what give it its most prized qualities, these yet under the circumstances demand study and care in the detail of preparation. Behind the easy success of this undertaking there was, I am sure, very much of the quiet and careful attention of the club's beloved president, Mr. F. A. Howe, to whose conscientious hands the club is quite willing to leave grave issues of any sort. There probably will never be any other president of Tolleston Club while Mr. Howe lives, for "that dear old man," as one of the younger members designated him in a toast, has done so much for the success of the club that the club will not consider any one else as its head. Mr. Howe is the Gladstone of Chicago club sportsmanship. Were it not for his leadership the rare privileges of the Tolleston marsh, coveted and vulnerable as it is to its natural enemies, could not have remained what they are. He has seen many changes in the sport and sportsmanship of this region, for, as he told me to-day, he came to Chicago in 1834, only two years after the Ft. Dearborn massacre. "I believe," said he, "that it is only true to say that I have lived in Chicago more days than any one of her citizens, for this has been my home since then, and I have rarely left the city for more than a short stay. At first," he continued, "when I began to shoot, we hunted plover and prairie chicken, and then quail, and then got to shooting ducks. This Tolleston marsh was always good. It lies in the natural line of migration of the fowl, which leaves the edge of Lake Michigan about four miles above us, and follows this chain of marsh. The east end of our marsh catches the southbound birds in the fall, and they come in first on the west end in the spring as they go north."

Comment has often been made upon this marsh. It is indeed a singular thing that it should still remain, almost upon the edge of the city, less than thirty miles from the city's heart indeed, and should still be so frequented by the wildfowl. This fall the shooting was as good as it ever was, the October flight of mallards was most extraordinary. Mr. Howe told me that in one day he bagged forty mallards besides other ducks, and in two days later he got ninety-three ducks, fully two-thirds of them mallards. And yet he missed the days when the heaviest flight was on, for instance the time when one of the club got forty-six mallards, shooting away 100 shells in less than two hours and going back to the club house for more. This member himself confesses that he should have killed 200 mallards on that day.

Is it any wonder that the Tolleston Club fights strenuously to maintain such privileges as these, which are not equalled in any region now, no matter how wild? Take away this club and the shooting would be gone forever in a year. I know no better commentary on the preserve system than these examples. I have no confidence in the unmuzzled shooting public. I know also that much of the talk about the severity of the Tolleston Club is unjust. To-day I saw the "brutal watchman" of whom we have heard so much as a terror to poachers. He pulled the traps for the shooters. He isn't brutal at all, but a very decent fellow indeed, though big enough to whip about eight men, I should think. He is instructed to be polite at first, firm always and serene at the end of his negotiations with trespassers. He has been shot at, threatened and all that, but seems to enjoy uncommon good health and to be ready for a few more of these fougus who are always trying to get in after the coveted Tolleston ducks.

Since I was last at this club an addition, 42 x 28 ft., has been built to the former house, the gift of 38 of the members, who contributed \$100 a piece, and whose sole

monument therefor exists in the form of 38 cosy lockers. The main room of this wing is a handsome sitting room 30 ft. square. The mantel here is the gift of the late Mr. Wirt Dexter, one of the most noted of Chicago sportsmen. Upon the walls are pictures carrying out the prevailing scheme of excellence. Commodore Griswold, of the hanging committee, rigidly excluded all cheap lithographs and meretricious works of every sort. Tolleston quality is a very good sort, all around. From pig to possum, and from pigeons to pictures, the Tolleston annual game dinner of to-day was an unmitigated success.

E. HUGH.

OLD FIELDS AND OLD FRIENDS.

Editor Forest and Stream:

I have had more tramps in the woods, more enjoyment, more recuperative benefit, and have found less birds this fall than for any time within a dozen years. During nearly the entire month of October the leaves on the trees and bushes were almost as thick and fresh as they were in June, thus proving to our Legislature (if we had one) the propriety of changing the beginning of the open season certainly as late as the 15th of October instead of the first, as the law now is. Of course, one don't like to be a "day after the fair," hence we all go out when the law says we may and bang at the leaves and bushes where we think the birds may be; get a few, cripple and lose more, and go home disgusted. Neither partridge, quail nor woodcock were as plenty as usual. There were only two or three days during the months of October and November, when woodcock were fairly plenty in this locality, and I was informed that the same was true in towns along the Sound from Saybrook to New Haven.

Partridge were scattered even in the last of November, wandering singly and in pairs over the hills, the weather not having been cold enough to force them to seek the warm and sheltered swamps and runs. Quail were really scarce, and in my experience with them acted very strangely, seldom finding them in the open cultivated fields but in dense thickets and underbrush. I repeatedly went over fields of rye and buckwheat stubble morning and evening without my dog showing the least sign of game having been there; in fact I found but one bevy of quail during both months in the open field, and that was in October, and they were not more than two-thirds grown. I can not account for the scarcity of quail and partridge this fall, for I know that quite a number were left over last year, and the winter was an open one and the summer unusually dry, both seeming favorable for the breeding of both birds.

I have said that I enjoyed my hunting very much and derived much benefit from it, even though my bags of game were very light. I am nearly sixty-six years old, and of course have outlived many of those who used to share the sport with me in earlier days and by their congenial tastes and good fellowship added a charm to it which cannot be forgotten, and is brought up with a vivid freshness as I tramp over the ground again at each point where we beat the brush together. This may seem a little sentimental for an old stager, but I trust it is not out of place or unwholesome; in fact, there is very much charming sentiment in field sports, and I often wish some capable pen would write up the subject as it deserves, for I am sure it would fill the pages of an enjoyable volume, as it does now the honest hearts of all true sportsmen.

HADDAM, Conn.

DUCKS IN CENTRAL AMERICA.—Tumbador, Guatemala, C. A., Nov. 16.—Editor Forest and Stream: I have seen the question asked so many times in the FOREST AND STREAM, "What has become of the ducks?" That I will now make known to the duck hunters the following fact: Seventeen years ago I never saw a foreign duck here. Twelve years ago I saw a few. This year I have seen thousands, and killed a great many widgeon, teal, spoonbills, and other kinds which I do not know the name of. Immense flocks of them can be found in the inland lakes on this coast, and I suppose all over Central America and in Mexico it is the same. Do you not think the ducks are flying over the United States to avoid the continued shooting which they receive from every part of the country and come down here where they are never shot at once a year; as many of these lakes are never visited by white men, and the natives never shoot birds to any extent?—GUATEMALA.

NEW YORKERS IN VIRGINIA.—There are stopping at the American Hotel several parties of New York city officials and citizens bent on bagging some of our game and destroying ammunition. Some of them have been here a week and others arrived later. We heartily welcome them and hope they will make many trips to our sunny town in the future, though we would caution them when bringing down game to be more accurate in marksmanship than the President was when hunting here about two years ago, and not shoot any of Gilbert Wooten's hogs. The different arrivals composing the parties are as follows: Alexander Williams, Inspector of Police of New York city; J. W. Jacobus, U. S. Marshal, New York city; G. M. Clark, of Clark & Wilkins, wood merchants, New York city; Capt. D. N. Pearce, of the schooner Thomas L. James; Dr. G. W. Tolson, New York city; W. J. Armstrong, New York city, and L. C. Phillips, Portsmouth, Va.—Claremont (Va.) Times, Dec. 14.

Sportsmen's Calendars for 1892.

In this age of calendars galore, the favorites with men who shoot are those which come each year from the Winchester Repeating Arms Co., and the Union Metallic Cartridge Co. The Winchester have brought out for 1892 a calendar bright with hunting scenes, drawn by Frederic Remington. The chief picture is of a sportsman and his guide, perched on the brink of a cliff in the Rockies; the sportsman has drawn a fine head on a noble mountain sheep, and if the hunter's aim is as true as his Winchester there will be a handsome pair of horns to carry home. Other drawings are of a cowboy on a Remington horse; and a Maine scene picturing a canoe with its occupants stealing toward a big buck on the shore. Taken all in all, the Winchester calendar is one which will have a cherished place on the sportsman's walls.

The Union Metallic Cartridge Co. have made a happy hit this year with a striking figure of a youngster in the field, equipped with gun and cartridge belt full of U. M. C. shells. The boy knows how to shoot, too, as the captured game gives evidence. The U. M. C. calendar depicts a phase of life which will be the special subject of our Boyhood Number, week after next, and it ought to shed sunshine in a grown-up boy's room all the year through.

AN OUTING IN ARKANSAS.

WHEN I was a mere boy a hunting party of four boys who were about my size undertook to bag some ducks and geese that were known to frequent the lakes near Columbus, Ky. But the ducks and geese were of a different mind, and we didn't get a feather. We were so sure of our success, however, that we declined to take any meat with us when leaving home, for we expected to kill all the meat we could use. But when night came on us we had entirely failed to kill anything—except one little wren. This we dressed, barbecued, and divided between the four hungry boys. It was all we had, and I have thought of that little wren a hundred times or more since then, and have always said it was the sweetest taste of food I had ever found.

I am older now than I was then. Streaks of gray can be seen by my friends in my hair and beard; yet I am as fond of a hunt to-day as I was when but sixteen. But I have found that even maturer age does not always assure us the things whereon we count when we start out to hunt game. There were nine in our recent hunting party, in Arkansas, including the cook. We left Cairo, Ill., Nov. 17, and left the Cotton Belt train at Greenway, Ark., on the morning of Nov. 18. We hired a wagoner and his outfit to haul out our provisions and camp equipage to the banks of the St. Francis River. The distance was about ten miles, and as some of us would be walking and hunting over the entire distance we decided that it would be useless to buy any bacon in the town, because we would kill plenty of meat on the road. Well, we did the walking and the hunting, but not a feather or a fur did we get. The entire crowd came up blank; and when we assembled at camp about sundown, weary, hungry, cold, the wood and ground wet, and not a taste of meat in camp, you may be sure that we all felt that we had made a "bad beginning" and that we had lots of room, and some hopes, of a "better ending." While we were trying to kindle a fire one of our party sought to try his skill with his brand new rifle, and shot off the head of a little grass bird, about the size of the wren that had fed the hungry boys in the former hunt. I at once thought of that experience, and proceeded to prepare the little bird for supper; and as all parties declined to spoil their appetites by so small a taste of meat, I was left to eat it all alone. It was good, but no better than the wren.

We had a fine camp cook with us, and he soon had some hot biscuits, coffee, Irish potatoes, and molasses ready, and we were all sufficiently voracious to make us appreciate supper hugely. We had good mattresses and tents with us, and our rest at night was fine. The next morning for breakfast, however, we were still meatless, though we consoled ourselves with the fact that the joke was common—taking in the cook and all. So soon as breakfast was over we started in different directions to discover our surroundings and look for signs of game. At noon we all collected in camp, (except one) and each one reported lots of sign, but nobody had any game. So that gave us another meal without the taste of meat in it. The thing was growing monotonous. Each man was growing desperate and swearing vengeance on every living thing. We lunched for dinner, and every man, but the cook, took to the woods determined to kill something. But at night we dropped in one by one, half mad, really disappointed, and yet full of hearty laughter at our predicament, for not a man of us had anything to show for meat. But after we had laughed at each other most heartily, with an inward wish for some meat for supper, the man who failed to show up for dinner walked into camp with a fine gobbler, a squirrel, and a Mallard wild duck on his shoulder. What a rally and shout there was in that camp. We had to give him the hand of fellowship. He was our hero.

That night we fared sumptuously. We slept well. Next morning we decided to see what was to be found in the way of deer. We took our stands for a deer drive. I was put next to the last in distance from camp. Dr. Hobbs was beyond me. Scarcely had I got well fixed until I heard his rifle. One shot, and all was still. No sound of the dogs, no sign of deer. In a few moments, however, Dr. H. whistled for me. I went to him. Said he, "Do you want some nice turkey shooting?" "Of course I do," was my reply. "Then follow me," he said. I followed. After going a few yards in silence he stopped and asked if I had a turkey caller. I had none. Then he proposed that I go across a little slough of water, around a certain upturned tree, take my stand on the little island, and he would call them up. I started, and before I had gone thirty steps I walked up on a magnificent three point buck lying dead, fresh blood all around. I turned and

called to the Doctor. He began to laugh and slap his hands at the joke he had played on me, for it was the fruit of his rifle shot. He had made a capital shot. As he was going to his stand he spied this buck quietly walking toward him, feeding. He also walked toward the buck. When within 80 yds. of him, as he was picking some moss from the root of a tree, he pulled the trigger of his rifle, and the bullet broke his neck and pierced to the heart. He fell dead.

The dog shortly after brought through another deer, but no one got in a shot. We carried this one into camp, assisted by our genial Frank Fomille, and you may be sure we all were a troop of happy campers, for we had plenty of meat. The buck proved to be very fat, and one of the largest for the number of points, that any of us had ever seen.

That afternoon two or three of us put in our time shooting mallards. They were abundant, feeding on the grass and smart weed in the scatters of the St. Francis. I have never seen a finer chance to bag mallards. It excited me, and, as the boys say, gave me the razzle-dazzle, so that my run on mallards was most unlucky. But others fared better, and we carried in seven fine ones, and several others fell in the weeds and could not be found. I did not kill a duck, but I killed some of the fattest squirrels I ever saw, and altogether we did well.

The next day we failed to kill either a deer or turkey,

for the noise of an approaching deer, he heard something walking in the water to his left. He turned and saw a magnificent gobbler, within forty steps of him. His gun was standing by a tree at his side. He thought to raise it and shoot without turning his body. He did, but just as he pulled trigger his feet slipped on the sticks, he and his gun measured their full length in the snow, the load of shot went into a tree close beside where the turkey stood, and the turkey flew away in safety.

But Tuesday morning we began to stir early in camp. We took a hunt before our 9 o'clock breakfast. John Brent had not gone more than 100 yds. from camp until he espied a fine doe making her way out of the scatters of the river. It was hardly more than light, but he drew a bead on his Winchester rifle and pulled trigger. The lithe and beautiful beast fell limp in death. The shot was fatal. Another fine deer ran from some others of the boys who were hunting in the same locality, and made his escape. We all came in for breakfast, dressed our venison, and then started out again. Some of the boys crossed the river and had some nice hunting. Brent shot a deer 243 steps and brought blood, but failed to capture the deer. Mr. Witty showed his skill in shooting at turkeys. He was standing by a tree when he discovered two turkeys coming toward him. He waited until they were within forty steps of him, when he took deliberate aim and fired at the gobbler. The turkey

jumped up, turned himself around, and stood stark still in the same spot. Mr. Witty fired the other barrel at him. Again he jumped up, turned around, and dared his enemy to shoot. But the gun was empty. The shootist proceeded to put in a new shell, and his turkeyship moved off at a slow gait, and when about 20 yds. away stopped still. Mr. Witty moved up about 20 yds., took deliberate aim and again tried his skill. But the turkey trotted off without the loss of a feather. If anybody can beat that he ought to have a chromo. Dr. Hobbs also took a round at the turkeys the same day. They were in trees and he had a Marlin rifle. He took deliberate aim, and shot about a dozen times, and so far as anybody knows never touched a feather. Somehow, the ducks seemed to be charmed when I shot at them, and the turkeys mysteriously escaped all danger when the other boys shot at them. But we could very easily kill those fat squirrels that continually tempted us by their chattering, and we made them pay dearly for their ventures.

On Wednesday morning the snow was gone, and the weather was warm. We took our hunt before breakfast, but killed nothing. After breakfast we scattered to the woods, it was to be

our last day. The dog stirred two or three deer, but they did not come in reach of any of us. Our cook had a gun left him, and he sauntered out about 200 yds. from camp. He sat down by a tree. After a little while he heard a noise in the tangled bushes to his right. He watched, and a turkey's head could be seen picking the berries. Soon another, and another, until some eight or ten turkeys were in sight, and only a few yards away. He was about to select the turkey he wanted, when, lo, a nice doe came walking along just a little way off, and right toward him. He decided to let the turkeys alone and prepare for the deer. He waited, and when the deer was just about where he wanted her, behold a large buck came galloping up still closer to him. He decided to shoot at the buck. He pulled trigger, but there had been too much game around him. He had a "buck ag'er," and missed the buck clear. Both deer and the turkeys then retreated in safety. But the shot from the rifle of the cook started the other deer from the underbrush, and as they made their way across the scatters they encountered Dr. Gardner, who was in waiting with a Scott shotgun. He let the doe have the first load, and the five-point buck the second. The doe ran about 100 yds. and fell dead, but the buck would have escaped had he not run in the direction of Col. McGlothlin, who was also in waiting. As he was running at breakneck speed the Colonel came down on him with his Winchester and broke his neck. He turned a summersault and soon both deer were swinging up in camp.

Night soon came on. All hands came in. After talking over the scenes and sights, the hits and misses of the day, we retired to sleep. On Thursday we loaded up our equipage and started for the railroad, and thence home. We had been out eight days, had killed four deer, one turkey, a number of ducks and squirrels, one possum, and had seen lots of game. In that locality there is fine hunting. We could have killed much more game, but we were strangers to the woods. When we go again we will succeed better, though all of us were happy over the results of this hunt.

J. N. HALL.

AMONG THE WILDFOWL.—XV.

THE GATHERING OF THE CLANS.

though we saw lots of both. The dog ran a deer within 150 yds. of our camp, and scared up a fine gang of turkeys, one of which sat for half an hour in a tree right over our cook fire, and the cook sitting right under him. Several others sat in the trees close around. But there was no gun in camp, and the hunters were all out of hearing. After the turkeys had rested in the trees around as long as they seemed to desire, they spread their wings and sailed to the ground. When night came not a man had killed anything except a few squirrels. Our special savior, the man who killed the first meat for us, John Brent, had walked and hunted heroically, but with no success.

The next day was Sunday. As most of us were respectful to the Sabbath, we passed the day quietly in camp. Our cook got in a boat to explore the river, and taking his troll with him caught two fine pickerel. Mr. B. crossed over the river to inspect the geography and see if there were signs of game. Otherwise all was quiet. We had a copy of FOREST AND STREAM, and Christian Union, and Christian Herald, and some daily papers, and these helped us to pass off the time splendidly.

On Sunday night it snowed. The snow was about six inches deep. The very thing for tracking, and we thought sure we would get the game on Monday. We could indeed see that there was plenty of game at hand. Deer tracks and turkey tracks could be seen everywhere. But the game all had eyes, better eyes than ours. They could see us first. And they didn't stand on the order of going, but just went. They left us. We wondered, but they didn't stop for that. Not a deer or turkey for Monday. But we were now satisfied that we were in fine hunting grounds, and the tracks had given us an idea of the range of the game. This was no inconsiderable item. We rested at night and planned for the chase the next day. One item of Monday, however, I must not omit to mention. Col. McGlothlin, an excellent and genial hunter, was on the stand. His ears are quick to catch a sound. He had put two or three sticks under his feet to keep him out of the snow, and while listening intently

BORES AND SHOOTING.

MUDDEVILLE, Mich., Dec. 18.—*Editor Forest and Stream:* In your edition of Nov. 12, "Answers to Correspondents," in reply to "B. R. H.," Chicago, you state that a 10-bore loaded with 4½drs. powder and 1½oz. shot will kill at greater distance than a 12-bore loaded with 3½drs. powder and 1½oz. shot. No. 6 in both cases, both guns choked alike. Now I do not write this to get up an argument, but in order to learn something. I have owned and used many guns from 8 to 20-bore, and have looked for (and I am still trying to find) a gun that will kill the furthest. From my own experience, I find that a 20-bore will kill as far as an 8. But the greater bore has the largest killing circle, consequently the 8 and 10-bore are the guns for flock shooting, and in shooting at a single object, flying or running, one does not have to hold as close as with a 16 or 20, two great advantages. But I contend that a 20-gauge, all things being equal, will kill a single bird, fox or rabbit at as great distance as an 8 or 10.

After reading the above answer to "B. R. H.," I looked up some of my brother sportsmen. First we used three Remingtons, all same model, and, so far as I could judge, choked alike, viz., 10, 16 and 20. The first two were loaded as "B. R. H." described, and I loaded the 20 with 3½drs. powder and 1½oz. No. 6 shot. Everything was as equal as we could make it. Then we used two Colt guns, 10 and 16, and lastly four other guns of 10, 12, 16 and 20. All guns were fired four times from a rest, i. e., the shooter sitting down with a muzzle rest, one man shooting all, at a target, two barrels at 40 and two at 60yds. distance, with new target for each shot. The result showed that the 16 and 20-bores gave as good penetration and pattern as the 10 and 12. The small bores would have killed a duck or rabbit sitting still as well as the others. But of course on a flock of birds the 10 gave a far larger killing circle. We also tried an 8-bore American trigger action with still better results as to flock shooting.

We brother sportsmen wish to live and learn, and for many years I have culled from the FOREST AND STREAM; many great benefits have I derived therefrom. I came to this village last August for my health, which was much impaired from a three years' residence in the so-called Sunny South, and my 20-bore Parker has given me much pleasure among the squirrels, quail, partridges and rabbits, while my 10-bore has seen no service except in the hands of some friends from Grand Rapids city, who came to me to enjoy the pleasures of hunting or fishing. I have often had the pleasure of seeing some of my crude letters in your paper, and expect to look you up some time next spring in your busy city office.

In reply to our friend who gets his gum boots full of water, use hot oats, shake out, heat over and refill. Sand will sometimes stick in the lining of same and work into one's stockings to irritate the feet, oats should be free from dirt or dust.

I would like to hear from some of the brotherhood on range and bore of shotguns, as one is never too old to learn.

BRYAN THE STILL-HUNTER.

THE FLIGHT OF THE WILD GEES.

Editor Forest and Stream:

During the few days past a number of the largest flocks of geese that have ever been seen from here passed over on their southward migration trip.

We have often wondered, and probably many others have also, why the sight of a noble flock of wild geese on the wing will send a thrill through every nerve in one's system. If the flock is near to a sportsman the feeling is nothing strange. When he in his excitement quickly grasps his shotgun or his trusty rifle for the purpose of giving them a shot, it is very plain to every one present that in him the ardor of the true hunter is fully aroused, and his love for sport then comes forth in its full strength. But when the flock is far beyond the reach of the longest ranged rifle shot, and the angle made by those converging lines is grandly cutting its way through the blue on a course straight as an arrow toward the south, or if in springtime, toward the unknown lands far to the north, even then at the sight that same thrill comes over one, be he sportsman or not, and one will stop to watch the flock with all eagerness and to listen to its resonant *honk, honk*, until the sight and sound of the flying angle is lost in the distance. Is that thrilling sensation due to the natural feeling of the hunter, a feeling latent in the breast of nearly every member of the human family, civilized or savage, which then comes over the watcher? or is it owing to a slight momentary development of the germs of that state of unrest that through all past ages has impelled man onward to wander by sea or land over the face of the earth and to make discoveries and settlements in the uttermost parts of it? Or is it due to some other cause? Who can tell?

A. L. L.

GUN, DOG AND CAMERA.

ON October 30, as Let and I were starting out for shooting, a friend stopped us, saying he had seen a partridge cross the road and enter a small run well known by us. As we would pass the place on our way to the shooting grounds decided upon for the day, we thanked the man and said we would give the bird a try. Upon reaching the place Let said he would hunt up the narrow run with his dog, while I had better keep along in the open on the further side, lest the bird should flush wild and fly across the fields toward some large woods. I agreed, and asking Bang to heel in, kept abreast of Let's dog as he worked up along. After a few moments I noticed that my dog was inclined to be more interested in nosing around on the ground than in obeying my command, and I was obliged to speak sharply to him several times.

We reached the upper end without starting the partridge, whereupon I told Bang to "hie on," thinking that perhaps he might have better luck in starting the bird than the other dog. Instead of entering the run he turned, and with nose down galloped quickly back in the direction we had come. About half way down the side of the run he showed up and then stopped short on a point. As I had walked within a foot or two of where the dog now was, I thought it was probably an old scent that tickled his nose; so I told him to "go on." He did so, and as some bird sprang into the air he caught it and brought it to me. Imagine my surprise when I found that it was a live woodcock. Upon examination I discovered that the bird had but one wing, the other evidently having been shot off by some one who had failed

to recover the bird. The stump of the wing had partially healed, showing that the bird had been injured some days before. In other respects the bird appeared to be in a perfectly healthy condition, and as Bang is nothing if not a good retriever not a feather was mussed as I took it from the dog's mouth.

Placed on the ground the woodcock at first would jump into the air, but his one wing would instantly turn him over back on to the ground. Getting on his feet again he would stretch out this wing, trailing it along the grass, and with tail cocked up and his head, seemingly heavy with its long bill, arched back, would strut about with great dignity.

His eyes were as clear as a pebbly brook, and the coloring and shading on his wings, back and breast were delicate, but clearly defined, far different from the quickly fading plumage of a dead bird. Taking a Kodak camera from the cart, I made Bang, who, despite his ten years, was almost silly with such a treat, point the bird again and again as it stepped daintily about. It was laughable to make the dog's legs in turn halt in the air with a "whoa!" as he crawled along quivering with excitement after that bird. Altogether it was an interesting and unique experience, but with the drawback of having the pictures turn out poorly.

F. L. N.

PLAIN HILL, Conn.

MASSACHUSETTS ASSOCIATION.

THE close of the sixteenth year of the Massachusetts Fish and Game Protective Association was celebrated last Thursday evening by a reunion and banquet at the Hotel Brunswick, in Boston. Covers were laid for 175. Among the invited guests were State Treasurer Geo. A. Marden, Hon. Wm. E. Barrett, Hon. Asa French and Hon. Henry G. Dorr, of Vermont. In a happily worded but informal after-dinner speech, President Edward A. Samuels reviewed the work and growth of the Association, and felicitated the members upon the society's past record, present prosperity and promise for the future. Alluding to his long tenure of office Mr. Samuels spoke feelingly and with fullest appreciation of the honor which had thus been conferred upon him, and assured his fellows that if mistakes had been made they had been of the head and not of the heart. As we announced last week Mr. Samuels will retire from the presidency with the close of the year; he has labored long and devotedly in the interests of the Association; and the best wish any of its friends can express for the society is that the successor of its outgoing officer may show equal devotion and felicity in advancing the work and building up the organization.

The Association has a membership of 525 names on the roll, representing seventy different towns and cities, and with constantly growing influence and public esteem. The treasury shows a good balance, and the Association has a permanent fund which will be increased at the January meeting. The committee on the introduction of birds has liberated in the State 170 pinnated grouse, many Northern hares and Arizona and California quail, with 1,600 Eastern quail. Mr. Samuels expressed his conviction that for the proper performance of the work of protection the Association should have under its control a salaried game officer.

Other speakers were State Treasurer Marden, who assured the Association that in its special work the commonwealth were behind it; Speaker Barrett and Judge French, who advocated the passage of a law giving trout culturists permission to sell the products of their private hatcheries at any time during the year. Music was furnished by the Harvard Glee Club.

Letters of regret were read from Gov. Russell, Senator Aldrich, of Rhode Island; U. S. Commissioner McDonald, Capt. J. W. Collins, of Washington; I. O. Woodworth and Arthur Richardson, president of the Southern Massachusetts Fish and Game Association.

THE HANDY CLOSER just announced by the Bridgeport Gun Implement Co. is here figured. It is designed to meet the demand for a smooth, even crimper, giving uniform pressure on the wads, so absolutely essential when loading nitro powders. The closer has a straight

feed lever and patent expansive follower, which adapts itself to any thickness of paper shell, and in crimping, exerts a uniform and equal pressure upon the wads, irrespective of the weight of the charge. This follower virtually restores the interior surface of the shell, burnishing the broken texture of the paper and produces the cleanest crimp possible. By reversing the hardened steel pins, either a round or square crimp can be made, one end of the pins being curved, the other end flat.

KALAMAZOO, Mich., Dec. 14.—The open season expires to-morrow, and I am sure everyone is glad that the game is to have a rest. Quail have been abundant; the woodcock were plenty, while a scarcity of ruffed grouse seemed general, and ducks are almost a thing of the past in Michigan. The spring shooters may be thanked for the decrease of the wildfowl; they have done their work of murder well.—BEN O. BUSH.

WISCONSIN DEER HOUNDING.—Appleton, Wis.—More regard has been given to the illegal hounding of deer this season just past than ever before, not that hounding was stopped, but it was carried on in far less degree and not so openly as heretofore.—C. V. Y.

TROUTING IN THE CASCADES.—II.

THE MOLALLA COUNTRY.

WHAT a lovely morning! Birds were warbling their sweetest melodies, Mongolian cocks were crowing down in the meadow and nature seemed to have donned her holiday attire to receive us. I was anxious to be on the stream, but as usual the coffee-pot took its own time to boil and Ira was irritatingly slow about hitching up. His gush, which at any other time might have been interesting, was now annoying. Finally my suspicions were verified. He declared that we must come back to his house to sleep, as those lonely woods were no fit place for a city lady to spend the night in, to say nothing about the comfort of the rest of the crowd. His anxiety about our comfort and welfare was certainly laudable and would have been duly appreciated had it not been that I was well aware that he had at least a dozen untold bear stories left over from the previous night.

My wife had spent her girlhood in Iowa and its takes years for one to rid themselves of that vague suspicion and dread of the dense woods, born of a life on the open prairies. Her attentiveness to his remarks about the lonely woods at night convinced Ira that he had touched the right chord and he at once set about making the most of it.

No matter what was said or what transpired it would remind him of some blood-curdling thing that had occurred in the lonely woods of the Molalla, and of course he had to tell it; and I can assure you that it lost none of its horrors by his relation. I was disposed to be angry with him, for I had spent much time and English in trying to convince my wife that the woods wouldn't bite, and that there was not a wild animal in the forests of Oregon that would harm her. But finally he overreached himself. The call to breakfast reminded him of how a cougar had come right into Mac Ramsey's yard down there by the creek and eaten up Mac's baby. Mrs. Moody herself couldn't stand this and corrected him: "Now, Ira," said she, "you know the cougar did not eat the child up, but only grabbed it and jumped over a log, and when Mac's wife ran screaming after him he dropped the baby and went up a tree." Of course the true statement of the case was calculated to allay my wife's fears. She probably mentally calculated how much larger than Mac's baby one would have to be before the cougar would turn tail and run instead of stopping to dine. I told Ira plainly, at last, that I hoped that he, out of respect for the friendship that had existed so long between us, would refrain from saying anything more about cougars, lynx, bob cats and bears in my wife's presence or she would insist on going home. This was a phase of the subject that had escaped Ira and he mellowed down a little. Thereafter he would cut his infernal yarns short at just the wrong place, audibly admonishing himself that he "expected he'd better not tell the rest of the story, as it might scare Mrs. Greene." I never knew Ira to be guilty of any other mean trick. I believe he would freely have given his team of grays to have us stop at his house every night while we were in the Molalla country.

When one is in a hurry everybody else seems to be horribly slow. At last we started. The same load, the same passengers, everything the same as the day before except that there was one more dog. Ira's dog went along to initiate Mike in the mysteries of the Molalla woods. It is really amusing to watch a country dog show his city cousin around. He doesn't talk as much as his master, but is fully as entertaining. If he strikes a familiar rabbit runway or a hollow tree that he knows is the home of an old coon, he will in some manner soon let his companion into the secret, and you would think from their maneuvers that they were just about to accomplish what the home dog had been unable for months to do without help. Human nature and dog nature are much alike in many respects.

Passing the barn, Ira was reminded that we had better fill a straw tick and take it along for our bed. Nothing that I could say about moss and hemlock boughs could alter his determination. So the straw tick was procured and filled. Then on we went down and across the roaring Molalla and on up the rugged trail that wound along Milk Creek. Before crossing the Molalla, Ira pointed out the spot where a cougar had killed his best dog after coaxing him out away from the house one dark night. Also the tree where, a week before, they had killed the biggest bob-cat he ever saw. My wife by this time manifested a disposition to agree with Ira about everything and particularly about the desperate chances a person took that slept in the lonely woods. The rascal himself had slept alone hundreds of times in more dense and remote forests, with the shadows for sheets and the soft side of a rock for a pillow, without giving danger a passing thought. Billy, all this time, was a disinterested spectator of the conflict—his love of camp life just about offsetting his regard for home comforts.

By ten o'clock we had our tents pitched in a beautiful fir grove not far below the mouth of Canyon Creek near the last house on the trail that led up to the "huckleberry patch."

It was the first time I had ever seen Milk Creek. The rapids and pools, of which we had caught occasional glimpses, made me more fidgety than I had been during the preceding night, and I could hardly restrain myself. I didn't want to exhibit my natural disposition, but you can imagine my feelings when Billy suggested that he and Fay could finish the camp if I could get a few trout for dinner. Of course I did not like to leave poor Billy there at work while I was off fishing; of course not. Nevertheless I reluctantly took my fly-rod and after turning the first bend in the trail, skinned for Milk Creek as if we were all starving and one trout would save the

whole camp. How natural it is to hurry to a creek. One would think that the trout were just ready to take wing. I sometimes wonder if anglers had to be in such a hurry in good old Isaac's time. To my certain knowledge they have hurried the same way for thirty years and still the trout and bass have taken wing only in the figurative sense.

Of course my whip carried three flies: Royal-coachman for tail fly, and brown-hackle and professor for droppers. In a country where trout are as plentiful and bold as in this, three flies are none too many.

Although not of a particularly nervous disposition, I must admit that in my efforts to get my rod together I quivered with excitement until my teeth chattered. It was the finest trout stream I had ever seen without an angler's foot-path along its banks; and I was to have the pleasure of introducing the whole royal household of freckled beauties to such bright flies as had never been dreamed of in their philosophy.

There is more joy in anticipation than in realization, even though one realizes the full measure of anticipation; and uncertainty as to results only adds tone to anticipation. How could I know whether there was a trout in the stream? And yet in a trout country such water must bear fruit. All these things ran through my mind while getting ready for my first cast.

Taking my stand on a rock that commanded a pool just below a low fall, I hesitatingly tendered the lure. It was a bungling cast; my dry leader curled and fell in a bunch, but who would have thought that under that placid surface there were so many watchful eyes? A flash, a strike, and a trout, in about the time it takes to tell it. I was not entitled to a trout for that cast, but got one all the same. Recognizing the fact that the trout was entitled to credit for being able to pick a fly out of such a tangled mess, I broke his neck and slipped him into the basket, without wasting time to admire him. Hastily straightening my leader, I put the flies at the same spot, for the trout had seen something that excited their bumps of alimentiveness, and the whole pool was astir. Smack, smack, here and there, as they rushed at phantom flies, admonished me that now was the accepted time. Whirr-r-r-r, went my reel, but before I could land the fish the joints of my leader seemed to get rheumatic. Instead of beautiful curves and lofty tumbling there was twitching and jerking like a balky team. There was not much strain on my rod, but the leader seemed to be in a fit. I let them fight it out, and finally landed three beauties. That's enough for one cast, particularly when one uses but three flies.

So it went, sometimes one, oftener two, and now and then three at a cast—Dolly Vardens and rainbows from 8 to 18 in. length. That was the kind of a trout stream I had found.

S. H. GREENE.

A BACK CAST.

IN an article with the caption "Black Bass Waters of the State of New York," written in 1887 for the "Game Laws of the State of New York," issued by the Eastern New York Fish and Game Protective Association, I made a claim that none of the interior waters of the State originally contained black bass, "except possibly the group of lakes in the western-central part be an exception," and Lake George, which got its supply of this fish from Lake Champlain through the connecting stream in the long ago.

Soon after the article appeared in print exception was taken to the claim that Lake George was the original habitat of the black bass, and a counter-claim was made that the lake was stocked with 40 black bass brought from Lake Champlain between 1840 and 1850. This last statement I had every reason to believe was incorrect, for there are men living who caught black bass in Lake George prior to 1840, but I had no documentary evidence to offer that the bass were native to the lake. It is recorded in Brown's "American Angler's Guide" that Mr. John D. Keese caught a black bass of 5 lbs. 9 oz. in Lake George during the summer of 1844, and that at that time this fish was distributed throughout the lake and afforded good fishing. This fact would dispose of the claim of their introduction between 1840 and 1850.

After a diligent search, extending over several years, I have found some additive testimony regarding the presence of black bass in Lake George, in a copy of the *Warren County Messenger*, of Sept. 2, 1880, as follows:

"Notice to all whom it may concern. An application will be made on the first day (or as soon thereafter as counsel can be heard) of the next term of the court of Common Pleas for the county of Warren, to be held at this Court House in Caldwell, on the twenty-first day of September next, for certain orders or rules for the purpose, and in the words following, to wit:

To the Honorable Horatio Buell, Thomas Patterson, and Horatio Barber, Judges of the County Courts in and for the County of Warren, of which the Common Pleas is one.

The undersigned, freeholders and inhabitants residing in the towns of Queensbury, Caldwell, Bolton, Hague and Chester, in said county, pray that in order to regulate the fishing in the Horicon, or Lake George, and Schroon Lake in said county, that an order or rule, to the tenor and effect following, may be granted and entered in the minutes of the Court at the next term thereof, in pursuance of the Statute in such case made and provided, that is to say:

"On reading and filing the petitions of certain freeholders of the towns of Queensbury, Caldwell, Bolton, Hague and Chester, praying the Court to regulate the fishing in the Horicon, or Lake George, and the Schroon Lake, in the county of Warren, and on proof made of due notice having been given of such intended application, it is ordered, That no person shall spear or hook up, with hooks fastened to sticks or poles, any of the fish commonly called lake trout, or any of the fish commonly called bass, in any of the waters of either of the aforesaid lakes, lying within the county of Warren. No person shall catch or take in any way, or by means or manner, any lake trout in the waters aforesaid, between the first day of October and the first day of January, nor any bass from the fifteenth day of April to the fifteenth day of June, in each and every year, from and after the first day of November next, for the term of three years.

"And be it further ordered, That whoever shall violate either or any of the provisions of the foregoing rule or order, shall, for every offence forfeit twenty-five dollars.

"Any person having in his or her possession, in any town in said county, any fresh lake trout, between the first day of October and the first day of January, or any bass between the first day of April and the fifteenth day of June, shall be deemed guilty of having violated the provisions of this order.

PETER D. TREKHOUSE, THOS VAUGHN,
LEWIS L. PICKLEY, HENRY PIKE,
DILWIN GARDNER, JAMES PALMER."

JULY 23, 1890.

This proposed order or rule is interesting for several

reasons. It establishes the fact that black bass were not introduced into Lake George after 1840. On the contrary, so early as 1890 it was deemed necessary to take measures to prevent their decrease through methods that were unsportsmanlike, and this would indicate that the bass were not new to this lake, as certainly the trout were not, and they, too, needed protection. It also indicated that the dastardly practice of hooking bass off their beds at the spawning season was practiced at that time as it has been through all the years since, until comparatively few black bass are left in the lake. It indicates that sportsmen—for every man who signed that notice was a sportsman, and his deeds as such are talked about to this day—realized over sixty years ago that in order to enforce a fish law a possession clause must be added; and it further indicates that fish laws were as carelessly drawn in 1890 as in 1890, for the bass season is made to open April 15, while it was illegal to have bass in possession from April 1 to April 15.

It is noteworthy that the rule or order I have quoted is distinguished for being the first movement made in this State to protect and make a close season for black bass by legal methods; and it was made possible by a law enacted within three years previous, which conferred power upon the courts of Common Pleas, upon an application of six freeholders, to regulate fishing within their jurisdiction for a period not to exceed three years.

In fact, the only fish mentioned in the general fishing laws that were in operation at the time this order went into effect were salmon and pike. The laws of 1816 protected salmon from Oct. 20 to Feb. 1, and the laws of 1827 provided that pike should not be speared in the Hudson. I am inclined to think that this referred to the pike-perch and not the true pike, now generally called pickerel throughout the State.

In 1815 there was a law passed which regulated the use of nets, but no specific fish are mentioned. There was also a law passed in 1822 which made it illegal to poison fish, but Edmonds's Revised Statutes, which is supposed to cover all the laws from the organization of the State in 1777 to a much later period than we write of, mentions no other fish laws than those we have referred to as being in force in 1830. There was, however, a colonial law for the protection of salmon in 1771, and a deer law in 1705, being the first law for the protection of game in New York. In 1830 black bass were beginning to establish themselves in the waters along the Erie Canal, which thoroughfare brought them into and across the central part of the State from Lake Erie, when it was dug in 1825; but the indiscriminate planting of black bass, now so much the fashion, had not then commenced. The phraseology of the petition quoted might lead one to suppose that Schroon Lake contained black bass at that time; but this is not so. "Horicon, or Lake George, and the Schroon Lake in the county of Warren" both contained lake trout, but the former only contained black bass. Only a part of Schroon Lake is in Warren county, and for that matter, only a part of Lake George.

Up to about 1845* there were no fish in Schroon Lake except trout and yellow-perch, then 40 pike (*Esox lucius*)—these fish must not be confused with pike-perch, wall-eyed pike, or Champlain pike, as they are variously called—were brought from Lake Champlain and planted in Schroon. My uncle, a man with a local reputation as a skillful and unremitting angler second to none, a contemporary of all the signers of the foregoing petition, and now over eighty years of age, clearly remembers the introduction of the so called pickerel into Schroon Lake, and in vigorous language has ever since censured those who introduced the "sharks" into trout waters, for it was this planting which distributed this "pickerel" through many waters in northeastern New York. It is possible that with lapse of time the 40 "pickerel" have been converted into 40 black bass, and their destination changed from Schroon Lake to Lake George. This is the only way that I can account for the claim that 40 black bass were taken from Lake Champlain to Lake George between 1840 and 1850. The black bass were not introduced into Schroon Lake until some years later than 1845—probably about 1860. Tradition has it that the original plant of black bass came from Effner Lake, in Saratoga county, which was stocked from Saratoga Lake, and that lake in turn was stocked from the Hudson River.

The Hudson River, by the way, was stocked in sections by three instalments of black bass. First, the lower part of the river through the Erie Canal; second, the middle portion, from Sacondaga River southward from Effner Lake, which empties into the Sacondaga, and the upper part through Schroon River or East Branch of the Hudson from Salmon Lake. The last-named section has been stocked within the past ten years, resulting in destroying some excellent spring trout fishing in the upper reaches of the stream.

It will be noticed that in the pioneer fish law that I have quoted, Cooper's name of Horicon, although not spelled as Cooper spelled it, is given as the alternative of Lake George, as if to identify the lake. This is the only instance, so far as I can learn, in which the novelist's name for the lake is used in a legal document. The names of the six petitioners recall many angling exploits attributed to them and a fund of stories of their fishing trips. For instance, Mr. Gardner caught the largest brook trout ever caught in the waters of Warren county, and

*Since writing this letter I find that Headley wrote from Schroon Lake in 1848 as follows: "The water is very pure and cold, and salmon trout were once found in it in abundance. Lately, however, they have become more scarce, so four years since some men living on its banks got a few pickerel and put them in as a basis of a new stock of fish. It was agreed on all hands not to take any out for four years. The time being expired this spring, they commenced spearing them, and the quantities have been caught almost surpasses belief. Hundreds of pounds have been taken, some of the fish weighing 12 and 18 lbs. The rapidity with which they breed is equalled only by the ratio of increase in size, for a growth of 4 lbs. per annum is almost incredible. It was doubtless owing to the abundance and richness of the food and the perfect adaptiveness of the water to their wants and habits."

Thus the date of the introduction of pickerel in 1844, instead of 1845, as I have given it. Mr. Headley states that the pickerel were introduced into Schroon because the lake trout had "become more scarce," and yet for thirty-four years succeeding the date of that statement the lake trout fishing in Schroon Lake was excellent in spite of the presence of the pickerel. Nothing was done to increase the lake trout in Schroon until 1882, when 200,000 eggs were sent there from one of the State hatcheries, and were hatched and the fry planted in the lake. In August of that year I fished in the lake one morning before breakfast with Monroe Green and caught four trout trolling at the bottom. At that time it could not be said that lake trout were scarce but their food was scarce, so scarce that the trout were obliged to go on the shoals in August and feed on yellow perch. The pickerel had destroyed the food supply, and it was really food that was regulated more than trout fry.—A. N. C.

he caught it in the Hudson River at the mouth of Clendon Brook, which for the past eight or nine years has been used as a nursery for young sea salmon. Mr. Threehouse is credited with catching the largest lake trout of his day in Lake George. Mr. Pike was particularly fond of catching the fish that bears his name, but which is generally called pickerel.

"This reminds me." Within the past few years pickerel (*Esox reticulatus*), the genuine article, have made their appearance in the Upper Hudson. How they came there no one seems to know, but they are increasing rapidly, much more so than the pike *lucius*. At first but an occasional pickerel was taken, and now out of five fish of this family taken, three will be pickerel and two pike.

I will not close this without telling at least one story of these old-time fishermen. It was an unwritten law in their time that a man who cut a hole in the ice for the purpose of fishing in the winter, was entitled to the use of the hole as long as the ice lasted. Ice might form in the hole almost to its original thickness, and be cut out again and again by another person, but upon the appearance of the original cutter the hole must be given up to his use.

One day Mr. Pixley started for a day's perch fishing, the ice was very thick and it was something of a task to cut a hole, and besides, it required time. He thought he might find a hole cut that he could use, but arriving on the ice he found the only hole that was cut occupied by a Quaker friend, Roger Haviland, whereupon occurred this conversation: "Roger, that is my hole you are fishing in." "Maybe, Lewis, maybe; but I have cut it out enough times this winter to own it, unless you cut it very early. When did you cut it?" "I cut it last winter." The claim was strong enough to get most anything else, but it did not get the hole.

A. N. CHENEY.

CHICAGO AND THE WEST.

CHICAGO, Ill., Dec. 19.—A meeting for the organization of a fly-casting club will be held at Von Lengerke & Antoine's sporting goods store, 246 Wabash avenue, Monday evening next, and it is thought that a dozen or so of members will sign the first manifesto. Through the courtesy of Capt. J. H. Barnett and some of his associate officers of the First Regiment, it is thought that the club can be admitted, for occasional winter practice, into the First Regiment Armory, a magnificent building with an unbroken hall covering a quarter of a block, and a ceiling four stories high. The possibilities of this will at once unfold to the fly-caster who some times longs for a place to try his hand to keep in practice during the winter months.

Mr. Geo. T. Farmer mentions a novel and very killing bait which he has tried for trout in the North. "You kill a red squirrel," says he, "and cut off a little strip of skin about 2 in. long and 1/4 in. wide in the middle, tapering to both ends, leaving a little of the flesh on the inside of the skin. You bait this through one end. When it gets wet it will all curl up around the hook, and it makes the best caterpillar ever you saw." I don't see why this would not be a good bait for bass also.

Mild weather has kept the ice out of our lakes so far. Warden Jeff. Smith and F. L. Buck will make a visit to the lakes as soon as a hard freeze comes. It is not thought that the residents on the main chain of the Fox Lake system will make much trouble, but the law may not be obeyed so well upon the smaller lakes.

The John Wilkinson Co. will remove from their present quarters at 259 State street, as soon as suitable store room elsewhere can be obtained, but no definite arrangements have yet been concluded. The tackle trade will be emphasized.

E. HOUGH.

POLLUTION OF WATERS.—The following, upon the destruction of fish by culm from the coal mines of Pennsylvania, is taken from the *Harrisburg Patriot* of Dec. 7: "Jesse Rittenhouse, one of the commissioners of Columbia county, writes to Thomas Hargest, Esq., attorney for the State Fish Commission, inquiring if there is no way of preventing coal operators from putting all their culm from their mines in the streams. Mr. Rittenhouse says he would like to show Fish Warden Nicholas, of this city, several streams that flow into others full of fish where the culm is killing the finest trout he would wish to see. The streams Mr. Rittenhouse refers to he says are as black as ink." This recalls the letter of Mr. J. T. Bare, published in *FOREST AND STREAM* last spring, upon the same pollution observed in the Susquehanna River at Bainbridge, Pa. It also calls to mind the vast amount of cedar chips and shavings to be seen at the same place. These chips on Oct. 30 were as thick on the York county side of the river as well-formed slush ice, and are continually coming down. These are from the paper mill at York Haven.—BON.

TICKLING TROUT.—New York, Dec. 14.—*Editor Forest and Stream*: I was amused by reading in your last number, when "O. O. S." made fun of the German catching trout with his hand. He perhaps had never heard that trout, like some other beings, like to be tickled. In a rocky stream, such as many of the streams in Wales, you will generally find two holes under a stone; you put your left hand over the hole, and then carefully try in the other with your right; if there is a trout there, the moment you touch him commence tickling him very gently on his side, he won't move; you continue it till you reach the gills and then grab him. I have tickled many a one when a boy. I used to think it good fun, but if you should happen to tickle a water rat he would most likely make it unpleasant for you.—R. A. T.

EARLY FISHING.—Shad have already appeared upon the North Carolina coast this month, several weeks earlier than usual. About New Years the stake nets on the marshes, it is expected, will be in operation and furnish shad in moderate quantities. It is reported that already the best roe shad have sold in the Norfolk, Va., market at a dollar a pair. Bluefish are being taken in large quantities on the North Carolina coast at present.—BON.

"FOREST AND STREAM."

On January 7 the "Forest and Stream" will be permanently enlarged to 32 pages. The price will remain the same.

AN ENLARGED "FOREST AND STREAM."

WITH the issue of Jan. 7 next, which will be the first number of its thirty-eighth volume, the FOREST AND STREAM will be permanently enlarged from twenty-eight to thirty-two pages.

This change has been made necessary by the growth of the special interests to which the paper is devoted, and by the corresponding requirement of more space for their adequate presentation. The enlargement is to be taken as an earnest of our purpose to increase the interest, usefulness and value of the FOREST AND STREAM; and by means of the better opportunities thus afforded, to maintain for it the character it has so long enjoyed as the representative sportsman's journal of America.

Each of the departments will be benefited by the change—Sportsman Tourist, Natural History, Game Bag and Gun, Sea and River Fishing—and, in particular, our news columns—the Kennel, Yacht and Canoe, Rifle and Trap. The generous amount of space now given to Kennel will be maintained, and the room devoted to Trap Shooting will be so enlarged as to make the department the most comprehensive and the best arranged contemporary record of that sport.

Since this journal was established eighteen years ago, the popularity of sports with the rod and the gun has advanced with giant strides; and in the development of those mainly recreations the FOREST AND STREAM has taken no unimportant part. With their growth it has kept equal pace in worth, in influence, in circulation and in generous public recognition. What it has been it will be. The record of the past contains the abundant promise for the future.

In 1892 and the years that shall follow, as in 1891 and the years that have passed, the FOREST AND STREAM will stand for all that is best and truest in field sportsman'ship; and it will strive to merit from its growing hosts of friends a continuation of that warm appreciation and indorsement with which it is now favored.

One word remains to be said: The price will remain unchanged; \$4 per year. Subscribe now.

Fishculture.

PENNSYLVANIA FISH COMMISSION.

At a meeting held in Washington, D. C., Dec. 18, Messrs. Ford, Powell, Stilwell and Welshon were present. One of the most important items of business considered was the construction of the fish transportation car, for which an appropriation of \$5,000 was made by the Legislature, and this item determined the selection of Washington as the place of meeting. There the plans and specifications of the cars built for the U. S. Fish Commission can be studied and their equipment and management fully investigated. Before the Commissioners make the contract for building they will examine the plans of the cars belonging to Michigan and New York, and try to combine as many as possible of the good features of all the cars now in use within the limit of the appropriation. Considerable attention will be paid to the distribution of large fish, and apparatus for hatching eggs en route will be provided.

A subject of the utmost importance to the anglers of Pennsylvania is the pollution of streams by washing culm. The injury to the fish is already so pronounced from Nanticoke to Bainbridge in the Susquehanna and some of its tributaries that general alarm is felt, and the people and press are vigorously denouncing the outrageous practice. In Harrisburg the Board of Trade and Board of Health have joined in the protest against this evil, and it is certain that the crusade opened by Mr. Powell will soon crush out the common enemy of health and the fisheries. The Board of Health is concerned in the matter because the reservoirs for drinking water are becoming so full of the black sediment that a pitcher left standing over night will contain nearly a half inch of the deposit on the bottom. The spawning beds of the bass, pike-perch and other game fishes are destroyed and many good fishing grounds are deserted. An attorney has been empowered by the Commission to prosecute all such cases, and if existing laws will not avail for the protection of the public new legislation will be earnestly demanded.

Chairman Ford appointed Mr. Welshon a committee of one to call on Governor Pattison and urge him to confer with the Governor of Maryland on the vitally important subject of the protection of fish in that part of the Susquehanna which flows through Maryland. In this stretch of 12 or 14 miles fish baskets are legalized and their number is legion. Here the best efforts of the Pennsylvania Fish Commission in the upper waters of the river are minimized by one of the worst implements of fish destruction known to civilization. Millions of young shad and herring, and thousands of black bass, striped bass and pike-perch are annually crushed out of existence against the walls and platforms of these barbarous traps. No amount of argument from persons interested in the welfare of the fishes has yet availed to turn the tide against the baskets, and now a last resource will be called into requisition and we trust it may prove adequate to the occasion.

Preliminary arrangements were made for the exhibition of Pennsylvania fishes and fishculture at the World's Fair, and the various counties of the State were redistricted under the charge of the Commissioners most available for the region. The meeting then adjourned subject to the call of the president of the board.

AN ALBINO BROOK TROUT.

Editor Forest and Stream:

I have received from Col. John Gay a small albino brook trout, 3 in. long, which was presented to him by Mr. J. P. Creveling, superintendent of the Allentown hatchery of the Pennsylvania Fish Commission. This little trout has pink eyes; the sides are of a pale straw color and described by Col. Gay as sparsely red spotted in life. The fins are paler than the body and the teeth of the upper jaw deep brown on their outer surface. The fish is slightly deformed, the portion of the backbone near the tail fin being slightly bent downward, while the lower lobe of the tail is more nearly horizontal in direction than in the normal fish. This albino was hatched in Allentown from one of the eggs forwarded to that station from Corry, Pa. Superintendent Creveling has a number of deformed trout now living, some of which are curiously distorted; he says they seldom live to a greater age than ten or eleven months.

DOG SHOWS.

Dec. 30 to Jan. 2.—Gloversville, N. Y. F. B. Zimmer, Sec'y.

1892.

Jan. 5 to 8.—Albany, N. Y. W. C. House, Fort Plain, N. Y., Sec'y.
Jan. 5 to 9.—Charleston, S. C. Benj. McInnis, Sec'y.
Jan. 13 to 16.—Columbia, S. C. F. F. Capers, Greenville, Sec'y.
Jan. 21 to 25.—Elmira, N. Y. C. A. Bowman, Sec'y.
Feb. 9 to 12.—Chicago, Ill. John L. Lincoln, Jr., Sec'y.
Feb. 10 to 13.—Jackson, Mich. Chas. H. Ruhl, Sec'y.
Feb. 23 to 26.—New York. James Mortimer, Supt.
March 1 to 4.—Philadelphia, Pa. E. S. Brown, Sec'y.
March 8 to 11.—Washington, D. C. F. S. Webster, 738 B'way, N. Y.
March 15 to 18.—Pittsburgh, Pa. W. E. Littell, Sec'y.
April 7 to 10.—Boston, Mass. E. H. Moore, Sec'y.
April 20 to 23.—Los Angeles, Cal. J. C. Sumner, Sec'y.
May 4 to 7.—San Francisco, Cal. H. L. Miller, Sec'y.

FIELD TRIALS.

1892.

Jan. 11-12.—Bexar Field Trials, San Antonio, Texas.
Jan. 18.—Pacific Field Trials, Bakersville, Cal.
—Southern Field Trials, New Albany, Miss.

PROVIDENCE DOG SHOW.

THE sixth annual exhibition of the Rhode Island Poultry Association was held Dec. 16 to 23. In connection with this a small dog show was one of the attractions and this part of the show did not open till Dec. 18. As we pointed out some time ago the association could not hope to have a large entry with the prizes at \$3 and \$2, and a \$3 entry fee, and so it turned out, and I was more than surprised to see about seventy dogs respond to the call. Most of them were local dogs, the Park Lane Kennels and Glendyne Kennels being the only exhibitors known to outside fame. For such a show the quality of the dogs exhibited was above the average and proves that Providence is a good dog town, but I am sorry to say no dog show town. The people seem to look upon such ventures with the greatest apathy, and to hold a show either of dogs or poultry is to court almost certain financial loss. This is discouraging, but answers very effectually the question often asked why Providence fanciers do not hold another good dog show. The arrangements for the show were left almost entirely to Mr. Michael Flynn, of Bristol, L. I., who owns the Glendyne Kennels, and who is also the proud owner of the Irish setter Sedan, that won the All-Age Stake at the late Irish Setter Trials. Mr. Flynn had his hands full, for his one sweeper and general attendant left him in the lurch during the first day; alleging that the show was too exciting for him and he preferred some other kind of work. There was, however, little delay in getting the dogs into the ring, as Mr. Flynn's friends came to the rescue and brought many of the dogs in. The show was in Music Hall, as in former years, and the judging was again done on the stage. Poultry benches took up two-thirds of the hall, and the dogs were consigned to two rows on one side. Judging commenced about noon and was concluded by about 4:30, with an interval for lunch. There were no catalogues and the secretary and judge both worked from the same book.

There was only one entry in mastiff dogs; this was A. L. Guild's Leo, a dog with a fair head, a little too long, nice ears, forelegs and coat; hindlegs too straight. He was awarded first prize. The only puppy had a poor head, but his body and legs redeemed him somewhat. There was no entry in bitches.

In St. Bernards a pretty fair brindle and white dog turned up in L. E. & W. Miller's Mettlehorn. He is rather soured, short in body and hindlegs too straight, his head, however, is of good square shape, his forelegs are good and his coat is straight. Second was withheld, as John B. Wilson's Nero is self-colored and shows little or no evidence of St. Bernard type, no white markings and has a wrong feel of coat. The owner told me afterward that he had won first at Boston show, and I asked how old it was then, when he replied "Six weeks!" In bitches L. E. & W. Miller's Dorothy IV. was easily first. This bitch was imported and is by champion Pout, which her beautifully-marked head and great look of quality would imply. Head is well-shaped, if it is a trifle long, muzzle a bit fine, front and body good, nice coat, but hindlegs looked a little groggy; owner said she had strained herself romping the day before. Second went to Robert Clitheroe's Bess, a light, shelly-looking animal, too snipy faced, but still a St. Bernard after a manner. Patrick C. Kille's Monk won in puppies. A well-grown dog, white with brindle patches, with a fair head, nice coat and bone. Third withheld, another of the no type red dogs, only a worse one, this was D. B. Burkinshaw's Bruno.

Great Danes had one entry, and that not a very extensive specimen, Joseph H. De Lory, Jr.'s Major, too big in ear but nicely formed otherwise, but was only five months old. He took the prize.

Greyhounds were represented by one specimen, M. J. Cornhill's bitch, no name given. She was given first although her head is too short and Roman-nosed; still she had good bone and forelegs, but hindlegs inclined to turn in a bit, also lacks rib development.

Pointers.—Sunset Hill Kennels showed Dash, the only entry, and won first. This dog has not a bad head, but is wide in front, heavy in shoulders and straight behind and too short in body, though well sprung in ribs.

English setters turned out better, and first prize went to Ed H. Openshaw's Joe Brown, who, though not so good in head as J. M. Brown's Myron McKie, beats the latter in legs, feet, ribs and loin, in fact a better made dog altogether. In bitches, one full of quality and with a good type of head was shown in the winner, Frank Moore's Jinnie B. Perhaps a little too much cut out before the eye, and drops a trifle behind the shoulder; otherwise little fault can be found with her. J. M. Brown's bitch, second, loses in head, front and is a little light in body. E. H. Openshaw's Trixie was shown too fat, making her look cloddy; she is heavy in shoulders, but stands on good legs, and only her cloddy look put her in third place. Puppies had two entries, Gabe Jackson's Ormonde, which beat Gloriana all over.

In Irish setters the rakish looking Glen Jarvis, owned by Glendyne Kennels, is well known to show goers as a fair dog, beats Thos. Cullen's Elcho, Jr., who looks too English settery and is too straight in face, in head, body and hindparts; also too fat, short-faced and had too much white on chest. In bitches Glendyne Kennels' Lucelle, despite her fourteen years, showed lots of quality and a correct shape of head albeit very gray. She is well formed, and were she younger would hold her own with any of the modern ones. Sedan, the field trial winner, was absent. A 7mos. old pup, Mollie Glendyne, from the same kennel, took second. This is quite a nicely made one, of good color, and only needs time to be able to hold her own in a good company. Mollie Glendyne was also in puppies, beating a litter brother, Larry Doolan, also owned by Glendyne Kennels. This one is snipy and was out of shape from worms, besides being very shy. He was afterward shipped down to North Carolina.

The only Gordon setter dog was M. Kenyon's Pete, that took first. He has good tan, but no pencilings; has a fairly well formed head, though it is a little short. In bitches C. M. Henyon's Judy, although given first, hardly deserved it. Bad head, light tan, but good pencilings; was shown in bad trim, too.

Cocker spaniels seemed to include a little of all sorts of the spaniel family, and our friend Mr. Bell would have had a good object lesson as to the difference of style between cocker and field spaniel heads, for the field spaniel head on the cocker body was shown to perfection in one or two cases. The winner in dogs was Mrs. E. H. Openshaw's Jim the Dude, a dog with a capital head, though a little light in eye, a bit long in body, but well ribbed and fairly straight in front; will do to show in New York if it can be kept in its present good condition. In bitches there was quite a turn out, Park Lane Kennels' La La winning first; is more of a cocker than the other, which struck me as too much of a field spaniel. La La turns elbows out a bit when she moves, but so does the second, M. C. Philip's Bessie. Little Gypsy, third, was the cocker of the show in body and style of head, but it was too domy in skull, feet too small and bone too light; but a real cocker in general appearance. M. C. Philip's Mischief was beaten in muzzle and shoulders, latter much too heavy, and was a bit high on legs, too. In the puppy class Major won easily over Sunny Hill Kennels' Fannie B., though more on the field spaniel form, being too long in body for a cocker; he had the best bone and was much better in hindquarters.

Of course this is one of the strongholds for Japanese spaniels, thanks to the Park Lane Kennels, whose Nanki Poo, in the dog class, looked as well as I ever saw him, and as handsome as usual. Then Yum Yum, seemingly a little short of coat, was also alone in the bitch class. Both these "Japs" are well known to the fraternity.

Foxhounds were the next to come on the stage, and Dr. Thurber, who showed most of them, can boast a nice sorry little pack, of a sort of betwixt-and-between type. Father and son came together in the open class, and, though the Deacon is a past winner, I had to give the blue ribbon to his son the Parson, for he beats the other in body and hind parts, Deacon being too narrow and short of muscling in quarters, also loses in bone. Deacon is better in skull but not so square in muzzle as Parson; both have good bound coats. In bitches, F. W. Wilbur's Bessie II., the winner, is a bit too long east, wide in front and out at elbows. In puppy class Dr. Thurber showed Femur and Tibia, two likely youngsters Femur beating the other in bone, pasterns and head.

Beagles had only two entries, but Little Roscoe was the only one to show up, Tampa, the Sunny Hill Kennels' other entry, having tampered with a skunk, was unable to appear. Little Roscoe is a nice little "basket" beagle, snipy in muzzle, soft in coat and not straggled enough in front, but good in body. No bitches. Don F., from the same kennel, is as much too large as the other was too small, is inclined to coarseness and is too long in head.

Collies came next, and whether it was the absence of any striking specimen of dog flesh except in one or two classes, I do not know, but over Lambert Stansfield's Highland Floss, by Fordhook Climax out of Fordhook Abyssinian, running back to The Squire, champion Charlemagne Rutland and the rest of them, I felt the spirit of covetousness creep through me. Barring Roslyn Dolly, I think she has the sweetest expression I ever saw in a collie, lots of quality, a well-shaped head, good feet, well formed body, nice carriage, and coat that would be of proper texture were she not kept in the house, with lots of undercoat and all combined, with quite enough bone and good size, made a bitch than which I have seen no better for some time. E. R. McIntosh's Finny suffered by comparison, and only received vhc., as she is thick in head and showed little quality. In puppies Highland Floss won again, she is only 10 months old, and is evidently now at her best. Michael Sweeney's Rogue had a coarse, thick head, good bone, fair coat and body.

Fox-terriers were represented by quite a fair specimen in Scamp, by Old Scarsdale, partaking of his sire's thickness of head; he, however, has a good body and front, but coat is too soft and not enough of it.

Bull-terriers had one entry, a nondescript. No prize awarded.

Irish terriers were well represented. In dogs Park Lane Kennels' Hillaloe beat Dr. Fennel's Mickey K. in general type, head, coat and front. In bitches Park Lane Kennels' Dummurry had no difficulty in beating Dr. Fennel's Noreena, too full in eye and faulty in head. In puppies two poor ones came forth, they were given the prizes, but got more than their deserts.

Then came a nice lot of black and tan terriers from the Park Lane Kennels. In dogs Salisbury had little difficulty in beating Jasper in head, front, markings and condition. Queen had a harder task in the bitch class, as Louie looked very well and Queen in whelp, appeared a little above herself, but Queen is also better in head, front and hindparts. In the puppy class another of the Park Lane Kennels' entries, Mizpan, won over Harry McDonald's Ned Whirlwind—one of their breeding, too, same litter—in head, color of tan and markings.

Then came the miscellaneous class with C. M. Kenyon's said-to-be-a-poodle first in the dog division. In bitches a fair round-headed, but Boston terrier, as they must now be called, Sunset Hill Kennels' Fidelity, beat another little nondescript poodle, and a toy black and tan that was entered in the black and tan puppy class, but was much too ancient for that. These two were given equal second. In the puppy class (miscellaneous) the judge gave a promising Dalmatian pup the prize, ignoring the claim of another Boston hybrid and this with the placing of the specials as follows brought the judging to a close.

H. W. L.

SPECIAL PRIZES.

Best mastiff, A. L. Guild's Leo; best St. Bernard, E. E. & W. Miller's Dorothy IV.; best Great Dane, J. H. De Lory's Major; best pointer, Sunset Hill Kennels' bitch; best pointer, Sunset Hill Kennels' Dash; best English setter, Frank Moore's Jinnie B.; best Irish setter, Glendyne Kennels' Glen Jarvis; best Gordon setter, C. M. Kenyon (Agt.) Pete; best cocker spaniel, Jim the Dude; best Japanese spaniel, Park Lane Kennels' Nanki Poo. Best foxhound, Dr. H. T. Thurber's Parson; best beagle, Sunny Hill Kennels' Little Roscoe; best collie, Lambert Stansfield's Highland Floss; best fox-terrier, H. A. Richmond's Scamp; best Irish terrier, Park Lane Kennels' Dummurry; best black and tan terrier, Park Lane Kennels' Queen III.; best kennel of four sporting dogs, Glendyne Kennels; second best, Dr. H. T. Thurber's foxhounds; best kennel non-sporting dogs, Park Lane Kennels' black and tan terriers; second best, Dr. W. T. Kenney's Irish terriers; best setter stud dog with two of his get, Glendyne Kennels' Glen Jarvis with Molly Glendyne II. and Larry Doolan; best setter in show, Frank Moore's Jinnie B.

THE AMERICAN MASTIFF CLUB SPECIALS.—Lake Waccabuc, N. Y.—Editor Forest and Stream: The American Mastiff Club offers the following specials to be competed for at the show of the Mascotah Kennel Club, Chicago, Feb. 9, 1892. (1) The club's silver challenge cup (value \$150) for best American-bred mastiff, open to all; entries to be made with Secretary American Mastiff Club, Lake Waccabuc, N. Y., accompanied by an entry fee of \$5; one half the fee to go to winner of cup, the other half to club to meet expenses of cup. (2) The club's silver challenge cup (value \$100) for the best mastiff dog owned by a member of the American Mastiff Club. (3) The club's silver challenge cup (value \$100) for the best mastiff bitch owned by a member of the American Mastiff Club. Each of the above cups will carry the club's diploma.—HERBERT MEAD, Sec'y.

THE VELVET TRAIN of the Monon Route between Chicago and Cincinnati offers the best and most luxurious service obtainable between those points.—Adp.

PHILADELPHIA KENNEL CLUB'S FIELD TRIALS

SOMEHOW the trials held by this club, owing to the absence of several of its most important members, did not afford such an enjoyable gathering of sportsmen as last year. President Brown, owing to sickness in his family, was unable to come, and Mr. F. G. Taylor had everything in readiness to start when a sudden chill upset his plans. The secretary, Mr. Connell, a host in himself in providing fun and amusement at these meetings, was also absent, leaving the popular pointer breeder, J. H. Winslow, as the only merry-maker in the lot. The management of the trials, therefore, devolved on Col. B. Ridgway, J. H. Winslow and Dr. Alex. Glass, who did their work well, everything running without a hitch. The judges were the same as last year, Messrs. W. A. Coster and Herbert Merriam, and again their decisions met with entire approval. They are careful and attentive to the work of the dogs, and owing to the scarcity of game the conclusions to be arrived at were formed under very adverse circumstances, for when it is understood that only fifteen beys were found during the trials it will be imagined that placing the dogs in their proper order, without injustice to any one, was a matter of no little difficulty. The scarcity of birds after the great abundance met with last year is very strange, and this, together with indignation at the exorbitant charges sought to be levied on the visitors, will very likely be the cause of some action being taken with a view to securing fresh grounds, probably in conjunction with one of the large field trial clubs.

The attendance this year was small compared to former years, those present being Messrs. Chas. Heath, of Newark, N. J.; S. Mitchell, N. B. Nesbitt, of Philadelphia; J. O'H. Denny, of Pittsburgh, Pa.; Mr. Godwin and Mr. Shewbrooke. The handlers present were S. C. Bradley, Chas. W. Barker, J. C. Schuyler, Geo. W. Greene, E. I. Martin, N. B. Thomas, Major J. M. Taylor and Mr. J. F. Johnson, of New York, represented the press. Monday, Dec. 14, was taken up by getting settled and arranging for an early start for the next day.

TUESDAY.

MEMBERS' STAKE.

The weather was all that could be wished, though toward evening it became cloudy. Only five starters showed up in this stake and were drawn as follows:

Chas. Heath's Lena with Col. B. Ridgway's King's Mark. S. Murray Mitchell's Sport II. with W. B. Smith's Ben Hur Franklin.

J. O'Hara Denny's Joe Lewis a bye.
LENA—KING'S MARK.—The blue belton English setter dog King's Mark (King Noble—Belle Belton) was handled by owner and the orange and white English setter bitch Lena (Prince Lucifer—June) was also handled by owner. Cast off in sedge grass near headquarters, Judge Farrar's house, the first bey found was put to Lena's credit. Just after King's Mark made a point on the same bey. The dogs, when Mr. Heath flushed the bey were quite unsteady, were moving when birds rose and were inclined to chase. Mr. Heath fired, killed, and Lena retrieved nicely. Birds followed to thick oak cover, but nothing done, and this was the last opportunity on game, as they were unable to spot another feather. King's Mark's superior range and hunting sense was very apparent, speed about equal and both dogs showed style, especially Lena. They were down 31m.

SPORT II.—BEN HUR FRANKLIN.—The lemon and white pointer dog Sport II. (Sport—Daisy II.) was handled by owner, and the lemon and white English setter Ben Hur Franklin was also handled by owner. They were cast off at 9:02. Unfortunately no birds were found by the brace, but during the running Ben Hur showed best pace, range and style, but the palm for obedience must be given to Sport II. Ben Hur pointed a bey after the brace was ordered up. We now had to wait some time for the bey dog, Mr. Denny's Joe Lewis.

JOE LEWIS A BYE.—The black, white and tan English setter dog Joe Lewis, handled by owner, turned up after waiting 15m. Even when he did see the scratch he would not start out to hunt, as he assumed the greatest indifference to his owner's command. The dog did not know him, and had only arrived by the morning train. He was then led to the open, when a successful start was made. The dog showed fair pace and range across an open stubble, and in the corner, near a stream, he pointed on foot scent, and the bey flushed a little ahead but did not fly very far. Joe was given the advantage of the wind, but still flushed the bey. In cover not far off he put up a single, pointed once, and then put up the bird; his nose was at fault and he did not work as well as at High Point. He had his half-hour run and was ordered up at 10:37. This concluded the first series.

Second Series.

Game was still scarce and no real work was done.
KING'S MARK—BEN HUR FRANKLIN were cast off at 10:42. They found no birds during 35m. run, but Mark showed conclusively that he was superior to Ben Hur in every way.

SPORT II.—LENA.—Sport had no business to face the judges again, unless to complete the brace, as he has no pretensions at all to field trial form. When he found a bey he did point it and then spoiled his work by flushing it. Although Lena ranged out well and sought high and low this was all the work done when called up after 15m. run. A short consultation ensued and the judges announced the result.

Col. B. Ridgway's King's Mark first.
Chas. Heath's Lena second.
Walter B. Smith's Ben Hur Franklin third.

THE DERBY.

The Members' Stake having been finished in the forenoon, after lunch the first brace in this stake was put down. There were eight starters, drawn to run as follows:

Katie Noble II. with Adonis.
Rod with Joe Lewis.
Philadelphia Press with Booth.
Bessie Mavournen with Hazel.

KATIE NOBLE II.—ADONIS.—The blue belton English setter bitch Katie Noble II. (Breeze Gladstone—Katie Noble) was handled by N. B. Thomas and the Irish setter dog Adonis (Tim—Curren Belle II.) was handled by J. C. Schuyler. They were put down in a cornfield at 1:10. They did not show much speed at first but eventually Katie got independent and left the Irishman to himself. She was much the best in all field qualities, showed good speed, fair range and is a merry worker, showing a good many traits of her dam Katie Noble. No game was found and dogs were called up at the end of their 30m. run.

ROD—JOE LEWIS.—The blue belton English setter dog Rod (Rodriguez—Perseverance) was handled by W. J. Shewbrooke, and the black, white and tan English setter dog Joe Lewis (Count Noble—Fannie) was handled by F. J. Schuyler. They were cast off at 1:50. Several points on larks were made, but they found no game. Joe Lewis, having his regular handler, worked much better, but there was little difference in the pace and range, and neither are good. Up at 2:21.

PHILADELPHIA PRESS—BOOTH.—The blue belton English setter dog Philadelphia Press (Cincinnati—Cornelia G.) was handled by Geo. W. Greene, and the black, white and tan English setter dog Booth (King Noble—Queen Vashti) was handled by Chas. Barker. They were put down at 2:23, but found no birds. Booth had the speed and range of any dog in the stake; hunted his ground out well, and was under

good control under Barker's expert handling. Press is a nice-moving youngster and is capably made, quite fit for keen competition on the show bench. Dogs up at 2:55.

BESSIE MAVOURNEN—HAZEL.—The Irish setter bitch Bessie Mavournen (Tim—Curren Belle II.) was handled by E. I. Martin, and the black, white and tan English setter bitch Hazel (Cincinnati—Cornelia G.) was handled by J. C. Schuyler. This brace started at 2:56, and had nearly completed their 30 minutes' run when Hazel, going at her best, pointed a bey. The work was spoiled, however, by the tardy movements of her handler, who failed to control her, letting her move forward and flush a small bey. The brace ran a few minutes longer and were ordered up at 3:26. And this ended the first series.

Second Series.

The judges called for Rod and Katie Noble, but Mr. Thomas feeling unwell had gone home, so the second brace, PHILADELPHIA PRESS—JOE LEWIS, was put down and sent to find the few birds raised in the last bey. The only game found was to Press's credit, pointing twice on singles. As one of these flushed he did not behave very steadily. They ran for fifteen minutes and were then ordered up, Press having much the best of it.

BOOTH—HAZEL.—They were cast off at 4:05 in sedge grass, and both went well, though Booth was the fastest. Booth commenced work with a point on larks and then found a bey, but left his point and drew to a flush. In the woods on singles he made two staunch points and was steady to wing. Besides being best in pace and range he was easily handled. This closed the day's work.

WEDNESDAY.

The morning was cloudy, and the day seemed right for good work, a slight rain having fallen during the night. There was, however, the same weary race after birds, and their scarcity completely spoiled the otherwise pleasant meeting.

KATIE NOBLE—ROD.—Mr. Thomas was still too sick to be out, so Kate Noble found a new handler in E. I. Martin, and he managed her very well. Starting at 9:32 Katie found a bey, making a very stylish point and was steady to wing, Rod backing. The birds were not followed, however, there being only a few of them. Although they ran fifty-four minutes there was no more point work. Katie's superiority was very noticeable in this brace. The judges had a short consultation and announced the winners as follows:

B. Ridgway's Booth first.
L. Shuster, Jr.'s Hazel second.
L. Shuster, Jr.'s Philadelphia Press and Francis G. Taylor's Katie Noble II. divide third.

ALL-AGE STAKE.

There were only nine starters in this race and they were drawn as follows:

Edgemark with Ezra Noble.
Rock II. with Silk.
Flash with Peg Woffington.
Limerick with Albert's Duchess.
Lou Noble a bye.

First Series.

EDGEMARK—EZRA NOBLE.—The black, white and tan English setter dog Edgemark (Skidmore—Flo Macklin) was handled by S. C. Bradley and the blue belton English setter dog Ezra Noble (Count Noble—Alphonine) was handled by Geo. W. Greene. They were cast off at 9:46. A bey was flushed, after a little run, by Ezra Noble at the edge of pines. Edgemark went into the cover, made game, and pointed a single bird and was steady to wing. The dogs were sent off in the open to find more birds but were unsuccessful. Edgemark was much more stylish in his work, was under good control and beat out his ground better. Ezra was under fair control but has a peculiar style of carrying his head. The dogs were ordered up at 10:17.

FLASH—PEG WOFFINGTON.—The black and tan dog Flash (pedigree not given) was handled by E. I. Martin, and the black, white and tan English setter bitch Peg Woffington (Ben Hill—Nora) handled by S. C. Bradley, were the next brace down, though not in regular order owing to the absence of the other brace by mistake. Lou Noble followed this brace with her bye, and this occupied the time until lunch, when the missing dogs were returned. After a short run Flash was thought to be making game, and Peg Woffington coming up dropped instantly to point. A bey was raised to the rear of the dogs. The birds were followed but it was some time before one was located, Peg nailing one bird, the only one found. After running thirty minutes the dogs were ordered up. Peg was the smarter dog and had the most style in her work. There was little difference in pace, Flash having most range, but did not use much intelligence with it.

LOU NOBLE A BYE.—The black, white and tan English setter bitch Lou Noble (Count Noble—Alphonine) was started at 11:33 to run her bye. She found no birds, and had only fair pace and range and was not deemed good enough for second series. She was under good control and covered her ground very fairly.

ROCK II.—SILK.—The liver and white pointer dog Rock II. (Graphic—Lady Belle) was handled by S. C. Bradley, and Dr. G. G. Davis's Irish setter bitch Silk (Chief—Gipsy Maid) were started at 1:45, Rock going much the faster. Silk only showed fair pace for a few minutes. Rock, with conditions favorable, soon after starting went bang into a good bey. The place was within 100yds, of where he put up birds for his owner in the Members' Stake last year, on the historic ground of Sailor's Creek. Rock showed inclination to chase, but Bradley stopped him promptly. Afterwards Rock made a point and a false point in finding the singles. Rock was the best all round, Silk, as in the Irish Setter Trials, doing but very ordinary work.

LIMERICK—ALBERT'S DUCHESS.—The Irish setter dog Limerick (Giencho—Nora) was handled by John White, and the black, white and tan English setter bitch Albert's Duchess (Warwick Albert—Princess Belton) was handled by J. C. Schuyler. They were sent off at 1:20 to finish the first series. In pace and range the brace was about equal, Duchess covering her ground much the best. The 30 minutes' limit was nearly up when Duchess found a bey in the edge of pine woods and pointed in good style. Limerick was not near to back. Duchess was steady as the birds were flushed. Not long after this White called a point in the direction two of these birds had taken, and it appeared from the dog's position as if he had been stopped by his handler to make a guess at it; certainly he was not pointing and no birds were put up. The dogs were ordered up soon after.

A long consultation then ensued between the judges, and finally they decided that six dogs should remain in second series, but neither Flash nor Limerick had done work that entitled them to rank on any equality with the other four. The order of running was: Edgemark with Albert's Duchess, Ezra Noble with Peg Woffington, Limerick with Flash.

Second Series.

EDGEMARK—ALBERT'S DUCHESS.—At 2:24 these two were put down to work on the birds that Albert's Duchess had found, and were sent into rather thick cover. Duchess did the best, getting two singles to Edgemark's one bird, besides retrieving well to a kill. This was all the point work done in the heat. Edgemark had the best pace and range and Duchess also lost to him in style and seemed a bit stale. The brace was ordered up at 3 o'clock.

EZRA NOBLE—PEG WOFFINGTON.—This brace was sent off at once, at 3:02, both starting off well. Peg was the first to

scent game, and pointed a small bey in the pines, but it flushed wild. The birds were not followed. At the roadside, soon after this, Ezra Noble either passed through or close to a bey, and following the birds Ezra flushed twice when conditions were favorable to good work. The dogs were then ordered up and

LIMERICK—FLASH—were put down for eight minutes. Nothing was found, but their going seemed to satisfy the judges this time, and they were ordered up and the second series concluded.

Third Series.

EDGEMARK—ALBERT'S DUCHESS.—It was hardly apparent why these two should go down again, but from appearances it would seem the judges were hardly of one mind as only one of them seemed to follow the running closely. This was Albert's Duchess's third run, and her pace showed she was none the better for it. They ran from 3:30 to 3:55, but nothing was found, and this ended the running in the stake. A short consultation ensued and the winners were announced as follows:

Francis S. Brown's Edgemark first.
Dr. John A. Hartman's Albert's Duchess second.
Francis S. Brown's Peg Woffington third.

THE PEARL OF PEKIN INCIDENT.

Editor Forest and Stream:

Whether Pearl of Pekin or Chicopee Lass is awarded the disputed course can be of any interest to very few, as far as the mere award is concerned. To me it is absolutely of no interest whatever. But that the National Greyhound Club shall put a humane and reasonable interpretation on the rule is of direct importance to every member of the club and is the only point I have ever proposed to discuss. The objection I have uniformly raised to the position taken by Messrs. LeMoine and Bartels and now by Mr. Gower is that it is Draconian, admits of no questioning and defies simple justice. But let us suppose that the rule is to be inflexible in its application, permitting of no qualification and most highly penal. Then it goes without saying that every highly penal rule, to which strict construction must be applied, must be construed strictly in every direction, and can never be advanced beyond the *littera scripta*. This is so axiomatic that it will not be disputed by any one versed in principles of interpretation. Now, Rule 30 is aimed at "riding over;" these words have a very definite meaning that any dictionary will define. Now, if Mr. Edmonds did not "ride over" Pearl, but she collided with his horse, the rule will not apply to him. It would be monstrous to hold that a highly penal rule, applied with Median and Persian severity against a man, should be advanced beyond its express terms. In homely phrase, What's sauce for the goose, is sauce for the gander.

However, drastic and unreasoning applications do not ever commend themselves to me, and I cite this dilemma only to show the absurdity of the narrow views put forth on the subject. I object to Mr. LeMoine's terms, be they "spades" or "instruments for the removal of alluvium," because they stigmatized the American Coursing Club as a modern monster, while he gave not a particle of evidence as to the facts on which the club based its decision, and asked the public to believe that the club had been guilty of a monstrous wrong in not applying, with the most blood for blood rigidity, as indefinite a rule as number 30, and thereby denying to the accused party any right of defense in the nature of showing the impossibility of his avoiding the collision, etc., and it is noticeable that not one scintilla of evidence has been brought forward against Mr. Edmonds, beyond the bare rule itself.

Now I defy the production of any product of modern legislation that is inflexible in its application, particularly if it is in the nature of a criminal statute. There are instances where a man is punished, and properly so, for the act of his agent, but there he is punished for his negligence, direct or indirect, in the selection of his agent, but that the wrong of his opponent can ever work against him, is simply preposterous. Yet it is very easy to imagine how a hound might collide with the horse of anyone, or even a rider "ride over" it, and the hound be the only party at fault, yet, in such a case, the following of Draco that Mr. Gower so hugs to his bosom, would punish the rider for the fault of the hound!

Now, the right and wrong of this matter seems very simple to me and its solution evident. Let it be held that the burden of proof is always on the party who rides over, or interferes with, a hound contesting with his, to show that he was in a position on the field that did not invite such an occurrence within the human range of probability; that he did everything within his power to avert the interference, and that he was in no way guilty of any negligence, direct or contributory. Let him be required to prove, not merely assert, this, and in default of such positive proof, the penalty of the rule shall fall on him, but if he succeeds in establishing this, the simplest principles of justice forbid his being held responsible for what he could not possibly avoid.

As an illustration of the mischief my interpretation might work, a friend asks me what should be done in the case of a man whose horse became entirely unmanageable, and running away ran into the hound contesting with his? The answer is simplicity itself. He must suffer for his horse's fault; he was guilty of contributory negligence in riding a horse that would become unmanageable.

Just consider what will be the result of the blood-for-blood application of this rule. An owner will never be safe in witnessing the running of his hound, unless indeed he sees it from a captive balloon or the top of a flagstaff; and surely, it is supposed to be proper for an owner to witness the performances of his own dog?

The case is now before the National Greyhound Club on appeal, and it is most sincerely to be hoped that it will not only decide this case, but will attach a well-considered interpretation to the rule defining just how far its literal requirements may be qualified, and what responsibilities an owner assumes who has the temerity to undertake to see his hound run.

W. WADE.

HULTON, Pa., Dec. 5.

What a Single "Ad." Will Do.

Editor Forest and Stream:

Will you kindly permit me to say that I have decided to withdraw my offer to sell my setter bitch Blue Ridge Belle (19,154), thus replying to the "small army" who seem desirous of owning her. I have declined to take \$500 for her, and recent work in the field only strengthens my opinion that she has no superior. I shall therefore keep her. I also wish to express my surprise and pleasure at the result of a single insertion in your columns, having received telegraphic and mail replies from all over the United States, and as you will see by my notice of sales one of the dogs advertised went to Massachusetts and the other to California. This certainly speaks well for your circulation and the value of your columns as a sales medium.—GEO. W. LA RUE (New York, Dec. 1).

A POINTER LOST.—Haverhill, Mass.—Editor Forest and Stream: On Tuesday, Dec. 13, I lost a pointer dog. He is two years old and weighs about 45lbs. Head and body liver color; breast and legs ticked. Right eye ball a little white, having been injured. Had on a collar with owner's name and address. Will readers of the FOREST AND STREAM please inform me should they hear or see anything of him.—JAMES F. JOHNS.

FREPORT DOG SHOW.

[Special Report.]

THE first annual show of the Freeport Poultry and Pet Stock Association was held in the Opera House, Freeport, Ill., on Dec. 10 to 14. The show was closed Sunday, the 15th. It seems unnecessary to keep a show over Sunday and commence again in another week. There really can be nothing gained by so doing and it may be a detriment to its success, as the break may cause the public to forget the show, whereas if kept open four days in succession it is continually before the public. This closing over Sunday seems to be caused more by the poultry fraternity than the dog men. In fact I do not think poultry and dogs go well in the same building. The Opera House was too small. T. Ellis Taylor worked like a beaver to make the show a success. He really attended to everything. One attendant had to do all the work for a few days, sweep the floor, cook the feed, keep benches clean—or should have done. Therefore, as may be imagined, the show was not kept so clean as it should have been, and an unclean dog show is not a pleasant sight. Show committees owe these things to exhibitors and should not forget that good clean bedding, plenty of water and feed, etc., saves lots of future trouble when dogs go back to their owners' kennels.

The show was not a success financially, and the members will have to go down in their pockets to the tune of about \$400. Everything will be paid up, however. The residents did not give the club the support they deserved, though the press of Freeport did all that could possibly be expected, so it could not be for want of reading notices.

The entries were not large, the catalogue numbering only 114, with a few absentees. Nearly all the winners have been commented upon before so often that it is not necessary to give further notice at present. Mr. Tim Donoghue judged setters, pointers, beagles, foxhounds, and Tim is a "slasher" on condition. H. L. Goodman judged the non-sporting and cocker spaniels, etc., and both judges gave general satisfaction.

AWARDS.

MASTIFFS.—Dogs: 1st, Chas. E. Bunn's Ormonde; 2nd and very high com., Colin C. McLean's Syria and Saosha. Bitches: 1st, 2d, and very high com., Chas. E. Bunn's Sinaloa, Mattela, and Lady Cobrey, Colin C. McLean's Armat. Puppies: 1st and 2d, Colin C. McLean's Saosha and Armat.

GREAT DANES.—Dogs: 1st, Jos. Zillig's Grover Cleveland. Bitches: 1st, F. S. Anderson's Columbian Flora; 2d, Geo. W. Clayton's Minca. Puppies: 1st, F. S. Anderson's Columbian Daphne.

ST. BERNARDS.—ROUGH-COATED—Dogs: 1st, W. C. Hickox's Fernwood Bruce; 2d, Dr. John W. Dunlop's Othello. Very high com., reserve, Dr. J. G. Earle's Arctus. Very high com., F. S. Anderson's Knight. Bitches: 1st, Whitewater Kennels' Lara.

ST. BERNARDS.—SMOOTH-COATED—CHALLENGE—1st, Fernwood Kennels' Lord Hector. OPEN—1st, South Bend Kennels' Sir Eldred.

GREYHOUNDS.—1st, F. S. Anderson's Kentucky Blue. **BLOODHOUNDS.**—1st, R. G. H. Huntington's Jack Shepherd. **FOXHOUNDS.**—Dogs: 2d, John Spore's Queen.

POINTERS.—CHALLENGE—1st, G. G. Palst's Trinket's Chief. OPEN—Dogs: 1st, J. H. Winslow's Inspiration; 2d, J. G. Earle's Chief Amo. Very high com., W. M. Brown's Sport. High com., H. C. Tyler's Trump. Bitches: Very high com., W. A. Kintzel's Nellie.

ENGLISH SETTERS.—CHALLENGE—Dogs: 1st, Paul Gotzian's Monk of Furness. OPEN—Dogs: 1st, Harry Northwood's Benjine; 2d, Seminoles Kennels' Sir Frederick. High com., John Spore's Pet. Bitches: 1st, Dr. John A. Hartman's Albert's Nellie; 2d, A. J. Klotz's Paxie Maid. Very high com. and reserve, Paul H. Gotzian's Minnesota. Puppies: 1st, T. Ellis Taylor's Buster Billings.

IRISH SETTERS.—CHALLENGE—1st, Oak Grove Kennels' Eldara. OPEN—Dogs: 1st, Oak Grove Kennels' Eldara Glenmore; 2d, Seminoles Kennels' Lord Elcho. Bitches: 1st, Dr. Wesley Miller's Elfrida; 2d and very high com., Oak Grove Kennels' Ona Belle and Aurora. Very high com. and reserve, Seminoles Kennels' Bessie Glencho II.

GORDON SETTERS.—CHALLENGE—1st, Dr. Samuel G. Dixon's Duchess of Waverly. OPEN—Dogs: 1st, B. F. Lewis's Alp; 2d, F. W. Ellis's Roger. Bitches: 1st, Dr. S. G. Dixon's Countess Richmond; 2d, W. N. Gilbert's Queen of Scotland.

WATER SPANIELS.—1st, Ed. G. Fink's Trouble.

FIELD SPANIELS.—CHALLENGE—1st, B. F. Lewis's Black Diamond. OPEN—Dogs: 1st, T. Ellis Taylor's Newton Abbot Torso; 2d, Mrs. A. P. Smith's Arko. Bitches: 1st, Ancient and Modern Spaniel Kennels' What Not.

COCKER SPANIELS.—CHALLENGE—1st, Ancient and Modern Spaniel Kennels' I Say. OPEN—Dogs: 1st, J. P. Willey's Jersey Ohio; 2d, Ancient and Modern Spaniel Kennels' Gothamite. Bitches: 1st, Ancient and Modern Spaniel Kennels' Lady Ohio; 2d, J. P. Willey's Black Duchess. Puppies: 1st, Ancient and Modern Spaniel Kennels' Woodland Pete.

COLLIES.—CHALLENGE—Dogs: 1st, Seminoles Kennels' Rosly Dandy. Bitches: 1st, Seminoles Kennels' Metchley Supreme. OPEN—Dogs: 1st, Seminoles Kennels' Rowdy; 2d, Harry R. Smith's Griefenstein. Bitches: 1st, Seminoles Kennels' Dot; 2d, Harry R. Smith's Wilma. Puppies: 1st, Seminoles Kennels' Scollia IV.

BULLDOGS.—CHALLENGE—1st, E. A. Woodward's Boswain. OPEN—Bitches: 1st, E. A. Woodward's Duchess of Parma.

BULL TERRIERS.—Dogs: 1st, G. W. Clayton's Chataqua Sam. Bitches: 1st, G. W. Clayton's White Gipsy. Puppies: 1st and 2d, G. W. Clayton's Chataqua Sam and Chataqua Bird.

DACHSHUNDS.—CHALLENGE—1st, B. F. Lewis's Jill. OPEN—Dogs: 1st, Wm. Loeffler's Hundesport Bergman. Bitches: 1st, Wm. Loeffler's Lina K.

BEAGLES.—Dogs: 1st, W. H. Child's Toney Weller. Bitches: 1st, Middleton Kennels' June M.; 2d, R. C. Rinearson's Dotie R. Very high com. and reserve, W. H. Child's Oak View Juliet. Very high com., R. Engelman's Sadie and R. C. Rinearson's Bettie R.

SMOOTH FOX-TERRIERS.—Dogs: 1st, R. E. Fishburn's Glendon Spark; 2d, H. Northwood's Painter. Bitches: 1st, Anglo-American Terrier Kennels' Venus; 2d, G. R. Halden's Auburn Beauty.

WIRE-HAIRED FOX-TERRIERS.—1st, Anglo-American Terrier Kennels' Barton Sting.

IRISH TERRIERS.—1st, H. O'Connor's Galtees; 2d, Anglo-American Terrier Kennels' Ballymony.

SCOTCH TERRIERS.—1st, W. P. Frazer's Grey.

DANDIE DINMONT TERRIERS.—1st, H. J. Liozen's Border Clinker II.

SKYE TERRIERS.—1st, Clifford A. Shinn's Sir Stafford.

BLACK AND TAN TERRIERS.—1st, Anglo-American Terrier Kennels' Prince Raglan.

POODLES.—1st, Mrs. W. P. Woodward's Pera.

PUGS.—CHALLENGE—Dogs: 1st, M. H. Cryer's Bob Ivy. Bitches: 1st, Howard Kennels' Sateen. OPEN—Dogs: 1st, Howard Kennels' Penrice; 2d, Mrs. M. M. Ballentine's Rob Roy. Very high com., Seminoles Kennels' Kash. Jr. Bitches: 1st, Howard Kennels' Lady Clover; 2d, M. H. Cryer's Cribbage. Very high com., Seminoles Kennels' Little Duchess. Puppies: 1st, Howard Kennels' Penrice Boy. Bitches: 1st, Seminoles Kennels' Little Duchess.

SPECIALS.

Best brace English setters, Paul H. Gotzian's Elms Kennels; best four Irish setters, Oak Grove Kennels; best four spaniels, Ancient and Modern Kennels; best four mastiffs, C. E. Bunn's; best four collies, Seminoles Kennels; best four of any other breed, Howard Pug Kennels; best litter of puppies, any breed, H. R. Smith's best four Gordon, Dr. S. G. Dixon's; best mastiff dog or bitch, C. E. Bunn's Ormonde; best rough-coated St. Bernard dog or bitch, W. C. Hickox's Fernwood Bruce; best smooth-coated St. Bernard dog or bitch, Fernwood Kennels' Lord Hector; best great Dane dog or bitch, Jos. Zillig's Grover Cleveland; best pointer, J. H. Winslow's Inspiration; best English setter, Elms Kennels' Monk of Furness; best Irish setter, Oak Grove Kennels' Eldara; best cocker spaniel, Ancient and Modern Kennels' I Say; best collie, Seminoles Kennels' Rosly Dandy; best Irish water spaniel, Ed. G. Fink's Trouble; best pug dog, Dr. M. H. Cryer's Bob Ivy; best greyhound pup, T. E. Taylor's Little Maid; best fox-terrier, R. E. Fishburn's Glendon Spark; best non-sporting dog or bitch, R. G. H. Huntington's bloodhound Jack Shepherd; best sporting dog or bitch, J. H. Winslow's pointer Inspiration; best beagle,

Middleton Kennels' June M.; best St. Bernard bitch, Whitewater Kennels' Clara; best bloodhound, R. G. H. Huntington's Jack Shepherd. Proprietor of Hotel New Clifton offers board and lodging for the handler with largest number of dogs entered—John H. Naylor and Ben Lewis "divided" with twenty-eight dogs each. YACCOB.

CHANGES IN THE RULES OF THE A.K.C.

Editor Forest and Stream:

The Canadian Kennel Club, on my motion, adopted a rule uncommonly similar to Rule XII. of the A.K.C., as it now stands, but with this important difference, that while the veterinarian is to be the sole judge in the matter of the contagiousness of a disease, it rests with the committee to determine whether the dog's condition, from any point of view, unfits him from being on exhibition.

It is only too well known that many veterinary surgeons know but little about the points of dogs as breeds, that they care little for shows, and in fact little for dogs as dogs (and not "cases") at all, while the committee is usually selected just because the members can appreciate all these things. A dog may not be a menace to the health of other animals at a show, yet be in a condition calculated to do much harm to dog shows, in fact liable to disgust the visitors to the show, as witness several dogs the property of one kennel exhibited at Hamilton and Toronto last September. Yet these dogs were admitted to the shows by the veterinarian appointed. It is true that under a strict interpretation of the new rule these dogs could not be admitted now in a show in the United States (much less in Canada), but a dog may still, in spite of the specification of eczema, as well as mange, etc., be in a very unfit condition to meet the public eye, and why should not the committee decide as to his fitness or the reverse for exhibition?

It seems a pity that section 5 of Rule XVII. was not amended so as to exclude challenge dogs from the open class in any case.

It is to be hoped that in these rules the correct term "veterinarian" will be substituted for "veterinary," which is surely very questionable English. Upon the whole, the amendments will probably be accepted as improvements. WESLEY MILLS, M.D.

DOG CHAT.

A MATCH that would create a good deal of interest among beagle men would be that between Frank Forest, the champion of last year, and Tony Weller, who occupied this position at the trials at Nanuet. Owing to Frank Forest not competing, to give the others a chance, a meeting between these two admittedly good dogs would be very interesting and afford some good sport. Though not pressed as to what was going on and we cannot let the opportunity pass to refer again to the kind and more than hospitable manner in which all visitors and owners were treated by that thoroughgoing sportsman Mr. H. L. Kreuder and the members of his family. To say that the N. B. C. is particularly fortunate in counting such a man among its members is but faint praise.

We are sorry to hear from Mr. Benjamin McGinness, Jr., that the idea of a Southern circuit of shows has fallen through, owing to the falling out of line of Augusta, Ga., and Greenville, S. C. This will make it expensive for Northerners to show at Charleston, S. C., alone, but from present advices we learn that several dogs from the North will be on hand, though the show will necessarily be a small one. Charleston show is from Jan. 5 to 8.

The Bar Harbor Kennels, Bar Harbor, Me., have bought a fine lemon and white bitch, 13 months old, by Duke of Vernon out of Boski, she by Beaufort out of Zuba, by Bravo; also the liver and white bitch Meteor's Flirt (22,37), sister to Nellie E. They have had some correspondence with the owner of the pointer Glenbeigh, with a view of purchasing and importing this noted English field trial winner, to be used as a stud dog.

At a meeting at Delmonico's Tuesday last it was decided by a vote of 19 to 6 that the famed Meadowbrook hounds, instead of being allowed to eat their heads off during the Long Island frosts, shall be hunted at Asheville, N. C., according to the Master, Mr. Thomas Hitchcock, Jr.'s desire. They will therefore start at once for the new country, and as a number of subscriptions have been received from the Asheville sportsmen a brilliant season over a good country and after the real "article" is looked forward to.

Mr. Darling, of New York, has purchased from Mr. Jas. E. McKillop two young deerhounds of the old Glenary and Badenoch strains. Also one young Gordon setter by Ballochmyle Don out of Nell Gwynne, winner of third at the last Edinburgh show. They sailed on the 9th inst. on the S.S. Britannic.

Among the new kennel advertisements this week we notice that C. E. Lane has a rabbit hound for sale, Box 310, Chesapeake retrievers; Prairie Mound Kennels, Irish setters; J. Hope, a staghound and Skye terrier; Wachusett Kennels, Llewellyn setter bitch; Wm. C. Avery, pointer bitch; F. B. Echlin, St. Bernard bitches; Glenrose Kennels, adult beagles and pups; Wm. Hamlyn, the St. Bernard Mount Morgan, litter brother to Lord Bute.

It is very interesting to read that Mr. Tom Smith, owner of Duke of Maplecroft, disclaims all connection with the fictitious price of \$7,500 that his dog was quoted at. It would be interesting to know who answered Messrs. Reick and Rupert's cablegram quoting that absurd price as "rock bottom."

Mr. Cumming Macdonald, well known as the father of St. Bernard on the other side, is now, *Stock-keeper* says, the Unionist candidate for Rotherhithe in the British Parliament. Mr. Macdonald has been a "Reverend," a lawyer and pretty nearly everything else during his career.

There was not a very large attendance at the sale of fox-terriers and St. Bernards in the American Horse Exchange, New York city, on Tuesday afternoon last. Anyone on the lookout for bargains had here a good opportunity to get a smart terrier or a fair St. Bernard at most ridiculous prices. Among the Woodale Kennels' fox-terriers sold were Woodale Rival, by champion Splauser out of Blemton Glitter, that did some winning in the Canadian shows last September, and \$35 was a small sum to give for a dog of his merit. Woodale Reva, by Eric II. out of Fanny, brought \$32. Woodale Delegate, a six months puppy, by Starden's Jack out of Ino, was knocked down at \$26. Woodale Rustic, by Warren Jim out of Warren Torment, went for \$22.50. Warren Ino, by champion Splauser out of Warren Lass, in which to the noted Dobbin, was cheaply sold at \$25. Baby McKee, by champion Splauser out of Warren Violet, a good brood bitch, was ridiculously cheap at \$20. Other smart, nicely-marked terriers went for all the way from \$1 to \$15. Mr. Keavan's well-bred St. Bernards were sold at real bargain prices. Appolona, a well-known smooth-coat winner, bringing but \$15. Then Prelate, a very typical little dog, went for the very small figure of \$20. Rosebud, by Montie Rosa out of Kleine, was a bargain at \$14. Storm Queen, at \$22, went dirt cheap, and Lady Hanley, though 6½ years old, was given away at \$7. We cannot but admire Mr. Keavan's candid description of his dogs, so different from the fulsome and misleading statements usually found in an auction catalogue.

A man who formerly owned some setters was asked by a member of the Park Lane Kennels why he did not show something at the show, but he claimed he had nothing of breed good enough. The miscellaneous class was suggested, when the man puzzled a moment and remarked, "That he didn't think he'd show his dog in any 'mysterious' class just yet."

Among the specials offered at Providence was a set of teeth by a prominent dentist to the best pug in the show. Evidently the pugs preferred trusting themselves to providence than to the doctor's tender mercies, for we'er a pug put in an appearance.

Mr. J. Hope, of Philadelphia, Pa., tells us he is shipping two Chesapeake Bay dogs to San Francisco, Cal., to-day (Monday), adding, "through your valuable paper. I consider your paper the best of all advertising mediums." Mr. Geo. Crocker was the purchaser.

Mr. John H. Naylor will visit the Nashville, Tenn., dog show, which takes place Jan. 6 to 9, 1892, with a string of dogs, and those who wish him to handle their dogs at this show can do so by advising him in time.

Dr. Wesley Mills is bringing out a new work entitled "The Dog in Health and Disease." The subject we hear is to be gone into very extensively and will be published early in the coming year.

Undeterred by the fate of that interesting paper *Canine World*, a new journal, devoted to the kennel, poultry, pigeon and pet stock generally will shortly be published from Manchester, England. It will be called the *British Fancier*. Front page portraits will be a feature of the paper, and from what we hear more attention will be given to the reports of shows; they will be fuller and more critical than is usually the case in English journals. The first issue has a guaranteed circulation of 15,000 copies. A gentleman well known to the fancy, Mr. Theo. Marples, will be the editor. The proprietors are a strong one, consisting of nine of the wealthiest and most respected gentlemen of the fancy, who are thoroughly in earnest in making this new journal a success. American correspondence will also be a feature of the new paper, therefore the first number is anxiously awaited.

We have received the premium list of the Charleston show. We are sorry to see, however, that the same mistake is made again this year in devoting the most money to the challenge classes. Challenge dogs do not journey very far for a \$5 premium, and the money would draw a better entry in the open classes, where we see they give only \$3 and \$2 and charge \$2 entry fee. No show can expect to give a successful exhibition on this basis, nor is it fair to the judge. The classification is liberal, that is in amount of classes, nearly all breeds being divided by sex in both open and challenge classes. Entries closed Jan. 3 with Benjamin McGinness, Charleston, S. C., who also is the veterinarian. Mr. H. W. Lacy is the judge.

It was a great disappointment to Mr. Flynn, of the Glendyne Kennels, that he had not received his Irish setter bitch Sedan from Mr. S. C. Bradley before the Providence show, although he had received a telegram some time since notifying him that the bitch had been shipped to him. Mr. Bradley was away at the Philadelphia Kennel Club trials and he had received no answer to his anxious inquiries. This is rather too valuable a bitch to lose or have any harm come to, as her meritorious win in the Irish Setter Field Trials showed here to be one of exceptional merit. As she is about due in season her owner is doubly anxious as to her safety; so if by mistake she has been sent to a wrong kennel and the finder reads this, his early communication with Mr. Flynn, Bristol, R. I., will be appreciated.

Although our time at the Providence show was limited, still we cannot let the opportunity pass without thanking "Cousin" Walter J. Comstock for his kind hospitality and courtesy to the stranger in the town. Mr. Comstock has just received from Mr. Geo. R. Krehl two good Irish terriers. Boxer IV. is a very typical one, by Jack out of Polto. His head is near perfection, and he has one of the very best and hardest coats ever seen on an Irish terrier. His legs and feet are also excellent. He has beaten such dogs as Breadenhill, Daniel II., Pounder, Pat and other good ones. His show record is as follows: Second, Crystal Palace; third, Crufts show; fourth, Belfast; first, Darlington; first, Gloucester, and two specials; second, Manchester; second, Leeds; third, Liverpool, fourth, Great Terrier Show. The other dog, Hanover Boy, was brought out at the last Kennel Club show, where he won first in puppy class, first in novice class, and special for the best uncropped pup in the show. He has perfect drop ears, splendid coat, and good legs and feet. He is by Apprentice Boy out of Belmont. With these dogs and the bitches Mr. Comstock has, Dunmurry and the new one Crate, the Park Lane Kennels can put a very strong team of Irishmen on the bench this coming season. Crate is still in England "waiting," but whether bred or not Mr. Comstock intends to have her over by the New York show.

The late Birmingham show seems to have given rise to more than the usual amount of complaints, both from exhibitors and from the press. It does appear peculiar, that with so many other good shows, that just for the sake of a traditional prestige, exhibitors will put up at Birmingham with impositions on both their pockets and their good nature that they would not stand an instant from any other association. It is bad enough to have dogs remain away from home for four or five days when quarters provided are roomy and excellent for the purpose, but that English exhibitors will send their dogs to experience discomforts and dangers in the very cramped accommodations at Curzon Hall for a period of nearly eight days, from time of start to finish, is incomprehensible. Mr. Everett Millais deserves the thanks of his fellow fanciers for the stand he took when asked to judge at the show. He replied that if he judged there he would only be conniving at a show system that was distasteful to the great majority of exhibitors, etc. The judging on the whole seems to have given rise to considerable grumbling. The spaniel judge, Col. Le Poer Trench, who is so well known in connection with Irish water spaniels, comes in for some hard knocks, as, not being able to go it alone, he had to continually refer to the secretary of the Spaniel Club for points and standards. He seems, from his report in the *Kennel Gazette*, to have gone for a working sort of spaniel in the field and cocker classes, and this may have upset the feelings and expectations of the worshippers at the modern long and low shrine.

St. Bernard classes at this show were principally noteworthy owing to the appearance of a dog—Duke of Maplecroft—that utterly failed to set the beauties of our Sir Bedivere and Princess Florence at naught. One good bitch came out, called Lady Gyla, 11 months old, and Mr. Betterton goes into ecstasies over her in his report, so she must be something a little extra. He writes: "Her muzzle and skull are very good, she has lots of bone and a well-marked coat * * * and with good luck she has a career in front of her." She beat Andromeda, quite a noted bitch. The judge of Newfoundland says in his report that there was a very fair entry of this breed, "but I was sorry to see so many with yellow eyes, large ears, and tails carried over the back." This sensitive gentleman should take a look at some of our

Newfoundland classes. Greyhounds and Barzois were only moderate. Fox-terriers had the best dogs in England on hand. Venio, Vesuvienne and D'Orsay, well at the head of classes. The judge, Mr. Southwell, thinks the latter an almost perfect terrier and one that only a Buffet could equal or beat. On the whole the judge thinks that the present year of our Lord shows the greatest improvement in fox-terriers, and that the old dogs are gone for good. He suggests that uniformity of type has not been reached, and that too much latitude is allowed in size, breeders are losing sight too much of quality, and that head properties are retrograding.

The *Kennel Gazette* makes a rather comical typographical blunder by heading the report of the Gordon setters black and tan terriers, but reading the report the criticism reads almost identical for the two breeds. As usual, the sporting dogs were well represented at this show, champion Geltsdale getting the challenge prize in English setters. Collies were also well represented, but nothing new came out of any moment. The different rough terrier classes were well filled with the exception of Dandies, which were said to be a poor lot as a whole. Dachshunds were also good. Mastiffs saw old Beaufort win in his class, but beaten by the open class winner, Lord Cobrey, for the special; this dog was entered at \$250, and he won the \$200 challenge cup and another \$25 special. The dog is called a sour-faced one and not up to Beaufort's form.

The New York and New England Poultry and Kennel Club's show, Jan. 5, to 8, 1892, promises to be a good one in point of entries. The premium list is a liberal one, most of the breeds are divided by sex, and \$10, \$5 and a diploma are given as prizes in the open classes. Challenge classes are given diplomas only. All the more important breeds have kennel prizes of \$10 for the best four. The special premium list affords some good opportunities for advertising at little cost to the generous donors, but quite a neat sum can be picked up in some of the breeds, as most of the specials are cash. Mr. James Mortimer will judge all classes, and Mr. C. E. Rockenstry will superintend the show. Entries close with W. C. House, Fort Plain, N. Y., Dec. 26.

Mr. H. C. Tyler, proprietor of the new Clifton House at Freeport, Ill., is evidently a dog man, for he honored the boys with a menu the dishes of which have a familiar sound to many of us, during the show just held:

MENU.	
SOUP.	
Cream à la Benzine.	Consonance Kildare Glenmore.
FISH.	
Broiled Mackinaw Trout à la Duchess of Waverly.	Penrice Potatoes.
BOILED.	
Sauerkraut and Sausage.	Ben Lewis Style.
ROAST.	
Stuffed Turkey, 1 Say Jelly.	Veal, Roslyn Dandy Sauce.
Prime Ribs Beef, au Bob Ivy.	
ENTREES.	
Squirrel Pie à la Jack Shepherd.	Spaghetti de Pointer.
Fernwood Bruce Puffs, Hickox Sauce.	
VEGETABLES.	
Mashed Potatoes.	Sweet Potatoes.
Harry Goodman Squash.	The Donoghue Boiled Potatoes.
RELISHES.	
John Naylor Champagne ou Ice.	Queen Olives.
Cheer Chow.	Celery.
PASTRY.	
Sir Frederick Cream Pie.	
Lemon Merengue Pudding, T. A. Howard Sauce.	
Green Apple Pie.	New England Mince Pie.
Mock of Pudding Ice Cream.	Raspberry Jam Tarts.
Seminole Strawberry Jelly.	Grape Jelly Tarts.
Young American Cheese.	Inspiration Tea.
Café à la Française.	
Connors Assorted Cakes.	Edam Cheese.

Mr. A. E. Pitts will show his kennel of puns only at New York, Chicago and Pittsburgh the coming spring.

We had our first peep at Princess Florence the other day, and much as our expectation had been raised, we were startled at her great size, massiveness and intense quality. Full of health, and as active as a kitten, she is indeed the Queen of the breed. It is to be hoped her coat will come in by W. K. C. show, and that family arrangements will not interfere with her appearance on the bench in February. We saw Princess first, unfortunately, and she completely dwarfs the other new arrivals, though both Marquis of Ripon and Refuge II. are both well worthy of more than passing notice, but they will be seen on the bench shortly, and then we can devote a little more time to them.

Specimens of the peculiar breed of dogs belonging to the island of Phu-quo, or Fou-kuo, in the Gulf of Siam, have been added to the collection in the Paris Jardin des Plantes. These dogs are sleek-haired and resemble fox-terriers in size and build, but are prick-eared, reddish brown in color (the female being a lighter shade), with black muzzles and dark lines on the forehead, like those sometimes seen in bulldogs.

Our reporter, "Bradley," who so ably described the recent beagle trials at Nanuet, is in trouble. Our compositor whenever he came to the beagle man's "barked," "backed" it, and when the hunter wrote "packed" the compositor "tacked" it instead. These are small things in themselves but they make trouble in beagle field reports.

At a meeting of the Toronto Kennel Club the other evening Secretary Stone reported 57 names on the membership roll and funds in hand amounting to \$127. There is every likelihood of the club affiliating with the Athenium Club of that city. The club decided to hold the next members' show the first Thursday in January for mastiffs, St. Bernards, Newfoundlands, great Danes, foxhounds, beagles and poodles.

An exciting scene took place in Brooklyn last week, when a Newfoundland was the means of capturing a thief. A Mrs. Garcia "had seen a man in the hallway of the basement floor, but he quickly escaped. Charlie, the dog, whose owner is Frank Osborn, a neighbor, was in the areraway at the time. He was a frequent visitor at the Garcia home and much petted. Mrs. Garcia called to the dog to capture the thief. He readily understood the request and started after his man. The thief had not gone many yards when Charlie had him by the tail of his coat. He succeeded in tossing the animal off and again started to run. The dog quickly followed, and man and dog fought as far as Broadway and Wythe avenue. By this time several hundred people had been attracted to the scene. The man again freed himself and ran to the street, where he attempted to jump on the back of one of the Williamsburg News Company's wagons. The dog, watching his movements, again had him by the coat tail. Black found it impossible to retain his hold on the back of the wagon and tried to run down Broadway. He managed to fight the dog off until the ferry was reached, when the beast again seized him by the clothing. He could not be shaken off, and while struggling with the animal the officer arrived.

Speaking of thieves reminds us of a dog whose intelligence had been made to serve the nefarious ends of his chicken-loving master. A man who lives in Newtown, L. I., had missed his chickens several times, and when about forty were stolen in one night he put a burglar alarm on the door of the coop and so arranged it that anything that moved in

the coop would set it going. He had not to wait long for the alarm, and investigation found the door still locked but a chicken had been stolen. This sort of thing went on till he hadn't a chicken left in the coop. Then he borrowed some hens to put in the house and even watched by the side of the coop at night, but though he heard the stifled cry of the abducted chicken he could find no trace of the thief. One day, however, a dog came sniffing round the hen house, and this gave the owner the clue, for he recognized the dog as belonging to a ne'er-do-well who gained a living by hunting rabbits in the neighboring woods. Mr. Johnson, the whilom chicken owner, then set a trap and had the satisfaction of seeing the dog run into it, but the canine got away safely owing to the trap not being set right. We are not aware whether the dog has been caught yet or not, but that he is a clever animal there is no gainsaying, as he has also devoted his attention to other chicken houses in the vicinity with a like good result for his unscrupulous master.

The Rideau Kennels that have hitherto devoted themselves principally to spaniels, have imported the noted fox-terrier Merle Guy, by Dudley Dandy out of Bodkin III. His pedigree is of the bluest. The dog is to be renamed and put in stud. At the rate they are going it will not be long before Canadian breeders will be able to keep most of the prizes at the shows in their own balliwicks.

Mr. Roland P. Keesbey has made his spaniel kennel still stronger by the addition of the Sussex spaniel Beau, having purchased him from Mr. J. F. Kirk, of Toronto.

Who owns the spaniel Busy? is a question that the *Canadian Kennel Gazette* is asking, as it won at Cincinnati under the name of Ancient and Modern Kennels. The bitch is or was owned by Mr. J. D. G. Shaw, of Kingston, and the Kingston men are therefore jealous of the credit of the win.

The Canadian Kennel Club has just held a meeting of the executive committee, at which several important alterations are made in their rules. Besides raising the standard of registration, which is now the same as that of the A. K. C., several other important matters were disposed of. The club has long felt the need of a stud book, and it was decided to publish one annually, the work being intrusted to Mr. Donovan, the publisher of the *Canadian Kennel Gazette*, that gentleman agreeing to publish monthly in his paper the registrations sent in up to the time of publication, for which he is to receive \$25. Messrs. Stone, Mitchener and Williams were elected a stud book committee. The champion rule has been made the same as in the A. K. C. rules. The club seems to have a slight misapprehension of the rule of the World's Fair dog show about the dogs being registered. They require a dog to be registered in the stud book of the country from which it comes, and not necessarily in the A. K. C. B. In the matter of Mr. Bell's St. Bernard Sir John, aged 18 months and registered as by Sir Charles, who was burned in the fire of Columbus show in 1887, the registration was canceled. The club will also move in the matter of entering Mr. Little's Clumber Newcastle without authority at the Ottawa show. Twenty-one new members were admitted.

Mr. F. E. Lamb, of Woodbrook Kennels, Baltimore, Md., imported last week on the Johnson Line steamer Barrowmore, from Liverpool, Eng., the rough St. Bernard bitch Duchess of Arlington, for Messrs. Cobb & McLearn, Wilmington, Del. She is by Lord Bute out of Lamb's Margharita, stands 32 honest inches at shoulder and scaled, immediately after her arrival, 108 lbs. She is litter sister to the noted Marchioness and Marquis of Bute. Her coat is of the richest orange color and markings all that could be desired. Her head resembles very closely her sire's and her body and bone are very massive. She comes over in whelp to the celebrated prize winner Polyphemus (champion Plinlimmon—Lady Adelaide) and from this combination of blood good results should be obtained. Her purchasers are to be congratulated upon the acquisition of such a valuable bitch to their kennel, which now contains, in addition to the Duchess; Altoness, a fine young Alton bitch, and the promising young imported stud dog Sir Lion, by Sir Henry out of Seabomb's Lena, winner of second Wilmington and third Baltimore this year.

Mr. Lamb is also importing another good bitch by champion Young Wallace out of a litter sister to the late Prince Regent. This one is for a well-known Southern kennel. One of his Lord Bute—Clydesdale Nell pups weighs 72 lbs. at 4 months old and is said to be wonderfully well made all over.

A kennel club has been formed in Seattle, Wash., with some 25 charter members. It won't be many years before we shall have a Pacific coast circuit.

A dispatch from London states that Queen Victoria has written a letter in which she expresses sympathy with the agitation now being carried on for the abolition of the sport of rabbit coursing. The *Pall Mall Gazette* urges the Queen to give evidence of the sincerity of her sympathy with the movement by the withdrawal of her support from the maintenance of the royal buckhounds.

Dogs are being poisoned again in different parts of the country in a most ruthless manner. A large and valuable St. Bernard was poisoned at the west end of Boston, and died in great agony. Pieces of raw meat folded together containing gray powder have been found on many doorsteps in the neighborhood. The case in question was a peculiarly distressing one, as the animal was a most docile and gentle animal. It is well to warn these fiends of the severe penalties which can be enforced against them, should they be found out. Of course it is a hard matter to reason with such wretches, but would it not be better, before resorting to such cowardly methods, to try a representation to the owner, if they have any complaint to make, so that a life, which is more precious than they probably realize, may be spared by such concession or restrictions as may be reasonably asked for.

We have received no premium list of the Gloversville show, to be held Dec. 30 to Jan. 3, but we hear the prizes will be \$5 and \$2.50 to challenge and open classes, and \$2.50 and \$1.50 in puppy classes. Mr. Chas. H. Mason will judge all classes and Mr. J. Otis Fellows will superintend. We hear several complaints about non receipt of premium lists among would-be exhibitors until the last moment. For the sake of the judge this should be attended to better.

Dr. James E. Hair, of Bridgeport, Conn., sends us a letter just as we go to press, stating that he has received, per s.s. Cirassia, two English setters, Devon Shot and Devon Daisy, from Mr. John Lee Bulled, North Devon, England. Dr. Hair's letter, with full particulars, will appear next week.

DAN O'CONNELL.—Detroit, Mich.—*Editor Forest and Stream*: Dan O'Connell (16,640) is sold and out of the stud. Mr. Charles J. Canfield, of Manistee, Mich., has made the second purchase of the Prairie Mound Kennels. Elsans, 21,021 (Dan O'Connell ex Lalla Rookh, 17,869) and now Dan, at a private figure. He will take both dogs South and shoot over them until April 1. I take this means of informing parties who have written me for Dan's service. Mr. Canfield will enter both dogs at the next Irish setter field trials.

—PRAIRIE MOUND KENNELS.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

King Jim, King's Own, Fleety Kent, Lady Kent and King's Flirt. By H. K. Devereux, Cleveland, O., for one dog and four bitches, all liver and white, whelped June 15, 1891, by King of Kent out of Fleet (Dash II.—Spot).

Raven. By H. W. Malcolm, Baltimore, Md., for Gordon setter bitch, whelped Sept. 26, 1891, by Rap out of Montrose.

Model Ben, Rapture and Royal Blue. By L. Gardner, Mount Vernon, N. Y., for three English setter dogs, one white, black and tan ticked, one white and lemon ticked, and one white, black and tan and blue belton, whelped Sept. 15, 1891, by Roger (Count Noble—Queen Meg) out of Sunol (Gladstone's Boy—Flame II.).

Glendyne Kennels, Bristol, R. I., claims the following names for a litter of Irish setters, whelped Nov. 5, 1891, by Lismore out of Lucelle: Dogs—O'Carry, O'Leary, O'Shea, O'Shane, O'Brien. Bitches—Nora McShane, Nora Crien, Sheila McGrath, Sheila McClone, Dora McCushla.

BRED.

Prepared Blanks sent free on application.

Bang's Mollie—King of Kent. Bar Harbor Kennels' (Bar Harbor, Me.) pointer bitch Bang's Mollie to Westminster Kennel Club's King of Kent, Nov. 8.

Lady Black—Rap. H. Malcolm's (Baltimore, Md.) Gordon setter bitch Lady Black to his Rap, Dec. 15.

WHELPES.

Prepared Blanks sent free on application.

Lady Godiva. South Bend Kennels' (South Bend, Ind.) St. Bernard bitch Lady Godiva, Aug. 28, nine, by their Sir Eldred.

Florie. F. Balms's (Saginaw, Mich.) black and tan bitch Florie (Prince—Nanon), Dec. 1, five (one dog), by Blake & Herbertson's Sir Wallace (Mabomet—Lady).

Maple Grove Luath. Maple Grove Kennels' (Logan, O.) collie bitch Maple Grove Luath (Clifton Hero—Sparkle), Dec. 8, seven (five dogs), by J. A. Long's Randolph (Archibald—Petunia).

Lucelle. Glendyne Kennels' (Bristol, R. I.) Irish setter bitch Lucelle (Karl—Irish Countess), Nov. 5, 1891, ten (five dogs), by their Lismore (O'Donovan Rossa—Sedan).

SALES.

Prepared Blanks sent free on application.

Sir Eldred—Lady Godiva whelps. St. Bernards, by South Bend Kennels, South Bend, Ind., one bitch to C. C. Jockey, Bremen, Ind.; one dog to Thos. Munro, Gallitzin, Pa.; one bitch to J. C. Uilery, North Liberty, Ind.; one dog to Miss Lizzie Davenport, Elkhart, Ind.

King of Kent—Fleet whelps. Liver and white pointer bitch, whelped June 15, 1891, by King of Kent out of Fleet, by H. K. Devereux, Cleveland, O., to C. M. Munhall, same place.

Clip. Lemon and white English setter dog, whelped Jan. 9, 1891, by San Roy, Jr. out of Nell o' Warwick, by Dr. Jas. E. Hair, Bridgeport, Conn., to Mr. Beers, Fairfield, Conn.

Nell o' Warwick. Black, white and tan English setter bitch, whelped February, 1889, by Warwick Albert out of Princess Belton, by Dr. Jas. E. Hair, Bridgeport, Conn., to Fred, Lyons, same place.

Shenstone Daisy. Black, white and tan English setter bitch, whelped April 16, 1891, by Shenstone out of Fairy B., by Dr. Jas. E. Hair, Bridgeport, Conn., to John Snell, Banghamton, N. Y.

Lady Fenwick. Black and tan Gordon setter bitch, by F. B. Zimmer, Gloversville, N. Y., to G. A. King, same place.

Nettle. Chestnut, white and tan English setter bitch, whelped March 17, 1891, by Count Wakefield out of Daisy II., by F. B. Zimmer, Gloversville, N. Y., to J. C. Teeter, same place.

Murtle. Liver, white and tan English setter bitch, whelped March 17, 1891, by Count Wakefield out of Daisy II., by F. B. Zimmer, Gloversville, N. Y., to H. W. Zea, same place.

Thistle. Blue belton English setter bitch, whelped March 17, 1891, by Count Wakefield out of Daisy II., by F. B. Zimmer, Gloversville, N. Y., to John Grinnell, same place.

Sarah. Black and tan English setter dog, whelped March 17, 1891, by Count Wakefield out of Daisy II., by F. B. Zimmer, Gloversville, N. Y., to W. O. Spotts, same place.

Taylor's Fly. White, black and tan hound bitch, whelped May 1890, by Ranger out of Fly, by F. B. Zimmer, Gloversville, N. Y., to P. Hart & Son, New Brighton, N. Y.

Sweet Briar. White, black, tan and blue ticked beagle bitch, whelped Feb. 13, 1890, by Count Wakefield out of Daisy II., by F. B. Zimmer, Gloversville, N. Y., to E. E. Palmer, Napoleon, Mo.

Mollie. Fawn, black points, mastiff bitch, whelped March 26, 1891, by Berkshire Caution out of Zetta, by F. B. Zimmer, Gloversville, N. Y., to W. D. Blenus, East Berlin, Conn.

Mymc. Blue belton English setter bitch, whelped Nov. 18, 1890, by Ranger out of Princess Llewellyn, by F. B. Zimmer, Gloversville, N. Y., to W. A. Smith, Reading, Pa.

Zeus. White, black and tan beagle dog, whelped Oct. 21, 1890, by Boston out of Weazel, by J. L. Jolley, Denver, S. C., to F. B. Zimmer, Gloversville, N. Y.

Graphic III.—Meteor's Flirt whelps. Liver and white pointers, whelped Aug. 5, 1891, by C. D. Roberts, Dexter, Me., a dog to Geo. Whiteside, Cambridge, Mass., and a bitch each to C. M. Wilson, Huron, S. D., and W. B. Battran, Oil Springs, Ont.

Shenstone—Vell o' Warwick whelps. English setter dogs, whelped Aug. 25, 1891, by Dr. Jas. E. Hair, Bridgeport, Conn., a white to J. McGam, New Haven, Conn., and a blue belton to O. Russell, Bridgeport, Conn.

Shenstone—Mena III. whelps. Blue belton English setters, whelped Aug. 14, 1891, by Dr. Jas. E. Hair, Bridgeport, Conn., a dog to Wm. Sirgleton and a bitch to Wm. O'Mara, Stratford, Conn.

Sell. Orange, white markings, rough St. Bernard bitch, whelped 1889, by Everest out of Sequa, by G. W. Patterson, Worcester, Mass., to W. H. Blums, East Berlin, Conn.

Lakeside Juno. Orange tawny, perfect white markings, rough St. Bernard bitch, whelped May 29, 1891, by Plinlimmon, Jr. out of Lady Teazel, by G. W. Patterson, Worcester, Mass., to A. E. Moore, Sparta, N. J.

Lady Lakin. Orange tawny, white markings, rough St. Bernard bitch, whelped May 29, 1891, by Plinlimmon, Jr. out of Lady Teazel, by G. W. Patterson, Worcester, Mass., to Milton C. Lakin, Hilliard, O.

Pontiac. White and liver pointer dog, whelped Jan. 9, 1886, by Geo. W. La Rue, New York city, to Geo. Lovell, Middleboro, Mass.

Bob Gates, Jr. English setter dog, whelped July 5, 1889, by Geo. W. La Rue, New York city, to Geo. Crocker, San Francisco, Cal.

Gus Bonhu—Mollie Gates whelp. Black, white and tan English setter bitch, by Dr. C. E. Stanley, Middletown, Conn., to C. B. Holley, Bismarck, S. D.

PRESENTATION.

Fleety Kent. Liver and white pointer bitch, whelped June 15, 1891, by King of Kent out of Fleet, by H. K. Devereux, Cleveland, O., to Frank Billings, same place.

Answers to Correspondents.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.

G. C. C. Rochester, N. Y.—Is a light or flesh-colored roof to the mouth of a red Irish setter objectionable, providing pup is good otherwise and well bred? Ans. No. The idea that a thoroughbred dog must have a black roofed mouth has been exploded long ago.

H. P. L., Worcester, Mass.—Please give pedigree of St. Bernards Kip, 21,025, and Nina, 15,502. Ans. The stud book for 1891 is not out yet containing pedigree of Kip. Nina is by Night out of Roxie, by Tip (6,560, Vol. IV.) out of Empress, by Carlo out of Burrell, Nurell, by Merchant Prince (4,421, Vol. III.) out of Lys (11,920, Vol. V.).

B., New York.—Dogs of the breeding of dog you name have produced good field dogs, but this particular dog you believe has not been hunted in the field, his life having been passed chiefly on the show bench. Therefore, we would advise you to breed your bitch to a dog of acknowledged field merit—the only way to produce natural field dogs.

G. G. R., Birmingham, Conn.—Will you please inform me if Beppo III. is litter brother to King of Kent? Also, can you inform me who broke Canadian Loxley, and who bred him, and is he a good bench show dog? I am told that he was broken by Mr. John Davidson, Ans. No. King of Kent is by Priam out of Kent Baby, and was whelped Jan. 12, 1886. Beppo III. is by Priam

out of champion Meally, and whelped May 26, 1884. We do not know who trained Canadian Loxley, nor his breeder's name, and never having seen him cannot pass an opinion as to his bench form.

J. W. J., Brooklyn, N. Y.—I have a deerhound and, with a friend who has a female, raised some pups, of which I have a male and a female. Would it be in-breeding to put my dog to his daughter? My dog can not be registered—he was imported without pedigree. Can I enter the pups at the Westminster show if I wish? Ans. It would of course be in-breeding and we should not advise the alliance unless to perpetuate some particular strain or when another dog cannot be secured. You can show any breed of dog at the W. K. C. show or any show under K. C. rules, pedigree or no pedigree, if you pay 25 cents to have it listed in the *Kennel Gazette*.

A. N., Baltimore, Md.—I have a St. Bernard dog, now about four months old, who is suffering with navel hernia. I think. He has a lump on his navel which, when you lay him on his back, all disappears; it is soft to the touch; does not seem to hurt him; general health and appetite good. I tried to put a rubber pad on the place after pushing the lump in, but could not get any plaster that would keep the pad in place. What can I do to cure him? Your advice in former times has been very good and would be much appreciated in this. Ans. If the hernia is small it will disappear as the dog grows older. If a very large one an operation will be necessary to cure it. Pads and trusses are useless as it is impossible to retain them in position; if you are very anxious to use some support try Johnson & Seabury's extra adhesive rubber plaster.

Rifle Range and Gallery.

AMATEUR REVOLVER CHAMPIONSHIP.

The shooting for the Winans Trophy during the past week was at Conlin's Gallery, corner of Thirty-first street and Broadway. Friday and Saturday evenings, Dec. 18 and 19, were set apart for the tests, and some revolver shooting and ever so much revolver talk was indulged in. Shooters who had been practicing for long times past at the 12yds. range found it very easy to miss at 20yds., and to get off the tin disk into the immeasurable beyond, made the shooters very much disgusted with 20yds. shooting. The revolver responds every time, however, and it is merely a question of a little firmer and closer holding than that required at 12yds. As an illustration of what man and weapon together may do, a target made by Mr. E. Wassermann is presented. He had just fired for the Trophy, and though making a very creditable score, was not satisfied with it enough to let it stand. "Let me give *FOREST AND STREAM* a target. What shall it be?" he said. "A

right at 12yds. at the word," said the shooting editor. "All right," and the shooting master began his calling out, "Are you ready? Fire, 1, 2, 3," and every time at about the call of 2 the shot went off and the dark hole in the bullseye was made larger and larger until the six shots had practically gone into the same orifice. Here is the target and it is a daisy fit for the place of honor it will occupy in the records crowding the walls of Conlin's Walhalla of past and present marksmen's exploits. The target counts up a total of 59 in the possible 60, and considering that it is an off-hand "a la carte" performance, shot on the spur of the moment, it gives one an admirable idea of the sort of shooting indulged in by the coterie of clever pistol and revolver shots who frequent the Broadway gallery. Though out of the Trophy shoot on its first round, owing to his withdrawal, Mr. Wassermann intends to give the first holder of the trophy a prompt challenge and a sharp tussle for the possession of the beautiful Winans art work.

"FOREST AND STREAM" TOURNAMENT

The Miller Rifle Club's headquarters at 80 Hudson street, Hoboken, were crowded last Wednesday evening by delegates from the different clubs who are to enter the tournament arranged for five men teams of New Jersey Rifle Clubs by the *FOREST AND STREAM*. The clubs represented were:

Miller Rifle Club, of 80 Hudson street, Hoboken; Captain, Richard W. Dewey; Secretary, J. H. Kruse.

Herman Rifle Club: Captain, Herman Neuman, Zabriske street and Terrace avenue, Jersey City Heights; Secretary, Rudolph Auerbach.

Jensen Rifle Club: Captain, Wm. Jensen, 69 Zabriske street, Jersey City Heights; Secretary, John Plump.

Puritan Rifle Club: Captain, Adams Sauer, headquarters, 29 Main street, Newark; Secretary, Thos. Risban.

Essex Amateur Rifle Club: Captain, John Coppersmith, headquarters 326 Bank street, Newark; Secretary, John Higgin.

Essex Indians Rifle Club: Chief, Frank Helms; Secretary, Geo. Freitag, 60 Rutgers street, Newark.

Our Own Rifle Club: Shooting Master, F. A. Freisenheiner; Secretary, O. H. To wnsend, 10 Arch street, Newark.

Hudson Rifle Club: Captain, Henry L. Hansen, headquarters 35 Giles avenue, Marion; Secretary, Chas. E. Bird, 90 South Fifth avenue, care Marvin Safe Co., New York city.

Excelsior Rifle Club: Captain, L. P. Hansen, headquarters 78 Montgomery street, Jersey City; Secretary, Ward J. Channing.

Palisade Rifle Club: Captain, John Reinhardt, headquarters 354 Palisade avenue, Jersey City Heights; Secretary, Gus Finger, 106 Zabriske street, Jersey City Heights.

C. H. Townsend, of the *FOREST AND STREAM*, acted as chairman, and J. H. Kruse, also of the *FOREST AND STREAM*, as secretary. Mr. Townsend explained the matter to the delegates.

The following clubs have entered for the trophy to be presented by the *FOREST AND STREAM* to the club winning the greatest number of contests in the tournament for New Jersey clubs. As we go to press earlier than usual this week we are compelled to defer to next week lists of names: Miller Rifle Club, Hoboken; Excelsior Rifle Club, Jersey City; Hudson Rifle Club, Marion; Jensen Rifle Club and Palisade Rifle Club, Jersey City Heights; Standard Rifle Club, Hoboken; Our Own Rifle Club, Volunteer Rifle Club, Essex; Amateur Rifle Club, Essex; Indians Rifle Club, Puritan Rifle Club, of Newark, and Greenville Rifle Club, of Greenville. Further particulars in regard to the officers, team location and how to reach the different headquarters, will be given in next week's issue.

New Jersey Riflemen.

[Specially Reported for Forest and Stream.]

HEADQUARTERS OF CLUBS.

Miller R. C., 80 Hudson street, Hoboken.
Union R. C., 223 First street, Hoboken.
Friday Night R. C., 210 Washington street, Hoboken.
Excelsior R. C., 78 Montgomery street, Jersey City.
Palisade R. C., 354 Palisade avenue, Jersey City Heights.

UNION RIFLE CLUB.—Captain, Henry Becker.—Tuesday, Dec. 15.—Ten shots, off-hand, 25-ring target, possible 250:

C Schroeder.....	25	25	24	24	23	22	22	22	22	232
J Meyers.....	25	25	24	24	23	22	22	22	21	230
F Brandt.....	25	25	24	24	23	22	21	21	20	228
G M Riedel.....	25	25	23	23	22	22	21	21	21	226
A Meyers.....	25	24	23	23	22	22	22	21	10	225
Capt Becker.....	25	24	23	23	22	22	20	20	20	223
S Russell.....	25	25	22	22	21	21	21	20	20	220
R J Link.....	24	24	24	24	23	22	21	20	18	220
Jos Feuerbach.....	25	25	24	24	22	21	19	18	16	220
Chas Wiskow.....	25	23	23	23	22	21	19	19	19	216
F Vanderheyden.....	25	24	23	23	22	21	19	18	18	214
D Meyers.....	25	24	23	23	21	21	20	19	19	214

Team shooting followed between teams captained by Dan Meyers and Charlie Wiskow with this result:

Meyers's Team.....	215	Chas Wiskow's Team.....	214
C Schroeder.....	230	F Brandt.....	230
G M Riedel.....	225	J Meyer.....	230
H Becker.....	225	S Russell.....	221
J Feuerbach.....	220	R J Link.....	220
A Meyers.....	230-1347	B J Link.....	220

The customary social session followed, during which the members were entertained by the spurious singing of "Whiskers" Wiskow; Shad Russell also gave a song which was famous about a decade ago, to wit: "Joe Bowers." Chas. Schroeder then related his mishaps while on a hunting trip with Henry Becker and Chris Inteman some time ago.

PALISADE RIFLE CLUB, Capt. John Reinhardt, Tuesday, Dec. 15. Ten shots, off-hand, 25-ring target, possible 250:

Geo Graf, Jr.....	25	25	24	24	23	23	20	20	20	230
Capt Reinhardt.....	25	25	24	24	23	22	21	21	20	227
Geo Graf.....	25	25	24	24	23	22	21	20	20	227
A Rossy.....	25	24	23	23	22	22	21	21	20	226
J Johnson.....	25	23	23	23	22	21	21	21	20	220
G Finger.....	25	25	24	24	21	21	20	20	20	220
F Pfeiffer.....	24	23	23	23	21	20	20	19	19	210

They have not as yet received the challenge from the Greenville Rifle Club to a 10-men team match. The Summit Rifle Club did not accept the Palisade's challenge to a match. The customary social session followed. The members were treated to a collation by Adolph Rossy. Adolph couldn't help putting it up, as he lost in a match between himself and Jim Johnson. The latter rendered a touching ballad, "I Couldn't Help It." George Graf, Jr., then gave an exhibition of fancy shooting.

MILLER RIFLE CLUB, Hoboken.—Capt. Richard W. Dewey, Wednesday, Dec. 19. Ten shots, off-hand, 25-ring target, possible 250. The scores made in the first, second and third classes in the shoot for class medals, first score shot to count, were:

C Indson.....	25	25	25	25	24	24	24	24	23	244
F Brandt.....	25	25	25	24	24	24	23	23	21	238
Geo Schlicht.....	25	25	25	24	24	23	23	23	21	237
Wm Forkel.....	25	25	24	24	24	23	23	23	22	237
A Meyns.....	25	25	24	24	24	23	23	22	22	237
E Fischer.....	25	25	24	24	24	23	23	22	22	234
L Miller.....	25	25	24	24	23	23	22	22	20	233
D Schell.....	25	24	24	24	23	23	23	22	20	230
A J Meyer.....	25	25	24	24	23	23	23	21	20	229
D Hencken.....	25	25	24	24	23	23	23	20	20	228
Capt Dewey.....	25	24	24	24	23	23	22	21	21	226
H Neuman.....	25	24	24	24	24	23	22	18	18	225

The first class medal was won by Chas Judson, 244.

J H Kruse.....	25	25	25	24	23	23	22	21	20	229
D Peters.....	25	24	23	23	22	22	22	22	21	227
J Carragher.....	25	24	23	23	22	22	22	21	21	226

Second class medal was won by J. H. Kruse, 229.

H Selteneich.....	25	25	24	24	24	23	22	20	19	221
A Stadler.....	25	24	24	23	22	21	20	20	19	219
H P Meyer.....	25	24	23	23	20	20	20	20	20	211
F Kammell.....	25	24	21	20	20	20	18	16	16	200
W Weber.....	25	24	23	20	20	19	18	17	14	200

Third class medal was won by H. Selteneich, 221. The shooting committee, consisting of Dave Miller, Capt. Dewey, Charles Judson, J. H. Kruse and E. Fischer, has completed all arrangements for the club's prize shoot on Christmas Day, the 25th, and Sunday, the 27th inst.

HUDSON RIFLE CLUB, Marion, Capt. Henry L. Hansen, Dec. 14, 10 shots off-hand, 25-ring target:

H L Hansen.....	25	25	25	25	24	24	23	23	23	243
J Robban.....	25	25	25	25	24	24	23	22	22	239
W Mueschl.....	25	24	24	24	23	23	23	23	23	235
H Mahlenbrock.....	25	25	25	24	24	23	22	22	21	235
T Reynolds.....	25	24	24	24	23	23	22	22	21	230
C E Bird.....	25	24	23	23	22	22	21	21	20	222
Adams.....	25	24	23	23	22	21	21	20	20	221

The club is getting its ten-men team in shape for the winter matches. All are putting up good scores and in a short time will prove that they have regained their old form.

GREENVILLE RIFLE CLUB.—Greenville, N. J., Dec. 18.—The scores made by this club, 10 shots off-hand, 25-ring target, possible 250, are appended below:

Chevant.....	25	25	25	24	24	23	23	22	20	235
Kaiser.....	25	25	24	24	23	22	22	22	20	230
Robidoux.....	25	25	24	24	23	22	22	22	21	230
Purell.....	25	24	24	24	23	22	22	21	21	230
Dodds.....	25	24	24	24	23	22	22	21	21	229
Spahn.....	25	24	24	24	23	22	22	21	21	227
Cook.....	25	24	24	23	23	22	21	21	19	224
Pfeffer.....	25	25	24	24	23	22	21	18	18	209
Fiorano.....	25	24	23	23	21	20	18	16	16	203
Hill.....	25	23	23	20	20	19	16	15	15	195

A meeting followed, during which two new members were elected. A social session followed the close of the meeting.

THE STANDARD RIFLE CLUB was organized at 233 First street, Hoboken, Monday evening, Dec. 21. Henry Becker was elected captain. The club decided to enter a team in the *FOREST AND STREAM* tournament. Shooting followed, the scores made being:

G M Kruse.....	25	25	24	24	23	23	22	22	21	233
H Becker.....	25	25	24	24	23	22	22	22	21	231
C Schroeder.....	25	24	24	24	23	22	22	21	21	231
F Brandt.....	25	24	24	24	23	22	22	22	20	230
J Meyer.....	25	24	24	24	23	22	21	21	21	230
J Sidel.....	25	25	24	24	23	22	22	21	21	229
S Russell.....	25	24	24	24	23	22	22	21	21	229
F W Kiefer.....	25	24	24	24	23	22	21	20	20	218

HUDSON RIFLE CLUB, Marion, N. J., Capt. Henry L. Hansen, Monday evening, Dec. 21; 10 shots off-hand, 25-ring target, possible 250:

Bratt.....	25	25	25	25	24	24	24	23	23	243
Capt Hansen.....	25	25	25	24	24	24	24	24	23	242
Boddy.....	25	25	24	24	23	23	23	23	22	235
Mueschl.....	25	25	24	24	23	23	23	22	22	235
J Heulan.....	25	25	24	24	23	22	22	21	21	231
Holtish.....	25	25	24	24	23	22	22	21	20	232
Buch.....	25	25	24	24	23	23	22	21	21	230

The club met afterward and decided to enter the tournament arranged by the *FOREST AND STREAM* for New Jersey Rifle Clubs.

UNION RIFLE CLUB, Hoboken, N. J.—Captain Becker, Tuesday, Dec. 22. Ten shots, off-hand, 25-ring target, possible 250:

C Schroeder.....	25	25	24	24	23	22	22	22	23	233
H Becker.....	25	25	25	24	24	24	23	22	21	232
G M Riedel.....	25	25	25	24	23	22	22	22	21	231
F Vanderheyden.....	25	25	25	24	24	23	22	22	21	230
S Russell.....	25	25	24	24	23	22	22	21	21	229
C Wiskow.....	25	24	24	24	23	22	21	21	21	224
D Meyers.....	25	24	24	23	22	21	20	19	19	218
J Feuerbach.....	25	25	24	23	22	21	20	20	19	218

Team shooting followed between teams captained by "Handsome Joe" Feuerbach and "Bean Brummei" Wiskow, which resulted as follows:

J Feuerbach.....	220	C Wiskow.....	225
G M Riedel.....	230	C Schroeder.....	236
F Vanderheyden.....	232	B J Link.....	231
S A Russell.....	220-908	H Becker.....	235-927

PALISADE RIFLE CLUB, Capt. John Reinhardt, Jersey City Heights, Tuesday evening Dec. 22. Ten shots, off-hand, 25-ring target, possible 250:

Geo Graf.....	25	25	25	24	24	24	23	23	22	21—236
Capt Reinhardt.....	25	25	24	24	24	23	23	22	21	21—232
J Johnson.....	25	25	25	24	24	23	23	22	21	20—231
Geo Graf, Jr.....	25	25	24	24	24	24	23	22	20	20—231
A Rossy.....	25	25	24	24	23	23	23	22	21	21—231
G Fenger.....	25	24	24	23	23	23	22	22	21	20—227

Revolver Shooting in England.

The annual report of the South London Rifle Club has just been issued; in it is the following: "The championship of the club for rifle shooting has been won by W. H. Trask, who thus becomes the holder of the beautiful bronze figure presented by Walter Winans to the club, the conditions being that it must be won two years in succession to become the absolute property of the winner." This bronze statuette is the same size as the one presented by Mr. Winans for revolver competition to FOREST AND STREAM, but the subject he has modeled is different, as it represents a buffalo hunter who has been surprised by Indians and is sheltering himself behind his horse.

In the revolver shooting of the club the committee congratulate the club on the increased success of the revolver competitions, the number of entries for which have almost doubled since last year, "and, thanks to the presence of Mr. Walter Winans, whom the committee congratulate on his restoration to health, the scoring of 1891 shows an improvement as compared with that of 1890, but on the other hand, while six possibilities of 42 points and thirteen scores of 41 were recorded in 1889, no competitor has made the possible either in 1890 or 1891, and there have been only eight scores of 41 during the two years, five of which were accomplished by Mr. W. H. Trask.

None of these looks like a falling off in the shooting, it is not really so; the reason was that Mr. Winans did the most of his practicing at his own private ground instead of, as in former years, at the club. At his private ground he made some dozen "highest possible" scores and a great many 41s this year.

After giving the result of the revolver championship competition, which, as already reported in FOREST AND STREAM, resulted in a win for the fourth year by Mr. Winans, the report continues:

"The success of the members of the club in the revolver competitions at Bisleigh has again been most marked. Mr. Walter Winans won first prize in each of the four competitions open to him, Mr. Haig also was second in each of such competitions. Major MacKerrell was third in the aggregate, fourth in third series, and seventh in both first and second series. Mr. Andrews, Mr. Heath, Mr. May and Mr. Lowe also won revolver prizes at Bisleigh. Mr. Lowe won the second revolver prize at Glasgow, the fourth at Edinburgh and the eighth at Brussels." The report concludes thus: "Inasmuch as the new service revolver embraces two improvements, the buckhorn rear-sight and Metford rifling, suggested by a member of the club, the committee respectfully claim that the South London Rifle Club has rendered good service to the State; but on the other hand the committee venture to report what they said in their 1889 report, viz.: The powder charge of the new service revolver is too light to stop a man effectually at close quarters; that the barrel is too short for accurate shooting, and the whole weapon is too light for efficient service in the field; and they contend that it is a mistake to sacrifice the general all-round efficiency of a weapon capable of doing what Mr. Haig and others have done with the revolver at distances up to 200 yds. to the mere question of portability."

This committee did not include Messrs. Winans and Haig, the former is of opinion that the buckhorn sight is a mistake, also the desire to have a larger charge is a mistake, as the present charge has a very severe recoil, and a larger charge would do away with accuracy, except in the case of exceptionally strong wrists.

A similar proposal was made at the meeting of revolver shots at Mr. Winans's tent at Bisleigh and voted against, only one man being in favor of it.

Home Pistol Practice.

At intervals we hear through the Rifle columns of "shooting cranks" who are fortunate enough to possess facilities for indoor shooting during the winter months, and it occurred to the writer that some of the fraternity not blessed with the necessary space requisite for that amusement might be interested in hearing how he utilized the limited means at his disposal.

In summing up the assets it was discovered that they consisted of 15ft. of hall ending in a hall blind 12ft. deep, giving a range of 25ft., with some room to stand clear of the wall.

Now, while ridiculously short range for a rifle it would seem very well for a pistol gallery for snuffing up the air as the writer proved himself in out of door shooting with a revolver.

A square of plank 1 1/2 in. thick and 40 x 40 in., backed by 1/2 in. Russia iron, holds the target and very effectually stops the ammunition used.

For the weapon a Stevens diamond model pistol with a 6 in. barrel was purchased, and has done pretty fine shooting when the man behind it was in good shape.

At every five shots, and although 5,000 of them have been so far fired, the barrel is as bright and clean as when bought—the cleaning rag being chamois skin.

Being a crank in some matters, my targets were an idea of my own, and made to order, electrolyte being cast from a photo-engraving of a drawing of a target made by myself. The bullseye is exactly the diameter of a quarter dollar, and is surrounded by thin rings, each one-half the diameter of the bullseye apart.

These being printed on very heavy white glazed cardboard are strong and durable, also just about the right size for an overcoat pocket, in which they can be carried without bending or curling.

In the first few weeks shooting there was a lamentable tendency of the pistol to throw up—so much, in fact, that I always pinned my targets by one corner and left it at that, at which point I would aim.

After a while, however, the arm became more manageable, or rather mine grew firmer, and now I hold directly on the lower rim of the bullseye and get there rather often.

Now, having given a point or two which I have found helpful in keeping up my practice, may not some one else give me some really valuable suggestions as to shooting, and help start the ball rolling. LANCEWOOD.

The Small Arms Board.

INVENTORS are coming forward very slowly with arms and requests for extension of time come in from many firms. The Lee Arms Co. expect to have a gun ready for trial in January and another shortly afterward. The Hotchkiss Co. was reported to have shipped two arms for trial in September last, but neither has yet been received. The Winchester Arms Co. has not yet perfected their weapon. The Pitcher Arms Co. report that they will have a gun in January. At the last session of the board held at Springfield, a wooden model of a magazine gun exhibited by Lieut. H. J. White, M. C., and an unfinished gun from the Pitcher Arms Co., of Wellsville, Wis., examined, and a Mauser gun very similar to that adopted by Belgium, was tested. The trial of the two Krag-Jorgensen guns was conducted on Dec. 3. The Bruce gun was also tested. The board will meet again at the Springfield Armory on Jan. 19.

Canadian Rifemen.

QUEBEC, Dec. 17.—The twenty-third annual meeting of the Province of Quebec Rifle Association is over and the officers elected for the ensuing year. The reports having been adopted the officers for the coming year were elected as follows: Chairman of the Council, Lieut.-Col. Houghton, re-elected; Treasurer, Major C. Radiger, Secretary, Major Blacklock, re-elected; Finance Committee, Lieut.-Col. Fraser, Brodeur and Martin; Major E. L. Bond retiring; Auditors, Captains J. Fair and J. G. Ross; Representatives to the D. R. A., Lieut.-Cols. Roseau and Hood, Majors Bond and Blacklock and Capt. Sims. On the question of changing the date of the annual matches from August to July, the rifle clubs were requested to communicate with the secretary, giving their views on the subject.

Shooting at the Falls.

NIAGARA FALLS, Ont., Dec. 16.—The live-bird tournament, under the auspices of the Whirlpool Gun Club, held here to-day, was largely attended by marksmen from Toronto, Buffalo, Hamilton, Woodstock and other American and Canadian cities and towns. The weather was anything but favorable to the marksmen. A stiff northwest wind blew in their faces all day, almost reaching a hurricane at times, driving the birds in all directions from the target.

Following is the score:
First match, sweepstakes, 5 birds: C. Charles 5, Mr. Taylor 5, Mr. Margatke 4, Mr. Koch 5, Mr. Bishop 5, Capt. Milloy 2.
Second match, sweepstakes, 7 birds: C. Charles 6, J. Koch 6, Capt. Milloy 5, J. Crooks 5, Dr. Neff 5, J. Stroud 3, H. Whitney 6, T. Miller 6, Mr. Hamilton 5, W. Stroud 5, R. Bishop 3.
Third match, \$100 purse guaranteed, entrance \$7.50, 10 birds: G. Rogers 10, C. Charles 8, H. Whitney 9, Miller 8, Dr. Neff 8, J. Koca 8, W. Stroud 7, J. Stroud 6.
Fourth match, sweepstakes, 7 birds: C. Charles 6, Mr. Miller 5, Mr. Rogers 5, Mr. Hamilton 4, Capt. Milloy 4, Dr. Neff 3, W. Stroud 5, J. Stroud 4, Mr. Bishop 3.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book, particularly interesting to young boys, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

Trap Shooting.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

- Dec. 25.—Boiling Springs Fish and Gun Club, open sweepstakes at 50 artificial, at Rutherford, N. J.
Dec. 25.—Maplewood Gun Club, open shoot at artificial, at Maplewood, N. J.
Dec. 25.—Athens, Pa., tournament, at kingbirds and live pigeons. W. K. Park, Sec'y.
Dec. 25.—Water Gun Club, all day's shoot at artificial, on Fifth avenue grounds, Newark, N. J.
Dec. 25.—John Erb's grounds, all day's shoot at live birds, Bloomfield avenue, Newark, N. J.
Dec. 25.—Woodside Gun Club, all day tournament at live birds and artificial, club grounds, foot of Riverside avenue, Newark, N. J.
Dec. 25.—Open sweepstakes at live birds, at Frank Class's Hotel, at Pine Brook, N. J.
Dec. 25.—Brunswick Gun Club, monthly club and open shoot, at New Brunswick, N. J.
Dec. 25.—Hilton Gun Club, initial shoot at artificial, open to all, at Becker's Woods, Hilton, N. J.
Dec. 25.—East Side—Mutual Gun Club, live birds, 9 A. M. to 1 P. M.; artificial, 1 P. M. until dark; open to all, at Wiedenmeyer's Park, Newark, N. J.
Dec. 25.—West Side Gun Club, monthly medal shoot and open sweepstakes at live birds and artificial, at Grove street grounds, Newark, N. J.
Dec. 25.—Germantown Gun Club, open tournament, at Germantown, Pa.
Dec. 25.—Cordova Gun Club tournament, at Cordova, Ill.
Dec. 25.—Sewaren Land and Water Club, team and individual contests, open to all, at Sewaren, N. J.
Dec. 25.—Spring Hill Gun Club, all day shoot, A. M. at live birds, P. M. at targets, at Blaueville, N. Y.
Dec. 28-30.—Genesee Gun Club tournament, at Genesee, Ill.
Dec. 29.—Lyons Gun Club tournament, at Lyons, Kansas.
Dec. 28-30.—Lincoln Gun Club tournament, at Lincoln, Neb.

1892.

- Jan. 1.—Spring Hill Gun Club, all day shoot; A. M. at live birds, P. M. at targets, at Blaueville, N. Y.
Jan. 1.—South Side Gun Club, open tournament at artificial, on club grounds, near Emma street station, Newark, N. J.
Jan. 1.—Edwards V. Brewer, at Harrisburg, Pa. Match at 100 live birds each for purse of \$500, contributed by citizens of Harrisburg, Pa., shooting to commence at 2 o'clock.
Jan. 1-2.—Holiday tournament of the Harrisburg Shooting Association. First day live birds, second day inanimate targets.
Jan. 26.—Hamilton Gun Club, grand live pigeon and artificial bird tournament; \$1,000 guaranteed. A. Smith, Sec'y-Treas., Hamilton, Ontario, Canada.
May 17-20.—Annual tournament of Kansas City State Sportsmen's Association, at Council Grove. G. W. Cleck, Sec'y.
June 6-11.—Eighteenth annual tournament of Illinois State Sportsmen's Association, at Chicago. W. L. Shepherd, Sec'y.
June 13-18.—New York State Association's Thirty-fourth Annual Convention, at Syracuse, N. Y. Chas. H. Mowry, Sec'y.
Manufacturers' and Dealers' Association tournaments:
Baltimore, Md.—Second week in March.
Staunton, Va.—Second week in April.
Savannah, Ga.—First week in May.
Pittsburgh, Pa.—Second week in May.
Brooklyn, N. Y.—Second week in June.
Watertown, N. Y.—Fourth week in June.

DRIVERS AND TWISTERS.

THE gun clubs of New Jersey seem slow in making a move toward the organization of the proposed State League. The corresponding secretary has repeatedly, through the columns of the lay and sporting press, called for an expression of opinion from shooters, and has never received a line on the subject in reply. I am informed that two of the strongest clubs in the State propose to take a step in the matter by holding a two (consecutive) days' tournament (one day on the grounds of each club) some time during January. Each club in the State will be requested to send a team of five men to take part in a team contest at 25 targets per man. At these two days' shoots a determined effort will be made to form a New Jersey League, and arrange for a big circuit of tournaments. If the effort is successful, the two shoots above mentioned will be considered by the two clubs as being their fixtures, and no other of the tournaments will be held on their grounds. Full details in regard to the shoots will be given in a short time.

At the "annual" of the South Side Gun Club at Newark, N. J., on New Year's Day, a novelty will be introduced in one or two of the events, which will effectually prevent a shooter from dropping for a place. The contestants will be one-half winners and one-half losers, i. e., presuming that the event is at 10 targets, \$1 entry, with twenty in. Three men break 10 each, four men break 9 each, five men break 8 each, each of the others break 7 or less. Deducting say 1/2 cents each for the targets, there would be \$7.50 in the pot, of which \$1.75 would go to each of the ten high men. Three 10's, four 9's and five 8's, however, make twelve men who have winning scores, so that two must be dropped out, and this is done by counting backward on the score, the two men who have misses nearest the end of their scores being the victims. In case of ties in order of misses the ties will be shot off miss and out until the proper number of winners are left.

A new organization known as the Hilton Gun Club has just been formed and on Xmas Day it will hold its initial shoot and house-warming on its well-appointed grounds at Becker's Woods, about half a mile above the Irvington Hotel, in Hilton, N. J. All are warmly and enthusiastically and will cordially welcome you to favor them with a visit. The shooting will be open to all comers. The Springfield avenue electric cars, taken at any point on Market street, Newark, will take visitors to within a half mile of the grounds.

The United States mails recently played a sorry trick at the expense of W. Fred Quimby. Fred had been doing a few days shooting in Maryland and having sixty odd quail he had boxed up and sent to his Broadway store. Wishing to give a treat to some of his friends he sent a letter to the store, the purport being that the recipient was to take a dozen of the birds and forward the rest to Mr. Quimby's home in Newark. At the same time he sent a letter to his wife, requesting her upon receipt of the birds to send a dozen each to two of his Newark friends, and to have the remainder served on a certain evening when he would reach home, and also requested her to invite a few of her friends to the "quail supper." The box of birds reached the store in due time, and, no instructions to the contrary having been received on the day following their arrival, they were distributed among the people connected with the store, in pursuance of previous custom. It is easy to imagine the feelings of Mr. Quimby's partner when, on the day following, the distribution of the spoils, the letter of instructions was received. In the meantime Mr. Quimby's wife was wondering why her birds did not arrive, and it was not until Fred had reached home that the case was thoroughly understood. It is needless to say that the promised "quail supper" did not materialize.

FOREST AND STREAM is desirous of revising its club directory, and would be greatly obliged if club secretaries would send to this office the name and address of every member of their club, shooting days and location of grounds.

The "annual" of the South Side Gun Club, to be held on the club grounds, foot of Emmet street, on New Year's Day, will be very enjoyable affair. Besides the local shooters there will be present nearly the full strength of the Boiling Springs and Maple wood clubs. The programme will be an attractive one and is bound to suit all comers. All the shooting will be at artificial targets. A feature will be the trial of the "Hobart system" of rapid-fire, which Will Hobart says is the coming system.

The amateur photographers were in their glory on the day of

the Fulford-Brewer match at Woodlawn Park. About a dozen of them were busy in snapping views from 10 A. M. to 4 P. M.

John H. Dufan, who retrieved the "doubtful" birds during the big match at Woodlawn Park, is a well known electrician of Harrisburg, Pa., and a member of the Harrisburg Shooting Association. As a live bird shot he has quite a reputation. Several years ago Mr. Dufan was a resident of Newark, N. J., where he was employed by the Edison Electric Light Company. He was at that time an enthusiastic cyclist and a member of the New Jersey Wheelmen. In height he is about 5 ft. 6 in., but nevertheless he rode a 54 in. Star bicycle of the old "coffee-mill" type. As an all-day "scorcher" he was a terror to his club mates. On many of his rides he was accompanied by his four-year-old son. Oldtime frequenters of Orton Hall, in Newark, were often regaled by Mr. Dufan with exhibitions of fancy and trick riding, at which he was an adept.

The Sewaren Land and Water Club, of Sewaren, N. J., held a meeting on Dec. 17, and elected D. C. Whitlock, Louis E. Ballard and F. W. Pohle to active membership. John T. Johnson was also elected an honorary member. The club has a red-winged glow or byline a black field, as the club colors. The club will hold a reception and dance at the Sewaren House on New Year's eve, and a large number of marksmen from different parts of the State are expected.

Arrangements have already been completed for the 1892 season of the Union Gun Club, of Springfield, N. J., and through the courtesy of Enoch D. Miller, the club's manager, I am enabled to give the following details: The club will be divided into two classes, the 90 per cent. men to comprise A class, and all under 90 per cent. B class. The initiation fees and dues for the year will be \$1. The shooting will be under Keystone rules, from 3 traps, unknown angles, and at each monthly shoot each member will shoot at 25 single bluecock or Keystone targets. All ties will be shot off at 5 birds each, until one or another of the contestants is ahead. The prizes will be as follows: A class, first prize \$15, second prize \$10, third prize \$5. B class, first prize \$10, second prize \$7.50, third prize \$5, fourth prize \$2.50, all in gold coin. In order to qualify for any of the club prizes members must take part in eight of the regular monthly shoots, and the prizes are to go to the ones winning them the greatest number of times. There will also be a gold medal awarded for the highest average in any eight of the twelve shoots. On each of the club days there will also be an open-to-all tournament, with eight events on the programme, the eighth being the regular club shoot. The initial contest will be held on Thursday, Jan. 7, 1892.

Derler Park, Long Island, one of the most famous and popular shooting grounds in this vicinity, will be the scene of some lively shooting to-morrow and on New Year's Day, and Melcher Miller, the jovial and corpulent proprietor, insures a jolly time to all who honor him with a visit. The programme is a mixed one, so that shooters had better go loaded for both feather ruffling and sancer smashing. The events comprise 10 bluecocks, 50 cents entry; 10 bluecocks, 75 cents entry; 15 bluecocks, \$1 entry; 10 single and 5 pairs bluecocks, \$1 entry; 10 bluecocks, \$1 entry; 5 live birds, \$2.50 entry, and 7 live birds, \$3 entry. Cash prizes are guaranteed, and all surplus will be added. Shooting will begin at 8 A. M. On each day the winners in order will be as above. The grounds are situated on Jamaica avenue, near Enfield street, and the electric road from East New York deposits passengers at the gate. Go early and have a great big time.

A match between teams of twenty men each from the Newark Gun Club, of Newark, N. J., and the Fountain Gun Club, of Brooklyn, is on the tapis, and when the event takes place it is safe to say that the work will be witnessed by a big crowd. The conditions will probably be ten live birds per man, Hurlingham rules to govern, the losing team to stand the expense of a supper. Both clubs are confident in their ability to turn out winning teams. Dates have not yet been arranged.

Sportsmen are anxious to know what two-man team will dare to pit themselves against E. D. Fulford and J. L. Brewer for a contest at 100 birds per man for \$5,000 or \$10,000 a side. The question is an interesting one. There are any number of shooters in this country who could, without doubt, provide a little interesting diversionment for either of the above mentioned experts if they only had the "nerve" enough to come to the front. I will send the matter with J. A. R. Elliott, Charley Budd, Geo. Kleinmann, W. S. Crosby, Frank Parmelee, W. F. Mussy, John Winston and the "other hundred" of cracks who are continually looking for gore? C. H. TOWNSEND.

Words of Appreciation.

Editor Forest and Stream:

I have just glanced at FOREST AND STREAM. Expected something out of the ordinary, but this is impossible. Nothing like it before in the reports of traps. It was a big occasion and you have done it justice. Please send at once two copies of this week. I will try and place them where they will do the most good. BURLINGHAM FOR FOREST AND STREAM. JACOBSTAFF.

Editor Forest and Stream:

Allow me to congratulate you on the enterprise shown in your report of the Fulford-Brewer match at Woodlawn Park. I have never seen so complete a report given in a sporting paper of any event that has ever occurred. The great importance of this match, and the widespread interest which it excited, led your readers to believe that you would give it the space which it merited, but I think all were surprised in seeing the unusual enterprise that was displayed in illustrating the most interesting and important events of the day as your artist and correspondent did it. It marks a new era in outdoor sports that is worthy at this time of mention. Sportsmen of the country appreciate such wideawake interest as you have exhibited. THE FOREST AND STREAM is easily this time at the top. HENRY C. SQUIRES. NEW YORK.

Editor Forest and Stream:

Being witness of the great match between E. D. Fulford and Capt. Brewer at Woodlawn, Dec. 22, and read several accounts of the match as reported by the leading newspapers, FOREST AND STREAM included, please allow me to congratulate you on furnishing the most complete and interesting report of any that I have ever seen, your photographic productions being of the very best and are good proof that your artist was there. Your report in regards to the work done by the two men, consider good and to express my opinion in regard to these two great knights of the trigger I must say that Capt. Brewer is my favorite. His style and actions at the traps just fills my eye for a shooter, yet I must admit that Fulford as a shooter is one of the finest in the land. After seeing both men shoot at their first twenty-five birds each I formed my opinion that the old man Brewer was a beat man, for it seemed to me that Fulford had the best load as Brewer hit his (lost birds with both barrels throughout the match with but two or three exceptions). This kind of work seemed to me to be the fault of the load. I am not throwing any "mud" at wood powder. I simply mean that in my opinion Brewer's load did not quite fit his gun. Yet I must say that the winner of this great match, Mr. Fulford, is entitled to a dignity that should be respected, for meeting and defeating the best man on earth. HARTFORD, Conn. C. H. BURIDGE.

Editor Forest and Stream:

Your report of the Brewer-Fulford match at Woodlawn Park is the most complete and the best account of a pigeon match I have ever seen. It is a pleasure to watch the rapid strides made by your paper. D. A. UPSON. CLEVELAND, O.

Toronto.

DEC. 14.—The match between W. Emond and W. McDowell at the Woodbine to-day was shot under the most unfavorable conditions possible. Wind and heavy rain prevailed during the whole of the contest. The birds were good flyers, and it took very hard hitting to bring down those which got into the wind. Mr. Emond commenced by killing 31 straight. He then missed a good bird and made a run of 10. He next lost 2 birds, each falling dead about 10 yds. out of bounds. He followed with 5 straight kills, and won the match with 47 to McDowell's 35.

Fulford vs. Brewer Again.

ON Jan. 1, 1892, the grounds of the Harrisburg Shooting Association, in Harrisburg, Pa., will be the scene of another big contest between E. D. Fulford and J. L. Brewer, who will shoot at 100 live birds each for \$500 a side. The Harrisburg Club will also have open sweepstakes shooting on the above day.

The regular shoot of the East End Gun Club was held this (Dec. 17) afternoon at their traps with the following result: Carr 22, Murray 21, Caldwell 11, Wherry 23, Barnes 12, Rudolph 33, Sterling 22, Cramer 1, Tamlyn 22, J. Snow 11, Elworthy 24.

SINGLEHANDER. DESIGNED BY H. K. WICKSTEED, 1889.

Auburn Gun Club.

AUBURN, N. Y., Dec. 18.—At the annual meeting of our club held Dec. 15, the following officers for the coming year were elected: President, Wm. H. White; Vice-President, C. R. Egbert; Secretary, C. W. Brister; Treasurer, Wm. Whyte; Committee-man, C. R. Peck. The club has accepted a challenge from the Onondaga County Sportsman's Club to shoot a 20-men team match, 25 kingbirds per man. This match will probably be shot soon after the holidays. The scores of our last two regular shoots are given below. Dec. 2:

“FOREST AND STREAM.”

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy \$4 per year, \$2 for six months. Rates for clubs of annual subscribers:

Three Copies, \$10. Five Copies, \$16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsmen throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.

Address all communications

Yachting.

Small Yachts. By C. P. Kunhardt. Price \$10. Steam Yachts and Launches. By C. P. Kunhardt. Price \$3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price \$3.50. Steam Machinery. By Donaldson. Price \$1.50.

Yachtsmen who do not see what they want under this heading will please look under the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

THE EDUCATION OF NAVAL ARCHITECTS.—With all the boasted progress of America in shipbuilding and its allied arts, it is a matter of national discredit that there is not an institution in the country in which instruction is given in the great field of naval architecture, nor is there any satisfactory opportunity for study available to young men who desire to fit themselves as designers or shipbuilders. The country which has been the actual birthplace of the steamboat, the ocean steamer, and the screw propeller; that has led the world for long periods in steam craft, war vessels, clipper ships and yachts, has rested for nearly forty years, with not one determined effort to keep in the lead by means of a systematic course of instruction for young men. Such progress as has been made is the result of individual effort in the face of difficulties which never should have existed.

We are frequently called on for advice by young men who desire to pursue a course of work or instruction that will fit them for designing merchant vessels or yachts; or for various branches of shipbuilding, and we are at a loss to aid such applicants. In regard to yacht designing and building, there is not a designer or a yard in the country with such an amount of steady work as would warrant the employment of learners or apprentices throughout the whole year, giving them any systematic instruction or practice. The only opening is in the larger yards where merchant vessels, and of late war ships, are built, and though these have greatly improved of late, they by no means fill the requirements. We speak from experience when we say that a dozen years ago the most important of American ship yards was as poor a place as a young man could find to waste his time in, either in the drafting room, the machine shop or on the building ways; while at that time, as to-day, there was not an institution at which instruction in naval architecture could be obtained.

This is the more remarkable in view of the growth of scientific schools and the increased facilities for obtaining a technical education in all branches but one. To-day there is, so far as we are aware, nothing outside of the Naval Academy of Annapolis, which is necessarily limited, save the two schools of designing in Boston, which in a small and unpretentious way have accomplished a great deal. New York, once the greatest shipbuilding center of the country, offers nothing to the student of naval architecture.

Thanks to the liberality and public spirit of one of the greatest of American shipbuilders, Wm. H. Webb, this deficiency will soon be remedied to a certain extent, as work is now progressing on a building in the suburbs of the city which he is erecting for the double purpose of a home for aged shipbuilders and their wives, and also of a school of practical instruction for young men. While the details of the latter part of the scheme are not fully arranged, when carried out under the practical direction of Mr. Webb, they will offer a most valuable aid to a limited number. At the same time the pressing need exists for a chair of naval architecture in one of the leading colleges, filled by a properly qualified expert, and giving at least as good instruction as is offered by similar institutions in England.

MEASUREMENT RULES FOR OPEN BOATS.—We quote from the *Boston Herald* some very sensible remarks on the sub-

ject of “mean length” rules for the encouragement of “sawed-off” models, as opposed to more modern and liberal rules. By adhering persistently to length rules, the open-boat sailors of Boston and New York have restricted and impeded the development of their boats, shutting out entirely all modern features. When the New York Y. R. A. was established, we advised the adoption of the Seawanbaka rule for all cabin yachts; even though, as a matter of policy, it might be necessary to begin with a length rule for the open boats. Had this advice been followed, the cabin yacht classes would have been stronger by far than they are to-day, while the same rule would probably have been adopted by the open-boat men. In view of the general adoption of the clipper stem and overhanging stern throughout the yachting world and by all recognized designers, it is rather amusing to see the fight so obstinately kept up by a few to their own disadvantage.

CORRECTED LENGTH CLASSES.—A correspondent who has given much thought to the subject of corrected length classification, adds a word this week in favor of the plan which we recently proposed of alternative limits by corrected length. The experiment might very easily be tried next year in at least two classes, the 30ft. and 40ft. under present rules, by the clubs offering special prizes in certain races for yachts not exceeding 30ft. corrected length in the one class nor 54ft. in the other. There would be no injustice to existing boats and no disturbance of the usual conditions, but much might be learned in regard to the action of the new method.

THE AMERICA'S CUP.—The America's Cup may be looked upon as “saved” for another season, the time within which a challenge might be received having expired. We learn from Lieut. Henn that there is no further talk of challenging among British yachtsmen as long as the new deed is retained.

ANOTHER SMALL CRUISER.

THE little cruiser herewith illustrated was built from a design by Mr. H. K. Wicksteed some three years since and has been used about Montreal on the St. Lawrence River. The design was sent us some time since, but as the sailplan then used was not quite satisfactory we held it in hopes of obtaining a better one. As this style of craft is now under discussion, and as the question of rig is independent of that of model, the design may be more interesting to some of our readers than the craft with longer overhang. Three scales are given for boats 16, 17 and 20ft. over all. The Montreal boat was of the smallest size, 16ft. 9in. l.w.l., 4ft. 4in. beam and 11in. draft. She has proved a very handy cruiser, being used single-handed or giving ample room for two persons. The rig consists of two gunter sails, the gaff or yard being well peaked up. The areas are 100 and 31sq. ft. The centerboard is of plate iron, weighing 75lbs.

THE NEW 90FT. SCHOONER.—The contract for the 90ft. steel schooner designed by Mr. A. Cary Smith has just been signed, the owner being Mr. John E. Brooks, the former owner of Montauk, and the builder being Piegrass, of City Island. The yacht is of the general type of Iroquois, a deep centerboard boat intended for off-shore cruising and for summer racing, but the model is quite different from Iroquois in the ends, the bow being carried out with a fullness at and above the waterline, the overhang being quite long, but by no means equal to Gloriana. The principal dimensions are, l.w.l. 90ft., beam 23ft., draft 10ft. 8in. The midship section is powerful, the keel line is comparatively straight from the sternpost, rounding up gradually, and although cut away in modern fashion, the contour is less exaggerated than the new keel boats, while the waterline is round and full, and the diagonals run round and fair for the full length of the overhanging ends. The yacht is expected to carry a large sail plan in summer. The sticks are further aft than in other new schooners.

THE DEATH OF MRS. BURGESS.—Mrs. Caroline S. Burgess, the widow of Edward Burgess, died on Dec. 16 after a week's illness. Mrs. Burgess had been in delicate health for several years, being very ill at the time of her husband's death in July. The immediate cause of her death was pneumonia. She leaves two young sons, who will be well provided for by the generosity of Mr. Burgess's friends and associates in Boston and New York. Since Mr. Burgess's death a fund of over \$30,000 has been quietly raised for the purpose of educating the children.

VALDA.

THE yachtsman who has plenty of water to sail in, and is near at hand to competent designers and builders, with a fleet of good boats from which to form an idea of what will best suit him, can hardly appreciate the difficulty under which yachting is carried on in less favored and more remote localities, or the trials of those in particular who are energetic and progressive, and desirous of something better than the general run of local craft. The St. Lawrence River at Montreal was evidently planned with no idea that it was ever to become the home of a yacht club, its reefs and shoals forbidding a working draft of over three feet, while the broad waters of "Lac St. Pierre" and "Lac Two Mountains" at times show a short, steep sea that calls for a particularly able craft, however small she may be.

In spite of the natural disadvantages, Montreal has, as our readers know, an active and growing yacht club, the St. Lawrence, the races being reported regularly through the season. The fleet has been made up of craft from all quarters, the only point of uniformity being in the matter of draft. The old New York sandbagger has always been well represented, with Cuthbert boats from Lake Ontario; home-built craft by local builders, and various odd models from remote Canadian waters. Starting with shifting ballast, unlimited crews, a mixed fleet of all sizes, and with the majority of the racing men opposed to any rules which bore heavily on their craft, the work of introducing better rules and of bringing the racing up to more modern ideas has been a very heavy task. It has been so far successful, however, that the races of the club are now sailed under the rules of the Lake Y. R. A., with a corrected length classification; shifting ballast and unlimited crews have been abolished, and several fixed classes have been established, to which the older boats have accommodated themselves, and to which new ones are also being built.

The little craft whose lines are here given has played such an important part in the racing of the past two seasons, and has done so much to give a practical demonstration of what is possible under the new rules and conditions, that at our request her owner, designer and skipper has given us a tracing of his original design. The yacht is in every way the work of an amateur, having been designed and almost built by her owner, Mr. G. H. Duggan, a mechanical engineer connected with the Dominion Bridge Company, of Lachine, near Montreal. Though a skillful draftsman, Mr. Duggan's experience as a designer has been very limited, Valda being his first yacht. The builder, St. Onge, an old French Canadian, has a local reputation for his skiffs and for neat and honest work; but is utterly innocent of any knowledge of building from moulds, all of his boats being built by eye alone. Under such circumstances the building from a design was doubly difficult, and the designer was obliged to lay down the boat and get out the moulds, laying off all the parts, and closely superintending the entire construction. The builder was familiar only with lapstrake work, so the boat was built in this manner. In spite of these difficulties the work has proved very satisfactory, the boat being fair and smoothly and strongly built.

"VALDA" - BODY PLAN.

Valda was designed for the 21ft. L.W.L. class, a length rule being in force in 1890, but being a believer in corrected length, and anticipating the adoption of the new classification, Mr. Duggan kept the design within moderate limits. When the rule was changed last winter he determined to race Valda in the new 29ft. c.l. class, her corrected length being 24ft. 11in. Her racing in 1890 was done with a crew of six and with 700lbs. iron on the keel, but in the past season she has carried but five men, her ballast being increased to 1,720lbs. of lead.

She has been started in every race but two that has been open to her during the two seasons, her owner steering her on every occasion, and she has besides been constantly used for sailing and short cruising. Her best work has been in light winds and to windward or free, the poorest point of sailing being reaching. She has contended very successfully with yachts of much greater size, though on one occasion she was beaten by the fastest of the local skiffs, Thora, a boat with 18ft. L.W.L., 5ft. beam, and 19ft. c.l. Valda's dimensions are: Length over all, 27ft. 11in.; L.W.L., 20ft. 10 1/2in.; beam, extreme, 7ft. 11in.; L.W.L., 6ft. 11in.; draft, 2ft. 1/2in. The draft was limited to this small figure as the water is especially shoal at Lachine, the home of her owner. Valda's racing record up to the present date is as follows:

RECORD OF VALDA, 20FT. 10 1/2IN., L.W.L., SAILING IN 21FT. L.W.L. CLASS, 1890.

June 21.—St. Lawrence Y. C.—21ft. and 26ft. classes. Wind light. Ten starters. Valda led fleet by 3m. 45s. elapsed time. Lulu of 29ft. 5in. c.l. second. This race was declared off by the sailing committee, the customary time limit having been exceeded, although none had been set before the race.

July 1.—St. Lawrence Y. C.—All classes. Wind light, freshening at finish. Nine starters. Valda won from her class by 2m. 21s., and was second in fleet.

July 5.—St. Lawrence Y. C.—All classes. Wind good, topsail breeze. Six starters. Valda first in her class by 9m. 16s. and was only beaten by Lulu of 27ft. L.W.L. by 16s.

July 26.—Valois Annual.—Special handicap. Wind fresh. Four starters. Valda scratch, but won first from Mabel 21ft. although allowing her 8m. handicap.

Aug. 3.—Pointe Claire Annual.—Wind light but freshening. Three starters. Lulu 27ft. L.W.L., Minnie A. 25ft. 5in. and Valda 21ft. Valda first on elapsed time.

Aug. 30.—St. Lawrence Y. C.—All classes. Wind fresh, double reef. Three starters. Classes did not fill and Chaperone 26ft. 5in., Minnie A. 25ft. 5in. and Valda 21ft. sailed together. Valda won by 2m. 25s. corrected time.

1891.

The club classification was changed this year to 21ft., 24ft. and 29ft. c.l., the new classes keeping the boats as they had been under former L.W.L. classes. Valda measuring 23ft. 5in. c.l. had her spar plan altered to make her measure 24ft. 11in., thus bringing her into the 29ft. class with Chaperone, a Jarvis compromise with Laphorne sails of 29ft. 9in. c.l., Mollie Bawn by Burgess of 26ft. c.l., Frolic by Mumm of 28ft. 5in., and Breeze by Cuthbert of 26ft. c.l.

May 25.—Special unclassified sweepstakes. Wind fresh but shifting. Four starters. Dream of 32ft. 5in. c.l. first, beating Valda, second, of 24ft. 11in. c.l. by 3m. 24s. This race was nominally eight miles, but four miles was a thrash to windward in a two-mile current, the race occupying in a fresh breeze two hours.

June 13.—St. Lawrence Y. C.—29ft. class. Topsail breeze. Four starters. Valda first by 6m. 24s. corrected time.

June 27.—St. Lawrence Y. C.—All classes. Single reef breeze. Twelve starters. Valda first in class by 5m. 25s. corrected time.

July 1.—St. Lawrence Y. C.—All classes. Topsail breeze. Ten starters. Valda first in her class by 9m. 5s. and making the best time over the course by 1m. 52s.

OPEN RACING BOAT "VALDA." DESIGNED BY G. H. DUGGAN, 1890.

"VALDA"—SAIL PLAN.

July 11.—St. Lawrence Y. C.—29ft. class. Wind flawy. Valda second, Chaperone taking first.

July 25.—Valois Annual Special Handicap.—Wind fresh. Single reef. Four starters. Valda beaten 2m. by Viking of 35ft. c.l. by the same designer. Valda should get 8m. from Viking but in this race was scratch.

Aug. 29.—Special unclassified race over special course.—All classes combined. Lower sail breeze. Valda led the fleet by 4m. 28s. elapsed time but had to give 16m. 43s. to Thora, a St. Lawrence River skiff of 19ft. l.w.l., and that boat won the first prize by 1m. 30s.

In her two seasons, therefore, Valda has started thirteen times, winning nine firsts and four second places. She has but once been beaten by a boat of her own class and has beaten the first class boats five times of the eight that they happened to start together.

Of the four first places lost, in one she was actually first by six minutes corrected time, but lost on handicap. One was lost to a boat of 35ft. 5in. c.l. in a fresh breeze and another on time to a St. Lawrence skiff which got from Valda 16m. 46s. on a ten-mile course through a curious result of the approximate measurement of sail area, Valda having 680 sq. ft. actual sail on 21ft. l.w.l., while the skiff had 400 sq. ft. actual sail on 19ft. l.w.l. Valda, being 24ft. c.l., would under the club rules allow Thora, 19.3ft. c.l., but 4m. 27s. in 10 miles.

RACING RULES FOR OPEN BOATS.

THE annual meetings of many yachting clubs will take place the coming month, and the question of new measurement rules is sure to come up in the clubs which are composed of the smaller class of boats. For years it has been the cry of the small boat owner and clubs that they have been crowded by the larger boats and have not had fair play. If the members of the small clubs knew it, they are standing in their own light, and by their unreasonable rules are preventing yachtsmen from building a type of small boat which their present rules prevent.

One thing is certain, the club which puts the least restriction on the design is sure to succeed in the end, and new boats of the radical type will be built as experiments.

The taxing of overhangs is inconsistent with speed, because it affects the elements of a design greatly and prevents public spirited yachtsmen from going forward. Nobody wants a slow boat and all want the fastest, whether she be cruiser or racer.

The Corinthian Club stands out as a success, because its members are progressive, and its rules are so broad that boats of all kinds may be developed with but little hindrance.

The time has gone by for the "sawed off" constituency to control much longer. The races between the Tartar, Mabel, Queen Mab, and other old boats have ceased to be interesting, from the very fact that nothing is to be gained from the results.

The American yachting public want new ideas tried, and they do not believe in standing still. The "sawed off" has almost reached its highest development, and the question to be decided is: Can the 21-footer or other class length of the cat or jib and mainsail boat be improved, if restrictions are taken off the design?

The catboat of to-day is, with a few exceptions, practically the same boat that it was 20 years ago. The Queen Mab and Mabel were racers over 15 years ago, and the writer well remembers the match races between the Mabel and Ionia on Dorchester Bay over 10 years ago. The races then created more interest than they do now.

There is a healthy feeling growing up in the small clubs in regard to broader rules for measurement. The thinking men of the clubs have come to the conclusion that restrictions must be taken off designs, and in this they coincide with designers.

Something must be done to create a new interest in the smaller classes and this means a radical change in the rules.

Clubs that tax overhangs both forward and aft will not be

patronized, while those showing broader ideas are bound to succeed.

A boat with overhangs runs the risk of being barred out for exceeding the length, while the square ender can be sunk to her planksheer and still hold her length.

The regatta committee of the small boat clubs would do a good thing by coming together and talking the matter over. An interchange of views is sure to be beneficial, and yachting in the end will be benefited.—*Boston Herald.*

CORRECTED LENGTH AS AN ALTERNATIVE RULE.

Editor Forest and Stream:

It seems to me that your suggestion that the leading yacht clubs establish one or more classes with a corrected length limit as alternatives and experiments is the most sensible and practical one which has been made for some time. It appears to me that there is a capital opportunity to do so at present. Rumors of a 53ft. class are in the air. Why cannot half a dozen of the leading clubs offer prizes for a class of 53ft. sailing length? A 46-footer with 4,000ft. of sail would fit into it quite handsly. And judging from the performance of that class with the Clara, it would not be an easy matter to beat them with more length and less sail.

At the same time, it would be open to any one to try with say 50ft. length and 3,600ft. of sail, or even 53ft. of length and 3,250ft. of sail. If the larger boat proves the faster, why is she not also the better in other respects? She would cost little more to build, less to handle, have more accommodation and probably be a better sea boat. It seems to me that the notion that a classification by corrected length would produce an undesirable type of boat is a pure bogey, born mostly of ignorance and misrepresentation. I cannot see why an English 20-rater of 46ft. is not, so long as you keep her at the sail area for which she was designed, a more convenient, comfortable, good all-round boat than an American racing craft of the same length, but with the sail area of a 40-rater 53ft. long. But admitting that she is not, there is not much prospect that she would prove a winner in American waters under corrected length. The generally lighter winds and smoother waters render it almost certain that a shorter boat with larger sail area would prove superior. Even in Great Britain the difference in length between the winners at Southampton and on the Clyde, where the prevailing winds are lighter, is quite marked.

At any rate, nothing will ever be learned without experiment. The establishment of a 53ft. c.l. class would give an opportunity to make such an experiment in the most interesting manner between the 46-footers and any longer boat that would fit the class. Now is the time to try it, before a lot of 53-footers with monstrous sail plans are called into existence.

C. L.

D. J. LAWLOR.

THE many friends of the veteran naval architect, D. J. Lawlor of Chelsea, will be pained to learn that he is confined to his bed, dangerously ill with cancer of the stomach, and there is but little hope of his recovery. A visit to his home in Chelsea yesterday found him very weak and steadily failing, and his demise may be expected at any time. Mr. Lawlor was born in St. John, N. B., in 1824, and came to this city when fifteen years old. He procured employment and served his apprenticeship with Whitmore & Holbrook, well-known shipbuilders at that time. On learning his trade he went to Gloucester, where he carried on boat building for some years. He returned to Boston about this time, and for forty years has taken a most prominent part in ship building and yacht designing. Soon after his return to this city he designed the brigantine News Boy for Dabney & Co. of this city, and she was a wide departure from the then prevailing type of merchant vessel. The News Boy attracted world wide attention, and was favorably commented on in *Griffith's Nautical*

Magazine. This was his starting point. He was always a good student, and by close application became very apt in his profession. No man on either side of the water can claim a wider experience, for he has designed and built more vessels than any of his co-laborers. Over 150 merchant vessels were built from his designs, and these include ships, barks, brigs, schooners, of two, three and four masts. He has also designed quite a number of towboats. Among the fishing vessels were the Sarah Pryor, John H. McMann, Sylvester Whalen, Susan R. Stone and others. When the steamship Meteor was projected, the late R. B. Forbes requested him to make a design and model, and the prize was won by Lawlor against the field, among whom were Messrs. Webb and Steen. The veteran designer has a fleet of nearly 500 vessels to his credit, and in nearly all cases he both designed and laid the vessels down. Many of these he built at his yard, corner of Condor and Meridian streets, East Boston. In steam yachts he clearly has the lead, for the steam yachts designed by him number 117. The Adelta and the one now building in Providence are among the number. Mr. Lawlor designed and built the schooner yacht Gitana, and there is not a better sea-going vessel afloat. It is a remarkable fact in his career that he has designed the last vessel built at Hingham and also at Medford. In the pilot boat fleet Mr. Lawlor has fifteen vessels. Among them are the Hesper, Phantom and D. J. Lawlor. Mr. Lawlor is a self-educated man and his success is due to his own efforts. He came here a poor boy and had no one to help him. His departures in naval architecture were as radical in their time as those of to-day. He had ideas of his own and was not afraid to carry them out. He invented the double topsail on square riggers, and also the cut of head sails. Before the late Mr. Burgess went into naval architecture as a profession, he often visited the veteran, and from him gained many a good point. Mr. Lawlor represents faithfully the old school of mechanics, well up in all branches of the trade. The cost of the fleet designed and built by the veteran would reach well up into the millions. The gap left by the late Edward Burgess and removal of Mr. Lawlor from active work is one that cannot be easily filled. Both were clever in their specialties.—*Boston Herald.*

HARLEM Y. C. ELECTION.—The annual election of officers of the Harlem Y. C. took place on Dec. 17 at the club house, 519 East 121st street. The officers elected were: Com., T. H. McDonnell; Vice-Com., Mortimer P. Lee; Rear-Com., Julius Greenbaum; Fleet Capt., F. Natterer; Treas., S. J. McCauley; Meas., W. D. S. Hyer; Fin. Sec'y, H. B. McAllister; Rec. Sec'y, E. L. Fellman; Cor. Sec'y, T. B. Bates; Fleet Surgeon, Dr. H. M. Cox; Steward, A. Borst; Board of Directors, Geo. W. Fuller, Jas. F. Lalor, T. W. Jackson, Wm. Towner, A. Johnston, Robert H. Wiley, A. M. Stebbins; House Committee, W. A. Hall, A. G. Austin, W. Scardefield, J. T. Kennedy, T. J. Hendry; Membership Committee, H. L. Fuller, H. G. McCord, John Traugott.

LIEUT. HENN.—In a letter this week Lieut. Henn informs us that he has been compelled to give up his projected visit to America in consequence of the serious illness of Mrs. Henn, and they will spend the winter in Scotland instead of Florida, a matter of regret to both. Galatea is laid up at Dartmouth. We have received a remarkably fine photo of her, made from a painting by Admiral Beechey, R. N., showing her under trysail, storm jib and staysail, on the return voyage across the Atlantic in 1887.

ALTERATIONS.—Hop, Leslie, sloop, has received a new stern at Frisbe's yard, Salem. Charn, F. S. Ketchum, New Jersey Y. C., has been raised 6in. and lengthened.

CONQUEROR.—The case of the steam yacht Conqueror, owned by F. W. Vanderbilt and recently seized by Collector Fassett, of the port of New York, was before the Supreme Court at Washington last week, but no decision was reached.

SAGAMORE. steam yacht, W. A. Slater, will sail shortly for the Mediterranean with her owner and family on board.

BRITISH CENTERBOARD SLOOP "VICTORIA," 1849.

BRITISH CENTERBOARD YACHTS.

NOW that the centerboard yacht has become an active factor in British yachting, a certain interest attaches to the early history of the centerboard. The accompanying drawing was published in the "Rural Almanac and Sportsman's Illustrated Calendar" for 1873, with the following description:

"Centerboard yachts have never been looked upon with a favoring eye in England. It is true we have hundreds of boats of which the American 'Una' was the type, but not one that could be dignified with the name of 'yacht' have we. The Americans on the other hand have adopted centerboards in their largest yachts, and moreover employ that appliance in merchant ships of four and five hundred tons burden. But the centerboard has not been adopted in America on account of any inherent virtue it possesses; its adoption has been entirely one of necessity. Nearly all the channels and harbors along the eastern American coast, from New Jersey to New Brunswick, are extremely shallow, and would not be accessible to the old-fashioned British deep yacht or merchantman. Consequently the Americans have been driven into building vessels of very light draft of water and great beam, and as such vessels are, by reason of the narrowness of the immersed longitudinal section, deficient in weatherly qualities, a moving keel is applied, which can be lowered when sailing to windward in deep water, and hauled when going through a shallow channel or when sailing before the wind."

"But it must not be supposed that the centerboard or sliding keel was an American invention; on the contrary, it is a very old English idea, and we have at this moment before us the design of a boat with a sliding keel, built by Lord Percy in 1774; another design, from which a boat with sliding keel was built at Deptford in 1789, is also before us; and we have also the design of the celebrated revenue cruiser Trial, designed by Lieut. Schank, R.N.,

and built in the Government dockyard at Plymouth, in 1789. It will thus be seen that Englishmen can claim the invention of the sliding keel and centerboard, and the Americans are to be credited with the discernment that first saw, utilized and acknowledged its merits.

It is generally supposed that a large centerboard yacht is not so seaworthy as a keel yacht; but this is entirely a mistake, the Vesta, centerboard schooner yacht, crossed the Atlantic in the winter of 1886 and encountered very heavy weather; her crew declared that she behaved splendidly through it all—that she was buoyant, easy and dry. American yachts frequently get caught in heavy weather when away from their cruising ground, but we have not heard of one being lost. Of course a large beamy, shallow yacht that carries little or no ballast requires a little more careful handling than the deep, heavy ballasted one, but there is no pretence for saying they are unsafe. For our own part we often wonder that as there are so many English 'yachtsmen' who keep yachts and never move out of the Solent, or out of their native river or harbor, that some of them do not patronize the light and airy American centerboard. Every little creek and inlet is accessible to them; they are extremely handy and make very high speed in such light winds as would scarcely move a 200 tons schooner that carries about 70 or 80 tons of iron and lead as ballast.

"The Victoria, of which we give an engraving, was built at Liverpool in 1849, from a design of Mr. Charles Melling, whose Safety Yacht we gave an illustration of in the Rural Almanac for 1870. The Victoria was 32ft. over all, 11ft. beam, 34ft. draft aft and 1ft. 9in. forward, and was fitted with a sliding keel 10ft. long. Her tonnage by English measurement was 13 tons. Her rig is not that of the Una type—the latter have the mast stepped right in the eyes and carry no headsail—but represents a rig common in America, even in large yachts. There are a great many disad-

vantages to one large headsail which the yacht sailor well understands. The Victoria was fast and weatherly, but the model, since the time when she skimmed over the Mersey, has been improved upon, and probably if Mr. Melling designed a centerboarder at this time, she would be a very different craft from the Victoria. We simply give the sketch of her as a 'landmark' in yacht designing; all such things should be preserved, as the study of them forms part of the education of the naval architect, and moreover, they preserve us from falling into exploded errors, and will prevent a man usurping credit for a design that perhaps had existence before he was born."

Canoeing.

COMMODORE WINNÉ requests us to give notice that he and Sec'y-Treas. Wackerhagen will be at the Murray Hill Hotel on Dec. 27, and will be glad to meet all canoeists, especially those who have suggestions to make or questions to ask concerning the Association or the meet.

SMALL SAILING CRAFT.

Editor Forest and Stream:

I have thought to write you for a long time about my little boat built from lines taken from "Canoe and Boat Building," and as the small boat men seem to have the floor, take this opportunity.

I built from lines of the Priscilla, with 1ft. added to length, making 16ft. over all; and the boat spread somewhat after the ribs were in, making her 4ft. 6in. beam. I have a fine little boat, and a fast one, and in light winds a wonder. I have added a jib for racing, my company being the 25-footers.

My racing mainsail has close on to 200ft., and the jib 35ft. I take a little sand when alone, but she does nicely with one, two or half a dozen aboard, as I have tested her in a piping breeze. There is to be quite a fleet of this class of boat here next season, three being already built on the Priscilla's lines as modified by me. They are built quite light, so as to be easily housed, and of light draft, so as to get into the bays, over the weeds, or out on the beach almost anywhere. I have taken great pleasure in reading about the Mad Cap, So So, and other small boats, and want to shake with them, and to thank the author of "Canoe and Boat Building" for the pleasure I have taken with Priscilla.

E. W. DELANO.

A. C. A. MEMBERSHIP.—Atlantic Division: Richmond Ellis, B. R. Roome, Arlington, N. J.; Dr. W. G. Budington, New York; Maurics D. Wilt, Philadelphia, Pa.

Answers to Correspondents.

H. C. W., Okahumpka, Fla.—The manufacturers will send you full directions on application.

SUBSCRIBER, Pittsburgh, Pa.—The gun should pattern about 150 to 160 pellets, and ought to penetrate about 15 to 17 sheets Dennison's penetration pads.

X.—Do you publish a book called "Florida Fishing" or "Florida Fishes." What is the price? Ans. No; but our special "Florida Number," of Jan. 9, 1890, is a volume in itself.

A. P. D., California.—Use 3/4drs. powder, 1 1/2 oz. shot, and experiment with slightly varying loads until you have determined best pattern and penetration, 30yds. circle at 40yds.

E. B., Wellsville, N. Y.—Will you kindly inform me through your correspondence column 1. Does the hare or the rabbit bring forth its young on top of the ground? 2. Which have their eyes open when born? Ans. 1. We have hares (not rabbits) in this country. Hares do not burrow; they lie in bushes or depressions in the ground, or in holes in the rocks, hollow trees, etc. 2. The young of the hare have their eyes open at birth, and are covered with hair, while the young of the rabbit are blind and naked.

DOG COLLARS

Send 50c. for Illustrated Catalogue in 7 colors, which will be refunded on receipt of first order for \$1.00.

BOOK OF THE GAME LAWS:
A COMPENDIUM OF THE LAWS RELAT-
ING TO GAME AND GAME FISH. REVISED
TO DATE, AND EDITED BY
CHARLES B. REYNOLDS, OF
THE FOREST AND STREAM.

The scope of the work embraces all the laws relating to game and game fish of every State and Territory in the Union and the British Provinces. The better to insure accuracy, all the important sections are given in their full text, as they appear on the statute books. Errors which might arise from abstracting or paraphrasing are thus avoided. The preparation of the work has involved an examination of more than 800 distinct original and amendatory acts, scattered through multitudinous volumes of the compiled statutes and session laws of the fifty-nine States, Territories and Provinces here represented. The labor of compilation has been largely increased by the often careless and sometimes seemingly contradictory nature of the legislation. The BOOK OF THE GAME LAWS is the result of a painstaking and conscientious endeavor to furnish an accurate and reliable compendium. Price 50 cents. For sale by

On January 7 the "Forest and Stream" will be permanently enlarged to 32 pages. The price will remain the same.

THE REVOLVER SHOOT.

THE revolver competition for the Winans trophy is calling out a goodly number of expert shots, and by the time it shall be completed the trial may fairly enough be termed national in its scope. There was at one time a disposition in some quarters to criticise the accepted conditions as to distance of firing, but the event has demonstrated the wisdom of the 20yds. selection. As was said by Mr. Conlin, of this city, who has had a long experience with revolver shooters, it is all well enough to talk glibly about fine work at 50yds., but when it comes to getting a list of shooters to compete at that distance, the men are not readily to be found. Fine shooting at 20yds. is in every way a test of skill as exacting as coarser work at the longer range, and as for practical use of the weapon, no one will deny that it is to be employed at the very shortest range in the thickest of hand-to-hand conflicts. An officer mounted would ride up and reserve his fire to the last moment. It is very instructive to have scores made at long ranges on large targets. Such shooting enables estimate to be made of the average aberration of man and arm together, but it is not always practicable to have a 50 or a 100yd. range. Jumping to the other extreme, the matter of 12yd. shooting has been so ciphered down, and the scores have been made so close, that the experts ought in self-respect to abandon that distance. All the merit in very close scores has gone with the production of the fine weapons now to be found in every gallery. Double the distance, and both the shooter and his revolver are put to

more than double test. The time will come when 20yds. shooting will show as fine records as those now on the walls for 12yds. To hasten that time was one of the considerations which led FOREST AND STREAM to fix that limit for the amateur revolver contests.

IMPASSABLE FISHWAYS.

ON Nov. 19 we published a communication on fishways in which the Holyoke structure was described as a failure because of its faulty construction. This is only one of many similar cases which have come to our knowledge. Inspector J. R. Kinney of the district comprising the counties of King's, Annapolis, Digby, Yarmouth, Shelburne, Queen's and Lunenburg in Nova Scotia, in his annual report for 1890 has the following to say about the subject: "Of all the fishways in this district I know of but three or four that are properly cared for. In more than one instance, as I have before pointed out, the fishways have assisted in making the streams non-productive. For instance, take the case of the lower dam on Salmon River, county of Digby, where there is a 'patent' fish ladder, built entirely below the dam, without any attempt at an auxiliary or wing-dam below. Before the creation of fishways and ladders this stream was a noted salmon stream, but now the salmon and alewives have been 'patented' out of existence. Happily the lower dam on the Clyde River was so far demolished that fish have now an unobstructed passage, hence the utility or non-utility of the fishway at that dam is no longer a live question, as the structure is perfectly dry at all times."

Inspector Robert Hockin of District No. 2, Nova Scotia, comprising seven counties, at the end of 1890 reported as follows concerning fishways: "Upon examination of the fishways in this district I found that of those constructed fully 90 per cent. were not, at the time of examination, in such a condition as to allow fish to pass within their spawning grounds, and that they were not fulfilling the purpose for which they were intended."

In the report of Mr. Wilmot, Superintendent of Fish-culture in Canada, we find the following statement: "The undersigned has been instructed on several occasions to visit and inspect certain fish-ladders in different parts of the country and in every case has found them to be perfectly useless, either from unsuitability of location or want of proper construction, the consequence of which has been that these passes, which cost considerable sums of money to help sustain the fisheries of the locality, act the reverse way by giving greater facilities to persons to kill the fish at the entrance of these passes, and by squandering the money in the construction of them—thus showing the necessity that exists for adopting the most perfect fish-ladder now known, and compelling the owners of mill dams to put in these passes, under the requirements of the Fisheries Act, section 13. This want of a duly authorized fish-ladder, and the delay in having an efficient one put in every mill dam or slide, or other obstruction in all of the streams of the country is telling most severely against the keeping up of fish life by the natural as well as the artificial method of reproduction."

We have presented the above statements in order to show one phase of the fishway problem. Effective fishways are in existence and we desire to place on record the results of their introduction. To this end contributions are invited from interested parties everywhere who have opportunity of investigating these important accessories to the increase of the fish supply.

SNAP SHOTS.

THE fatal "accident" on the Hudson River was caused in just the way that the usual didn't-know-it-was-loaded gun "accident" occurs. When the train was brought to a stop a trainman was sent back with his lantern to signal trains approaching from the rear. According to published reports this trainman took it for granted that the next train to follow would be a local and would stop at a station; accordingly instead of remaining on the track to signal the train he went into the station; the train proved to be not the local he had expected, but an express, which thundered by and crashed into the train ahead. All because the trainman took it for granted. The average human being who shoots another with a gun he thought empty in the same way takes it for granted that the gun is unloaded.

So far as close and exciting racing is concerned, the

year just closing compares poorly with some of those immediately preceding it: there has been no great international race, as in '85, '86 and '87, and even the home races have lacked the excitement that attended the advent of Minerva and Liris in the 40ft. class in 1886. While the many races of the new 40ft. class have afforded plenty of sport through the season, the immediate and unqualified success of Gloriana in the first week of the racing, robbed the following races of all interest and excitement, as it was clear from the first that she was without a dangerous rival. The present year, however, will not be forgotten, but will have a prominent place in yachting history. Just as the year 1851 is remembered as a turning point in yacht designing, the old theory of a full bow and fine run being swept away to be replaced by one radically opposite: so the present year—1891—marks a new departure in designing, in every way as notable as the other. Just as the long, fine bow of the America drove out forever the round bluff ends of the old yachts, so has the full waterline of the Gloriana put aside the hollow bows and fine lines of existing yachts. Paradoxical and contradictory as this statement may appear at first sight, its truth will be plain to all who consider the subject carefully. Of the many distinct steps in advance that have been made in naval architecture in the forty years between 1851 and 1892, one of the most important is that embodied in the full waterline and buoyant topsides of Gloriana.

The extinction of the buffalo from the plains of the West has been followed by a disappearance of the buffalo grass which formed the chief subsistence of that animal. In his paper on "English and American Flowers," in the *Fortnightly Review*, Prof. A. R. Wallace accounts for the supplanting of buffalo grass by other coarser plants by the theory that "the uniform hardening of the surface by the tread of bison, together with the equally regular manuring, favored the growth of this particular form of grasses."

The interesting photograph of a hunting outfit on the Sawtooth Range, which was reproduced in our issue of Dec. 17, was there wrongly credited to Mr. F. Bracht, of this city. The picture was taken by Mr. F. F. Frisbie, of Detroit, Mich., and we take much pleasure in giving him the credit due for so excellent a piece of work. Mr. Frisbie has been fortunate in securing views of camp life and scenery in the wild hunting grounds of the Northwest, and his work demonstrates his skill.

The New York city salt-water fisherman who resorts to the fishing banks off the New Jersey coast is of so much importance commercially that he is to have a sea-going steamboat built especially for him. The well-known Capt. Al Foster, who takes tens of thousands of anglers down to the banks every summer, is building the boat, which will be 225ft. in length, will have three decks, and be provided with devices intended to make salt-water fishing a delight.

It is expected that in 1892 the FOREST AND STREAM will be a better paper even than it has been in 1891, because we shall have better facilities for gathering the news and better facilities for handling it. No enthusiast interested in the gun, the rod, the dog, the trap, the yacht, the canoe, need look elsewhere for all the news. It will be in the FOREST AND STREAM.

It would be a consummation devoutly to be wished if some arrangement could be made by Canada and the United States to secure adequate protection of the fish in the St. Lawrence River system of waters.

"Sniggering" is the term used in Great Britain for what we call "jigging," that is catching a fish by jerking a big hook into its body. It is a heathenish practice and deserving of the heathenish names.

Many a man who cares nothing for shooting and who affects rather to despise your hunting dog is glad enough to share the game that dog helps to provide.

ANY subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal card the name of that friend.

The Sportsman Tourist.

JIM McLANE'S BAY PONY.

How He Got Him.

SOME time ago a friend of mine suggested to me that we two should take a trip in a flat boat down the upper Mississippi.

The railroad which passes near Fort Benton does not again approach the river as you go east until near the mouth of Milk River, a distance which, following down the bends of the serpentine Missouri, is about 500 miles, though by rail it is not half as long.

We built a boat at Benton and went down past Croquant du Nez, past Cow Island, past the Rock Creek ferry near the site of the old trading town of Carroll, which caved bodily into the flooded Missouri one stormy night, past the mouth of the Musselshell, with its bullet-riddled cabin, and a hundred other spots, resorts of wood hawks and horse thieves, scenes famous for Indian skirmish and border feud.

It is not my purpose to tell about this trip other than to say that after two weeks of toil, cold and exposure we came again within sound of the engines' whistle.

The road lay at some distance from the river, but we ran ashore at the foot of a cut bank and I clambered up to make inquiries at some cabins about a mile away.

After plunging through the brushy thickets in the gathering darkness I found open country, and reached the cabins on the bluff, but I was hardly better off. The householders were pure and primitive Indians, who knew no tongue but their own, and even declined to understand the few words of Piegian I had at my command.

At last, after trying all my own resources from baby talk to dog latin in vain, I made signs to a benevolent-looking old fellow with two pairs of brass bangles in his ears to follow me to the river and talk to my more accomplished companion.

How Brassbangles understood me I can't say, perhaps it was by reason of the necessity of the case. At all events about half an hour later we stood on the bank and my associate by ridiculous but effective gestures made a bargain with the savage to transport our baggage to the railroad on condition that we should give him the boat and its rigging. I afterward added a quantity of old clothes for good measure. Brassbangles, however, was earnest in his petitions for "whisk." This, I assured him, was bad, but he retorted by a most comic pantomime that he smelt my breath. However, he smelt nothing more in the way of whisky on that occasion, and soon we were squatted with our baggage around us in his cabin, where we were compelled to pass the night while awaiting the morning train.

We had eaten our supper and distributed rations to quite a circle of new-made friends. We had smoked a little and seen a quantity of tobacco yield to the persistent begging of our hosts, when my ear caught the sound of a heavy wagon driving fast over the prairie. Brassbangles dropped the blanket that was around his waist and slouched swiftly out. Soon we heard the team stop outside and an imperative voice seemed to direct the unharassing of the horses, while from the crackling and snapping of bushes we thought that some of the contents of the wagon were being carried into the thicket. The newly arrived driver soon came in. He was a dark, sinewy fellow and wore for the moment an expression of mingled distrust and menace. He was, in fact, a whisky trader, and had come on to the Assinaboine reservation with a load of liquor, running the risk of the serious penalties of the law. He fancied at first that we were Government officers, but my friend's tact soon showed him our harmless nature, and he began to make amends for his previous distrust by a frank friendliness.

For my part I was almost sorry that we were not officers, that we might make some effort to destroy the infamous traffic of selling whisky to the Indians, but I became so much interested, as the night wore on, in the trader's stories of the early frontier that my respect for righteousness lost something of its vigor and became perhaps sickled over with thought of the valuable contributions to history and ethnography that the mistaken adventurer was giving us.

Jim's recollections (for the trader's name was Jim McLane) were of many tribes and nations. He himself was half Scotch, half French and half of each of the tribes with which he did, or had done business either in the present or past. How much real Indian blood ran in Jim's veins was doubtful, but it appeared when he spoke of the Piegians that he was half Piegian, when the Assinaboines had a place in the story he was half Assinaboine, and his claims to Crow and Gros Ventre blood seemed to depend also on the association of the moment. I am inclined to think that Jim's mother had been a half-breed, but as he lost his mother in early life and was perfect master of many tongues, he could never quite decide which tribe should claim him, and so gave each one its due turn.

Conspicuous in many of the exploits which Jim narrated was a bay pony, a cause of war fruitful as the beauty of Helen or the body of Patroclus. But to appreciate our historical perspective we must now go back a little nearer the beginning and get an idea of the upper Missouri in the days of the fur trade.

Fort Benton is now a town blessed with a railroad and at the head of steamer navigation on the river, but it is decaying with a rapidity which promises a speedy end. Other towns with more railroads and cheaper freights are taking away its reasons for existence, and the city of Great Falls is relegating Fort Benton to the place of a romantic but past tradition.

Twenty or thirty years ago Fort Benton was perhaps smaller than it is to-day, but it was then the center of a great and growing trade. The square adobe tower and the long mud walls, whose relics we may still see, inclosed a post planted on a flat by the river and commanded by a semi-circle of bluffs, whence a single rifled gun could have ruined the establishment with a dozen shots; but the bluffs were too distant for the range of small arms, and under the conditions of the time the fort was strong.

A firm of fur traders, whose members, Carroll & Steele, had formerly worked for the American Fur Company, had here set up an independent post. The Blackfoot bands, which then held a vast, an almost undiminished territory, brought their peltries here to exchange for the treasures they most loved. Further down the river lived

the Gros Ventres, and these, as well as the Crees and Sarcees from Canada and now and then even distant Kootenays or hostile Crows, made this post a supply point.

Buffaloes were as thick on the prairies as the cattle are now. Wolves and coyotes were numberless. Bear, elk, mountain sheep, antelope and the precious beaver, with otter, fisher, fox and mink, abounded on every side, but chief of all these was the buffalo. The commerce in buffalo robes was immense. And as there was competition among traders, the Indians must be kept in good humor, a task that needed both diplomacy and firmness. Sometimes, in spite of every precaution, the savages would blaze out into hostility; and sly assassination was one of the lesser evils to be feared from people who, when aroused, delighted in the invention and practice of unspeakable cruelties.

One thing the best Indian could not understand, and that is that warfare should be confined to conquering warriors. The Indian on the warpath killed everything and tortured everything that he met if he could.

This is not an indictment of a race, all of whose bad qualities have been fostered by alternations of coddling philanthropy and cruel reprisal grafted on a consistent policy of vulgar theft. It is the statement of a trait that seemed inseparable from Indian blood in its original savagery.

Among the Blackfoot braves who were trading at Fort Benton was a young fellow of high renown as a hunter and fighter. His cringing squaws would spread a robe for him to alight on at the door of the lodge when he came back from the chase. His leggings were beautifully fringed, his blankets were of the most approved device, and his coppery cheeks glowed with broad stripes of red paint.

This proud young dandy, who was named Lone Wolf, traded at the post, and from him Steele had bought the bay pony that forms the subject of this monograph.

But Lone Wolf's temper had for some reason become clouded. He was low in purse and low in mind. Jim McLane, who worked for Steele at the time, noticed the changed demeanor. Lone Wolf no longer responded to the compliments of the day. He neglected or repulsed peace, offerings of sugar, even of tobacco. His heart was poor.

Still amid all the bustle of the post, the sulky Blackfoot did not attract much notice. Jim attended regularly to the horses that were "kept up," that is to those which were sheltered and grained for daily use, and had for a stable a large double log cabin with a padlock on the door.

As he brought in the horses one morning after watering them he passed Lone Wolf lying on the ground and apparently chewing the cud of meditation. Jim tied the horses in the stalls and then gave them hay, but before he finished he heard some one calling his name in front and interrupted his work to step out and see what was wanted. He came back in three or four minutes and was going on with his business when he noticed that the bay pony was gone. For a moment he was puzzled. Then he rushed to the door. The Indian was gone too. He looked up the river and down, he scanned the flat and the bluffs, but neither horse nor Indian was to be seen, nor dust cloud nor any sign of galloping creature. The pair had vanished.

Jim at once reported the facts to Steele and got a sharp scolding. A few days after Steele bought a fine Oregon horse and told Jim to take better care of him than he did of the other one. This was Steele's last allusion to the bay pony. But Jim's spirit was deeply galled. All his Indian blood was boiling at the disgrace of being outwitted by a horse stealer. For in Indian esteem the clever horse thief is but a little lower than the warrior who dangles a hundred scalps, while a man or a tribe that loses horses is as contemptible as a beaten enemy.

Meanwhile Lone Wolf had gone to his camp, about seven miles from Benton, and was running buffaloes earnestly to make up for lost time. Worse than that, he now gave his custom to the rival traders, while old Four Bears, a Blackfoot brave who was on good terms with all sides, used to ride into the post every day or two with tales of the prowess of Lone Wolf and his pony.

"Lone Wolf killed six buffalo to-day," Four Bears would chuckle. "Lone Wolf got good horse, Lone Wolf big chief."

The largest tally for any one day reported by Four Bears was eleven buffalo for the bay pony, but the evident merriment and satisfaction of the old runner were an insult to themselves—and as for any attempt to reclaim the stolen horse, such an idea had entered no one's head. He was the spoil of warlike success; and ugly hints of the untoward fate that would befall Lone Wolf's enemies were whispered around.

But Jim's heart was hot, and yet he was crafty withal. He would take a horse out for exercise and, as soon as he was out of sight, would ride off toward the Blackfoot camp, hide in the brush and watch with a field glass until it got so late he couldn't see, and then he would ride back to the post, stable his horse quietly, and be at his work the next morning with so domestic an air as never to arouse suspicion about his doings.

But around the Blackfoot lodges there was good watch, too, and many precautions were taken to keep all their gains.

Through his glass Jim could often see the band of horses driven in in the evening or taken to water or picketed around the lodges—but there was always a boy or two on guard to give instant alarm. And the bay pony had been disguised. His ears were tied back with a thong passed around his neck, and his skin was plastered in spots with clay. Besides this, he was always tied by a short neck rope to some companion pony, so that it would have been almost impossible to get away with him by a rapid swoop.

And after a month the Blackfoot lodges were moved some six miles further off, so that Jim's scouting trips took nearly the whole night, and were fast wearing out his strength and patience. He became half desperate, and is it not written that fortune favors such as this?

One afternoon Jim set out in an uncompromising mood. He forded the Missouri, and left on an island a new grass rope. Then he coiled his lariat and sneaked rapidly toward the Indian lodges. With his glass he saw a boy driving the horses to drink, and he made a rapid circuit and pulled up behind some brush a couple of hundred yards from the water hole, and as he halted he saw the boy turn around and go into a lodge,

Without a second's pause he dashed between the horses and the lodges and urged the band off toward the prairies, then, as they headed the right way, he rode through, roped the bay pony around the neck, shortened up his hold till he and his prize were close together, and sending his spurs in made his best speed for the breaks of the bad land bluffs.

As he looked back he saw the excited bucks stream out of the lodges and peer after him, shading their eyes with their hands against the rays of the fast declining sun. Then the Indians dashed back to get their guns, and the boys rounded up the scattered herd. It takes little time for tough savages to get ready, and before Jim had half a mile of a lead the Blackfoot braves were thronging after. Jim was riding a grain-fed horse, stronger for brief effort than the grass-pastured Blackfoot ponies, and of course the captured pony had no load, so Jim chose a direction that led him through a country seamed by steep clay-sided barrancas 200ft. deep, and racing up and down these discouragers of pursuit he hoped to distance his hunters. But for a while the Indians gained ground. Hardly more than one wide ridge lay between the chasers and the chased, but the sun had now gone down and the orange sky of twilight brought the crest of the swell into relief. On this crest Jim mounted, and with his utmost efforts managed to maintain his interval of safety, riding in full sight of his foes.

A little later and in the darkness of the interim between the fading twilight and moonrise Jim turned sharp off his course toward the river, and while the baffled braves followed fiercely after nothing, he at his ease again forded the Missouri and tied up his recaptured pony with his grass-rope to a tree. Then he rode to the post, and for the last time crept in with the caution of a thief.

The next morning, after doing his chores in, I fear, a sleepy and imperfect manner, Jim asked Steele what he would take for the chance of getting back his stolen horse. Steele, with the quick sure suspicion of a frontiersman, said, "You've got the horse."

Jim speaking but a partial truth, said he thought he knew how he could get him, but Steele had no fancy for so dangerous a piece of property and thought it would injure his trading with the Blackfoot bands also; so, as he was a generous fellow, he told Jim that he could have the pony if he got him. It did not take long for Jim after thanking Steele to have the animal back in the stable, and hardly was this business done when old Four Bears turned up looking for his accustomed cup of coffee and full to the brim of the deeds of Lone Wolf on the bay pony; for Four Bears's band was camped in a different place from Lone Wolf, and his news was a day old.

"Lone Wolf kill four buffalo yesterday," said the old man, with his triumphant chuckle as he swallowed his coffee.

"Major Steele has a new black horse," said Jim when Four Bears had finished his cup. "Come and see it."

Now, the black horse stood in the first stall and the bay pony in the second. Four Bears while looking critically at the Major's mount caught sight of a white stocking on a bay hindleg in the stall beyond that seemed familiar. He stepped quickly and eagerly around and recognized the animal. He turned toward Jim with his eyes as big as saucers and his mouth open, and covering his mouth with his hand by an Indian gesture eloquent of confusion, he walked out without a word.

Thus the famous pony became the property of Jim McLane. But as that good old rule of ownership, "Let him keep who can," then prevailed in Montana, the future possession of this chattel proved full of chance and change.

The Blackfoot brave, chagrined at being beaten at his own game, was all for reprisal, and his threats were often reported at the post.

When Jim rode his horse out for exercise he always chose the brightest part of a bright day, and rode along the crest of the wide barren ridges whence the eye could command a wide view and easily defeat any attempt at ambushade. But after three or four weeks of watchfulness there was a little relaxation of tension, and, hastening one day on a distant errand, Jim swung around a curve in the trail, and lo! about a hundred yards off and ambling toward him came Lone Wolf with his rifle across his lap and looking, as usual, grim. Jim had but a revolver which, however, was somewhat hidden on his thigh. He was afraid to reach for his weapon, for that would be a signal for instant war, and at a hundred yards the rifle had all the advantage. He was afraid to turn and run lest his enemy should, as he expressed it, "paste me in the back, you know. Them fellows is awful good shots on horseback." So Jim put on a caressing smile and whirling his whip in an ornamental manner, let his whip hand finally rest unnoticed on the handle of his pistol, while every stride of his horse made him feel happier because it put the arms of the possible combatants more on an equality; indeed, at very short range Jim would have the advantage.

Lone Wolf was evidently as much surprised as Jim at the encounter, and sat unmoving while Jim rode up with profuse courtesy and turned his horse swiftly around so as to be on the Indian's right, next the butt of his rifle; then Jim, with the prompt mendacity of a born diplomatist, told Lone Wolf that Major Steele had sent him to Lone Wolf to invite that celebrity to the post in order to present him with gifts and renew their friendly relations. For a moment the Indian pondered. Then he looked at the bay pony and smiled. Then he grunted approval and they rode together to Fort Benton, friendly but very watchful and alert. Arrived at the store Lone Wolf was seated with honor and laden with coffee and tobacco and cartridges, while he for his part gave the Major a handsomely painted parfleche of raw-hide which he carried tied behind his saddle, and between Jim and the Blackfoot reigned white-winged peace for several years, until, in fact, Lone Wolf met his death fighting the Crows.

How He Lost Him.

There was a good deal of nervousness felt at the post, for the Indians were getting uneasy. The Blackfoot bands had drawn off and the scattered parties of Gros Ventres seemed to be concentrating.

The town which had grown up in the flat alongside of the post was laid out in a rough square, and volunteer patrols watched all night on each of the four sides to guard against surprise.

The patrols were divided into three reliefs: the evening watch from six to ten, the middle watch from ten to two, and the morning watch from two until sunrise.

Trading with the Indians had practically stopped. Only a few old friends came in now with uncertain or gloomy news. Of course the horse herd was a matter of anxious attention. Every one brought up his horses if they were within reach, and the band was herded on the flat in sight of the post and partly fed with hay because the feed on the flat had been almost consumed by the mule trains of the freighters.

Some people, however, had left their horses at outlying ranches, and in these cases it was usually thought best to view their probable loss with philosophy. Matt Carroll, however, had a friend who owned two fine driving horses which were running on Jones's ranch, about fifteen miles below Fort Benton, on the right bank of the river. This friend not only wanted his team, but he wanted it badly, for he had to drive to Helena in great haste, and these horses were about the only ones he could rely on for his intended journey.

Carroll had tried several times to get men to go for the horses, but in vain. It was thought, to be sure, that the Gros Ventres were north of the Missouri, but the slightest chance of capture was an unpleasant risk. Finally Carroll happened to remember Jim, so he proposed to give Jim \$50 to ride down and bring the animals up. As Jim was well mounted he could get down in two hours easily, and ought to be able to come back with the team in three hours more—so that starting after breakfast he could be in time for dinner at the post. Jim thought the matter over for a moment, and then lured by the chance of getting some cash, which had of late been a kind of property that he greatly lacked, he agreed to go. The arrangement was made in the afternoon. Jim, counting as present his future earnings, started in on the credit of his contract, and for the first half of the night sought that experience of life and manners which is found in the barrooms and card rooms of the frontier. About midnight he determined to go home, when he suddenly remembered that his turn for patrol duty fell in the morning watch; so he decided that it was not worth while to go to bed, and simply dozed in a chair by the barroom stove until called for duty.

After breakfast Jim saddled his horse, took his rifle and set out. This horse was the identical Blackfoot pony got from Lone Wolf, and from the retrospective value of \$200 which Jim set upon the animal, its memory was clearly precious. Jim forded the river at the first riffle below the post, where in very dry times there was hardly 6 in. of water, and then turned eastward, but not even the chill of the winter morning could enliven his faculties dulled by his long vigil, and perhaps somewhat stupefied by the reaction from his evening's jollity. Jim nodded. His horse sympathized with his humor and jogged easily along. He was going at only half his intended speed, but the thought did not trouble his sleepy mind.

As the road pitched into a steep ravine the horse sidled down with an even more deliberate gait. He reached the bottom and Jim waked to find himself wrenched from the saddle, his gun torn from him, his horse captured and half a dozen painted braves around him. In an instant a knife was at his throat, and his days were like to have then ended but a mild-mannered old gentleman who accompanied the war party prevented the murder and said that the prisoner must be straightway led before the council. The prisoner accordingly was stripped of his coat, trousers and other clothes down to his drawers and undershirt (though his moccasins were left as a favor) and he was made to follow the horses up to the assembly of warriors on the mesa above.

Fortunately for Jim the same mild-mannered old chief who had already saved his life continued to take an active interest in its preservation, perhaps by force of habit, perhaps on the ground of some relationship by blood or adoption. The party assembled were clearly bent on war. There was no baggage to be seen. No squaws. The ponies were without saddles, prepared for rapid work. The men had nothing with them but their arms and, by reason of the cold, their blankets muffled warmly but shapelessly around them, and every face carried broad daubs of red paint, which added to the dull ferocity of the expression.

"My son," said Jim's old friend as they approached, "many questions will be asked you. You must answer these questions. Then you will be protected. I have slept in the same lodge with you, you have given me buffalo meat and coffee, but you must answer the questions. The young men are angry. Their hearts are very high. They want horses and scalps."

The warriors who were squatted around on the ground as Jim's captors came up did not move otherwise than to cast a grim look on the new comer, but when the prisoner's character was explained first one and then another would put a question to the shivering wretch.

How many men were there at the post? Jim made a generous estimate. How were they armed? Did they keep good watch? How many horses were there? Where were they herded? All this had to be answered with approximate truth. And indeed the truth should have made the Indians cautious, but they had gone too far to abandon their project now, and merely got information to shape their attack. When the examination was over there was a well-supported suggestion that it would be wise to take a preliminary scalp for good luck. Jim's old friend, however, stuck to his defense, and it was decided to send the prisoner off to the river and swim him over to keep him from giving the alarm. Two of the young bucks that had effected the capture were detailed for this service.

Jim was tied to the tail of the horse of one man while the other rode behind to see the fun. The trail was steep and stony. Jim's moccasins, already soaked, were of little protection now, and his thin underclothes were torn by every shrub they passed. The horses were put at a fast lope. If Jim stumbled he would be dragged to death, and the grinning savage in front lashed indiscriminately at his horse and his prisoner, sure to torture his captive wherever the blows fell. In a time, short in minutes but long in anxious peril, the party reached the river. Jim's hand was untied, and the Indians, taking their guns carefully, signed to Jim to jump in.

It needed no second hint. Before the sign was finished he had dived into the surging current and was speeding down the rushing stream under water. He rose almost safe from any shot, but to doible assurance he kept on going rapidly down until he reached a shallow far below. Then he waded to the northern shore and sat down under the low cut-bank to get his breath and think.

Until now he had been under a fearful tension. The shock of the surprise, the hideous prospect of torture and death had deprived him of immediate feeling. He shivered, but he didn't know it. His feet were torn and mangled by his run and his body bruised and bleeding from the branches on the trail and the whip of the Indian, but at the time he had no thought for that. Now, as he sat chilled by the icy river, half frozen by the winter wind, bleeding, sore, and at last, for the moment safe, he broke down and cried with the convulsive sobbing of utter pain and prostration.

At last he climbed the cut-bank and found himself on the site of an old cabin, and rummaging around somewhat aimlessly, his eye fell on an old-fashioned cap and ball Colts revolver lost in the rubbish. It was quite worthless, but it was something, and Jim grasped it for want of a better weapon and began slowly to crawl and totter back toward the post, slinking and hiding like a coyote. It was getting along in the afternoon, and the west wind seemed to bring faint sounds of yelling and firing that were not cheerful for a defenseless and freezing man, so he chose a retired den and waited, keeping alive as best he could until after sunset. Then there was no choice—he must get to shelter or perish. He now struck out with what speed he could. At 8 o'clock he had reached that lofty bluff called the Croquant du Nez. On the river side it was almost perpendicular, and he kept along there, thinking that he would thus be safe on one side anyhow.

The wind had now risen to a very gale and it brought to him the sound of voices, but whether of whites or savages he could not tell. He felt fall on his face and waited. The sounds came nearer. Soon he could distinguish forms against the night sky. About 50 yds. away the group stopped and consulted. Jim's first notion was that the men were Indians, and he was about to drop over the bluff and take his chance of being killed by the fall; then a sudden gust brought him some words in English. They were men from the post and their language boded no good to a stray savage.

The same gale that carried the words of the whites to Jim made it useless for him to try to call to them. Yet he must do something, for their peering glances had made out his body and they were going to fire on the chance.

With a shout, perhaps not wholly inaudible, of "don't fire! don't fire!" Jim jumped up and, holding both hands above his head to show at least that he was harmless, he rushed forward and fell in the midst of a reserve party that had come to seek him.

For the Gros Ventre raid had failed to do anything more than capture a lot of horses and the scalp of one defenseless unfortunate, at the expense of two warriors who fell before the rifles of the whites, but, as has been seen, among the animals lost was Jim McLane's horse, who now disappears from history.

H. G. DULOG.

CANOE RECOLLECTIONS.

MY first introduction to a canoe, by personal contact, occurred in my ninth year at the mouth of the River Raisin, in Michigan. I had been vainly trying to capture some rock bass on the banks of the river when I chanced to see an old Indian in his canoe, whom I beckoned to my side and asked him to ferry me over to a charming little island where I thought my chances for sport would be improved. The good red man complied with my request, swept his craft across the water like magic and volunteered to await my pleasure; and having caught a fine lot of fish I was duly landed upon the main shore again, deeply in love with the dugout canoe and as happy as a king. To have a canoe of my own soon became the leading hope of my life, and it was not long before I was gratified, through the kindness of my father, and a nice little Pottowattome affair soon became the leading topic of conversation in the family. In the immediate vicinity of my home, on the southern side of the Raisin, stood two beautiful little islands, all covered with trees, bushes and vines, and the tiny harbor which they formed became the resting place of my canoe; and after I had safely circumnavigated the two islands a number of times I was prepared for further explorations, which I duly accomplished—not only on the Raisin but also on many other waters of the United States.

It was in a birch canoe that I visited the headwaters of the Mississippi River in 1845, when my companions were Chippewa Indians, and whose characteristics it was my privilege to study and admire, and whose so-called savage methods never caused me as much fear as the hooting of an owl over my head, as I counted the stars while lying under my blankets in the shadow of the trees. It was from the same tiny craft that I watched the ripples which were playing with each other in the center of a marshy pond before parting company, some of them turning to the west to find the waters of Sandy Lake and thence to pass down the Mississippi River to be lost in the Gulf of Mexico, while the others, finding a passage down the St. Louis River, were to cross the basins of the great lakes Superior, Huron, Erie and Ontario, until they reached the Gulf of St. Lawrence.

It was in a canoe, moreover, that I first visited the desolate sand hill where now stands the city of Duluth, and obtained my first view of Lake Superior. From that point to the Apostle Islands I paddled along the southern shore of the great lake, catching trout at the mouths of various streams, picking up agates all along the shore and afterward forming an acquaintance with the Porcupine Mountains, Copper Harbor and the Sault Ste. Marie. And I may add that next to the pleasure of meeting the Poet Bryant at the Sault I enjoyed a canoe race over the rough waters and captured many a noble trout, with a Chippewa chief for my companion.

My first view of the St. Lawrence was obtained at the Thousand Islands, when I rambled among them in a Frenchman's canoe, now sketching the picturesque rocks and evergreen caves of verdure, and anon joining in battle with muskallonge. At a later date I caught black bass in the waters of the Ottawa with the late Harrison Stephens, the noble man and millionaire angler of the Dominion. It was from a birch canoe that I first gazed upon the stupendous cliffs of the Saguenay River, and while touching their sides with my paddle, was informed by my Canadian comrade that the water under our shallop was not less than 600 ft. deep.

Long before the Restigouche, the Nepisiquit and the Miramichi rivers had become generally known as favorite haunts of the salmon, I navigated their waters in birch canoes. I once made a canoe trip with my wife and

a sister along the Matapedia and St. John rivers, and subsequently visited the Hermit of Aroostook in his cabin on that river, nor can I ever allude to the bark canoe without recalling the superb wilderness scenery of the Upper Penobscot and Kennebec, and the majestic form of Katahdin, as it looks down upon Moosehead Lake in its marvelous beauty and loveliness.

While the dugout or solid canoes of the Southern States cannot, on the score of beauty, be compared with the birch-bark canoes of the North, they are undoubtedly much safer, and associated with a world of beauty. Those of the upper Tennessee may boast of a mountain land of surpassing beauty, and of a rare and interesting history; while those of Florida have it in their power to pilot the way along the sleeping streams, where the live-oak forests, matchless springs and lakelets, broad lagoons and fairy-like islands are forever competing with each other to win the affections of the alien sportsmen and travelers. And then, if we pass down the Alabama and Pascagoula rivers and reach the lower Mississippi and its southern tributaries, we shall find that while the steamboats now monopolize the business of those regions, the sportsmen and lovers of matchless scenery must depend for their choicest pleasures upon the canoes of those romantic waters.

As there is hardly a river in the United States that has not, in earlier and later times, been navigated by the dugout or birch bark canoe, the very mention of the craft naturally recalls the wealth of our country in its flowing waters. The total number of parent streams within the Union and on its borders is said to be 346, while their tributaries make a total of 5,000. And to the streams here mentioned may be added 1,317 full grown lakes, making a grand total of nearly 8,000 waterways, with which the American canoe has hitherto been identified.

Turning now to the important part which the canoe has taken in the history of our country, we cannot but be surprised at its success. Lewis and Clark depended upon it when they opened a pathway of empire over the Rocky Mountains to the Pacific Ocean. And so was it when Cass and Schoolcraft discovered the sources of the Mississippi River; and also when Henry, Carver, McKenzie, Jaques, Hennepin, and such explorers as Champlain, La Salle and La Hontan first made the world acquainted with the wonders of Canada and the region of the Great Lakes.

It was to their birch canoes that the Hudson's Bay and American Fur companies were indebted for their great and long continued prosperity, and without the birchen waif how futile would have been the zeal of the French missionaries in their labors among the aborigines of Canada and the United States. It was in a birch canoe that Daniel Bacon coasted the lonely shores of Lake Huron when leading the noble and self-denying life of a Protestant missionary among the Indians, whereby he set an example which ought to bring a blush to the faces of a large majority of the modern preachers of the land. Except for the canoe the world would this day be without the possession of that marvelous volume of American adventures from the pen of Charlevoix. Another man who in later years was greatly assisted by the canoe in his explorations was the artist Catlin, and he it was who pronounced the birch canoe the most beautiful craft in the world. But perhaps the most imposing picture that was ever produced by the birch canoe and its cousins the piroque and bateau was that connected with the passage of Abercrombie's army through Lake George, when seventeen thousand men crossed over to Ticonderoga in their romantic fleet, only to be defeated in their war-like expectations.

Aside from their beauty and fairy-like movements, the American canoes are noted for the skill with which they are managed in running down the rough waters of our rivers, or in bounding over the billows of the sea.

The skill which the Indian and French voyagers always manifested in the management of their canoes has seemed to me a marvel and a mystery; and while the birch canoe has won the palm in gliding and leaping down the rapids of the North and West, the tiny fishing craft, with its covering of skin, has performed wonders along the northern coasts of the Atlantic and Pacific Oceans.

As boy and man, I remember only two occasions when my life was endangered in connection with a canoe. The first was in a shallow bay of western Lake Erie, when I attempted to haul into my canoe a mammoth catfish which I had hooked with a hand-line, and the weight of which exceeded that of myself and canoe combined. I secured my fish, but measured that part of the lake with my legs and arms, and duly reached the shore in safety.

The second adventure that I would mention occurred in the valley of the Restigouche. Although accompanied by my wife and a sister, I had planned a canoe trip on the Matapedia. Two canoes, with four Indians and three passengers, made up the cavalcade. After crossing the Restigouche and entering the tributary, we made two discoveries, first, that there was a roaring freshet coming down the stream, and secondly, that all the Indians were in a state of intoxication, whereupon I ordered an immediate landing, and in less than two hours we were all safe under the roof of Athol House, the place of our departure. We remained there one day, and then started for the St. Lawrence over the Metis portage by the usual route in an ox cart, over the hills and through the woods, and I owe it to the Matapedia to declare that, while joined by the canoe men in preventing me from passing up its beautiful waters as I desired, it was my privilege to capture near its source a 26 lbs. salmon, as a kind of return for my disappointment. CHARLES LANMAN.

POSSUMS UP A TREE.

Editor Forest and Stream:

I never saw a wild possum in my life, and mighty few of any kind anywhere, but I can settle that dispute about "possums up a tree," by quoting from no less an authority than "Uncle Gabe Tucker," who in one of his most celebrated musings says:

"De bantam chicken's mighty fond of roostin' purty high,
An' de turkey buzzard sails above de eagle in de sky;
Day ketches little minners in de middle ob de sea,
An' de smalles' kin' o' possum up de bigges' kin' o' tree."

E. E. T.

It Will be Kept There.

AUBURN FOUR CORNERS, Pa., Dec. 8.—Forest and Stream Pub. Co.: Inclosed find ten dollars (\$10) to advance my subscription to the FOREST AND STREAM for three years. I intend to read it as long as you keep it up to its present standard. G. W. EUNNELL

DREAM GOLD.

WHEN bluff Prince Hal the golden circlet gained,
The friendless glitter of the monarch's eye
Half broke old Falstaff's heart; amazed and pained
That Harry thus should pass him sternly by.
So this old year, while yet another reigned,
Fair promise made of mirth and royal cheer;
But once enthroned, a cold demeanance feigned,
Passing with alien face and heedless ear.

But, ah! what boots it that in favored laps,
Forgetting mine, the horns of plenty poured?
Had not the year its gold? though now perhaps
Of all it gave remains no minted board.
The golden banners of departing fall.
The gold of amber flags emptied quite,
The gold of sunny tresses—dream gold all—
Ah, well! I would not mint it if I might.

M. M. CASS, JR.

IN MAINE WOODS.—VI.

IN CAMP, Piscataquis Co., Me., Nov. 1, 1891.—Another beautiful, still autumn day greeted us. The deer-doggers were early at work. One deer was put into the water somewhere on the lake, but for some reason escaped the battery of rifles lying in wait. So, at least, it was reported. When I arose all of the dogs were in the woods, and several of them giving tongue at once. About nine o'clock the hunt drew near, and two canoes were made ready. Suddenly, down the lake, we saw the deer swimming steadily out from shore. With my glass I saw it to be a noble buck, with the finest antlers I have seen this year. His doom was certain. The canoes were rapidly nearing the poor creature. He turned and saw them, and in his terror became confused, but finally turned again for the nearest point of land, and swam—or rather sprang with convulsive leaps—throwing a good part of his body out of water at each desperate plunge. From the shore with my glass I could see his open mouth and extended tongue and frightened eye. A shot rang out, but still he swam on, another still failed to hit him, though the foremost canoe was hardly two rods away; a third, and before the report reached me the noble head sank, and the ninth deer thus killed on this lake within ten days was dead. But now the law-breakers are getting fearful of a visit from the wardens and they make preparations to leave: and by noon they are gone, leaving three deer to be fetched next day by a team when they have gotten their dogs out of sight.

On this whole bad business little comment is needed. I by no means base my judgment entirely on what I myself have seen. The worst of the killing, and by far the worst and most outrageous, is the crust-killing in the spring. By the side of that this driving the deer into the water, or jacking them in August and September, is honorable business. There is no doubt in my mind that many more deer, moose and caribou are killed by crust-hunting in the spring than are killed in any other time of the year. The guides and hunters whom I have asked about it agree with me. Any one can judge who are guilty of the destruction. Since writing the letter in which I reported twenty moose killed in this vicinity year before last, I have learned of nineteen killed in the same region last year, and in the same time and manner. I say I "have learned" of this. The information comes from men who are in position to know and whose statements I believe. The number may not be exact but that many were killed is fairly certain.

One man who is trustworthy, and who traps, but kills no big game save for his own legitimate need, which is not great, told me of his good-natured, but unsuccessful, effort to prevent wanton slaughter year before last. Two young fellows were hunting in the spring. They killed several deer and wounded many more, when they discovered a herd of fourteen caribou. They shot two, and then "just to see them run," fired all their remaining cartridges at them. How many were wounded they did not know or try to find out, but several they knew were. Of the mass of meat they had some was eaten; but my informant told me that when he left his camp he hauled out on to the ice two heaped-up handsled loads of "as good meat as ever grew." This he did, that on the breaking up of the ice it might sink and not become offensive near his camp. These two young killers did their work not twenty miles from their homes.

But here I leave the matter—and the woods also—for a year at least. And as I may not again for a long time be able to send you a word, permit me to mention two or three things which I have had it in mind to record.

There is in San Antonio, Texas, a collection of antlers and horns worth the while of any one interested in such matters to turn aside for a moment to see. When there I was told of it, and found it—I could wish it were in a different place—in a liquor saloon, 223 Dolorosa street. The walls are completely covered with heads, antlers and horns, some six hundred sets in all. The great majority are of deer—mostly of Virginia deer—but many of the black-tailed species. Among them are many abnormal formations and freaks. One set has forty-two prongs, and there are many of far more than the ordinary number.

There are three pairs of locked antlers, having been found in that condition. There were heads and horns of ox, ram, Rocky Mountain sheep, Rocky Mountain goat, antelope, moose, caribou, cashmere goat, ibex, bison and common goat, chamois, and African antelope of one or two kinds. There was a domestic ram with four horns, another with five, a cashmere goat with four, a steer with long horns, one pointed straight back at right angles to the other, a set of moose antlers with twenty prongs, two of caribou each with twenty-seven prongs, but finest of all, to my mind, the head of a Texas steer with finely polished, symmetrical horns, running out in a slight spiral, and extending 7 ft. 1 in. from tip to tip. The collection had cost a great deal, and was naturally valued highly.

I spent two months in Missouri last summer, and to my astonishment did not see nor could I hear of, in the portions of the State where I went, a single prairie chicken. Quail were frequently met with, but the chickens were exterminated. In travel further west, only once, and that when going through the Indian Territory, did I see a prairie chicken. My journey was by rail, but yet it surprised me to see from the car windows next to nothing of the evidences of game, which were formerly so plentiful.

For vaudeictory, I want to express my thanks to that comical genius who some months ago furnished the

funniest item for FOREST AND STREAM which I remember to have ever seen in its columns, and they have, as everybody knows, contained many a "good one." I refer to the man who soberly wrote to FOREST AND STREAM to inform its readers of his discovery, on a camping expedition, that the bark of the white birch was very inflammable, and was therefore valuable to hunters and campers, if they only knew it, for kindling. He said he had found it so, and wished to share with others the benefit of his discovery. I have looked in vain in the columns of FOREST AND STREAM for some recognition of this generous deed, and I wish for one to express my thanks for it. The man was right. White birch bark will burn readily, and is a good material with which to start a camp fire. Let me add, with no claim for priority of discovery, that dry wood will burn better than green. Hereafter let no old trapper or hunter, or camper out in the woods of the north, waste his time in trying, with benumbed fingers, to start a fire with wet wood or damp moss, as no doubt has been his custom, but let him remember the advice of the aforementioned gentleman, and try birch bark.

C. H. AMES.

Natural History.

SUMMER ROBIN ROOSTS.

(Concluded from Page 447.)

HAVING dealt with what may be termed the statistics of these flights and behavior of the birds at the roost. There is nothing about the start which would attract particular attention, but a close observer will notice that, as evening draws near, such robins as may have been scattered about on the lawns or in the orchards near his position begin to show marked restlessness, ascending to the tops of the taller trees, calling a good deal—an old male perhaps singing. At length they take wing, one after another in quick succession, each, as it flies, uttering a loud note, and in straggling order disappear over the trees. The approach of another flock seems to excite them and hasten their departure, and they often follow it at once, all dashing off together as if struck by a panic, but I have never seen two flocks unite, although single birds occasionally join a larger number. Their course toward the roost is usually straight, but they sometimes turn aside to avoid a hill or follow the valley of a brook or river. As "all roads lead to Rome," so the various robin paths traced across the sky at sunset converge more or less regularly from every side to their common center, the roost. At roosts where for one or another reason most of the birds enter on a single side only and are drawn to something like a focus, they form during the height of the rush an apparently continuous stream. But close examination will show that the flight is always more or less intermittent and composed of single robins and loose, straggling parties of from three or four to eighteen or twenty birds, each single bird or flock moving quite independently of all the rest.

Some—probably birds from the greatest distances—are 1,000 ft. or more above the earth, flying slowly apparently with whirling, often intermittent, wing-beats, until almost over the roost, when perhaps after circling once or twice, they half close their wings and drop like meteors, or descend in graceful curves or spirals. Others, at lower elevations, seem to advance more rapidly and steadily, and upon nearing the roost glide down on gentler inclines. While still others skim close over the turf with arrowy swiftness, swerving now to this side, now to that, to avoid bushes or other obstacles, and turning sharply upward into the treetops just as they gain the woods. The average height of flight is a little above the trees, but it varies at different periods of the same evening as well as on different evenings. As a rule the birds come lower and lower as the twilight deepens. They seem to fly lowest—as might be expected—on cloudy and especially rainy nights, but highest—as certainly would not be supposed—on cloudless nights when the air is filled with dense haze. On a particular hazy evening (Aug. 31, 1889) the flights passing over Mr. Faxon's house were so high that "many birds were just discernible." As only 450 were counted against 835 of the preceding evening, Mr. Faxon concludes "that one-half of them were beyond my ken." The presence or absence of wind may have more to do with this matter than the conditions just mentioned, for all the especially high flights I have witnessed have occurred during nearly or perfectly still weather.

The first comers reach the roost an hour or more before sunset, but for the next thirty or forty minutes the arrivals are few in number and at wide intervals, although they gradually increase. There is rarely anything like a continuous or heavy flight until within fifteen or twenty minutes of sunset, but rather more than half the total number usually pass in before the sun has dipped below the horizon.

For about fifteen minutes after sunset the rush continues unabated. It then begins to slacken, always diminishing more rapidly than it grew, and often ending with somewhat marked abruptness. Stragglers, however, continue to arrive until it is too dark to see them distinctly, except against the light in the western sky. The earlier comers usually alight on the topmost twigs of the smaller trees and sometimes, after a brief rest, fly back to the fields to feed, as if conscious that they were ahead of time. If there is a brook or spring near at hand many birds visit it to drink or bathe. They are also fond of collecting in the upper branches of dead trees to bask in the last rays of the sinking sun, and a rum cherry tree loaded with ripe fruit is an irresistible attraction. But when the rush is at its height, there is rarely any loitering. Each bird, as it gains the woods, plunges into them at once, and with such directness and decision that one feels sure it has gone straight to its own particular perch. This, however, is evidently not the case, for during the entire period covered by the bulk of the flight, indeed for some time after the last belated straggler has stolen in, there is incessant and general agitation of the foliage as if a strong wind were blowing through the trees. This is caused by the movements of innumerable birds who, in the attempt to secure positions nearer the center of the roost, or in thicker foliage, are continually darting from place to place, often plunging headlong into the branches or dropping through the leaves with much awkward and noisy fluttering. Either because of inability to see distinctly in the dim light, or with deliberate design to dispossess their fellows,

such restless spirits often try to appropriate perches already occupied, and the squabbles which ensue, although quickly ended by one or the other giving way, are accompanied by outcries which rise above the general din of shrill, varied voices. If it is early in the season there is also more or less singing.

But the most characteristic and peculiar sound to be heard in a roost is that produced by the myriad wings constantly striking the leaves. This closely resembles the pattering of hail or large rain drops on dry foliage at the beginning of a shower. There is also an equally steady and similar but slighter sound of falling excrement with which the ground and bushes beneath the roost are so thickly covered at times as to look as if sprinkled with snow flakes.* As the darkness deepens the tumult gradually subsides. One by one the shrill voices are hushed and the nervous flutterings cease, until, when the light has quite gone from the west and the stars are all out in the great dome overhead, a person might pause under the trees and listen intently for minutes without hearing anything save the occasional drowsy chirp or faint rustle of some half-awakened bird—sole tokens of the feathered host bivouacking in the leafy canopy above.

There is much about the flight to the roost which will remind the reader of migration. The preliminary restlessness and gathering of the scattered birds; the excitement caused by the passage of other flocks; the wide spread of the infection; and the brief time in which a considerable area is practically drained of its entire robin population—all these are familiar features to one who has studied the phenomena of migration. As with the latter, the roosting flights are doubtless started by a few experienced birds who, with a definite purpose in view, lead the way over familiar ground to an old haunt. Others follow and the rout becomes general, although many of the birds which it includes are probably at first as ignorant as they are careless of whither they are going and to what end. A further resemblance to migration may be found in the manner in which the different sets of birds perform their journey—not all together nor yet quite independently of one another, but in what is virtually a straggling army where the new recruits are always more or less directly under the guidance of veteran leaders. In short, so closely do these evening flights resemble those of migration that I can trace only two marked distinctions: (1) They are comparatively local affairs extending at most over only a few square miles; (2) they are undertaken, not because of the necessity of escaping from a region where food will soon fail or the climate become unbearable, but seemingly from a mere impulse to assemble nightly in one place for mutual companionship and protection. Neither of these differences is really fundamental, nor can either affect the obvious significance of the fact, established by Mr. Faxon, that the young are at first led to the roost by their parents. If the guidance of old birds is necessary along the short and simple paths to the roosts, can it be doubted that it is even more essential on the long and difficult journey southward?

* Early in the season when the food of the robin consists chiefly of earth worms and insects its excrement is of chalky whiteness. Later, when berries are eaten freely, the color becomes so dark that the deposits beneath the roost are no longer noticeable.

WOLVES IN THE ADIRONDACKS.

FROM the northern New York Wilderness reports have come that wolves have invaded the woods in such numbers as to threaten serious injury to the deer during the winter just begun. The deer are more numerous at this time, so all guides and sportsmen say, than in many years before, because of a rigid enforcement of the game laws, and the growth of a healthy sentiment in favor of their protection during the close season provided by law. Some years ago, owing to a law prohibiting hunting that was in force for a short time only, deer increased very rapidly and became very plentiful, and then, too, there came reports from the woods that wolves were abroad and were destroying the deer in the deep snows of winter.

To say the least, it is a coincidence that with an abundance of deer the wolves, long believed to be practically extinct in the State, should make their appearance—by report—to answer for every pool of frozen blood, deer's hair, and the evidence of a death struggle in the snow during the close season. The wolves are mid-winter wolves as a general thing, for they never make their appearance until all the sportsmen have left the woods in the fall; this is probably only another coincidence. About the year 1873 or '74 the writer had occasion to cross Franklin county in the winter with a guide who had spent his life in the woods and was then past three score. We were crossing a lake on the ice, or rather on the crest of the snow above the ice, when an animal came out of the woods on the right bank and crossed at a right angle to our line of march. At its first appearance both observers pronounced it a wolf and made all possible haste to intercept it, although both were unarmed. A nearer view only confirmed the first opinion, that the animal was certainly a wolf, but the old man could not reconcile its appearance with his statement that the wolves were all gone—killed for the bounty and exterminated. That night we reached Chazy Lake and a number of guides and woodsmen were around the evening fire and this wolf question was thoroughly ventilated, and the weight of opinion was that excepting a possible stray, there were no wolves left in the Northern Woods. On different occasions since that time similar evidence has been given by those best competent to give it. When the most recent report of the appearance of wolves came out we interviewed Wm. H. Bennett, Dr. Seward Webb's chief forester, on the subject. He said that he had heard that there was a family of wolves in the region east of Brandy Lake and between Smith's Lake and Forked Lake, but he had no evidence that there was any truth in the statement. That last summer a report came to Smith's Lake that a deer had been killed by wolves just east of Albany Lake, but an examination of the "kill" showed that it was the work of a panther. He concluded by saying that if during the winter he should hear of deer being killed by wolves on the preserve under his care he should investigate the matter very closely, but he should not trouble himself to look for wolf tracks, but should confine himself to a search for snowshoe tracks and the tracks of hound dogs, and if he found those who made them he would find at the same time all the wolves that were killing deer in the Adirondacks.

A. N. CHENEY.

TURTLES WITH NINE LIVES.—On a recent visit to the World's Fair exhibit of the U. S. Fish Commission, at Washington, D. C., we found Mr. Denton at work upon casts of two terrapin, which had been obtained from the carp ponds. The artist was obliged to kill the animals before attempting to make the casts, and in order to do so he inserted a knife blade under the skin of the neck and completely severed the neck with its blood vessels and nerves, leaving the head attached to the body by the skin only. They were then put in the ice chest, where they remained five days. When we saw them seven days had passed since the above operation and yet both of the terrapin were alive and one of them was able to crawl. It may be that the low temperature in the ice chest during the first five days after the necks were severed kept them in a state of suspended animation, but for the two days prior to our visit they had been exposed to a temperature of about 65 deg. or more. We have never heard of a more striking illustration of the tenacity to life in this class of animals. The species are the painted tortoise (*Chrysemys picta*) and the red-bellied terrapin (*Pseudemys rugosa*).

When the grouse flies down from the steep hillside into the woodland contiguous, he not only alights in a straight line, but afterward may sometimes be seen standing in an opening among the trees with his tail directly toward the hunter. The grouse also at times, instead of flying, runs down the wooded hillside, when alarmed by something on the top. While at other times he may be seen to run a little way and then stop, precisely as the American robin does. The grouse also on rare occasions walks off in plain sight. Frequently the grouse may be seen to sail down in a straight line, and at times to strike the leaf-covered earth like a clod, with a sound "chuck," that may be heard many yards. There he will remain motionless for a time, lying flat on the ground, and trusting for security from detection to the similarity of the surrounding color to his own. When the bird flies of his own free will he almost invariably alights without circling. For a short time he will remain standing unsuspecting, perhaps, of danger, and yet looking all about, as his wont, to take in the surrounding, when he will usually walk slowly away.—DORP.

OUR NATURAL HISTORY COLUMNS.—Todmorden, Dec. 22.—*Editor Forest and Stream:* Having read your pleasant paper since 1874, I take advantage of your announcement of a further improvement and enlargement of it, to congratulate you on the success which has made this step possible. I may also say that I found your Natural History columns of great service, the extracts and records from it which I have cut out and kept now form of themselves a valuable work for reference.—C. W. NASH.

THE LINNEAN SOCIETY OF NEW YORK.—Regular meetings of the society will be held at 8 P. M. at the American Museum of Natural History, Eighth avenue and Seventy-seventh street, on Jan. 6 and 20. Jan. 6, Mr. Jonathan Dwight, Jr., will present a paper, Paper for Jan. 20, *Definite vs. Fortuitous Variation*, by Dr. J. A. Allen.—JONATHAN DWIGHT, JR., Secretary (2 East Thirty-fourth street).

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price \$2.50. *Wing and Glass Ball Shooting with the Rifle.* By W. C. Bliss. Price 50 cents. *Rifle, Rod and Gun in California.* By T. S. Van Dyke. Price \$1.50. *Shore Birds.* Price 15 cents. *Woodcraft.* By "Nessmuk." Price \$1. *Trajectories of Hunting Rifles.* Price 50 cents. *Wild Fowl Shooting;* see advertisement.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

BOSTON NOTES.

GOV. RUSSELL, of Massachusetts, has made another gunning trip, this time it has been "down on the Cape," and he is reported to have had excellent success with the bluebills. Other gunners have been after the birds all the fall and winter thus far, and it is reported that ducks have been unusually plenty for so late in the winter. Christmas day was spent on the Cape by several Boston gunners, and generally with good success. Reports from Portland, Me., say that Casco Bay has been unusually full of ducks this winter, the winter being so mild that the birds have not found any occasion to seek a more southerly clime. But within a day or two large flocks have been seen all along the shore headed southward. A gentleman from Portland informs me that between the Brothers and Clappboard Islands a flock of about a thousand bluebills have been hovering nearly all the fall, and he believes that the birds would doubtless be there now but for the treatment they have received. The local gunners had been after them a good deal, as they had an honest right to be, but the gunning the gentleman complains of is of another sort. It seems that some sailors, from a passing schooner, or a schooner that worked on to the ground for the purpose, landed on the Brothers, taking a howitzer with them. This they loaded with several pounds of buck shot, all the gun would carry, with a heavy charge of powder to force the charge. They waited till there were thousands of birds in range, when the howitzer was fired. The shot was repeated several times till there were no flocks of bluebills in sight. Then they commenced to pick up the birds, chasing and killing the wounded birds with a shotgun. Actual boatloads of ducks are reported to have been picked up, more than 100 birds having been killed and wounded by one of the more successful shots. On board the schooner that night high carnival was held over a game supper, with many guests invited, most of whom carried home gifts of ducks.

Comment on such shooting is unnecessary. Game birds and game animals cannot stand up under such slaughter; whereas, with reasonable shooting, it is plain that our shore birds would last for many years to come. If one desires to butcher, there is genial employment for such dispositions in the slaughter houses and the butcher shops.

Mr. J. S. Clark, of Boston, has returned from the Rangeley (Me.) region with three fine deer. With him, on the same train, was Mr. Will Thompson, of Livermore Falls, in that State, who had the heads of two fine bucks of his own killing. Three caribou and one deer have lately been brought out from the Dead River region by Messrs. H. M. Pierce and E. W. Whitcomb, of Farmington. The kill of big game in Maine since the open season begun has been much greater than ever before, in spite of the assertion that all the caribou and deer had been destroyed by the summer hunters. The wonder is where so many deer come from. Deer have been found and killed further down toward the settlements in the southern part of Maine than ever this fall. In locations where deer are not remembered to have been seen for many years, they have been seen this year. One day last week Messrs. L. M. Sanborn and Joseph Shaw, of East Sebago, were out gunning when they came upon a deer track, which they followed some distance. They caught sight of the deer times enough to fire six or eight shots, neither of which brought the animal down. Night came on and they were obliged to give up the hunt. But they were early on the ground the next morning. They had gone but a short distance before they drove up the wounded deer, which they finished with a couple of better directed shots. Down in the town of Mason, in Oxford county, many miles south of what would have formerly been considered the southernmost habitat in Maine, Mr. Walter S. Butters has killed two deer this fall. Mr. E. E. Goding, station agent of the Maine Central Railroad at Livermore Falls, has lately killed three deer in the town of Madrid, a few miles above Phillips. SPECIAL.

CHICAGO AND THE WEST.

CHICAGO, Ill., Dec. 22.—The cold, hard, dismal jolt which FOREST AND STREAM gave its dead or alive, or rather its dead-and-alive, contemporaries in trap matters last week has attracted a good deal of attention and occasioned a good deal of amusement out here. Western people love enterprise. They follow it. They go where it is shown. They enjoy it. They insist on having it. The large and growing hold which FOREST AND STREAM has in the West is due to this fact.

The paper has enterprise enough to get the news for its readers. Therefore it does its duty and fills its function, and deserves its title as a journal for the sportsmen of to-day, and not for those of ten or twenty years ago.

In much of the above there is cause for reflection upon some of the features of current sporting journalism, although in anything of that I should dislike to be thought as animadverting upon the character of any other paper specifically, which would be an undignified and unnecessary thing, since the public draws its own inferences more rapidly and surely than a writer can. The fact remains, however, that the journal of ten years ago will not do for to-day. A decade of time covers history in newspaper methods as well as in anything else. The paper first to realize that, and to keep the fact in mind, is the one for the hearts of American sportsmen.

Time was when loose-jointed, ill-fed, puerile shooting stories, of more or less fabulous nature and ill-concealed advertising tendency, would do for the bulk of the letter press in a sporting journal. That was years ago. It will not do to-day. History has swept by that. English, facts and editing, these are three things which an American sporting paper must have to-day. The day of the egotistic, the selfish, and the prevaricating story-teller is fading. The day comes on apace when the writer and the man with facts will have their day. The man who unfairly "works" the sporting goods trade through his hold on a sporting paper is a parasite whose hold is nearly gone. Clean methods and clear discernment are essential now in a sporting paper, as well as in a daily paper. The public will go to the cleanest, ablest, honestest paper to-day. It will not have clap-trap and lumbag now. The grade of the material in demand has advanced. In the character of its field stories FOREST AND STREAM has been with the times at every step. Its columns hold literature of no ignoble sort. Its writers have, many of them, gone up higher in the literary world. Moreover, a fairer paper never was, even though fairness meant business loss.

Time was when unrestrained personal abuse and reiterated accusations of any sort soever made a large part of the so-called reading matter in a certain type of sporting journalism. In kennel matters especially this was a by-word and a reproach on the name of journalism of that class. The time for that is gone. History has swept by. The paper which clings to such low and humiliating methods has dug its own grave, and soon the walls thereof will close upon it, without even the helping hand of competition. If I find contention in FOREST AND STREAM, I find it gentlemanly. FOREST AND STREAM has elevated, it never debased, sportsmanship in this country.

Time was when news had no value in our sporting press, but was replaced by slop and Billingsgate. Again history. News rules now. The story of a cross-road turkey shoot, held four months before publication, is not now offered to the public as an equivalent for money in search of current information. At least, this is not the case in FOREST AND STREAM. News, plenty of news, fresh news, and news selected and balanced by an editor who knows the newspaper business—this is what the public expects to-day, and what it has a right to expect, and what it is going to buy. If you seek this, look about you.

In other words, the sporting journal of to-day must be built on newspaper lines, and must be a journal in more than the name. The old ways will not do now. There have been sporting papers unworthy of the times in which they lived, but that is changed and they must go. Bright, comprehensive, built up each week at an expense of which the public does not know or dream, the genuine and typical journal of the honorable sports of the field is to-day a stable fixture and one of credit in the field of journalism. What FOREST AND STREAM is by that example is more than guaranteed by its promises, all too modest, but confident, as to its future plans. It even foreruns the day, for in effect it lowers its price. Newspapers of to-day do not raise their prices, they lower them. That is the tendency of the times.

All these things I have no call, beyond that of impulse, to say, but the impulse for that is strong, especially in view of the promises of the coming year, and in retrospect also of those days whereto still cling those papers which could not stand the gait of modern history.

Dec. 24.—Dull times, except for our friends the trapshooters, who continue to make merry and to mock at one another. The Milwaukee men are anxious to shoot the final match with the Ft. Dearborn Club of this city. In short, they are altogether too anxious to suit the latter club, which remembers the wide gap by which the Cream City team won in the last contest. It is suggested, however, that the Milwaukeeans come over to Chicago and shoot the final on the grounds of Cumberland Club, on Washington's Birthday, they having expressed a disinclination to encounter the J. Watson brand of pigeons. Ft. Dearborn team is not favorite in the odds on this event.

The time for the annual meetings of the Kankakee and Fox Associations draws on apace. At that time will come up the question of the organization of the proposed State League for fish, and possibly game, protection. That will be a good time to discover whether or not the men from the lower Illinois country are in earnest about it, as they proclaim at present they are, and whether or not they expect Chicago to furnish all the motive power of energy and work and also all the cash. There ought to be thirty to fifty men from the lower country present at this joint meeting, Wednesday, Jan. 15. I understand the Wisconsin Central Railway, thoroughfare to the Fox Lake country, is much interested in this project, and offers to further it substantially. That would be very appreciable and commendable enterprise.

Early in January there will also be called the second meeting of the new Chicago Fly-Casting Club, at which time a fuller organization will be perfected. Mr. A. H. Harryman will be in the chair for the next meeting.

Last week I spoke of the possibility of securing the privileges of the 1st Regiment Armory for occasional practice at fly-casting by this club. This could not be done for a large club, though for a small and select one it might be arranged. Last night, by means of a dark, mysterious "pull" in military circles, Mr. Chas. Antoine and myself got access to this vast hall, and had some practice in fly-casting by electric light. It was delightful. A hat placed on the floor made a good enough fish, and there was no bush to spoil the back cast. We did manage, however, to foul one of the electric light globes, and in fear of a shock sacrificed some yards of a good enameled line. Winter fly-fishing in an arsenal is good fun and good practice.

There seem to be no unusual plans abroad for Christmas festivities this year among the shooting fraternity, but on Saturday there will be quite a house party at Watson's Park, no less than five matches being arranged, as see trap columns. On that day there will be present from Milwaukee Mr. Frank Meixner, Mr. R. Merritt, Dr. J. P. Carmichael and Mr. H. B. Taft. The former will test his skill against Mr. R. O. Heikes of this city, and the latter with Mr. J. O. Wilcox. Mr. Meixner shoots a match with Mr. Mussey and Dr. Carmichael with Mr. Dicks.

A Chicago firm, Messrs. Rand & McNally, has issued an interesting book, "Sweden and the Swedes," by W. W. Thomas, Jr., American Minister to Sweden. Mr. Thomas is much of a sportsman and writes entertainingly of sport in that little known country. Some of the most interesting chapters in the book have in times past been contributed to FOREST AND STREAM. He says of the great grouse, the capercaillie and also of the black game of that country that they could doubtless be naturalized in this country and should increase and thrive. His remarks on this head, the estimates of experts, etc., are so interesting that it is hoped FOREST AND STREAM, which has already discussed them, will refer to them again. Another chapter originally published in FOREST AND STREAM is that devoted to the Swedish "reporting" dog, which finds and points the birds and if the shooter is not at hand leaves the point and goes back after him, then taking him up to the game which, by his actions and dumb speech, the dog announces that he has found. These "reporters," Mr. Thomas says, are not uncommon in Sweden, though not all pointers and setters there have the instinct, and it seems to be impossible to train one in which the original disposition to "report" is absent. Mr. Oscar Blomgren, of this city, who visited Sweden last year, says he spent some time in the neighborhood where Mr. Thomas found his capercaillie, and describes that as a very romantic and beautiful country.

Mr. M. R. Bortree, game warden for Chicago, has often told me that he would like to see an effort made to import and naturalize certain foreign game birds, thus adding to the range of our sport in the field. This would be a fine idea, but how practical is it, except as applied to closely guarded preserves. If two capercaillies were turned down in the heart of the Wisconsin pine wilderness, and if one shooter of a certain sort got wind of it, it would be dollars to cents he would go after them and get them, and sell them, too. We can't protect our own native game birds yet, let alone any new and singular ones.

In case of birds turned down in a close preserve, however, some results might be looked for. The Koshkenong flock of wild turkeys, kept by the Peck brothers in Wisconsin and mentioned long ago in these columns, is a good instance of that. I am inclined to think that the wild turkeys mentioned last week as having been seen near Hennepin, on the Illinois River, are colonies from the Koshkenong herd, perhaps 200 miles to the north. Many bunches have strayed away from the main body from time to time, and these have always been heard from to the south, many miles below the Illinois line. The original start of this great flock was a half dozen birds brought from Mexico. E. HOUGH.

MICHIGAN DEER.—Central Lake, Mich., Dec. 17.—There were good tracking snows toward the last of the deer-shooting season, which closed Nov. 25, but few were killed hereabout, only eight, as far as I could learn. Some hunters had better success in the great forests of Montmorenci and Presque Isle counties, but the deer grow scarcer every year. Most hunters of my acquaintance favor a close time of three or five years for the deer in the Lower Peninsula, and I think the ruffed grouse ought to have the same chance, for they are nearly as scarce as ostriches. The same is true of ducks, of which few have been seen in our lakes this fall. My house overlooks Central Lake, and we have not seen a duck for weeks. The first two weeks of December were delightful—almost Indian summer. The weather has changed and we again have a little snow.—KELPIE.

SPORT IN NORTH CAROLINA.

Editor Forest and Stream:

Every sportsman should appreciate the just remarks of your correspondent Alex. Hunter. There is a good reason why the owners of land should post it as a warning to those persons who seem to think that such owners have no rights that a man with a gun or a fishing rod is bound to respect. No doubt the game is no man's property in particular, but the land on which it happens to be is, and according to the common law, as soon as a bird or a fish is captured and reduced to possession, it becomes a chattel and the property of the owner of the land.

In this State it is forbidden by law for any person to carry game out of it. And as many land owners carefully protect the game and fish, it is only just that their interests should be considered. It is only in this way that the game can be kept up and extermination prevented. There is an abundance of it for all if the sport is not carried to excess. But when a party who has been politely given permission to hunt or fish has taken all he can possibly carry and has sold them, or given them away to others who have not and would not be invited to hunt or fish, it goes a long way to exasperate the giver. And this often occurs. I know it is difficult and even painful to refuse permission for a stranger to enjoy himself on one's land, but in time this experience tends to harden the feelings and makes a refusal more easy. There are numerous good preserves, which might be rented for a reasonable sum, and kept stocked so that the sport would be much increased in years to come. It would not be difficult to get several tracts adjoining of several thousand acres in a block, and secure a monopoly of the game, and by spending a little money the stock might be replenished yearly and so kept up to a satisfactory point.

There has been so much promiscuous hunting and fishing in this State that the supply has fallen off very much of late. I have spent a few hundred dollars in all in the past few years in stocking my waters with trout, but there has been so much fishing that there are fewer fish now than at first. To fish every day through a three months season, and take all that can be caught in a ten hours day, will soon reduce the stock, if only a few are engaged in it. So that strangers hearing of the fine fishing here or there, must reasonably know that all cannot be accommodated freely. And this is the inevitable result which follows a description of the good sport that has been enjoyed in any place. It is the only safe way to avoid disappointment to follow the suggestion given by Mr. Hunter, and secure privileges before making a journey.

H. STEWART.

HIGHLANDS, N. C.

AS TO LIMITATIONS.

Editor Forest and Stream:

For years past, although only twenty-four, I have been an enthusiastic gunner, both in field and at the trap, and follow your game columns with great interest. Now, a subject often mentioned therein of late is handled so illogically that I am moved to "take a hand." This subject is "Where is game going to?" Sportsman after sportsman in your paper rails at the market hunters who kill a hundred ducks in a day and then turns round and describes how he and a friend killed one hundred and fifty, and concludes by saying that the market hunter should be put down at once and forever. His own game he gives away to friends, and the average sportsman seems to think that that justifies any slaughter. Now, Mr. Editor, I appeal to you. If a hundred ducks are killed, can it possibly matter whether it is a man or woman, white or black, who killed them? The duck supply is lessened by just one hundred birds, and the sportsman who kills one hundred and one does more harm to the cause of game preservation than the professional who kills one hundred. Now we have a fair estimate of how many sportsmen wish to shoot, and we know there are nothing like a hundred birds per man per day, and it is utterly selfish to kill that many. I inclose to you the FOREST AND STREAM of Dec. 10. The gentleman who signs himself "Sand Hill" killed, with a friend, on three separate days, 107, 98 and 127 birds—teal, widgeon, mallards, spraintails, butterballs, canvas and snipe (a few of the latter). This foots up a total of 327 birds for two men in three days, or over fifty for a day for each man. They may be rattling good fellows, but they took more than their share, and would doubtless acknowledge the same if they would reflect on the matter. When the birds fly thickly the temptation to run up a big score proves very attractive, but say what one will, these same long scores are what do the damage to our game supply. I hope that others, better writers than myself, will take up this matter vigorously and try to raise a spirit of moderation.

FRANK LAWRENCE DONOHUE.

AN INCIDENT OF CAMP LIFE.

Editor Forest and Stream:

December 14 found me making the rounds to my traps. In the course of the day I saw tracks of caribou since my last trip, and once jumped five before I got in sight. I knew it was useless to try for them, as the frozen snow made it too noisy. After returning to camp and having a late dinner I concluded to enjoy my last FOREST AND STREAM by the fireside. It was getting too late to read by daylight and the hour was 4 o'clock. As I laid down the paper I glanced out of the window facing my seat, and saw five caribou coming toward the camp on my main trail. They were coming, too, at a lively gait. I sprang for my rifle on the hooks over the head of my berth, and grabbing a few cartridges from the window ledge, ran to the door in season to give a bleat, and stopped the two rearmost ones, a bull and cow. The flock had turned off the trail at right angles when within something over a hundred yards from the camp, and all but these two had passed out of sight in thick cover. As they stopped I fired almost on the instant at the cow. I preferred her as the bull had shed his antlers and I knew the cow was the better meat. As I fired both jumped away and instantly out of sight. I did not doubt she was hit, although I aimed more by faith than actual vision, as it was so dusk I could but faintly discern the sights. Putting on my hat and blouse and strapping on my knife belt, I hurried to the spot and saw a wad of hair and a few drops of blood on a cedar sprout. Taking

up the trail I saw at her second jump a spurt of blood, and at every other jump there was an increased flow. I found her dead about twelve rods from where she had stood. I intended it for a shoulder hit, but it was a trifle too far back, the bullet striking it on a raised portion of the bone, which turned it backward through the lungs. By the time I got the skin off it was so dark I postponed dressing out till the next morning. I packed in the meat before breakfast, at which repast tender, juicy steaks formed the *pièce de résistance*. It is the fattest caribou I ever shot; the fat on the rump being an inch or more thick.

HUNTER.

ALWAYS CARRY A COMPASS.

THAT was just what I did not do the last time I got lost. The reason I did not take one was that I started for a short row up the lakes to look for ducks and it seemed superfluous to put my compass in my pocket. Coming down Sisson's River about sunset I left my boat and walked perhaps sixty or eighty rods across a tongue of land, and through a dense cedar swamp, to the head of Hanly's Lake, where I expected to get a shot at ducks. Returning, I had walked some distance before I realized that I was off my course, as I should otherwise have reached the river. The sun had set and it was cloudy. I wasn't fool enough to trust to the moss on the trees to show a northerly direction. I had thumb-nails and knives enough but they were as useless in this emergency as an old-fashioned warning-pan. If I could not find my way it meant a tramp of miles' hard walking, and perhaps a midnight lunch, or worse. I had lost my course and did the best thing possible under the circumstances. I sat down on a log and considered.

There was a faint red glow above the horizon in a certain direction. I decided that it was probably in the northeast. I took the chances, struck out and in five minutes reached the shore within four rods of my boat.

Just why I choose this course I could not have easily explained. I think that a certain familiarity with the woods had much to do with it. But the moral of all this is that so simple a precaution as that of taking a compass is not to be neglected by the wise, for there is no dependence on substitutes. I can make a fire with my rifle (though Gordon Cumming couldn't), but that is no reason why I should leave my match-box at home.

KELTIE.

A WILD RICE SCHEME.

Editor Forest and Stream:

There are few things in your recent numbers more interesting to me than the article by Messrs. E. Hough and "Nipissing" on wild rice. Wild rice is to game what bread is to us; given food enough and the game will hold its own against ordinary destruction. As a matter of fact there is an immense desert region extending from the Lake of the Woods nearly to the Atlantic and north to Hudson Bay, which is practically duckless excepting in one or two sections where duck food, or especially wild rice, is found. There cannot be much doubt that the rice would grow in most of this country, for it is found as far north as Lat. 50 1/2 in Manitoba. I would propose, therefore, that each sportsman next fall, and each sporting fisherman who goes abroad early next spring, take at least a few handfuls of rice and scatter it in a dozen new localities. In this way we should in a few years have rice beds scattered all over the Laurentian wilderness and the effect would be seen, perhaps, in the arrested decrease, if not the increase, of our duck supply. Wild rice is advertised for sale in this paper, and a letter on best time and locality for planting has also appeared.

ERNEST E. THOMPSON.

A NORTH CAROLINA QUAIL COUNTRY. — Edenton, Dukenfield House, Avoca, N. C., Dec. 27.—The article that appeared in the FOREST AND STREAM in regard to the sporting resort of Avoca, has caused a good deal of talk among sportsmen, and for their benefit I would like to say a few words on the subject. From a sportsman's standpoint this is a fair place for sport, but principally for quail. The birds are large and fly very strong. There are some turkeys here and they can be shot by roosting them along the creek. Also a few deer. The Dukenfield House is comparatively new, and the host and hostess, Mr. and Mrs. S. W. Everett, are very genial people. Mr. Everett goes with his guests and has dogs, for which he charges a small fee per day for their use and his services. He is a good all-round sportsman and a good shot. He also "calls" turkeys. There is nothing here except the hunting. The climate is delightful. Dr. Copehart, the owner of the house and the plantation, is a hospitable and genial Southern gentleman, and both he and Mr. Everett will do all in their power to make guests have a pleasant time. Avoca can be reached from Norfolk (Norfolk & Southern R. R.) to Edenton, and thence four times a week by steamer M. E. Roberts.—H. W. HAMLYN (Hohokus, New Jersey).

Camp-Fire Flickerings.

"That reminds me."

A FEW days since I was walking alone and talking to a small boy when a woodcock arose just in front of me. I remarked to the boy, "There goes a woodcock." He said, "Boss, dat ain't a woodcock, it's a snipe. Me and my brother used to kill lots of them near a spring up home. One morning I took my gun and walked down there to see if I could get a shot, and I found one of these birds with his bill stuck in the ground with the mud froze around it."

Here is another: A few days since a party were out deer hunting, when one of them shot a deer and wounded it. The dog ran in to a creek and swam in after it, and beat the deer across. When the deer came up he tried to catch it, but the deer started back. The dog sprang at it and grabbed it by the tail, and pulling it to the shore tipped the deer's tail up, thereby putting its head under water and drowning it. How is this for canine intelligence? And it was a "yaller hound" too.

TROUTING IN THE CASCADES.—III.

THE MOLALLA COUNTRY.

IT was nearly high noon. I had been fishing an hour and a half, had a nice basket of beautiful trout and must go to camp; but it was like taking a fellow from a picnic to a funeral. Creeping regretfully up the bank I struck the trail and was soon in camp. Mike had enjoyed himself hugely. The first thing of interest had been a pine squirrel that went up a leaning tree and out on a limb, where he sat and scolded until Mike, losing his temper went up after him so far that he had to fall off to get back. Then a covey of young quail, just big enough to fly a little, entertained him. I was fishing at a pond under a bank, intent upon my flies, when I was startled by a splash, splash, almost in front of me. Mike had nosed out a rabbit, which either intentionally or by accident took to the water, pursued and pursuer going over my head almost simultaneously. Of course the trout in that pool had no more use for flies. Had trout been scarce it would have been annoying. As it was, it was only amusing.

I fully agree with the Indians that it is beneath the dignity of a brave to do camp drudgery. The warrior in time of peace should content himself with hunting and fishing and not interfere with the squaw's vested rights. Billy is no squaw, but appreciating the fact that he had not yet secured his credentials as an angler, he made a virtue of necessity and soon had the trout cleaned; and my wife proceeded to prepare dinner, while Ira and I lounged around on the grass. The trout were cooked my favorite way. The smaller ones were selected and nicely cleaned. A thin slice of bacon was placed inside of each, they were placed in a wire broiler with strings of bacon over and under them, salted and peppered, and carefully broiled over a hardwood fire. Ira and Fay were with us at dinner, and we had an enjoyable time and a jolly good dinner.

The camp had been completed and everything was in shape, even to Ira's straw tick. After dinner I announced my intention of making a bed more to my taste. Billy, fully agreeing with my views of what constituted a good camp bed, particularly for one inclined to be rheumatic, as was Billy, we set to work and soon had constructed two fine beds of cedar and hemlock boughs. A bed of roses will not compare with such a bed for sweet perfume and genuine comfort. Without it one loses much of the romance of camp life.

We have no poisonous reptiles in this country unless, perhaps, at the mouths of some of the low passes in the Cascades. I have never seen a rattler in the wild state west of the Cascades, but it is a good plan to run a tarred rope around your tent to keep out garters and other reptiles which, even though not poisonous, can be dispensed with as bedfellows.

"Nessmuk's" ideas about fire places in "Woodcraft" are most excellent. A sheet of boiler iron two feet square improves his fire place and is a great convenience. By using the boiler iron as an attachment to the common woodsman's fire place I am sure you will please your wife (if you are lucky enough to have one), as it makes a cooking place nearly as clean and handy as a Charter Oak stove.

After dinner Ira and Fay started home, Ira, of course, manifesting some misgivings about leaving my wife in the lonely woods over night. He even suggested that she had better go back with them and he would bring her out in the morning. But she concluded to take the chance and remain in camp. You see it was a bad time of day for him to raise the question. The sun was shining, the birds were singing and there didn't seem to be so much danger as she had anticipated. Had the suggestion come a few hours later, when the shadows, the crickets, the night-hawks and the owls announced the arrival of the time when beasts of prey, hobgoblins and sprites saunter forth on their missions of mischief and death, her decision might have been different.

It was close season for deer, elk, grouse, pheasant and quail, and therefore I had left "shootin' irons" at home to make it easier to resist temptation. This was strictly a trouting trip, but I had already decided in my own mind that I would pay that country a visit in August when the water would be low and I could whip the Molalla itself. Besides it would then be open season for game.

I never like to fish during the middle of the day, even if the trout are disposed to rise. It is an unnatural proceeding, when we consider that fish, like other creatures, have their regular hours for feeding, relatively speaking. So we walked over to the little house that sat snugly on a low bluff near Bull's Creek, a small tributary to Milk Creek. Introducing ourselves and making known our wishes, we were cordially received by Mr. Hall, his wife, his three modest daughters, and his kid of a boy. Yes, we could get not only milk and eggs, but plenty of wild honey and huckleberries. I suppose these good people were about as glad as we were to have neighbors. Besides, we were not on a sponging trip, and the few silver pieces we offered them in exchange for their luxuries probably looked as big as wagon wheels to their eyes. Hall also manifested a strong disposition to exchange frontier yarns for a little information about what the great world was doing outside.

We of the city, who visit these forest haunts only when the weather is favorable and nature has her verdant dress on, imagine that we would love to live out our lives there. But there is another side to the picture, which we, as social beings, should not overlook. Weary of life's turmoils we gladly turn from the hum and buzz of the busy street to the solitude of quiet nature. We listen to the songs of birds, the ripples of the brooks, the whisperings of the winds in the treetops while we drink in the balm-laden air, not as a part of our life labor, but as rest

and recreation. Recreation signifies refreshment of the strength and spirits after toil; literally re-creation. But when the birds have sought summer climes; when the ripples of the brook become the roarings of the torrent; when the balm-laden air becomes the chilling breath of winter, and the whispering zephyrs become the shrieks of the storm king as he howls down the dark, tempest-ridden cañon, then how quickly these elysian summer dreams vanish and how realistic our hurried trip back to the comforts of the reviled city. Even in the lovely wilds the sun does not always shine. Happiness and pleasure and comfort, adversity and distress and affliction are our earthly portion, and go hand in hand with us through life whether we live in the city or in the forest.

I look at my watch, it is 4 o'clock, and Billy and I hurry off to the creek, leaving my wife and the girls to gather wild flowers and ferns. Everything was new to us and I felt like investigating, but Billy couldn't see the necessity of any trips of discovery, when we could get all the trout we wanted without running our legs off; so we put in the time close to camp and partially over that portion of the creek already fished by me in the morning. What sport! The fingerlings were thrown back, and we went to camp early with creels well filled.

Mr. Hall and his family were over to spend the evening. Hall had gathered night wood for our camp and had a roaring fire, without which the mountain air made it almost uncomfortably cool.

S. H. GREENE.

PORTLAND, OREGON.

THE KINGFISHERS.

CENTRAL LAKE, Mich., Dec. 16.—*Editor Forest and Stream:* I am very much obliged to "Von W." for his interesting note on the "Derryfield Beef" matters. It is the old story. A fellow thinks that he has learned all about something or other, and writes thereabout to the FOREST AND STREAM. Then along comes some other correspondent—it may be from Maine, or, quite as likely, from the Sandwich Islands or Manitoba—and the fellow afore mentioned learns a good deal more than he has been able to teach. As old "Guzman," of Chicago, used to say in similar cases, "Thus it is—to-day we sparkle and tomorrow die."

With your correspondent I join in the hope that some of us old fellows, who have long been acquainted with each other through the medium of our favorite paper, may meet and shake hands at the coming World's Fair in Chicago. We ought to give the biggest kind of a "pot-latch" in honor of such an event. Still, it will not be like swapping yarns while dodging the smoke of an old-fashioned camp-fire.

"Von W." wants to see "Kingfisher." He ought to have seen him, as I did last summer, "on his native heath," or, more accurately, standing in the bow of the old "iron-clad" (canvas) canoe, with the foaming waters swirling past, and the light of battle on his countenance, and shining all over his tennis shirt, and his corduroy trousers, and his canvas shoes.

"Anathema, maramatha," or words to that effect, came from his lips, as with one hand he smote the deer-flies which buzzed about his head, and with the other inveigled the trout to their destruction.

"I'm not much of a fly-caster," observed the old Trojan, as the little bamboo waved and the line floated out some 50ft. down the river, but—"snap," there you are my beauty. Whirr, smack—"Dang those deer-flies, anyhow," and a large trout was shortly added to the glittering collection which lay in the bottom of the canoe until he could find time to otherwise dispose of them. "Kingfisher," said I, "I am somehow reminded of the late Captain Simon Suggs, of the Tallapoosa Volunteers, and of his incidentally cursing a bank director." "Yes," said Suggs, "I told him I'd see him as fur into the t'other place as a pigeon could fly in a fortnight. I gin him thunder an' lightning" stewed down to a strong pison, I tell you. I cussed him up one side an' down t'other, twell thar warn't the bigness of your thumb-nail that warn't properly cussed."

"Just so," said Kingfisher. "Kelpie, just let her drop about thirty-one inches lower, there's a swirl under that bush that ought to be seen to."

It was accordingly "seen to," *secundum artem*; but Kingfisher writes me that he hopes to find time to give your readers some account of our last summer's outing, and far be it from me to attempt to forestall him in this laudable intention. I promised to let you know if I had any luck on that trip, but it has hitherto been impracticable to write as I desired. I may say that, as to fish, I caught more than I could eat, which is something; and as to the camp—that, indeed, was luck, rich and rare. Many camps have I seen, but never one as near perfection as that of last summer on Carp Lake.

These being my sentiments, you needn't expect me even to hint how it was that "Snakeroot" nearly dislocated his wrist in showing us how to hook a blue-gill; how Kingfisher worked four days and nights to circumvent a big trout in Ballyhoo Brook; how he kissed the beauty when at last he held it in his hand; how Snakeroot and Kelpie went fossilizing, and smashed rocks until the camp was so piled with them that it appeared necessary to move the tents, and Snakeroot slung Latin jawbreakers at the club until "Old Frigid" managed to stash him with a piece of tourmaline, which the President irreverently termed a "stink-stone," while threatening to lock up every hammer and hatchet in the camp unless this rock-piling business was stopped—on these and many other recollections of that camp I am silent as the grave. Kingfisher is one of the most tireless and unselfish fellows I ever knew; looks out day and night for the comfort and pleasure of those in camp, and if in the night the canvas flaps or a boat is heard to pound, he is out instantly, probably *en chemise* (rubber boots don't count), if the case is urgent, and shortly all is order.

We had a most complete outfit—camp equipage, fishing rods and tackle of all sorts, and here I will remark that a Horton steel rod (jointed), which I carried and used for the most part on that trip, won golden opinions. I dislike the telescopic fly-rod (I never tried the telescopic bass rods), but in the small hollow tips a G-line does not work well. I like the action of these rods, however, and bought last summer a jointed one, which has proved very satisfactory. Mine was a No. 11 bass rod, 10oz. with reversible butt. I mention these facts only because I think they may be of interest to anglers.

Yes, we all voted it the pleasantest camp we had ever seen, and much of good did it do me; but for me the best

day of all was that on which Old Hickory and I poled the "ironclad" up Cedar Run; and when at last, wearied with the labors of the day, we approached the landing, and the stately form of the President, surmounted by that old "sunflower" hat, loomed in the fading twilight against the ruddy glow of the camp-fire, while his genial voice announced to us that by a special dispensation our supper had just been made ready for demolition, the happiness of the day was complete.

KELPIE

ANGLING NOTES.

WHILE up in Orange county week before last, ruffed grouse shooting, I was surprised to find how low the streams were. The anglers in that section of the country are very much afraid that the trout spawn will be seriously injured, as in many places the spawning beds are barely covered with water. Similar reports have been received from other parts of the country, particularly Connecticut.

Judge Bookstaver paid a visit to Newfoundland last summer, and while there tried the trout and salmon. His stay was short but he took a run over to the Salmonier and killed four salmon in that magnificent river. The trout fishing he pronounced excellent but the black flies and mosquitoes were rather a drawback to the sport.

Mr. Theodore Gordon of Savannah, Ga., one of the most accomplished fly-fishermen in the country, has turned his attention to dressing salmon flies for his own use. The specimens which he recently sent me were certainly wonderfully well tied, not only for an amateur but even for a professional. Mr. Archibald Mitchell will have to look to his laurels. There is no prettier accomplishment than fly-tying, but it requires a deal of patience and perseverance to become even moderately expert, and when it comes to salmon flies, with their mixed wings and delicate feelers and crests, it is doubly difficult. When on long fishing trip it helps pass away many a rainy day, and is often very useful, particularly if the angler is anxious to try copies of natural insects.

Of late quite a number of fly-fishermen have given their attention to the floating flies and dry fly-fishing, this style of angling is very successful on the other side for brown trout, but it is a question whether it works well here or not. There are undoubtedly times, particularly on much fished streams, where a delicate midge dropped light as a thistle down on the surface of a still pool will kill trout when the average fly will not, but as a rule these delicate little flies will not answer for the rapid swirling waters of our trout streams or the deep dark Canadian or Maine lakes. In short, in our country where there are so many different styles of fly-fishing necessary, it takes considerable experience and a well stocked book to meet all the requirements of the different sections. In the West the black-spotted trout require rather large flies on stout gut and heavy leaders—the waters are often swift and rough and the fish large. On the Niipegon flies are used dressed on No. 10 sprats and even larger. In Maine the big trout love to lie in deep water and prefer a Parmachenee-belle or silver-doctor on a No. 2 or 3 hook; and again on the much fished streams of Long Island it often requires a midge on a drawn gut leader to kill a decent fish. One thing is very certain, that the more trout are fished for, the more particular they become, and every season the dealers find that the sales of light leaders and small flies are on the increase.

SCARLET-IBIS.

ONONDAGA ANGLERS' ASSOCIATION.

SYRACUSE, N. Y., Dec. 21.—*Editor Forest and Stream:* The members of the Anglers' Association had a large meeting. Our private protector gave in his report, which was very satisfactory to the members. We are some in debt and many of the members contributed their little mite to help pay up. Mr. Skinner, the veteran spoon maker, contributed one dozen spoons, which were sold at auction at the meeting, and brought about \$20 for the benefit of the association. Chas. Mowry, of the *Sporting Goods Gazette*, acted as auctioneer and made a good one (but Charlie is no talker). All the members were glad to see Mr. Skinner, who gave us a description of the work on the River St. Lawrence. With such good fishing as we have had in our vicinity (the best we have ever had), every member was anxious to continue the good work. One of our members has contributed a wagon and boat to the protectors to help them in their work, as they have trouble in getting boats. There should be a law that should enable a game protector to take any livery boat by paying regular rental of same.

Since our meeting last week our Mr. Hawn and Jackson have taken thirteen nets and made three arrests.

The night of the meeting the poachers thought it would be a good night to put in their nets, as they knew the protectors would be at the meeting. Well, they got fooled, as Hawn and Jackson started after the meeting closed and took seven nets and three poachers on Onondaga Lake. The nets were burned in front of the Court House the next evening.

Some of our Supervisors were trying to help the netters take whitefish in nets during a certain period here, but when they came to know all the facts and the injury it would be to protection, this bill was tabled.

A petition has been forwarded to the Commissioners asking for the appointment of Harry Jackson on the State force. With two such men in central New York, we will have the best fishing grounds in the State. I do not know where there is such good bass fishing as we have on our rivers, Oneida and Onondaga Lakes. I know of several catches of bass from fifty-five to eighty taken in one afternoon, also from fifty to 150 pike in one day's fishing.

There has been fishing for perch on our lakes up to the 15th of December, and I do not doubt that there will be many on the lake to-day, being so pleasant. There have been catches of from twenty to seventy-five, and weighing from one-half pound to one and a quarter. Just think of it at this time of year seeing from twenty-five to thirty boats fishing. We shall have great fishing next season if this work is kept up. If any of the readers of the FOREST AND STREAM want to know anything pertaining to our fishing grounds, please refer them to me and I will gladly direct them to right localities.

About two months from now our factory will be re-

moved to Baldwinsville, the citizens giving us land and power. The main building is now completed; it is 50x150ft., four stories, and within 100ft. of this factory there were caught in one afternoon's fishing fifty bass, weighing from 1½ to 4½ pounds each. There are a number of New York gentlemen who visit Baldwinsville for bass fishing every summer. It is only twenty minutes ride by rail from Syracuse.

HENRY LOFTIE.

ARTIFICIALLY REARED TROUT.

AT the reunion of the Massachusetts Association, referred to in our columns Dec. 24, the sale of domesticated trout during the close season was brought up for discussion.

Hon. H. F. Raymond, chairman of the legislative Committee on Fisheries and Game of the last House, said in effect that at the last session of the Legislature a petition was presented asking that domestic raised trout be allowed to be sold during the close season, when wild trout were not allowed to be taken. Mr. Raymond explained that the petition was introduced in the interest of one or two parties interested in the sale of these fish, who, although they were probably making a very handsome sum by selling their products as the law is now, yet wanted to derive more benefit by petitioning for a law allowing them to place their fish on the market before the open season, thereby giving a larger opening for violations of the law, to take wild trout out of season.

Mr. Raymond said in conclusion that the Committee reported the bill as inexpedient, the trout in Massachusetts having a hard enough time to protect themselves now without having any more laws tending toward their extermination.

"FISHING THROUGH THE ICE."—Kalamazoo, Mich., Dec. 26.—*Editor Forest and Stream:* A myriad of the lovers of the "gentle art" must be readers of the FOREST AND STREAM, for by the way the letters are pouring in regarding "Fishing Through the Ice," as published in your issue of Dec. 10, has placed me in a pretty fix indeed. I can't tend to them all and will you kindly state that I will mail as sample one line only with attachments complete to any one person on receipt of twelve two-cent stamps.—BEN O. BUSH.

It is hard work to select an acceptable Christmas present, something that will give real pleasure. For the sportsman there is nothing more pleasing than a book which deals with his favorite topic. He enjoys its perusal, and the satisfaction it gives him is a lasting one. FOREST AND STREAM'S free illustrated catalogue gives the intending purchaser a wide range of selection and offers many suggestions which at this season of the year are very timely.

Fishculture.

FEEDING HABITS OF WHITEFISH.

Editor Forest and Stream:

I was much interested in the reading of an article in your issue of the 10th inst. which referred to the feeding habits of whitefish when confined in ponds. The food of the whitefish in its natural state has been a very interesting study with me, and since I first came to this country, nearly nine years past, I have examined the stomachs of over 300 whitefish and more than that number of tullibee, but in none of them did I find a trace of young fish, although in the spring I often found the spawn of the pickerel (*S. vitreum*) and in the fall the ova of both the whitefish and the tullibee. I shall not, however, dwell upon the results of my researches in this letter, but only wish to bring to your notice a peculiar find of mine, which I had the good fortune to happen upon on the 19th June last. On the east side of the Rocky Mountains, at the head of the Waterton River, one of the tributaries of the South Saskatchewan, there are three very beautiful lakes, locally called the Kootenai Lakes, the water of which is deep, clear and cold, except in the lower and smaller lake, where it is shallow and in places weedy. Here there are pike, but in the two larger and deeper lakes these fish are not found; but instead there are lake trout and whitefish (*C. clupeiformis*).

A Mr. Brown, who has lived on the edge of one of these lakes for a number of years, set a gill net in about sixty feet of water and next morning he took two lake trout and seven whitefish, the latter averaging 4lbs. in weight. I very carefully examined the stomachs of the whitefish and was surprised to find the walls of some unusually thick and hard with the papillae fully one-quarter to three-eighths of an inch in length. One-third of the contents was made up of a bright red pointed worm, one-quarter inch long and as thick as a very coarse sewing needle, and a worm of the same length, but a trifle thicker and blunt at the ends, color white; one-third of the larvae of *Phryganidæ*, and the balance was composed of minute, and some larger, shells; many of the latter were crushed by the time they got into the gut. In the stomach of one whitefish was a young burbot (*Lota maculosa*) 1½ in. in length and in a perfect state of preservation, showing that it had been swallowed just before the whitefish was caught and but a very short time before the net was hauled.

Can you or any of your readers inform me whether the common sucker (*C. commersoni*) eats the fry of whitefish, etc., after they begin to swim about? I know that the sucker eats quantities of the eggs of other fish in the various stages of development, and even after they are hatched out, but before the little chaps can do more than feebly wriggle.

F. C. GILCHRIST.

FORT QU'APPELLE, Assiniboine, Dec. 18.

[In Utah Lake among the worst enemies of trout eggs and fry are the ubiquitous suckers. We think it probable, therefore, that the common form above mentioned, because of its close relationship to some of the forms in Utah Lake, will be found to destroy whitefish.]

ALASKAN SALMON, according to Mr. Franklin Booth, were later than usual in coming on the coast and the season was, therefore, much prolonged. Up to the middle of August the catch was very light, but the run continued at Karluk until the beginning of November. Although reliable information is hard to obtain the yield must have been very large. We have already referred to the commendable enterprise of one of the cannery firms in establishing at their own expense a well-equipped hatchery on Karluk River, which has produced 5,000,000 red salmon fry in its first season. There is probably no other hatchery in the United States which has surpassed this record.

BROOK TROUT EGGS to the number of 1,500,000, besides two troughs of fry, were reported in the Allentown, Pa., hatchery by Superintendent J. P. Creveling Dec. 13. The outlook for a large distribution of young trout in the streams next spring is very encouraging. The good results of wholesale stocking are nowhere more evident than in Pennsylvania.

WATCHING THE NETS.

Dear Forest and Stream:

"There's a strike, Lou!" was the first sound that greeted my ear as I arrived at the cozy camp of the Lake Sunapee State Hatchery one dark, still night in October. Following the exclamation, in which I recognized the genial voice of the superintendent, Mr. Runson P. Sargent, two shadowy forms sprang from the sandy beach into one of the large boats lying by the little pier and hastily paddled away from the shore. "Where are they going now?" asked the driver who had brought me from the station at the southern end of the lake, some five miles away. "Out to run the nets," I replied; "they have got a strike." "Well, you have got me. Run the nets! What do you mean?" he asked in such a tone of surprise, that I was completely taken back at the apparent ignorance of this man, who had doubtless lived within rifle shot of Sunapee Lake for many years.

By careful inquiry I learned that he was only one of many who were perfectly ignorant of the methods employed to capture the trout in October, when, heavy with spawn, they attempt to run up the brooks.

Then, thought I, if so many of these people, living within a few miles of a well-equipped State institution, know absolutely nothing of the labor and expense involved in "propagating the species," would not a little article descriptive of my visit to this, the banner hatchery of New Hampshire for '91, be of interest to many of our readers? Assuming that such may be the case, I would state at the beginning that no more picturesque nor healthier location could be found upon the shores of this famous sheet than that of necessity selected by the Commission upon the east shore, by the clear waters of Pike Brook, and upon which, about eighty rods from the lake, is the hatchery proper.

This is one of the most important feeders of the lake, toward which the trout and landlocked salmon swarm as soon as the September rains raise the water to a sufficient height to allow them to pass up.

Here, close to the mouth of the brook, their further progress is barred by a heavy pound, which is ingeniously placed in the water. Having once passed through they cannot get back to the lake nor further up the stream. This pound is built on a similar principle to the wire fly traps so commonly used. The fish in its efforts to follow the current passes through a small opening in the A-shaped inclosure, and here it safely remains until the netters come and more active operations begin, which is usually about Sept. 18. Just above the pound, in the deep waters of the brook, is built a heavy tank, having three sections, one for each of the species captured here. The brook flows through the long tank to a depth of from 4 to 5 ft., and supplies the captive fish with pure water. No food is taken by the trout when confined in this tank at the spawning season.

The Camp is a handsome, painted cottage, containing four rooms, ample sleeping accommodations, cooking range and utensils, and is neat and convenient.

The preparations for the fall campaign are not very extensive, and soon the busy superintendent and his assistants have overhauled the long nets and put them in readiness for service, while in the sandy bar which stretches away from the beach for many rods, heavy stakes have been driven at distances of 100 ft., this being the length of the nets. These stakes form various angles, and when the nets are distributed make a sort of enclosure.

Everything in readiness just before dark, the superintendent with an assistant takes a large tub in his boat, in which the nets have been carefully placed, and beginning at the shore stake, in about 2 ft. of water, the nets are "put out," sometimes 300 ft. and sometimes 500 ft. are stretched in this vertical position from stake to stake. The nets are provided with heavy leads on one edge and cork floats upon the other, which cause them to remain vertical in the water. Then from dark until near morning these sturdy men must watch and wait for the expected "strike," for, strange to relate, brook and lake trout are moving toward their spawning beds only in the darkness of night. Hour after hour they watch and listen, and when a large specimen is captured much care and skill are necessarily employed in order to release the fish from the nets without doing it injury.

The trout swimming toward the brook, which flows into the lake back of the suspended nets, strikes the fine linen meshes, and as it feels the threads drawing about its gills, it "strikes," or throws itself from the water in a vain effort to shake itself free from the tangle in which it finds itself. Over and over it turns in its struggles, and one can but poorly judge of the strength of a fifteen-pounder unless he has handled him. Then the attendant puts his arms deep down in the cold waters of the lake and lifts the captive in a baglike fold of the net. Near the surface, oftentimes beneath the water, and then perhaps in his arms, the attendant carefully proceeds to untangle the finny monarch, and this, too, in the darkest of nights—perhaps it may be raining violently in addition to the other discomforts.

It was free at last, and placing it carefully in a high, narrow tank containing a small quantity of water, the boat is put ashore where each man ventures an estimate of its weight, of course, and the beauty is placed in the receiving tank to await proper development of an inclination to throw its spawn, when one by one the females, or "biddys" as they are called, are taken from the tank, with the aid of a dip-net.

When found to be "ripe" the superintendent takes the trout upon his arm, its head between his elbow and side, its body firmly, but gently, grasped in his mitted hand, then, by slow and continued pressure the little golden globules are forced into a shallow receptacle. This work is done close by the receiving tank, under cover of a canvas spread to protect the roe from the rays of the sun, which must not fall upon the eggs at this time. Then a male, or "jack," is dipped out and by the same process its milt is mingled with the spawn of the female, and the act of fecundation is complete. These trout are returned to the waters of the lake, while the spawn is carried to the hatchery, where two large pipes supply bountiful streams of water from the brook itself, and from a large spring some rods away. The union of these two streams of water keeps the temperature even, and the supply can be regulated and distributed through the various tanks, by means of valves.

In the long rows of water-tight tanks are arranged wire screens in boxed sections, and upon these the roe is carefully spread, a crow's feather being used to distribute them. Then the water is allowed to run through these tanks incessantly, keeping the little globules from a third to one-half an inch beneath the surface.

The building must be so tight and warm that the water cannot possibly freeze, and twice or thrice a week during the long process of incubation an attendant must visit the hatchery and remove such of the eggs as have not become fertilized. These are easily distinguished by their creamy white appearance, while the perfect spawn is almost transparent. This dead spawn acts like decayed fruit upon the mass, affecting all about it, and in turn destroying the entire plant.

The eggs develop and increase in size, until in January and February the little sac bursts, and a tiny wiggling mite, less than an inch in length, is discovered. To this embryo is attached, at the junction of the head and body, the balance of the sac, which supplies the food until about the time of the opening of the brooks in April, when the fry are ready for distribution. These in turn make sport for the angler and supply the hatchery with its required spawn. BYRON.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—Ado.

Jan. 11-12.—Bexar Field Trials, San Antonio, Texas.
Jan. 13.—Pacific Field Trials, Bakersfield, Cal.
—, Southern Field Trials, New Albany, Miss.

RETROSPECT.

A HAPPY AND PROSPEROUS YEAR to all kennel readers of FOREST AND STREAM. The year just passed has been marked by a great advance in all kennel interests in this country, notwithstanding the severe losses some kennels, especially the St. Bernard men, have sustained during the past summer. In mastiffs there is little new to relate, Mr. Whitney's importation of Cardinal Beaufort, taking the place of his late Ilford Chancellor, being the most important, and Mr. Bunn has imported several good brood bitches. In St. Bernards Plinlimmon, Prince Regent, Scottish Prince, Plevna, Alton, Ben Lomond, Hesper, a galaxy of St. Bernard talent that it will take years of careful breeding to duplicate, have all gone to the silent majority, but the importation of Princess Florence, Lord Bute, Marquis of Ripon, Refuge II., King Regent and others will go far to redeem the breed.

By the importation of Imperator, the great Dane breed has been greatly strengthened here and the interest in these dogs is decidedly on the advance. Newfoundlanders have made no progress. Deerhounds are also just about where they were. Greyhounds, on the contrary, have been improved by several importations, Gem of the Season, Pious Pembroke, Ornatus, Bestwood Daisy, Lilly of Gainsborough, and in coursing by Dingwall, Royal Crest, etc. Coursing is surely on the boom but is still, unfortunately, chiefly confined to the West. Pointers have had no special addition to their ranks and Sir Frederick is the principal new comer in English setters. The breed is rather in an unsettled state and there seems an inclination to favor a lighter type than the heavy English too customarily seen at our shows. Irish setters through the field trials have received a great fillip and the importations of Coleraine, Blue Rock and Finglas are very noteworthy ones. Gordons are about as they were, nothing new except Heather Bee having been imported. Fox-terriers still hold their own in terriers, and such new dogs as Dona, Dominica, Pitcher, Dobbin, Miss Dollar, etc., will all do good to the fancy, besides the several new kennels that are going into the breed. Bull-terriers may be said to be booming, (thanks to Messrs. Frank Dole and John Moorehead, whose Gully the Great, imported by the former with several others, and the latter's Streatham Monarch, will all serve to make competition very keen in the coming circuit. Bull terriers and Dandie Dinmonts have been improved by recent importations, Crate, Banner Boy, Boxer IV., Danmurry and Ballymoney helping the Irish cause, while Dandies, Heather Madge and King of the Heather are noteworthy specimens of this game dog. Bulldogs have had several important additions, though none that will beat Harper and those we had before. Skyes and Airedales remain still in the cold. Pugs have been strengthened by the Bonsor and Penrice importations. Other toys remain about as they were last year. Black and tan terriers, by the addition of Sultan, Queen III., Salisbury, Jasper, Louie and Beaconsfield, have had considerable attention drawn to them, and they are certainly a coming breed. The Psowoi, formerly known as the Barzoi, have made rapid strides in public estimation. Mr. Hacke's importations being very important, and there is every sign that before another year American grit will have solved the question as to which is the proper type, and then they will get the best as usual. Field trials, though they are hardly the sentimental, enjoyable gatherings they used to be, are now set on a firm business basis and must revert to the good of the several breeds of sporting dogs. In conclusion we may remark, that FOREST AND STREAM, as in the past year, will continue to watch the growing interests in kennel affairs, and, with its increased space, will give its readers all the latest news and most interesting "Dog Chat."

THE PULSE OF THE DOG.

Editor Forest and Stream:

As the pulse is so important a guide to the health of the animal, any of its peculiarities are of course of the utmost importance. Works on the dog are unaccountably silent on this subject. The fact is that the pulse of the dog has a character different from that of any of our domestic animals. As regards rate, while it varies with age, breed, etc., it is still not very different from that of the human subject; and the ratio between it and the respirations is about the same, i. e., one respiration to about four pulses.

But the great and characteristic peculiarity is the irregularity of the pulse of the adult animal.

If one examines, as a dog lies quietly, either the pulse or the inside of the thigh or the heart itself by feeling the crest wall over it, he is struck very forcibly by it. He has ever felt the beating of his own heart, with the pronounced irregularity of the organ, so that one might be forgiven for concluding that the animal had heart disease, as many a one has done. As a matter of fact this peculiarity is present in every grown dog, though absent in young puppies; and if it were present it would be difficult to detect, owing to the rapidity of the pulse.

This irregularity extends to the rate and the force of the beats, and by suitable apparatus this can be made evident to the eye; but a little practice makes it easy to convince oneself that the irregularity exists in a marked degree, and that the slowing, etc., is manifest only during expiration, the heart beating faster and more regularly during inspiration.

Of course the more frequent the beat the less pronounced is the peculiarity, hence it is much more marked in health than in disease.

Recently I read an article by an expert, in which he states that the pulse of the dog may be irregular in health, showing that this peculiarity of all normal dogs has escaped the observations of even some who professionally treat the dog. It seems to me that it is important that all who have much to do with dogs should be aware of the characteristics of so important a guide to the condition of the animal as the pulse. WESLEY MILLS, M.D., D.V.S.

AMERICAN KENNELS.—V.

THE FLOUR CITY KENNELS.

THERE is something that savors of the fairy wand in being able in these progressive days to fall asleep in the Grand Central Station in New York and waking find one's self breathing the vapor-laden atmosphere of early morning in Rochester, the Flour City. Such was my experience one day in the early fall. A desire to see the home life of dogs whose bench show career had made them celebrated was not to be resisted, not to mention several pressing invitations both from Mr. James W. Whitney, the owner, and Mr. Pritchard, the manager.

A little misunderstanding in train arrivals led to Mr. Pritchard's fruitless search at the railway station while I was seeking to make myself heard "over the garden wall." There was no one about, and I judiciously kept the fence between the occupants of the kennels and myself. Though these mastiffs seemed imbued with the utmost good nature, still, mastiffs are mastiffs, and I had no overweening desire for Ilford Chancellor nor even the mild-faced Miss Caution to stand guard over my prostrate body, which, I believe, is the traditional and pleasing method dogs of this breed have of protecting their master's property when the stranger intrudes. Mr. Pritchard's arrival, however, soon let me into the secrets of the place.

It is a peculiar situation for a kennel this. Right from the heart of the busy city one walks down a short, steep street, and alongside the Genesee River one finds a perfect little oasis in the deserts of factories, mills, breweries and what not that go to make up Rochester's prosperity. A stretch of land as flat as a table, and containing several acres of grass land and gardens, it is a most unique situation. Here the dogs are secure from molestation and their barking can disturb no one. Not very far away are the famed Genesee Falls, but to-day they were falls in name only owing to the dry spell.

The kennel building is a neat story and a half structure, very well arranged with a view of getting the maximum of space with a minimum of waste. The main building is about 40x20, and one enters it through a short passage, which leads to a square room. Here is a large set pot which, with its brick setting, is about 4 ft. square, and in this the food is cooked. The arrangement, however, has not been found very satisfactory and will be remedied very soon by having the cooking done in an outside building. In summer the way it is now it must make the kennels too warm. Round the walls of this room are hung framed prize cards, showing that though the Flour City Kennels is a comparative new comer in the kennel field, its occupants have made an enviable record for themselves during the year. This room is also used as an office. A little anteroom leads off from this main compartment, and here I found one of those useful adjuncts to a large kennel—the canine treadmill. Opening from the main room are several kennels, and beginning with the one by the cook stove I found a 12x16 compartment, in which Minna Minting got lazily up to welcome us. She was in nice summer trim, neither too fat nor too lean. This bitch is by, as her name would denote, the celebrated champion Minting (8815) out of Minna (11789). She is three years old, but has not been shown very much. Minna Minting was to have been bred to Ilford Chancellor. Passing to the next compartment I found a nice brindle bitch called Princess, small in head, nice body, but struck me as rather light in bone. She was four weeks in whelp to Ilford Chancellor, whose grand head properties will, it is to be hoped, stamp themselves upon her progeny. She was bred at the kennels and whelped in 1886. Her sire was the brindle champion Ilford Cromwell and dam Brenda II. She is already the dam of winners, counting Melrose Prince, a winner of many good prizes, including a \$150 silver cup and gold medal at New York in 1889, also Philamont, first at Toledo and Columbus shows, among her progeny.

In the corner of this kennel a door opened into the boudoir of the pride of the kennel, at least the female portion of it—Caution's Own Daughter, whose career since I first spoke of her many good points in November, 1890, has fully kept pace with all expectations, and when our mastiff enthusiast, "The Member for Hulton," thinks her about the best of her breed over here, there is little need for me to either criticize or praise her. C. O. D.'s record is now well known, and though her chocolate markings may be objected to by some, still her beautiful head outline and intense look of quality must surely impress the most prejudiced stickler for black points. C. O. D. has another name for commoner wear—Radie. This bitch was sired by that celebrated stud dog, Ilford Caution, and her dam is the beautiful bitch Lady Dorothy. It may be remarked *en passant* that the latter bitch must have thought that the production of two such animals as Caution's Own Daughter and Miss Caution was honor enough for her lifetime, for she has done nothing further to increase the mastiff population of the country. C. O. D. has won firsts at most of the principal shows last spring and in the Canadian circuit, being only beaten by Lady Dorothy twice at Washington and Pittsburgh, and Lady Coleus once at Toronto.

The next compartment was drawn blank and then with a confident smile Mr. Pritchard opened the adjoining kennel door and showed me the hope of the kennel—the new young dog Cardinal Beaufort, that Mr. Whitney during the summer had paid \$1,250 for through E. H. Moore when the latter was in England. This dog is now about 22 months old, having been born Feb. 10, 1889, and is by Sir Stafford out of Friga. When I saw him he was just then in the neither hay nor grass period of his life but showed every promise of furnishing into a first flight dog. He boasts one of the stoutest and deepest of heads, as his picture shows, nice small ears, good eye and wrinkle. Body a little short but his hindparts, I now hear, have strengthened till now there is no sign of weakness. Take him all round, with luck, he should be a dog that will do a lot of good for the breed. I forgot to say that these kennels open into nice grass runs 125 by 20 ft. fenced in with eight foot palings.

Crossing the passage we found another kennel opening into Cardinal's yard. In this was the noted Lady Dorothy, looking the picture of health, and though she has hardly carried out the early promise as regards size when first imported by Mr. Moore in 1887 she is yet one of the best in the country. Full of quality, her good points need no repetition. She was about three weeks gone in whelp to Cardinal Beaufort, the first he had visited, I believe, since his importation in July last. Lady Dorothy has a nice body for a brood bitch and it is to be hoped her union with such a young dog as Beaufort will effect the desired result. Lady Dorothy was whelped in 1886 and her sire was either champion Hotspur or champion Orlando, he of the wonderful head, and dam Wunna, by Cedric the Saxon out of Mona. Her winnings include firsts at Providence 1887, New York, Washington, Pittsburgh, etc., 1891.

The next door led us into two kennels which compose the corner of the building. In the right one is Exeter Dree, a new importation during the summer. This bitch was whelped June 3, 1888, and is by Beaumaris (13801) out of Doris (18012), by Titus out of Digit, Beaumaris, by champion Beau out of Mischief. She was purchased from Mr. James Hutchings, the noted Devonshire mastiff breeder. Exeter Dree is a little long-faced, but has a small ear, fair bone and is nicely ribbed. She was imported in whelp to Exeter Barister, but unfortunately lost the litter of nine, as she only came over a week before whelping. She was to visit Ilford Chancellor. The corresponding compartment to this was drawn blank. Opening a side door into a small room Miss Caution came smiling up. This is a very much im-

proved bitch since the spring, and though her face has a suspicion of "dish," still it is a beautiful one, and much like her more celebrated sister's, but if she has not been favored with quite so perfect an outline, she luckily has the much desired black points. She is the same breeding as C. O. D. sire, Ilford Caution: dam, Lady Dorothy, but was whelped May 5, 1890, and in these two Mr. Whitney has a pair of valuable brood bitches, for their quality is intense. Miss Caution won several prizes last spring, and in the late Canadian circuit, and now that C. O. D. is in the challenge class seems to have the open classes next year at her mercy. This finished the main building, and entering the passage

Railroad runs now, but which formerly were the grounds and gardens of the house in which Mr. Whitney was born. Leaving the kennels I passed a substantial looking house where Mr. Pritchard is to have his rooms so that he can sleep with one eye on his charges. There is no lack of room for exercising the dogs without going off the estate, for across the road from the kennels are two large fields of about three acres that run down to the river. Here are kept two Alderney cows, the kennel pony, and the buck-board, to which is attached an arrangement of cross bars, so that several dogs can be chained behind and taken out for exercise, a rather lazy man's arrangement, but

country I sincerely trust that another year there will be no such cause for complaint. After a pleasant lunch at Mr. Whitney's residence, a meal made bright by the presence of Mrs. Whitney, I visited the stables behind the house, which contain some five or six very nice trotters, one of which has shown a 2:20 gait; this is a half sister of Monbars, the noted two-year-old trotter, and will ere this be now in the hands of the noted Budd Doble, who will bring out of her whatever record-smashing pace there is in her. As we jumped into the perfectly appointed sidecar behind two lovely young mares I asked the owner why his fancy leaned so much to the tenderer sex in his trotters. "Why," he answered, "lame a horse and he's done for, lame a mare and you still can use her for breeding purposes." Some people may call that horse sense, and I'll agree with them. Anyhow, I had a most charming drive to Oriental Beach, and jogging quietly home in time for dinner several hours were spent till train time in pleasant chat that was not "all dog."

H. W. L.

LORD CLOVER'S PEDIGREE.

Editor Forest and Stream:

Inasmuch as your correspondent "Onlooker" pronounces the Lord Clover matter still in a half baked condition for lack of evidence, it may be well to outline the testimony still in my possession.

First of all I have a number of English for sale lists, stud cards, catalogues, etc. All of them antedate this Lord Clover turmoil and all of them contain strong corroborative testimony in favor of the pedigree under discussion. They show the breeding of Mr. Proctor's Rosalind just as clearly as the stud book, also that of Mr. Hartley's Lady Yara, Mr. Talland's Lola, Captain Openshaw's Lindon, Mr. Proctor's Lothair, Mr. Houker's Haughty Nellie and Haughty Daisy, Mr. Kiltver's Cestrian Psyche and others. All of these animals have the blood of Lord Clover's dam and maternal granddam, Little Dorrit, in their veins in greater or less degree, and the documents descriptive of them show unequivocally that their owners think as I do. They one and all make out the same case as that with which Dr. Cryer is confronted. More than that I have the direct testimony of a number of well known English breeders, and there is not a single point of difference or a conflicting statement throughout. Mr. Houker, the present secretary of the English Pug Club, owns Lord Clover's sire. He formerly owned all of Lord Clover's litter brothers and sisters, together with his younger sister Haughty Nellie, and a dozen others of the same strain. Mr. Houker wrote me that there was not "a shadow of a doubt" as to the integrity of the pedigree with which everybody but Dr. Cryer accredits Lord Clover. The stud cards of Lindon, a litter brother of Lord Clover, and of Mr. Proctor's Lothair, another full brother of the dog, show the same thing. Joseph Openshaw, who owns Lindon wrote me that the pedigree was unimpeachable. Mr. Kiltver's Cestrian Psyche won three firsts at the Agricultural Hall this year and was first also in open class bitches at Birmingham last month. Her pedigree involves all that I affirm of Lord Clover's. The challenge class bitch Lola was bred by Mrs. Britain, who also bred Champion Little Count and Little Countess. Lola is by Lord Clover's brother Lothair and her pedigree is so given by her owner. Lady Candy-tuft, winner of first at Bristol and at Birmingham this year is by Lord Clover himself ex Lady Clematis. Her owner, the Rev. Dicker, assured me long ago that the pedigree I submitted to him was authentic. I can show over the signatures of these breeders and of others a condition of affairs that no incomplete stud book entry will set aside. Dr. Cryer's blunder was simply a failure to distinguish between things that differ. He probably understands now that

LADY DOROTHY AND CARDINAL BEAUFORT.

Owned by Mr. James W. Whitney, Rochester, N. Y.

which runs the length of the extension to the main kennel, 50ft. long, I found eight more kennels which open into the alleyway. These have runs about 10ft. wide by 125ft. in length, extending to the road, with plenty of grass to roll round in. In these runs there was hardly as much shade as I would like to see; shade is a *sine qua non* in a kennel, and especially for mastiffs and other large breeds. The kennels in this building have divided doors, opening top or bottom, and the floors are cemented, with a slope so that water passes off into the main drain to the river. The partitions between the kennels are 10ft. high, of solid boarding. In the third compartment a grand old winner and handsome mastiff raised herself lazily from her comfortable couch—Lady Coleus. She is now about in her prime, a little over five years old. Her sire is the noted champion Beaufort and dam Vistala. Her breeding is, therefore, superb. Her list of winnings is just one succession of firsts, and the only bitch that can rub her uncomfortably is C. O. D., as Cambrian Princess has about passed her limit mark. Of course this bitch was a winner on the other side before she was imported by Mr. E. H. Moore in 1888. I am not aware that she has produced any pups, and more the pity, as she is grandly built for breeding. Massive in head, with a nice expression, she shows lots of quality, is very deep-chested and large of bone. Then I came upon another matron, Lady Pamela, one of champion Minding's get out of Bess (11,733). She was whelped April 12, 1888. She has an excellent body and front, is short-faced, but hardly massive enough. This bitch was in whelp to the late Horace, who had died shortly before my visit to the kennel, and this is the only bitch that was in whelp to him; and as Horace was a bigger dog than Ilford Chancellor, some good-sized progeny are now, I hope, trying to run round the kennel. Lady Pamela was shown once, in Boston in 1888, when she won a \$25 special.

By this time I could not but admire friend Pritchard's arrangement of the kennel, as my interest was kept at fever heat all the time and I had not seen the best yet—but we were coming to it when he opened the next pen, which proved to be the quarters of the Sultan of the harem, champion Ilford Chancellor, and as such was wearing an insignia of office in a fine silver studded collar. I never saw him looking better, and I am sure no one would even dream at that time of his early demise. I have so recently in a late issue of this paper, in commenting on his death, given particulars both of his breeding and his winnings that it is no use repeating them here; but to show what a good dog he was I may remark that at the Crystal Palace show in 1888, under Dr. Turner, he beat such dogs as Hotspur, Victor Hugo, Admiral, Prince of Wales and Montgomery for the challenge prize. He was another importation of Mr. Moore's in 1889, and from this gentleman Mr. Whitney purchased him. He was the sire of Ilford Cato, Chocolate Girl, Coral, Ilford, Ilford Conquest, Ilford Chorister, and he was just beginning to make his mark as a sire in this country. Some of his litters were very large, of more than ordinary promise, and next year may see some of his stock in the prize lists of the shows. With this dog was a young bitch pup, by champion Beaufort out of Gerda, bred by Mr. Winchell and purchased by the Flour City Kennels from Mr. Thompson, of Washington. This bitch is quite well made, good bone and body and nice head, and will no doubt be seen to good advantage at future shows. She will be about 15mos. old now.

Our tour of inspection concluded with the bathroom at the end of the building with its tubs and other washing paraphernalia. The ventilation and light in this building has been well arranged and the total absence of smell in any of the kennels was very noticeable. The dogs lie on pine shavings in summer, and this gives the kennel a pleasant odor, besides being death on fleas. Behind the main building is a small place used as an ice house for storing meat, of which a good deal is used in the food, and judging by the looks of the dogs, Mr. Pritchard's home-made recipes must be appreciated by his canine charges. In entering the kennels from the road one passes through an old-fashioned garden of half an acre in extent with lots of shade from numerous quince, apple and other fruit trees. This will be utilized for four kennel runs from a new kennel which will contain the stud dogs. A capital plan, as these should never, if possible, be kept in the same building with the bitches for very obvious reasons. Nothing but bitches and pups will be housed in the buildings I have described above. Behind this plot of ground is another large inclosure where the bitches are turned in to have a run. Overlooking the kennels is a high embankment, on the top of which the Rome & Watertown

friend Pritchard, like most of us, has a "bone in his back," as the saying goes. Here is also a windmill pump, that supplies the kennels with water. Further down the road is another tract of ground, used now as a vegetable garden, which Mr. Whitney will turn into a half-mile track for his trotters to be jogged on.

The pangs of hunger by this time began to make themselves manifest, so turning once more to the busy haunts of trade, I found Mr. Whitney in an atmosphere of "wheat futures," and while waiting for him I might here remark that a fondness for dogs is no passing whim of Mr. Whitney;

THE LATE CHAMPION ILFORD CHANCELLOR.

Owned by Mr. James W. Whitney, Rochester, N. Y.

he has been an ardent lover of mastiffs for upward of fifteen years, but until he purchased Horace, by champion Minding out of Duchess, he had no idea of indulging in a kennel of prize-winning stock. It was not till the winter of 1890-91 that the opportunity arose, through Mr. Moore's intention to devote all his energies to St. Bernards, that Mr. Whitney was able to lay the foundation of the fine kennel he now has, by purchasing such dogs as Ilford Chancellor, Lady Coleus, Lady Dorothy, Caution's Own Daughter, Miss Caution, etc., and at once stepping to the top of the tree. In Mr. Pritchard he has an able manager, one whose training has been principally with mastiffs, first in the Winlawn Kennels and then with Mrs. Grant.

The kennel has had little opportunity yet to rear much young stock, but for the good of the mastiffs bred in this

omission is not necessarily prohibition. In one entry, that of Lord Clover himself, the stud book fails to carry out the schedule of the dog's lineage to completion. In place of tracing it elsewhere, Dr. Cryer appears to have flown to the seemingly not very distasteful conclusion that Lord Clover was not as well bred as some folks imagined. This is the way it looks at least to a man up a tree. In any event there does not appear to be a scrap of evidence other than the omission just mentioned to conflict with the fact that this dog was bred by Mr. Goulding, not Mr. Chatterton, and that his dam, Nellie, was bred by Mr. Proctor out of Little Dorrit, Little Dorrit by Max ex Midge. If Dr. Cryer will table his cards I will cheerfully match facilities with him so far as this one case is involved.

THOS. I. BALLANTINE.

PEORIA, ILL.

IN RE ANTONIO VS. MAID OF KENT.

Editor Forest and Stream:

At the close of the Central Field Trials I was courteously informed by the reporters that they would dissent from the judges' decision in the four-hour race.

By discussion, I soon learned that they differed from us in regard to important matters of fact, and also in regard to the bearing of facts upon the issue.

While disclaiming any wish to enter into controversy, or to complain of criticism, it seems to me proper to give the public the case as the judges saw it.

Antonio had the luck to draw the bye, and was sent to run his bye heat under Mr. H. Penry as side judge. It was expected to finish the All-Aged Pointer Stake before noon and to begin the four-hour race in the afternoon, therefore we ordered Antonio to run his bye so as to be in readiness to go down against the winner of first heat, which would be run at the same time. Unfortunately, the Pointer Stake could not be finished in time, so that Antonio got a day's rest more than the other dogs. We might have stopped the running of the bye, but hardly thought it right when we had brought Mr. Aventura out some four miles with his dog. Especially as he had yielded his allotted place in the drawing to enable us to so arrange the running as to avoid the necessity of making Paul Bo run a heat for the Absolute All-Aged Stake and a four-hour heat on the same day. The original drawing was very favorable to Mr. Aventura, and after his consenting to change it for the accommodation of a competitor, we did not think proper to subject him to a further and arbitrary change.

Fortunately the disability of Paul Bo gave Maid of Kent a bye, a id so made matters even between her and Antonio. For the sake of complete equality we had Maid of Kent run her bye heat under Mr. Penry also. Mr. Penry, I will say, has acted as steward of our trials for three years, and is a very good handler in private, so there can be no question of his competence. But in his report to us he mentioned a fact whose bearing he did not himself perceive.

Maid of Kent being a good retriever her handler shot and killed birds at every opportunity, she retrieving. No less than twelve were brought to bag in the bye heat.

The important rest afforded by this change from galloping and searching was not overlooked by the judges, and was thought to be something of an offset to Antonio's advantages. Now, as to the work in the final heat.

Antonio was surely handicapped by the illness of his handler, Mr. Aventura, who was suffering from grippé. About an hour after the start one of the reporters got in front of Mr. Aventura in a narrow path; he wishing to pass and unable to make his voice heard, struck the reporter in the back with a cornstalk, at the end of which was a clod of earth.

Shortly after, the dogs having passed through cockle burs, Antonio got some under his legs and was pulling at them with his teeth. Aventura stooped over to help remove the burs. At the moment I gave the order to move on the reporter above mentioned charged on him suddenly and dealt him a swinging blow on the head with a large cornstalk having a heavy lump of clay on its roots. The blow was so hard as almost to knock him down, and in his condition, being quite sick with the grippé, it was near being decisive of the race. Aventura remained dazed and stupid for some time, and did not recover so as to handle with ordinary skill or judgment in the rest of the heat.

Although Aventura was blamable in provoking the attack, I felt it to be my duty to reprove the reporter, because I considered that he was there in the exercise of a public function and should have remembered that the interests of Mr. Harris, the owner of Antonio, were jeopardized by this bit of horse play. I will add that every proper apology was made, and I would not bring up this affair if the heat could be fairly understood without it. Its extreme importance will be seen when I explain that during the confusion Maid of Kent went on without competition and found a bevy which she pointed well. The location of this bevy was known to the handlers, and there is no doubt Aventura would have sent his dog there, too, had he not been interfered with. Twelve minutes before the end of the heat Maid was lost, and when found after time was called she was pointing a rabbit.

Meanwhile Antonio had finished strong, galloping well and ranging wide. The only foundation for the report that he was inclined to quit was in the fact that he stopped behind a bush to eat some carrion, the halt only amounting to about five seconds, he going on and continuing to hunt when ordered. The dogs had ranged so wide and been separated so much that each judge saw only part of the work. On comparing notes and observations, the judges were tied on the result of the heat and could make no award on it.

The heat system as practiced from the beginning of the Central Field Trials Club has required the judges to consider the entire work of each dog throughout the stake.

Therefore in a tie or a very good heat the award is given to the dog whose previous work is the best. (See Running Rules, page 8, Rule 12.) We were surprised and shocked when one reporter who has been present at our successive trials and had copies of every edition of our rules, should declare himself ignorant of this feature, and when it was explained to him deny the propriety of applying it. In truth we had no choice but to apply it unless we dispensed with all scruples of conscience.

Whether it is a good rule or not is a different question. In our summing up we found that Maid of Kent had pointed one bevy the most, while Antonio had a majority of one on singles. She had flushed two bevies that she had the best of chances to point. He flushed one when absolutely pushed on from his point by his handler. He made two false points and pointed too often where birds had lately flushed. He showed more fatigue than she, especially at the beginning of the last half hour, but freshened toward the last. She went off her nose and passed right through the midst of birds without owning scent; her pace was slower than his and she showed less industry in her work. She ran very strong and ranged as far at the close as at the beginning. Antonio was lost three times during the heat but was always found pointing birds in thick covert near the line of march, not dropped to his point but standing. About half an hour would cover the total time he was lost. He showed great speed, fine style and great industry in his work, and had good nose all through. As faults are mostly mentioned above, the impression may arise that the work in general was poor. On the contrary, it was brilliant beyond all previous trials.

The final heat was better than previous finals, and the work of the two pointers was far better than even that of winning setters in previous years. The heat between Antonio and Rip Rap was probably the finest ever run in field trials. Any hour of it taken alone would make a brilliant heat in all-age stakes. The advantage of Antonio was clear, and why his work aroused no more enthusiasm is a mystery to me.

On a previous day we had seen Count Eric do some remarkable bird flushing in a sour, headstrong way; and all were highly delighted, as was proper, for it was truly a great performance. But Antonio found as many bevies and more singles, was tractable and obedient, as wide-ranging fast dogs go, being surpassed in this by Paul Bo alone, of all the fast setters we saw. His work was done more cleanly, and his speed was greater. Why, then, was he not a favorite? The dog has one fault, that a very plain and unmistakable one. He is inclined to point at too faint a scent, and consequently stops where birds have lately flushed, or to the scent of small birds. However, he usually corrects his own error if time is given. This fault was made more prominent in the heat with Maid of Kent by the injudicious work of his handler, who repeatedly stopped

him when he wanted to draw on and locate, and forced him on when he was staunchly pointing, thus ruining his finest opportunities for bird work.

I think too much importance has been attached to this fault. When a remarkable dog has one solitary and plainly marked defect, however slight it may be, he is apt to be put below others who are inferior to him in everything else. In my opinion this is wrong, and is the most crying evil of dog judging and of criticisms on the same. Antonio did not retrieve, but this was scored against him and handicapped him in another way, for the pointers were excellent retrievers and their handlers shot birds which they retrieved, thus obtaining a rest from galloping. The judges were obliged to order handlers to stop shooting or the handicap would have become too great. The services of a third judge were urgently needed. Mr. Churchill, who was to have been with us was prevented by very urgent business which it was expected he would terminate in time for the Free For All. When at the last we learned he could not, we made all possible effort to replace him, but found that serious objection was made by one or other of the contestants to every person whose services were then and there obtainable. We had no choice but to finish the work by ourselves, which we did to the best of our ability with the result known.

As a matter of opinion on the question of the relative merit of the two breeds I will say that I think that if enough pointers had started in the four-hour race to make their numbers equal that of the setters, their superior endurance would surely have made one of them a winner. In a short series the setters have the advantage from their quickness on birds. At the end the pointers appeared little worse for wear, while the setters were more or less leg weary, though neither Antonio nor Paul Bo were anywhere near quitting. Still their ability to go on running through a longer series seemed doubtful, while that of the pointers did not. Reverting to the advantage Antonio may have secured in the time his bye was run, I wish to explain that the judges did not think that amounted to anything. Rip Rap, who came down against him, had one day and two nights rest, and in our belief was as fully restored as he ever would be from the fatigue of one heat. Antonio had two days and two nights and we did not think the extra time was of any advantage to him, as he would have been fully rested in twelve hours less. Our decision at the end assumes that the heat between Maid of Kent and Antonio was a tie, as also their bye heats, but that Antonio's work against Rip Rap was better than Maid's against Chance.

J. M. TRACY.

[Mr. Tracy's suggestion that the trial was affected by the exchange of courtesies between Mr. Aventura and one of the reporters hardly merits serious comment. But giving to the incident the importance Mr. Tracy claims for it we suggest that if the handler basted a reporter in the back with a lump of dirt he invited a basting in return, and so was himself alone responsible for the effects of the encounter. The business of a handler is to run his dog, not to thump reporters; reporters are only human after all; if thumped, they thump back again. But to find in this ridiculous and trivial incident anything affecting the work of the dogs or affording a basis for a decision of their merits appears to us to be not less misleading than it is ingenious. It reminds us to be not less misleading than it is ingenious. It reminds us to be not less misleading than it is ingenious. It reminds us to be not less misleading than it is ingenious.

"There was once a robber in Cairo who fell from the second story of a house he was trying to enter and broke his leg. He went to the cadi and complained. The man's window was badly made and he wanted justice. The cadi said that was reasonable, and he summoned the owner of the house. The owner confessed that the house was poorly built, but claimed that the carpenter was to blame, and not he. This struck the cadi as sound logic and he sent for the carpenter. 'The charge is, alas, too true,' said the carpenter, 'but the masonry was at fault and I couldn't fit a good window.' So the cadi, impressed with the reasonableness of the argument, sent for the mason. The mason pleaded guilty, and explained that a pretty girl in a blue gown had passed the building while he was at work, and that his attention had been diverted from his work. The cadi thereupon demanded that the girl be brought before him. 'It is true,' she said, 'that I am pretty, but it's no fault of mine. If my gown attracted the mason, the dyer should be punished, and not I.' 'Quite true,' said the cadi, 'send for the dyer.' The dyer was brought to the bar and pleaded guilty. That settled it. The cadi told the robber to take the guilty wretch to his house and hang him from the door-sill, and the populace rejoiced that justice had been done. But pretty soon the crowd returned to the cadi's house, complaining that the dyer was too long to be properly hanged from his door-sill. 'Oh, well,' said the cadi, who by that time was suffering ennui, 'go find a short dyer and hang him. Justice shall prevail.'"]

GLOVERSVILLE DOG SHOW.

"AWFUL muddle-judging does not commence till Wednesday, -P., reads the special to FOREST AND STREAM on the opening of the Gloversville show. According to the catalogue there were 100 entries. Mastiffs and St. Bernards are chiefly locals. Greyhounds have Spinaway in the challenge class. Foxhounds are local. Pointers show up well with Mr. Hyland's well-known winners. Sir Frederick, of the Seminole Kennels, will take care of the English setter division. This same kennel also show their noted Irish setters, and Mr. Blossom is on deck with his well-known team of Gordous. There are five native setters entered. Cocker spaniels are good with Mr. Bell's and Mr. Browning's entries, others are from local fanciers. Seminole Kennels take care of the collie classes with their well-known dogs, and Dr. Sueden's Winning Wagtail is one of the two bull-terriers. The Rockland Kennels and Mr. Zimmer's entries fill the beagle classes. In fox-terriers, Woodale Kennels with five entries and Wilton Kennels and Clarence Rathbone's well-known dogs will make competition interesting. Several well-known pugs are entered. Mr. Russell's noted Bedlington fill three classes, and Pat Murphy is the only Irish terrier representative. There is also a show of poultry with 477 entries.

VALUABLE SETTER IMPORTATIONS.—Bridgeport, Conn., *Editor Forest and Stream*: I received by s.s. Circassia, Dec. 15, the English setters Devon Shot and Devon Daisy from the kennels of John Lee Bullied, North Devon, England. The dog is 2 yrs. old this month, weighs about 40 lbs., has a magnificent evenly marked black and tan head and solid blue belton body. He is a very rangy built dog with the cleanest of necks set on to good shoulders, well arched loin, strong hindquarters and excellent legs and feet; in fact, his general make up is so different from the type of English setter that have been imported of late that I was agreeably surprised and felt like asking if he had not come from Tennessee, the home of our field trial setters, instead of the land of roast beef and plum pudding. He goes with me on a hunt this week, and I'll let the public see him in New York in February. In breeding he is by Bang IV. (ch. Sir Allister—Belle of Furness); dam, Queen Bess (ch. Sir Allister—Beauty Queen), she by Fletcher Rock out of Flash II. Devon Daisy, 18 mos., is a small white bitch, black patch over each eye, black ears and one spot on back: she is a very handsome little bitch, excellently put up for work, which she has demonstrated to me already she can do, but will have to be controlled more for our hunting as she is a very fast and wide ranger, and is at work every moment in the field. She is a pure Laverack, sire Topp; dam, Lady Babb; Topp (Monk of Furness—Bridford Sybil), she by Count Howard—Princess Ada. Lady Babb is by Prince of Welts—Porton Miss, by Beau of Ball—Snail, by Blue Prince—Old Kate, and as Mr. Bullied says, is extra valuable because of her Blue Prince and Tam O'Shaunter blood which she runs to on all sides of her pedigree. She is in whelp to Devon Shot, being bred at Mr. Bullied's suggestion a week before she sailed.—JAMES E. HAIR, V.S.

PSOVOI.

WE have seen a very interesting letter on the Psovoi, which term we shall henceforth use instead of Barzoi, that this Russian authority says has no meaning in the light that we have accepted it. Some time since we spoke of the functions of the Psovoi dog in Russian coursing, namely to simply course the wolf after being made to break cover by the pack trained for that purpose and which must not leave the edge of the cover, but as soon as the wolf gets away must return to work again and put up another. We find this Russian says the essential points to all Psovoi dogs are (1) "a very large, full and dark eye; in fact, the gazelle eye. (2) A long, narrow and perfectly lean head without any break in the line of the profile. (3) Ears placed far behind, small and overlapping on the back of the neck, easily cocked, and then presenting the appearance shown in the portrait of Mr. Vysheslavtseff's dog in the *Shooting Times*. (4) Paw close, compact and oval-footed—by no means round. (5) A deep, narrow chest, reaching below the elbows. (6) A powerful loin and stern. (7) A tail richly hung on the lower side, scimitar-shaped and somewhat longer than the knee joints."

In another letter this gentleman gives some interesting information regarding Mr. Hacke's recent importations, which were said to have come from the Grand Duke George Mikhailovitch's kennels, owing to that gentleman's being temporarily under the cloud of the Czar's, his cousin, displeasure for marrying a maid of honor of his late mother. Now as to this leading to any disposition of his kennel is said to be untrue, for the Czar personally and many of the Imperial family own grand coursing hounds, but to procure even a pup of them, except through a special favor in the shape of a present, is a thing simply unheard of. They are never sold, and this is given as a fact. And the simple idea of this appears monstrously absurd to any one who has the slightest notion of how things go in Russia. Generally the selection of pups from the litters is an affair personally attended to by the Imperial owners, and the pups found defective are ordered to be destroyed. The kennel servants, however, often sell these defective pups on the sly or in fact any pups, as whelped by the Imperial bitches, for, of course, there are many who want to get, at any price, a pup bred in the Imperial kennels, or at least reputed to be such. All this goes to show the lot furnished by Mr. Rousseau to be a doubtfully acquired one, and though this gentleman is in touch with the dog world of Russia it is only recently, on receiving a letter from America, that he had heard of Mr. Rousseau.

We are told further that the animosity existing between the leading breeders of Russian coursing hounds is a source of great annoyance to most Russian sportsmen. They have but one breeder who breeds for sale, a Mr. Karieff, and he has among his dogs descendants of Nafar, and this gentleman has very much influenced the getting up of the standard. The real strong points of this gentleman's breed are coat, ears, size, pasterns, tail and a great speed for short distances (characteristic of the northern Russian coursing hound, together with great pluck and a wonderful "fling." The back is said to be very bony and poor in muscle, which gives rise to the nickname given to the Karieff breed of "Sturgeons of the Psovoi breed."

Then there is another leader with another type, Mr. Baldareff, an acknowledged leader of a more numerous section of coursing men. He is a well known judge and thinks the reproduction of the old type quite impossible and his ideals are called the Ermoloff dogs, who are descendants of the old Machevarianoff dogs, of which the dogs Serdectimai and Kaira are good examples, both bred in Mr. Ermoloff's kennels, and which Mr. Karieff wants disqualified owing to their having Oriental blood in their veins. Mr. Machevarianoff, the authority on Russian coursing, and who died some thirty years ago, it seems, mixed some Caucasian coursing blood in his breed to give them better eyes and lasting power, for the old dogs, bred for coursing on short intervals, between great tracts of forest, were and are very fleet on distances not exceeding 700 to 800 yds., but beyond this distance they cannot run.

This shows the different positions of the leading coursing hound "amateurs" of Russia. The Ermoloff—Machevarianoff dogs' good points are "a graceful and slim build, heads, eyes and paws." This would require both Karieff and Ermoloff stud dogs to constitute a good Russian coursing hound kennel. This Russian says, according to drawings, that Elsie's head was decidedly superior to Kriut's, and on the other hand neither Kriut, Zloem, or in fact any of the Russian coursing hounds in America whose portraits he has seen can be qualified as even second-class specimens, the heads being particularly defective. Argos is said to be a very valuable sire owing to his good head and hindquarters. On the question of color he says that black must be considered a defect in the Karieff type which were bred from the old type without any admixture, and the original colors of these dogs were gray, cream, and red (rather roan), and even red was considered by some as a defect. The Machevarianoff, and subsequently the Ermoloff dogs, have inherited black from the Caucasian sires alluded to above, and consequently owing to the difference of opinion, Mr. Chybyshcheff, one judge who believes in the Karieff type, disqualifies for black, while Mr. Baldareff, another equally good judge, does not, as he believes in the Ermoloff strain. As there is an absence of any reliable Kennel Club stud book, the identification of certain sires is very difficult, but the wide interest now being developed in these Psovoi dogs all over the world will no doubt spur the Russians to take some definite action in regard to keeping proper records of the breed.

DOME-SHAPED SKULLS.

Editor Forest and Stream:

I saw in your paper some time since an article from the pen of the Rev. Robert O'Callahan on "Irish setter type," and among the many good suggestions as to importing Irish setters, etc., there was a statement like this: "The pure bred Irish setter should above all else have a dome-shaped skull." Now, acknowledging the reverend gentleman to be an authority in Irish setter matters, I would ask, as a breeder, does the expression "dome-shaped" convey the idea of form most desirable in the Irish setter skull, and should this be our aim or standard in breeding?

A dome-shaped skull, as I understand it, is one rising in all directions and having its highest point about mid-way from eyebrow to occiput, an illustration of which we see in Mr. Scanlan's Inchiquin and to which that of Desmond II. also approaches. Should not an Irish setter skull rather be more of the following form? From a muzzle square at the end and of good length, rising sharply under well raised eyebrows to a point about one-third the distance from eyebrows to occiput, thereby forming a strong stop, thence with a slight but gradual rise to occiput, where it falls rather abruptly to a well-shaped neck. Such a skull has in profile a rather long appearance as of a flattened oval, and from a rear view an oval outline. This skull I believe is similar to that found in such dogs as champions Elcho, Jr., Glencho, Tim and many others of the Elcho strain. I make no pretensions to authority, but in studying the breed it has occurred to me that the peculiar shape of the skull is a very important matter to those who would breed successfully for herein lies one of the strong points of character and one on which the various authorities and standards are comparatively silent.

REDSTONE.

NAMES AND PORTRAITS OF BIRDS, by Gordon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

DOG CHAT.

BECAUSE the Bulldog Club of America did not offer a series of specials at other shows in addition to their fine display at last W. K. C. show, it was thought by several people that their gigantic effort was a sort of expiring kick. The club has kept very quiet during the year, but from a letter we received from Mr. C. D. Cugle, the secretary, we note that the club is out again to challenge the admiration of exhibitors by a generosity completely surpassing any previous effort in this respect made by either this club or any other specialty club. The Bulldog Club will offer at the Westminster Kennel Club show, cups, medals and cash prizes as follows: Five solid silver cups, value \$650. Thirteen solid silver club medals, value \$130. One kennel prize of \$25 and twenty cash prizes of \$15, \$10 and \$5 in eight classes, making a total of \$200 more, and a grand total of \$1,005. At the 1891 show specials to the value of \$775 were competed for, so that this coming year \$227 more will be offered. Only club members can compete for these specials, but as nearly everyone that owns a good bulldog is a member, or should be, competition is not very much restricted thereby. It is well known what influence for good the Bulldog Club has already had on the breed, and the great number of entries (fifty-one) its generosity and enterprise brought out at New York last year, and we trust that the bulldog men will respond in a way that will show the English judge, Mr. Geo. Raper, that the breed has not been neglected. Mr. Raper is *facile princeps* as a judge of this breed and is noted as the breeder and owner of the once great Rustic King. Mr. Cugle concludes his letter to us with a little burst that is particularly applicable: "Breeder, don't forget the American-breds, for it is more than likely that Mr. Raper, with his years of breeding, will see more in the youngsters than we of less experience. Swell the club membership and face the judge with all the entries you can make."

Mr. Paul Schumacher, Frankfurt, Germany, is, we understand, shipping a smooth-coated St. Bernard dog called Marko by the steamship Russia to Mr. Geo. W. Schenck, of Lyons, La., who is well known among St. Bernard men. The dog was bred by Dr. Caluminus, and is forwarded to this country through Mr. Goldsmith, the well-known forwarding agent for live stock.

There are several breeders of terriers and pet dogs that do not advertise their stock as they should do, so that would-be purchasers may have an opportunity to make their selections. The business columns of the FOREST AND STREAM afford the very best medium to reach a wealthy class of patrons. Hardly a day passes but that we receive queries by mail where such and such breeds of dogs can be purchased. As this office is not, however, a dog mart, we can only refer them to our advertising columns. We have now inquiries for a light-weight bull-terrier dog, not over 15lbs. weight; red dachshunde and a pug dog pup. We have the addresses of the parties wishing dogs of these breeds and can furnish them on application. If you want to sell your stock advertise in the FOREST AND STREAM.

Our thanks are due to Mr. Donovan, the secretary of the Canadian Kennel Club, for his kindness in sending us a proof of the minutes of proceedings at their last meeting. There is nothing in it, however, which we did not publish last week excepting a rule made that dogs that have won prizes in England may compete in novice classes in Canada. This is a ruling that will hardly meet with approbation, as Princess Florence's appearance in a novice class would entirely, in our opinion, defeat the purpose for which such a class is formed.

Wolves have become so numerous in San Miguel county, N. M., that the county commissioners of that county have laid a bounty of \$7.50 per head for their destruction. Pan-handle ranchmen have been successful in killing wolves with foxhounds; one pack killed 96 last year. Messrs. Lewis Lutz and Robt. Minjes have issued a circular inviting owners of foxhounds to clear their ranges of the savage pests, heading the circular, "A Woman and Child Devoured by Wolves."

The *Scottish Fancier* says the days of the short-legged spaniel are gone. The *Ayr Advertiser* of Sept. 24 contains this advertisement: "Found in Ayr, on Saturday, liver and white spaniel bitch, sixteen hands high." This one would even be enough "on the leg" to suit our "Uncle Dick" and the hills round Hornellsville.

It is the fashion nowadays to rake up all the interesting events in the life of E. D. Fulford, the great pigeon shot, and our "Dog Chat" column must keep in line. It is said that he had a bull pup once that he trained to track and point quail and partridges, and in one point and flush of the dog Mr. Fulford killed eight quail at one shot. Next!

At the time of the last Albany show Mr. T. J. Farley did many of the dog men a good turn by turning some of the back rooms of his hotel into a kennel where handlers could keep their dogs till the show opened after the Troy show was over. Mr. Farley intends to do the same this year, and exhibitors can bring their dogs to his place and take care of them there, or send them there in his charge to stay till the Albany show opens. He will be at Gloversville to look after this part of it. His place is almost next door to the dog show building and very convenient for the purpose. It may be remarked that Mr. Farley did not charge a cent for this timely accommodation.

We note in our business columns that the noted English setter Antonio, that did so much winning at the recent field trials, is now standing at stud at Mr. D. E. Rose's kennels, Lawrenceburg, Penn. This dog is a very handsome looking one, besides being such a notable performer in the field. We are not informed whether Mr. Rose has purchased the dog or whether he is still owned by Messrs. J. M. Avent and N. T. Harris.

From an Alabama paper we learn that Miss Annie Sullivan, the teacher of little Helen Keller, who had been under treatment at the Gibier Institute for a dog bite, has left the establishment "cured," and the mastiff puppy Wade, that did the damage, is now undergoing a course of treatment at the same place.

Mr. Bradford S. Turpin writes us he is down at West Yarmouth, Mass., for a few weeks hunting with his pack of beagles, that have records in public competition, Clyde, June Rose, Gypsy, Forest and Belle Ross. This pack between them won four firsts, two seconds and two thirds at the N. B. C. trials. Besides these, he has Mr. Parry's Hunter and a promising ten-months puppy. He says the six do some beautiful running together, they pack to perfection, and it is a lucky hare that can throw them off. The old dog Frank Forest is also still in the ring. In company with a young bitch he ran down and killed on the ground two hares a few days ago. We know that we are only echoing our readers' sentiments when we wish hope Mr. Turpin will not be selfish, and as we cannot participate in the stirring runs, he can at least give us an echo of the music with his interesting pen.

We regret to hear that Mr. Eberhart has lost, from hasty consumption, his new stud pup Seven Dollars (\$2,880). Although Seven Dollars in name, Mr. Eberhart informs us

that it took many, many seven dollars before he could call him his own.

How a dog saved his master's life was told the other day at the Coroner's inquest into the cause of the death of Wm. Dillman, of Philadelphia, Pa. It appeared that Dillman and a companion named Wallace were walking along the Pennsylvania Railroad in Trafford, unconscious that a train was behind them. Wallace's dog saw the danger and pushed his master off the track just in time. Dillman had no such dumb friend, and was struck and killed by the train.

Dog thieves in this city sometimes get their deserts. On the 23d a man was sent to the penitentiary for six months for having stolen a bulldog from a man in Harlem.

Psovi breeders and those who take an interest in the breed will be sorry to hear of the death of the Hornell-Harmony Kennels' Vladimir. This young dog has won numerous prizes in his short career and gave every promise of filling out into a capital dog. He was one of the famous Krlint-Msie litter and was always shown with Princess Irma, a litter sister. On Tuesday morning Vladimir was to serve the bitch Modjeska, but when taken out of the kennel he was found to be breathing heavily, and though a physician was summoned and everything done that could be, he died on Wednesday night. Messrs. Wixom and Fellows have our sympathy in their loss, which is a substantial one, as large sums have been offered for the pair.

It is mooted that a show given under the auspices of the National Greyhound Club, and under the management of Mr. Mortimer, will be given next fall in Brooklyn.

Kennel Editor (after news)—"Hello! old boy! how are you? Any news?"

Old Boy—"Yes, but promise faithfully, you won't publish it"—then he retails some spicy nib of dog news that the editor would give his eye tooth to print. But—well, it's very discouraging.

There are four dogs now on the way or being imported whose names we cannot get at for this very reason. Times have changed somewhat, and purchasers of dogs seem to want to keep their dogs secret for fear, we suppose, that some rival will cable over for another to beat his; and so it goes.

Here is a letter that has important bearing on the subject of discussion as to who quoted Duke of Maplecroft at \$7,500. For the protection of American buyers this thing must be sifted to the bottom. The following from Dr. A. J. Sewell is suggestive.

[COPY]

VETERINARY INFIRMARY,
55 ELIZABETH STREET, EAGON SQUARE, S.W.,
November 19, 1891.

James Rupert, Esq.:

DEAR SIR—As I cabled you yesterday I went to Birmingham and saw Duke of Maplecroft. I was obliged to co. there, as the owner, Mr. T. Smith, refused to bring the dog up to London. However, from the results I might have saved myself the trouble and you the expense. The Duke is a nice dog and has got a very good head and also body. He is also a very nice color, but he has bad forelegs, the left foot turning out very much, and I am afraid the defect will never be remedied. The dog has also rather large ears, which spoil his expression, that otherwise would be good. He is small, not measuring more than 31in. at the shoulder. His length is very good, measuring from the tip of the nose to the tip of the tail 71in., and he has got plenty of bone, the measurement round the arm being 12in. The measurement round the skull is about 26½in. The dog's muzzle is square and deep, but inclined to be weak. The price asked, namely \$7,500, is most ridiculous. In fact I don't advise you to buy him, even at a much lower rate.

* * * (Refers to fee, etc.) Yours faithfully, A. J. SEWELL.

P. S.—Did somebody recommend you the dog?

This letter shows that Mr. Tom Smith was asking \$7,500 for the dog, and lucky it is there are such men as Dr. Sewell, on whom American buyers can depend for a protective opinion on dogs on the other side.

The first premium list of the large spring shows is now before us, that of the Mascoutah Kennel Club. The list of judges is a distinctly Western one, only Dr. Cryer for pugs and toys representing the East, and coming as it will Feb. 9 to 12, so soon before New York, the show will, we are afraid, have altogether a distinctive Western flavor, though the money offered is enough to induce the best kennels in the country to enter. It is certainly the most liberal list ever offered in America. In the large breeds the challenge prizes are \$30 and \$20, something quite munificent. Open classes are \$25, \$15, silver medal and bronze medal, and the entry fee for these classes will be \$4. In setters, pointers and collies the prizes are \$20 and \$10 in challenge, and the same with silver and bronze medals in the open. Foxhounds, greyhounds and deerhounds have \$15 and \$10 in challenge, and the same in open, with silver and bronze medals for third and fourth. Other prizes range \$10 and \$5 in challenge and open classes, and as almost every breed has challenge classes for each sex, the dogs which have earned their titles will be well taken care of. There are kennel prizes given ranging from \$25 to \$10. A \$25 special for the handler with the best conditioned lot of dogs; \$25 for best kennel of sporting dogs and the same for non-sporting, and another quarter of a century for best kennel of toys entered by one exhibitor. For toys the entry fee is \$2 and all other breeds except those mentioned above \$3. The judges who will have the task of placing these valuable prizes are well known men, though some of them have had little or no experience in the judging ring. St. Bernards, R. J. Sawyer, Menominee, Mich.; mastiffs, great Danes, Newfoundlanders, fox-terriers, bulldogs and bull-terriers, Harry L. Goodman, Chicago; Russian wolfhounds, deerhounds and greyhounds, Roger D. Williams, Lexington, Ky.; English setters, P. H. Bryson, Memphis, Tenn.; collies, John H. Long, St. Louis, Mo.; Irish and Gordon setters, cocker, Clumber, field spaniels, foxhounds, beagles and bloodhounds, John Davidson, Monroe, Mich.; pugs and toys, Dr. M. H. Cryer, Philadelphia, Pa.; pointers, Chesapeake Bays, Irish water spaniels, and miscellaneous, Tim Donoghue, La Salle, Ill. The entries close Jan. 23 with the committee, room 717 Chamber of Commerce, Chicago, Ill.

Appropos of Psovi a little bird whispers that Mr. Hacke intends importing a lot of 75 dogs of this breed. When is this going to stop we wonder?

Among the new advertisements this week we notice that Beebe Bros. offer beagles for sale; Jas. Wrinkle a pointer; Oak Grove Kennels, pointer pups; Chas. E. Bunn, mastiffs. At stud—D. E. Rose offers the English setter Antonio. Wants—W. D. E., two pointer pups.

Mr. D. C. Luse, owner of the American Coursing Kennels, Great Bend, Kan., has received from M. Pluister, Cincinnati, six of the finest imported greyhounds in America. They are from the kennels of Col. North, the nitrate king of England. Four are half brothers and sisters to Fullerton, winner of the Waterloo cup three times in succession. The hounds are Norwegian, Belle of Eltham, Beunerito, Nettle, Field and Carvick.

An offensive and defensive alliance has been consummated between two noted dog men in a kennel of Psovi. We hear that the kennel has purchased one of the best dogs of this breed obtainable and it will sail for this country next Saturday. From a photo we have seen the dog is a most hand-

some animal; very straight in front and strongly built throughout. It is one well known as a good one, having won the grand medal at Moscow. We are not permitted to reveal the name.

We hear that Mr. J. L. Little, the Clumber man, has donated, through the Spaniel Club, \$20 for specials in the Clumber classes at New York show.

Last year there was considerable grumbling among exhibitors at W. K. C. whose dogs were relegated to the basement. It is the intention of the management this year to obviate all that, if possible, and bench all breeds on one floor. To this end, and to keep down the number of entries, the fee for each dog will be \$5. To counteract this and keep pace with the times, the club will put up about \$2,000 more prize money.

The amendment to the A. K. C. rules, Mr. Vredenburg tells us, have been ratified by mail vote of delegates.

BORZOI POINTS.

IN a letter to the English Stock-Keeper the Duchess of Newcastle writes:

"Permit me to say a few words in answer to 'Highlands' remarks respecting 'Borzoï points'. English judges will soon ruin this breed if they form a fresh standard; they will soon ruin the animals (not 'dogs') as topheavy and useless as the present St. Bernard, simply through trying to make elephants of them."

"In Russia they do not consider height a point, simply symmetry of form and speed for hunting. The average height of the dogs is from 16 to 18 vershoks (28in. to 31½in.), over this height they become coarse, and lose symmetry and speed which are so much valued."

"With reference to color, a black Borzoï, if placed beside a white one of equal merit, would have to be content with second honors. White with colored markings is the favorite color, then yellow or fawn, and last the dark colors, such as gray, blue or black. There are a few breeders who go in for the dark ones, but they are in the minority."

"I have not seen Mr. Hacke's Osmadai, so cannot say what his head is like, but certainly the collie type is not sought for in Russia; they like long thin heads, like Krlint's and Ooslad's. With regard to shape of body, I have just received a young dog from Colonel Tcheshishoff, and both he and General Balderoff consider his body perfection (these gentlemen are two of the principal judges at the Imperial shows for these dogs), he is wider in front than any I have yet seen, very deep in chest, splendid shoulders with tremendous bone, very good legs and feet, good arch, long straight tail well set down to the hocks, and can go a great pace. This dog is grandson of Nagradai, the only one who has taken the gold medal single handed. With regard to the respective merits of Ooslad and Argoss, I have both dogs in my kennels here, and certainly, seeing the two dogs running together, the most unprejudiced observer cannot fail to say that Ooslad beats his brother in more than one point, having much the best hindquarters, arch, and movement; and with reference to color, I have a litter by Ooslad out of a red bitch, and they are all lighter than he is. I hope a club will soon be formed for these dogs that will stick to the old Russian standard, for, in my humble opinion, they cannot be improved, there being no other breed to equal them in grace and perfection of shape; besides this, they have many other qualities, they are most faithful and affectionate companions, and, as far as my experience goes, they are most intelligent. I ought to know, considering I have had nearly fifty."

"KATHLEEN NEWCASTLE."

THIS WILL SUIT PROF. ROMANES—Champaign, Ill.—*Editor Forest and Stream*: I think I have something new and remarkable in the dog line that interests me very much, and I am sure will interest those of your readers who are lovers of thoroughbred dogs. In April, 1888, I bought of Mr. Harry Muss, this city, a very handsomely marked young black and tan terrier bitch out of his prize winning Lady (2092) and by imported Mahomet (4429), which I named and recorded as Roseleaf (6915). When Roseleaf came in heat I bred her back to Mahomet, as there was no other first-class dog convenient, and got a healthy, nicely marked litter of puppies. The third litter of this mating came June 20, 1890, and judge of my surprise to find one of a litter of six puppies to be a pure Maltese color in place of the black, tan marks being just the same. Now, I took care of Roseleaf myself during this mating, and I know no dog but Mahomet was near her, as I kept her shut up and locked up till all signs had disappeared. I have bred dogs long enough to know that to keep them strictly pure every precaution and no chances must be taken. Now, here was a bitch puppy eligible to registry, as straight bred a black and tan as ever was born, and a Maltese. I couldn't account for it then, and haven't yet. Could in-breeding make it? At any rate she has grown into a fine, perfectly healthy bitch, which I named Rosebud, kept, and own her now. Her shape, instinct, actions and tan marks are all terrier. This same thing occurred in a litter bred by Mr. Harry Muss out of his Lucy, by Dick. They were whelped February, 1890, and of a litter of three, two were dogs and both of this color. Now, Mr. Muss is an old breeder, very careful and perfectly reliable, and I have every reason to believe these two puppies to be of just as pure blood as Rosebud. When Rosebud first came in heat, March, 1891, I bred her to one of these dogs, Harry, but she did not get in pup. Last September she came in heat again, and on the 27th I bred her again to Harry and anxiously awaited the result, expecting a part of them would breed back in color and be black and tans, but on Nov. 29 she gave birth to a litter of four of the prettiest Maltese puppies anybody ever saw, every one exactly like herself and the sire, one dog and three bitches, all healthy, doing well and as fine as silk. Think I have a new breed and will name them Maltese terriers. What think you? Inclosed is tabulated pedigree, which shows their breeding.—A. G. ADAMS. [There is already a breed called Maltese terriers, pure white with long fleecy coat.]

THE HOUND MAKES A POINT.—Philadelphia, N. Y.

—*Editor Forest and Stream*: A few years ago a party of men went to Indian Territory hunting birds. They had but one dog when they started, but on the way a hound was picked up. The hound was half bloodhound, the other half was of beagle blood. When the hound chased a jack rabbit he would bark loudly, while the other dog would point—she was a setter. As these men did not want the hound barking they licked him when he chased rabbits and chickens. One day the hound was seen to stop for an instant and straighten out in as pretty a point as any dog ever showed. After he had stood a minute or so he started after the big jack rabbit he had pointed. He was seen to point several times afterward.—RAY SPEARS.

If your shooting friend does not read FOREST AND STREAM why not give him a charming present and do a little missionary work at the same time by subscribing to the paper for him. It will give him pleasure fifty-two times a year. Do you realize that next year \$4 will buy you 1664 of these big pages, and all of them devoted to wholesome, manly sport.

THE PERFECT POCKET OILER, advertised by Cushman & Denison, is well deserving of its name, and is one of those handy little articles that win appreciation.

WIRE-HAIRED FOX-TERRIER TANTIVY.—Philadelphia, Pa.—*Editor Forest and Stream:* Somewhere in this glorious country of ours there is a gentleman who owns a wire-haired fox-terrier dog named Tantivy, imported June, 1891, by Ely Czar out of Vere Brown. I want to get, if I can, the service of this dog, but do not know the name or address of his owner. Several inquiries for same have been fruitless. Can you give me this information? Another question, one that is in harmony with above, will fit in here very nicely. Who is Brokenhurst? Is he a fox-terrier, and was he bred by Mr. Timne, of England? He—"Brokenhurst"—has given the fox-terrier-loving public several articles that have been both instructive and interesting. He must have encouragement, and I hope he will continue to give to the "fancy" weekly, if he can, the result of his practical experience, for it would be valuable information that the American breeders could appreciate and would find useful in their efforts to improve this game and lively little dog, which in America is not up to the English standard. If you cannot give me the above information, will not one of the many readers of your valuable paper who may read this article favor me?—G. W. PRICE.

WUN LUNG'S SISTER.—*Editor Forest and Stream:* I was somewhat discouraged over the death of my bitch Wun Lung's Sister, as I had hopes of her doing well at the Central, where she died. Mr. McCartney, her trainer, had every confidence in the little animal, and am satisfied did all in his power to save her. My trainer, W. B. Harvey, who was handling my entries for the Bexar Field Trials met with a sad death at his ranch gate, near Marshall, Texas, being foully murdered as he was entering his yard the night of Nov. 28. It will be remembered he handled Mr. Amory R. Starr's dogs at Texas Field Trials last season, and with credit, too. He was 23 years of age, and had been married only two weeks at the time of his death. He had in taken my dogs and had been handling them only a few days, and as this unfortunate affair left me with no trainer, I intended sending for Sister, who I was confident would secure a place in our trials. Under the circumstances I will have to handle and run my dogs as best I can, and will try and replace Sister in the near future.—C. M. ROUNDS (San Antonio, Texas).

CHRISTMAS, 1891.—New York City.—*Editor Forest and Stream:* A great big wild yobber and a "little brown jug" proved to be the contents of a box delivered to me by express last night, being a little expression of friendship of that great-hearted Southern sportsman, Col. P. Henry O'Bannon, Sperryville, Va., truly one of God's noblemen. If his celebrated Blue Ridge Kennels produce stock as fine as this box contained, he will be practically alone in high class setters 'ere many moons. A Merry Xmas and a Happy, Prosperous New Year to you and your readers.—GEO. W. LA RUE.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.
Virgie, by Eberhart Pug Kennels, Cincinnati, O., fur silver fawn pug bitch, whelped Nov. 13, 1891, by Spokane (champion Kash—Lady Thora) out of East Lake Virgie (champion Bradford Ruby—Puss B.).

BRED.

Prepared Blanks sent free on application.
Peggy Pryde—Eberhart's Cashier. Eberhart Pug Kennels (Cincinnati, O.) pug bitch, Peggy Pryde (Eberhart's Cashier—Flossie B.) to their Eberhart's Cashier (champion Kash—Lady Thora), Dec. 22.

Little Goldie—Eberhart's Cashier. E. L. Bretner's (Grafton, N. D.) pug bitch Little Goldie (John Bull—Phyllis L.) to Eberhart Pug Kennels (Eberhart's Cashier (champion Kash—Lady Thora), Dec. 18.

Nymph—Sir Bedivere. South Bend Kennels (South Bend, Ind.) pug bitch Nymph to Wyoming Kennels (Sir Bedivere (Nero II.—Bona), Dec. 4.

Beck Grove Jessie II.—Jack Briggs. Dr. W. C. Johnson's (Frederick, Md.) Irish terrier bitch Beck Grove Jessie II. (Buckler—Rickie) to Anglo-American Terrier Kennels (Jack Briggs (Irish Ambassador—Bridget), Nov. 27.

WHELPS.

Prepared Blanks sent free on application.
Graphic's Lady. G. W. Batchelder's (Weston, Mass.) pointer bitch Graphic's Lady (champion Graphic—Blowmo), Nov. 27, six (two dogs), by J. L. Anthony's Beppo (Prism—Meally).

SALES.

Prepared Blanks sent free on application.
Count Bob. Silver fawn pug dog, whelped Aug. 20, 1891, by Bradford Ruby II. out of Lady Thora, by Eberhart Pug Kennels, Cincinnati, O., to Miss Gladie Muhlenberg, Charleston, W. Va.
The Scamp. Sable and white rough collie dog, whelped Sept. 9, 1890, by The Squire out of Lady Tippins, by Dr. W. C. Johnson, Frederick, Md., to Jesse Reifsnider, same place.

AN ENLARGED "FOREST AND STREAM."

WITH the issue of Jan. 7 next, which will be the first number of its thirty-eighth volume, the FOREST AND STREAM will be permanently enlarged from twenty-eight to thirty-two pages.

This change has been made necessary by the growth of the special interests to which the paper is devoted, and by the corresponding requirement of more space for their adequate presentation. The enlargement is to be taken as an earnest of our purpose to increase the interest, usefulness and value of the FOREST AND STREAM; and by means of the better opportunities thus afforded, to maintain for it the character it has so long enjoyed as the representative sportsman's journal of America.

Each of the departments will be benefited by the change—Sportsman Tourist, Natural History, Game Bag and Gun, Sea and River Fishing—and, in particular, our news columns—the Kennel, Yacht and Canoe, Rifle and Trap. The generous amount of space now given to Kennel will be maintained, and the room devoted to Trap Shooting will be so enlarged as to make the department the most comprehensive and the best arranged contemporary record of that sport.

Since this journal was established eighteen years ago, the popularity of sports with the rod and the gun has advanced with giant strides; and in the development of those many recreations the FOREST AND STREAM has taken no unimportant part. With their growth it has kept equal pace in worth, in influence, in circulation and in generous public recognition. What it has been it will be. The record of the past contains the abundant promise for the future.

In 1892 and the years that shall follow, as in 1891 and the years that have passed, the FOREST AND STREAM will stand for all that is best and truest in field sportsmanship; and it will strive to merit from its growing hosts of friends a continuation of that warm appreciation and indorsement with which it is now favored.

One word remains to be said: The price will remain unchanged; \$4 per year. Subscribe now.

Rifle Range and Gallery.

THE REVOLVER COMPETITION.

THE holiday season with its festivities is not helpful of good scoring in revolver work. In consequence there is a resting spell in the shoot. Several Cincinnati shots have entered, and a date will be fixed there early in January with a FOREST AND STREAM representative there as referee. There will be another date in this city, and preparations are in progress for some tests in Chicago and Boston. This will probably close up the entry list, but due notice will be given in the FOREST AND STREAM of the closing up date for entries and the time and place of measuring up the disks.

"FOREST AND STREAM" TOURNAMENT

FOR NEW JERSEY RIFLE CLUBS.

THE absorbing topic in New Jersey rifle shooting circles is the coming tournament for the FOREST AND STREAM trophy. There are twelve clubs entered, including such cities as Newark, Hoboken, Greenville, Jersey City, Marion and Jersey City Heights. The initial matches will be shot on Monday evening, Jan. 4, 1892. Gallery shooting, which has become a fixture in that State, has flagged considerably during the past year, and this tournament, which is for five-men teams, will no doubt bring this particular branch of shooting up to its former popularity. The Amateur Clubs of New Jersey was the title of an organization with headquarters in Newark that successfully engineered tournaments during the seasons of 1886, '87, '88, '89, '90 and '91. This season it was found impossible to create enthusiasm and decided to hold no tournament this year. The organization in question comprised twelve clubs in all and all with headquarters at Newark. Jersey City, Hoboken and the neighboring cities have quite a number of prominent clubs, but for some reason or other they attempt to arrange a tournament has failed up to now. The tournament will no doubt prove to be a powerful stimulus to the sport, as it enables the shooters of the different clubs to become better acquainted with one another. The FOREST AND STREAM tournament is bound to result in a series of interesting contests, the entry list comprising all the crack clubs of the State, among them being such old-time organizations as the Miller Rifle Club of Hoboken, Our Own Rifle Club and Essex Amateur Rifle Club of Newark, and the Excelsior Rifle Club, of Jersey City. The younger clubs comprising the Standard Rifle Club, of Hoboken; Jensen Rifle Club and Palisade Rifle Club, of Jersey City Heights, and the Hudson Rifle Club, of Marion. It is impossible even to guess the probable winner of the handsome trophy offered to the club winning the greatest number of matches during the tournament. Below will be found a list of the clubs entered in the tournament, together with the men who will participate, also the location and means of reaching the various ranges:

Our Own Rifle Club, Newark.—Team: John Bander, Wm. Watts, Gus. Widman, Fred W. Fetting, F. A. Freisenbender, C. H. Townsend, A. Cherry, G. Goerck, John Coppersmith, G. D. Weigman. Range: 36 Springfield avenue, opposite West street, Newark. How reached: Take electric cars at any point on Market street.

Essex Amateur Rifle Club, Newark.—Team: John Coppersmith, G. D. Weigman, A. C. Neuman, Godfray Snellen, Wm. Watts, F. C. Dietz, A. D. Welter, Chas. Cooper, J. K. Walsh and B. Cohn. Range: 326 Bank street. How reached: Take Roseville car via Bank street, about ten minutes' ride from depot.

Essex Indian Rifle Club, Newark.—Team: Frank Helms, Eugene Howard, Fred McCallum, Wm. Clark, Geo. Freitag, Harry Snyder, Geo. Oberst, Wm. Wadams, Newell Brower and J. H. Huegel. Range: 326 Bank street. How reached: Take Roseville car via Bank street, about ten minutes' ride from depot.

Puritan Rifle Club, Newark.—Team: Fred. Danger, Chas. Carpenter, Wm. Henschman, Edward Helb, Conrad Kopf, Adam Sauer, Fred Miller, Morris Johnson, Henry Rodder. How reached: Take Erie Range, 29 Main street. How reached: Take either New Jersey Central R. R. and get off at East Ferry street station, or Pennsylvania R. R. and get off at Market street station, then take the South Orange horse cars.

Volunteer Rifle Club, Newark.—Team: J. Blewitt, A. Mier, G. Huber, J. Dougherty, H. Heinrich, H. Haag, J. Knalsch, W. Tufte, H. Pfeiffer and B. R. Ranger. Range: East Ferry street station, two blocks to left.

Miller Rifle Club, Hoboken.—Team: David Miller, Fred Brandt, Charles Judson, August Meyne, George Schlicht, Louis Vogel, Ernest Fischer, Louis Soli, Fred'k Liell, Louis Flach. Range: 80 Hudson street, five minutes' ride from D. L. & W. R. R. station.

Standard Rifle Club, Jersey City.—Team: Julius H. Kruse, Gottlieb M. Rord, Henry Becker, J. Bosch, John Meyer, Claus Schroeder, J. Stein, Shadrach A. M. Russell, Chris. Intenau, John Still. Range: Jackson street, corner First. How reached: Take Grove street car at Hoboken terminus of D. L. & W. R. R., get off at Monroe street, two minutes' walk from there.

Hudson Rifle Club, Jersey City.—Team: Henry Hansen, John Rehman, Walter Russell, Robert Ingersoll, Henry Rodder, Thomas A. Reynolds, Adolph Malz, Samuel Middleton, A. Braun, Sr., J. Russell. Range: 35 Giles avenue. How reached: Penn. R. R. to Marion, Oakland avenue cars to Court House, thence to Marion via Newark avenue, Montgomery street cars to West Side avenue, Court House cars to Five Corners, Summit avenue cars to Five Corners, Monticello avenue cars to Five Corners; also D. L. & W. R. R. to West End Junction.

Excelsior Rifle Club, Jersey City.—Team: L. P. Hansen, W. H. Hallowell, Wm. Weber, W. J. Hennessy, John Spicher, W. J. Channing, C. L. Penney, James Hughes, Chris. Bauchle, F. J. Kittridge. Range: 78 Montgomery street. How reached: Three blocks from Courtlandt street ferry and Penn. R. R. depot, by horse cars from Pavonia Ferry, Erie R. R. and Hoboken.

Greenlee Rifle Club, Jersey City Heights.—Team: Wm. Jensen, Wm. Deigen, Chas. Prien, John Plump, August Steuber, Fred Seesman, Fred Kloepping, John Schmer, Louis Muhs and Wm. Yagdmann. Range: 69 Zabriske street. How reached: Hoboken clubs take Elevated Railroad and change to Central avenue car and get off at Zabriske street. Jersey City clubs take Pavonia avenue cars to Five Corners and change to Summit avenue cars to Zabriske street. For incomers on Pennsylvania R. R., get off at Marion station, go to Five Corners and take Summit avenue cars to Zabriske street; for incomers on the D. L. & W. R. R., take Elevated Railroad at Hoboken to Jersey City Heights, change to Central avenue cars and get off at Zabriske street.

Palisade Rifle Club, Jersey City Heights.—Team: J. Reinhardt, G. A. Finger, G. W. Graf, J. Johnson, Geo. P. Herrschaff, A. Rossy, G. E. Grant, H. Rosenthal, F. Pilger. Range: 354 Palisade avenue. How reached: North Hudson County R. R., Elevated station within a half block of range.

Greenlee Rifle Club, Jersey City.—Team: H. Gotthardt, C. Scheelein, C. Boag, H. Chavart, G. Parkers, J. Dodds, W. H. Robidoux, J. Cook, J. Kaiser, W. C. Collins. Range: 608 Ocean avenue. How reached: Greenlee cars from Jersey City, take the door. For incomers take Newark & N. Y. R. R. from Broad street station, get off at Jackson avenue and take horse car to the door.

Howard Rifle Club, Newark.—Team: Frank Swing, Jacob Berger, F. W. Fetting, A. Graeff, A. Aurnhammer, substitutes, F. P. Laute, J. Mayer, G. Chapman, O. E. Derivaux, A. Burger. Range: corner Springfield avenue and Howard street. How reached: Take Springfield avenue car (electric) at any point on Market street.

The following rules will govern the FOREST AND STREAM's New Jersey rifle tournament:

1. Open to one team of five men from any regularly organized club in the State, no man to shoot on more than one team. In each match each man shall fire ten shots on the 25-ring target.
2. Any .22cal. rifle with rim-fire ammunition may be used, without restrictions as to weight or trigger pull. No telescopic sights will be allowed.
3. Each man shall be required to complete his score within ten minutes from the time the first shot is fired: two minutes will be

allowed between the last shot on one score and the first shot on the next. An allowance will be made, however, for all time consumed in deciding doubtful shots, in repairing range or arranging lights.

4. In all shooting a sheet of paper shall be placed behind the target in such a manner that it may be moved after each shot that is fired. The shooter shall have the benefit of all doubts that cannot be decided with the naked eye. No shots will be judged with the aid of any glass. In case the captains of the contesting teams so desire, the judge may decide a shot by inserting a .22cal. bullet (or .22cal. plug) in the bullet hole.

5. All shooting shall be off-hand (hip or body rest allowed) and any member who leans or rests any part of his person against any support, or who places the butt of the rifle under his coat, shall forfeit his full score of shots. The matches shall be shot off on the same date and range where made. The visiting club shall have the choice of ranges.

6. Each team shall shoot two matches against every other team, one on the range of each team. The club winning the greatest number of matches will be awarded a trophy, presented by the FOREST AND STREAM. A fine gold medal will be awarded to the shooter who makes the highest average in four-fifths of the matches. In case of a tie on the number of matches won, the FOREST AND STREAM will decide upon the time and place for shooting off said tie.

7. The scorer of the home club shall send to the FOREST AND STREAM the result in full of each match within twenty-four hours after said match is shot. Said scores must be signed by the captain and scorer of each team, and be certified by the judge.

8. If a protest is made during any match, regarding the decision of the official, said protest shall be at once submitted in writing to the FOREST AND STREAM, whose decision shall be final. In case of a disputed shot the target shall be sealed at once and submitted as above, the shooter finishing his score on another target.

9. Entries must be received by the FOREST AND STREAM, 318 Broadway, New York, on or before Tuesday, Dec. 22. Said entry must give the name of club, location of range, how to reach ranges, name of president, name and address of secretary, and the names of the five team members along with five substitutes, none other than whom shall be allowed to shoot. All matches will be shot strictly according to a schedule to be arranged by FOREST AND STREAM, and any team failing to appear for any stipulated match will forfeit said match to the opposing club. All matches will be started not later than 8:30 P. M.

J Holenborg	8	10	7	12	12	12	12	12	12	105		
Wright	11	12	8	11	10	10	11	11	9	105	542	

International Shooting Match.

MONTREAL, Dec. 23.—The international shooting match

Shooting for the Riverton Cups.

Fulford-Brewer.
A memento of the great match. Fourteen photos, \$2.50. Two
good photos, 50 cents. J. B. BURNHAM, 464 W. 20th st., N. Y., 40p.

Christmas at Honeoye Falls.

The Honeoye Falls Gun Club held an interesting shoot on Dec. 25. Among the shooters was Daniel M. Lefever, of Syracuse. The scores of the various events are here given: No. 1, \$1 sweepstakes, 10 kingbirds, known angles, rapid firing system:

E. J. Wilkinson.....	10111111-9	W. Gregg.....	10111111-10
A. W. Starr.....	10111111-6	D. F. Farnham.....	10111111-5
G. Gates.....	10111111-9	R. Weller.....	10111111-9

No. 2, turkey shoot, 10 kingbirds, entrance \$0 cents:

Wilkinson.....	10111111-8	Weller.....	10111111-9
Gates.....	10111111-8	Starr.....	10111111-8
Gregg.....	10111111-10	Farnham.....	10111111-5

Gregg won first choice of turkeys, Weller second; ties of 8 shot off, Wilkinson won third.

No. 3, turkey shoot, 10 kingbirds, conditions the same as before:

Wilkinson.....	10111111-9	D. M. Lefever.....	10111111-10
Gregg.....	10111111-10	Starr.....	10111111-8
Gates.....	10111111-9	Weller.....	10111111-8

In the shoot-off of 10 Lefever won first choice of turkeys; ties of 9 shot off, Wilkinson won; ties of 8, Weller won.

No. 4, turkey shoot, conditions the same as before:

Wilkinson.....	10111111-10	Lefever.....	10111111-10
Gregg.....	10111111-10	Weller.....	10111111-8
Gates.....	10111111-8	Starr.....	10111111-9

Ties of 10 shoot-off:

Wilkinson.....	10111111-10	11111111-11111	11111111-11111
Gregg.....	10111111-10	11111111-11111	11111111-11111
Lefever.....	10111111-10	11111111-11111	11111111-11111

Wilkinson won first choice, Starr takes second.

Weller and Gates shoot-off on ties of 8:

Weller.....	11111111-11111	11111111-11111	11111111-11111
Gates won third choice.			

No. 5, \$1 sweepstakes, 10 kingbirds, unknown angles:

Wilkinson.....	10111111-7	Gregg.....	10111111-9
Weller.....	10111111-7	Farnham.....	10111111-9
Lefever.....	10111111-8		

No. 6, \$1 sweepstakes, 10 kingbirds, unknown angles:

Wilkinson.....	10111111-7	Gregg.....	10111111-9
Weller.....	10111111-7	Farnham.....	10111111-9
Lefever.....	10111111-8		

No. 7, \$1 sweepstakes, 10 kingbirds:

Wilkinson.....	10111111-7	Weller.....	10111111-9
Gregg.....	10111111-8	Lefever.....	10111111-10
Farnham.....	10111111-8		

No. 8, \$1 sweep, 10 kingbirds:

Wilkinson.....	10111111-10	Farnham.....	10111111-8
Lefever.....	10111111-10	Weller.....	10111111-8
Gregg.....	10111111-7	McKenzie.....	10111111-8

No. 9, \$1 sweep, 10 kingbirds:

Wilkinson.....	10111111-10	Weller.....	10111111-10
Lefever.....	10111111-8		
Wilkinson.....	10111111-10	Weller.....	10111111-10

No. 10, \$1 sweep, 10 kingbirds:

Wilkinson.....	10111111-10	Weller.....	10111111-10
Lefever.....	10111111-10	Starr.....	10111111-8

Spring Hill Gun Club.

BLAUVELT, N. Y., Dec. 25.—Owing to an epidemic of grip in Rockland county the attendance of local shooters was small. What was lacking in numbers was made up in enthusiasm, and resulted in one of the best shoots the club has ever held. The medal shoot was hotly contested, Simpson, Baker and J. Bogart tying on 10 straight. On the shoot-off Baker and Bogart each dropped one, and Simpson, by scoring all, won the medal for the third consecutive time, therefore it becomes his personal property. As he holds the Lefever medal for New York State championship he is well on the way to a collection of trophies. He is very popular with the club and the best shot in it. Schortemeier shot well in the live bird events. Only three birds had to be put up. They were a good lot, but in the absence of wind were not "clinkers." The usual substantial dinner was served at noon, a huge joint of fine roast beef, sweet potatoes, lima beans, fine bread and excellent champagne. Good appetites soon made a huge hole in the supplies and the boys then resumed shooting. James Bogart, the veteran of the club, crawled out to "look on," as he had been very sick, but in less than half an hour could stand it no longer, sent for his gun and gave the boys a hustling, by 3 o'clock he was looking the picture of health. The day's scores follow:

Event No. 1, 9 singles and 3 pairs of targets: Simpson 12, Schortemeier 10, Hathaway 3, Allen 6.

The next five events were at 10 targets each, and the scores are summarized as follows:

	Second.	Third.	Fourth.	Fifth.	Sixth.
Simpson.....	9	8	10	10	9
Schortemeier.....	9	9	10	6	7
Hathaway.....	9	9	7	6	8
Allen.....	0	7	6	9	6
Moeller.....	0	5	7	4	8
Lydecker.....	3	8	5	8	8
Bogart.....	10	5	10	7	7
Fleming.....	0	4	1	0	0
Blauvelt, Sr.....	0	9	4	0	0
Baker.....	0	6	6	4	0
Duryea.....	0	8	9	7	0
Blauvelt, Jr. (21 yrs. old).....	0	8	9	7	0

At this stage the targets gave way to live birds, and the following sweepstakes were shot, the conditions in each being 6 birds per man, 28 and 30 yds. rise, \$3 entry; dead birds to the shooters, boundary 30 yds. end side, 60 yds. front boundary:

	21	30
Hathaway.....	12112	22022
Moeller.....	10100	12101
Simpson.....	12101	21101
Allen.....	02001	21101
Schortemeier.....	02001	11211
Lydecker.....	10112	12100

Claremont.

CLAREMONT, N. J., Dec. 25.—To-day's wretched weather somewhat spoiled the elaborate programme of holiday sport at clay pigeon cracking which the marksmen of the New Jersey Shooting Club had arranged to enjoy during the forenoon and early afternoon on the club's range at Claremont. Six matches were shot, however, fairly good scores being made by all the competitors. The contests and their results are subjoined:

First event, 20 singles, Keystone system: Schaeffer and Moore 20 each, Bigoney 18, J. Berdan 16, Purdy 15, Hunt 14, Compton 12, Vredenburgh 10, T. Berdan 7, Griff 5.

Second event, 20 bluebirds, unknown angles: Vredenburgh, Bigoney and Moore 18 each, Purdy 13, Vincent, Hunt and J. Berdan 17 each, Compton 14, T. Berdan 6.

Third event, a walking match at 10 birds each: Vincent 10, Purdy and Moore 9 each, Griff and Hunt 8 each, Compton and Vredenburgh 7 each.

Fourth event, Keystone system, 15 targets: Bigoney 15, Purdy 14, Pope and J. Berdan 13 each, Hunt and Vredenburgh 12 each, Moore 11, Compton 10, Griff 5, T. Berdan 4.

Fifth event, 10 disks, Keystone system: Hunt 10, Bigoney 9, Compton and Purdy 8 each, Vincent and Pope 7 each, Griff 5.

Sixth event, the sixteenth match of the series at 20 pigeons each, Keystone system, for a Marlin rifle: Vincent shot a clean score of breaks and won first honors for the third time. The other scores were: J. Berdan 18, Moore, Pope and Smith 18 each, Compton and Griff 18 each, T. Berdan 17, Vincent's feat ties him with Smith and Pope for the trophy, each having won three matches. They will shoot off the tie next Saturday. First honors in the series were also won by the following: A. F. Compton and W. J. Simpson twice each, Elmer E. Bigoney, J. D. Berdan and C. Hathaway once each.

Smith vs. Freche Again.

The day after Xmas was not one on which a man would expect to witness a cricket match, nor would he care to stand upon the promenade deck of a Sound steamer to see the sights. From early morn until 9 P. M. the air was close and murky, and occasionally the clouds would open and down would come a torrent. Even these disagreeable conditions, however, did not deter a number of hardy sportsmen from visiting John Erb's grounds, on Bloomfield avenue, Newark, to see a little shoot-off of a tie. A week before Harry Smith and Gus Freche, both of the Essex Gun Club, had shot a hundred bird match at Marion for \$50 a side, the match resulting in a tie on 77 kills each. Saturday's race was also at 100 birds, the agreement being that the winner should take the purse of \$100, and the loser should pay for the birds used in both match and shoot-off—100 in all. The race began shortly after 1 P. M., and about two-thirds of the time the rain fell at a lively rate. The birds, much to the surprise of everybody, flew well, some in fact being regular "clinkers." There were "duffers," as a matter of course, but taken as a whole the birds were better by far than could be expected in such weather. The result of the match was a surprise to nearly all the spectators, although there were some who were willing to "go" a little on Smith's chances. It was thought, however, by the majority, that Freche

by virtue of his numerous contests would be likely to outerve Smith, who a year ago was scarcely a 60 per cent. man. During the last few months he has pulled himself together in great form and is shooting a good game. Both men shot 12-bore guns, 30 yds. rise, Hurlingham rules. Smith used a Greener hammerless ejector, and Freche a Lang hammer gun. Wm. H. Green officiated as referee, while the mysteries of the score card were solved by John Erb, the latter also manipulating the die and pulling the traps. The scores in detail are appended:

	10111111-21	10111111-23	10111111-20	10111111-28-87
Freche.....	10111111-21	10111111-23	10111111-20	10111111-28-87
Smith.....	10111111-21	10111111-23	10111111-20	10111111-28-87

Smith used his second barrel 32 times to kill, Freche 34 times to kill.

SWEEPS FINISHED THE DAY.

As usual the people who had been standing around looking at the above match became possessed of the idea that they were all experts, and in order to prove the fact a number of sweeps were shot, the results of which are appended. The sweeps were all at 4 birds each, \$3 entry. In the first three there was one money each, and in each of the last two there were two moneys:

	1121-4	1011-3	2201-3	1011-3
Erb.....	1121-4	1011-3	2201-3	1011-3
Freche.....	1121-4	1011-3	2201-3	1011-3

No. 4, same as above:

	1121-4	1011-3	2201-3	1011-3
Mack.....	1121-4	1011-3	2201-3	1011-3
Castle.....	1121-4	1011-3	2201-3	1011-3

Ties:

	1121-4	1011-3	2201-3	1011-3
Hedden.....	1121-4	1011-3	2201-3	1011-3
Francis.....	1121-4	1011-3	2201-3	1011-3

First div., second won by Erb on shoot-off.

No. 5, same:

	1121-4	1011-3	2201-3	1011-3
Mack.....	1121-4	1011-3	2201-3	1011-3
Castle.....	1121-4	1011-3	2201-3	1011-3

Erb won, Hedden second, both on shoot-off.

The New Illinois State Rules.

CHICAGO, Ill., Dec. 24.—As was stated much earlier, FOREST AND STREAM had the first and the only accurate copy of the committee report on the new trap rules of the Illinois State Sportsman's Association, but at the time the report was sent our criticism or comment was impossible. Now, when opportunity offers for that, the necessity does not seem especially apparent, for the three thoughtful gentlemen, Messrs. R. B. Organ, M. J. Eich and Col. Chas. E. Felton, who had this matter in hand, seem to have formulated a good consensus of opinion in their draft, and it is safe to say that their report will be adopted in practical entirety by the association at its annual convention next June.

The shooters of the Illinois Association are nothing if not conservative. The old rules were adopted in 1876, and were clung to, in spite of innovation all around, ever since that time till now, quite unamended since 1886. The 80 yds. boundary is now no more, and the match of time has now made the old duck shooters admit the *passé* quality of the 10-gauge as a standard for these days, and caused the substitution of the modern 12-gauge as the standard arm. These changes, and the re-adjustment of the handicap, are the principal alterations of the old rules. The new boundary is unique and distinctive, and I do not see what objections, other than fanciful ones, can be urged against it. It is probable that the Chicago shooters will shoot on the kite-shaped track for some years to come.

And yet, after all reports, all criticisms, and all sayings of wise men and foolish are in from all over the world, what set of rules is perfect, and which one of the total number is there that actually covers all the exigencies of a pigeon match? No such set of rules exists. We may all be unable to find in our minds an incident or point left unprovided for, but let one referee pigeon matches, and some day there will arise a question that is not covered by the rules. Thus we hear the case of a bird held by the wing in the trap after the trap was sprung, although its feet were off the ground, and there was much discussion over the common-sense decision of the referee of "no bird." What rules specifically cover that case? Others may arise in any race, for a pigeon match is a long and devious way. We are safe in saying, however, that the new rules, as given, represent well the art of trap shooting as interpreted here. The new rules have been whom an abler could not have been selected, deserve the thanks of the craft throughout the State.

E. HUGH.

Lively Work on Dexter Park.

BROOKLYN, Dec. 25.—The following events were shot at Dexter Park to-day:

No. 1, 15 bluebirds, \$1 entry: J. Lyons 14, H. Seymour 12, C. Johnson 11, J. Vincent 10, F. Short 10, G. Griffin 10, J. Borel 8.

No. 2, same: Short 13, Greenville 10, Griffin 10, Lyons 10.

No. 3, 10 bluebirds: Short 9, Greenville 9, Knebel 9, Coleman 8.

Five live birds, \$3 entry, 4 moneys, ties div.:

	1121-5	J. Vincent.....	01111-4
J. Lyons.....	1121-5	J. Vincent.....	01111-4
H. Knebel, Jr.....	1121-5	A. Andrews.....	01111-4

C. Hubbell..... 1121-5 J. Bond..... 00111-2

R. Pieter, Jr..... 1121-5 J. Simpson..... 01222-4

A. Loeble..... 1121-5 E. Griffin..... 20111-4

W. C. Levens..... 02101-3 T. McLaughlin..... 02211-4

J. Skillman..... 00011-2 H. McLaughlin..... 12022-4

Seven live birds, \$4 entry, three moneys:

	10111-4	10111-4	10111-4
C. Hubbell.....	10111-4	A. Andrews.....	10111-4
J. Pieter.....	10111-4	A. Andrews.....	10111-4

W. C. Levens..... 01212-6 F. McLaughlin..... 12202-6

J. Simpson..... 00122-0 A. Loeble..... 12102-5

The Country Club.

The Country Club, of Westchester, held several shooting events on Saturday, Dec. 24, on their club grounds. The events were open to all, and the results are as follows: The scores were as follows: First event, sweepstakes: B. B. McGregor 3, T. A. Havemeyer 1. Second event, cup or \$50, unlimited number of birds, distance 24 yds., handicap, three misses out; 28 yds. and under, two misses out; all others one miss out; entrance \$5: H. T. Reynal 11, O. Thorne 10, B. B. McGregor 8, C. Thorne 6, N. C. Reynal 4, T. A. Havemeyer 3, H. Adee 2. Third event, cup or \$50, miss out, entrance \$5: T. A. Havemeyer 8, O. Thorne 9, B. B. McGregor 6, M. Reynal 1. The other two events failed to fill. The annual club shoot, open to the members of organized gun clubs, will take place on New Year's Day.

Hilton Club's Initial Shoot.

The old baseball grounds in the rear of Becker's woods, a famous old picnic spot in Hilton, was the scene on Christmas Day of the initial shoot of the newly organized Hilton Gun Club, which comprises the trap shooters of Irvington and Hilton. Each man shot at 25 targets, under the American Shooting Association rules, the result being as below:

	10111111-23	10111111-18	10111111-18	10111111-18
F. Compton.....	10111111-23	10111111-18	10111111-18	10111111-18
N. B. Compton.....	10111111-18	10111111-18	10111111-18	10111111-18
Ph. Becker.....	10111111-18	10111111-18	10111111-18	10111111-18
C. Boschen.....	10111111-18	10111111-18	10111111-18	10111111-18
Geo. Howard.....	10111111-18	10111111-18	10111111-18	10111111-18
D. Howard.....	10111111-18	10111111-18	10111111-18	10111111-18

Geo. Kent.....	10111111-18	10111111-18	10111111-18	10111111-18
D. Knight.....	10111111-18	10111111-18	10111111-18	10111111-18
Thos. Smith.....	10111111-18	10111111-18	10111111-18	10111111-18

The West Side's Monthly.

XMAS DAY was the date of the regular monthly live-bird shoot of the West Side Gun Club, of Newark, but, as a number of the members preferred roast turkey to live pigeons, the attendance was light. In the shoot for the club medal each member shot at 10 live birds, 28 yds. rise, under Hurlingham rules. The score:

	10111111-4	10111111-4	10111111-4	10111111-4
J. Lamb.....	10111111-4	10111111-4	10111111-4	10111111-4
E. Astfalk.....	10111111-4	10111111-4	10111111-4	10111111-4
S. Spann.....	10111111-4	10111111-4	10111111-4	10111111-4

Next came a shoot at 20 bluebirds each, the scores being as appended:

	10111111-12	10111111-12	10111111-12	10111111-12
E. Astfalk.....	10111111-12	10111111-12	10111111-12	10111111-12
J. Lamb.....	10111111-12	10111111-12	10111111-12	10111111-12
T. Freund.....	10111111-12	10111111-12	10111111-12	10111111-12

At the Brooklyn Traps.

BROOKLYN, Dec. 24.—The regular shoot of the Erie Gun Club at Woodlawn Park, L. I., to-day brought forth the shooting capabilities of the club. The club shoots at 7 live birds each, modified Hurlingham rules, club handicap, for a gold medal and extra prizes. Five tied for its possession with straight scores, and H. Dohrman won it by killing 8 more in succession. F. Graef took second prize with 6, and C. Plato third with 5 kills. H. Dohrman by winning this time was entitled to shoot off with C. Verichcho for the absolute possession of the medal. This he won by killing 6.

Harry Blackley, of the Tremont Gun Club, has been keeping a special lot of half-bred Antwerps for a shoot among members of the club. To-day the shoot came off at Parkville, L. I., and four of the best shots in the club chopped in \$2 each for a sweepstakes at 10 birds, 25 yds. rise, modified Hurlingham rules. Nine birds got away out of the forty shot at. R. Steate won the pot with 9. The other scores were: H. Meissner 8, H. Blackley 8 and J. Heid 6.

Dec. 24.—Pigeon shooters from all parts of Long Island congregated at Dexter Park, Long Island, to-day, when Miller had his usual Christmas Day shoot. Blackrock shooting was first in order. Sweepstakes, \$1 entrance, 21 yds. rise.

The first was at 15 bluebirds, 12 entries. President J. Lyons, of the Northside Gun Club, won with a score of 14.

The second sweepstakes, 10 bluebirds, was divided by J. Lyons and H. Seymour 9.

Third sweepstakes, same conditions, was won by T. Short with 9.

Fourth sweepstakes, 15 bluebirds, was won by T. Short with 13.

Fifth sweepstakes, 10 bluebirds, E. Douch 8, won.

Sixth sweepstakes, same conditions, resulted in T. Short, J. Greenville and H. Knebel, Jr., dividing with 9 each.

The live bird shooting took place in the afternoon. The first sweepstakes was at 5 live birds, 25 and 27 yds. rise, \$3 entrance, 16 entries. The final tie was between Dr. Shells, C. Fisher and B. H. Garrison. The latter was the first one to drop out on his third bird and Dr. Shells followed suit on his fourth. Fisher killed his four straight and won the cup for good.

The wet weather did not prevent the Prospect Heights Gun Club from going to Parkville, L. I., at the regular shoot. G. A. Somers had his revenge on the others present by winning the gold medal of the club.

WESTERN TRAP EVENTS.

B

tor of the public estimate of Mr. Brewer's honesty as a pigeon shooter has steadily risen since his good matches with Mr. Elliott and his late Fulford matches, but right or wrong the Brewer thermometer took a sudden tumble to well below zero. Mr. Brewer is openly accused of selling out and throwing the match, and those who would have hailed a Brewer victory under the attending conditions with the greatest delight are now his most bitter denouncers. Most of these men lost money on the result, of course. A conservative element condemns Brewer for changing his Westley-Richards gun for his old Greener, and his Schutzen powder for American wood powder, for a money consideration. These men forget that Mr. Brewer is making his living with his shooting. He is a professional and most professionals have a price, and for money can be induced to use this or that gun or powder. I have for years been in a position to know this to be a fact and it is no secret to anybody. Therefore men should keep their money in their pocket and not bet on professionals if they are not willing to take such chances. In this instance Mr. Brewer is no more to blame than the parties who bought Brewer's change of gun and powder. Not as much, because Brewer's fatal change was not at all sought, by him and was not voluntary. Of course amusing incidents are not lacking. A certain number of the inside talent got the tip straight that Brewer would shoot a Greener. It was whispered about among "members of the family" some days prior to the public being aware of it that Mr. Brewer would go back to his old trusty Greener gun and for the first time use American wood powder for a money consideration. The talent theorized correctly enough that things were "fixed" for Brewer to win, as neither the agent of the Greener gun nor the American wood powder people could afford to buy even the possibility of a defeat under the circumstances and boldly put their money on the captain. Of course they deserved to lose for believing the above parties capable of any dishonesty in the matter and the outcome of the match has certainly freed everybody from any suspicion with the exception of the poor captain.

I know that Brewer did not sell out. He made a mistake in accepting money for changing his gun and powder just previous to the match. He was no doubt over-confident. I don't believe that he was at all handicapped by his change of gun, for he can shoot the gun he used as well as any gun he has ever shot, and he has done the best shooting with it that was ever done by any man. I refer to his second match with Elliott, when he killed 99 out of 100 extraordinary good birds. There were no cripples in that match, and the exhibition of skill and deadly execution was the finest I have ever witnessed. He proved in this match that he was at home with any gun and any powder. He shot 200 birds shot at. He was doing his best throughout the match. He very soon realized, as did hundreds of interested observers, that he was handicapped by his change of ammunition. Here something was wrong. All but one of his 34 birds scored as missed left clouds of feathers behind and a majority of outgoing birds which were scored were not dead, but had to be killed by the gatherer. Quite a large additional number would have been lost in a 21yds. as well as 30yds. boundary. The long shots made were invariably broken-wing kills.

Mr. Fulford's second barrels shot miserably. He had to do most of his execution with his right barrel, and outgoing birds were seldom killed with his second. It was either a poor shooting gun or his ammunition did not suit this barrel, which was evident when using it in the Ground. Mr. Fulford was greatly handicapped on account of it, and to his own work. "If Capt. Brewer had not changed his powder he would have won hands down."

J. VON Lengerke.

Editor Forest and Stream:

Allow me to congratulate you on the able manner in which the shoot between Mr. Brewer and myself was written and published.

E. D. FULFORD.

NEW YORK, Dec. 27.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price \$2.00. Canoe Handling. By C. B. Vaux. Price \$1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneak-box. By N. H. Bishop. Price \$1.50. Canoe and Camp Cookery. By "Seneca." Price \$1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

A. C. A. GOVERNMENT.—The present system of government of the A. C. A., with a general executive committee and one for each of the four divisions, has worked very successfully since 1886; but for some time the necessity for a re-modeling and extension of the system has been apparent. Within the past three years cases have come up of appeals to the commodore or executive committee, and of business between the general and division committees, in which, after long delays, no satisfactory decisions have been reached; in fact two such cases are now pending. The chief of several reasons for this state of affairs is the brief time for business permitted by the two meetings of the committee in each year. On our return from the recent November meeting we devoted some thought to the matter, with the idea of proposing two important changes: first an extension of power of the division officers and executive committees, giving them a greater control over matters of membership, complaints against members, etc.; and second the establishment of a smaller and much more compact body than the general executive committee, acting independently of it, and serving as a board of appeal, as well as a governing body with a general supervision of the finances. From a recent discussion of the matter with Com. Winnie and other canoeists, it appears that the same idea has suggested itself to others, and a correspondent this week calls attention to the scheme in more complete detail. There is ample time now to prepare a satisfactory plan before it can be acted on by the executive committee, and we look to members for a full discussion through the FOREST AND STREAM.

HOUSING CENTERBOARDS.—In the absence of a rule prohibiting it, the simplicity and effectiveness of a single large plate in the center of the canoe, and removed when not in use, has led to the universal adoption of this type of centerboard in American canoes. The disadvantages of this clumsy and unwieldy feature, which is frequently of such a size that it cannot be packed in the canoe, but must be shipped separately; and the advantages of a board which houses compactly at all times within the canoe, are each plainly evident; but the advantage in point of speed, however small it may be, has diverted all efforts for improvement from the original form of housing board to the later form. There is no doubt that, with any incentive under the rules to do so, the housing board can be greatly improved, so as to make a most efficient aid in sailing, and at the same time to leave a reasonable amount of room in the canoe, and to present no projecting parts to encumber the deck. We present this week two plans for accomplishing these ends, both of which are open to objections, but they offer suggestions which may lead to more satisfactory results. The plan of Mr. Hogan is both ingenious and practicable, and such a board should answer all the purposes of a purely cruising canoe, and possibly may be utilized in a general purpose canoe intended for both cruising and racing.

A. C. A.—Com. Winnie spent Sunday last in New York, a number of local canoeists visiting him at the Murray Hill Hotel. He intends shortly to take a trip through Canada in order to interest the Northern Division in the coming meet.

SLIDING CENTERBOARDS.

WE have received from our correspondent "J. H. H." several sketches of the sliding centerboard alluded to by him in his letter published two weeks since, one of which we publish. Though ingenious, the device is not new, a similar centerboard housing in the deadwood having been fully described with quite elaborate details, by Mr. William Stewart in the *Field* of March 7, 1885. The outline of the board, a metal plate, is shown by the heavy line. The trunk is indicated by the letters A, B, C, D, the headledge E F forming the fore side, while the sternpost or after deadwood forms the after side. The fore end of the plate is supported by two small wheels, at D, which would run on iron straps bolted to the bottom of the keel on each side of the slot. The board is shown in its lowest position; when raised by means of the line G the small wheels would run back to the position D. In a yacht of moderate size it would be possible to arrange the board and trunk so as to leave the cabin entirely unobstructed. One disadvantage, however, would be the shifting of weight aft as the board was housed, the trim of the yacht being so affected that with the change of centers due to the absence of the board, she would handle very badly. It would of course be necessary to

HOGAN'S CANOE CENTERBOARD.

have a board of considerable weight in order that it might always drop quickly, and to secure sufficient strength against the lateral pressure. In a small craft, such as a canoe, a second line on the fore end would be necessary to haul the board forward.

The peculiar motion of the ordinary parallel ruler, with its two radius bars, is one that would most naturally suggest itself to a draftsman; and in 1880, when the necessity of a centerboard in a canoe was first recognized in this country, together with the serious disadvantages of a trunk in the cockpit, we devoted some study to this device, but finally abandoned it, as no saving of room was apparent. The same idea, however, has been utilized in a more practical shape within a few years by Mr. Percy F. Hogan, of the Brooklyn C. C., retaining but one radius bar, the forward one being replaced by a curved track, A B. The after part of the plate is supported by a radius bar swinging on a pin near the top of the trunk; while in the fore end is a stud, A, projecting about

J. H. H.'S SLIDING CENTERBOARD.

1/4 in. on each side of the board. The track, A B, is of brass, about 3/4 x 3/16 in. Two pieces of the shape shown, one screwed to the inside of each sideboard of the trunk. On lifting the board, by means of the hauling line, the fore end at once begins to rise, allowing the after end to clear the keel and enter the trunk. The board is shown applied to an ordinary canoe of about 14 ft. extreme depth at fore end of well. The outline of the board when fully housed is shown by the broken line; while the position of the common triangular board fitted to the same length of case is shown by the dotted line. The area of the swinging board is 2 1/2 sq. ft., the triangular plate being a little larger, but the center of the pull on the line is just 1 ft. further aft. The effect of a slight pull on the line is to draw the board forward without lifting it much, so that the amount of weather helm may be very easily varied without materially decreasing the area of the exposed part of the board. A longer board than that shown may be used, and in some cases the center may be thrown still further aft. The mechanical details are quite simple, and the device should work well in practice; thus allowing the trunk to be placed at least a foot further forward than with the common pivoted board.

THE ORGANIZATION OF CANOE CLUBS.

WE have received a number of inquiries of late for a constitution and by-laws suitable for a canoe club, and we publish herewith the latest, and one of the best which has come under our notice; that recently adopted by the New York C. C. It is very largely the work of Mr. Allen H. Sexton, a member of the club;

CONSTITUTION.

ARTICLE I.—Name.

This organization shall be known as the New York Canoe Club.

ARTICLE II.—Objects.

The particular object of the Club is to encourage and foster the building of canoes, and the improvement in model, rig, appointments and handling thereof; the general object of the Club being the cultivation among its members of an active interest in exploration, navigation and seamanship.

ARTICLE III.—Membership.

1. Any person over eighteen years of age is eligible to membership.

2. There shall be three classes of members: active, associate and honorary.

3. Active members shall be entitled to vote and to hold office, and to all the privileges of the club house.

4. Associate members shall not be entitled to vote or hold office, but they shall be entitled to certain privileges of the Club as prescribed in the By-Laws.

5. Honorary members must be active canoeists, and if formerly active members of the Club they shall be entitled to all the privileges of active members.

6. Membership in the Club shall be terminated (a) by death; (b) by resignation, provided such resignation be tendered in writing addressed to the Secretary-Treasurer; and (c) by expulsion, whereby any member may be dropped for cause, by a two-thirds vote of all the members present at any meeting; provided such member shall have been notified of the charge, in writing, at least ten days previously, that action will be taken thereon, and that opportunity will be given to be heard in his defence.

7. The interest of any member in the Club property shall cease on the termination of his membership.

ARTICLE IV.—Officers.

1. The officers of the Club shall consist of a commodore, a vice-commodore, a secretary-treasurer and a board of trustees,

2. The Commodore shall hold office for the term of one year or until his successor is appointed. It shall be his duty to take command of the squadron, to preside at all meetings of the Club, and to enforce the rules and regulations. The Commodore shall be, *ex-officio*, a member of the board of trustees and chairman of the Regatta Committee.

3. The Vice-Commodore shall hold office for the term of one year or until his successor is appointed. He shall assist the Commodore in his office; shall officiate in his absence, and in the event of death or resignation shall succeed him in office. The Vice-Commodore shall be, *ex-officio*, chairman of the House Committee.

4. The Secretary-Treasurer shall hold office for the term of one year or until his successor is appointed. It shall be his duty to keep records of the meetings of the Club and the board of trustees, to keep the records of the Club, to post and mail notices, to carry on Club correspondence, and to prepare a Club book as may be prescribed in the By-Laws; to receive all moneys due the Club, and to pay all bills duly contracted by the board of trustees, and to keep a correct account thereof in a book provided for that purpose; to make a report to the annual meeting of the Club, and also to the board of trustees whenever called for in writing by

three of the trustees, and to include in such report a statement of all his receipts and disbursements. The Secretary-Treasurer shall have the custody of the funds of the Club; he shall be, *ex-officio*, a member of the board of trustees, and shall be exempt from the payment of annual dues.

5. The Board of Trustees.—The government of the Club, the title to, the management of its property, shall be vested in a board of trustees, to consist of five members, two of whom shall be the Commodore and Secretary-Treasurer; three of this board, including the Commodore and the Secretary-Treasurer, shall retire each year in the order of their election, unless re-elected.

At the first meeting of the board of trustees held after the first election held under this constitution, the trustees not officers of the Club, shall by lot divide themselves into three classes, the first class to go out of office at the next annual meeting of the Club, the second class at the second annual meeting.

The terms of office of those trustees who are not, *ex-officio*, members of this board shall be three years.

The trustees before each annual meeting of the Club shall nominate twice as many candidates as there are vacancies to be filled in their board, but any member of the Club may at the annual meeting of the Club nominate a candidate or candidates for such vacancies. The vacancies shall be filled from the members so nominated or by the re-election of the retiring trustee or trustees.

The board of trustees shall have power: 1st, to fill, by appointment, for the unexpired term, any vacancies in their board which may expire by death or resignation, except the office of Commodore; 2d, subject to the approval of the Club to make By-Laws, in accordance with and subject to the provisions of the Constitution; 3d, to make purchases and contracts for the Club; but it shall have no power, unless specially authorized, to render the Club or any member thereof, liable for any debt beyond the amount of money which shall at the time of contracting such debt be in the treasury and not needed for the discharge of prior debts or liabilities.

A vote of two-thirds of those present at a meeting of the Club, called for that purpose, can reverse any action of the board of trustees.

ARTICLE V.—Meetings.

1. The annual meeting of the Club shall be held in December of each and every year.

2. The Commodore may call a meeting of the Club at any time, and he shall do so on the written request of three active members.

3. At least five days' notice of all meetings shall be sent to every active member.

4. At any meeting of the Club seven active members shall constitute a quorum.

ARTICLE VI.—Elections.

1. Officers.—The election of Officers shall be held at the annual meeting. All voting shall be by ballot.

2. Members.—Each candidate for membership in the Club shall be proposed by one member and seconded by another, to both of whom the candidate is personally known. The Secretary-Treasurer, after receiving written notice of such proposal, shall send to each voting member of the Club, containing the name of the candidate with the names of his proposer and seconder. Upon the expiration of not less than seven days after such notice the Board of Trustees may elect such candidate to membership, unless two or more members shall have objected to his election.

ARTICLE VII.—Committees.

There shall be two standing committees, namely, the Regatta Committee and the House Committee, whose organization and respective duties, each, shall be prescribed in the By-Laws. They shall be appointed each year by the Commodore not later than the first day of March following his election.

ARTICLE VIII.—Entrance Fee and Dues.
Each active member on his election shall pay an entrance fee of ten dollars; if said sum be not paid within thirty days after his election such election shall be null and void.

The yearly dues for active members shall be prescribed in the By-Laws; provided, that such yearly dues shall not exceed the sum of twenty dollars for each active member. The annual dues for associate members shall be five dollars, payable in advance.

Members who are absent from the United States for a whole year shall be exempt from their dues for such year, provided they give notice of their absence to the Secretary-Treasurer.

No member of the Club shall be entitled to any of the privileges of the Club until his dues are paid, and if any member shall allow his dues to remain unpaid for a year, his name shall be dropped from the roll.

ARTICLE IX.—Club Flag, Signal and Totem.

The Club flag shall be a pointed burgee of an approved size, its colors, device and proportions corresponding to the Club signal flag.

The distinguishing signal of the Club shall be a pointed burgee twelve inches by eighteen inches, the device being a white longitudinal stripe two and one-half inches wide, on a red ground.

The Club totem shall be a red disk twelve inches in diameter.

ARTICLE X.—Pennants.

The Commodore's signal shall be a broad pennant with two crossed paddles encircled by four five-pointed stars in white, on a blue field.

The Vice-Commodore's shall be a broad pennant with a similar device on a red field. The Acting Commodore shall carry a broad pennant, blue field, without device.

ARTICLE XI.—Amendments.

An amendment to this Constitution may be proposed and passed at any meeting; but no amendment so passed shall be valid until approved by a majority of two-thirds of all the members present at a subsequent meeting; and notice of such amendment must be stated in the notice calling the subsequent meeting.

BY-LAWS.

CHAPTER I.—Order of Business.

1. Approval of minutes.
2. Unfinished business.
3. Report of Secretary-Treasurer.
4. Reports of Committees.
5. New business.
6. Adjournment.

CHAPTER II.—Senior Officer.

In the event of the absence of the Commodore and Vice-Commodore, the senior member of the Board of Trustees shall be considered the Senior Officer and Acting Commodore.

CHAPTER III.—Quorum.

At any meeting of the Board of Trustees three members shall constitute a quorum.

CHAPTER IV.—Dues.

The yearly dues for active members shall be fifteen dollars, due on the first day of January. Active members elected on and after August first shall pay half dues for that year, and those elected on and after November first shall pay no dues for that year.

CHAPTER V.—Secretary-Treasurer's Report.

The Secretary-Treasurer shall present each year to the Annual Meeting of the Club a report of his receipts and expenses up to and including December first, with a statement of the assets and liabilities of the Club.

CHAPTER VI.—Club Book.

The Secretary-Treasurer shall prepare each year a Club book, if, in the judgment of the Board of Trustees, the finances of the Club warrant.

CHAPTER VII.—Regatta Committee.

The Regatta Committee shall consist of the Commodore and two active members. It shall arrange and have control of all Club races.

CHAPTER VIII.—Sailing Rules.

All races of this Club shall be under the racing regulations of the American Canoe Association.

CHAPTER IX.—Associate Members.

Associate members shall be entitled to receive notices of club regattas and meetings for social purposes; to fly the Club signal; to visit the Club House; use the Club canoes; and, at the discretion of the House Committee, to use their canoes temporarily in the Club House and use Club lockers during such privilege.

CHAPTER X.—House Committee.

The House Committee shall consist of the Vice-Commodore and two active members. Subject to the first paragraph of Section five, Article IV., of the Constitution, it shall have entire charge of the Club House and floor; shall make and publish house rules and regulations; and shall make any report or recommendations to the Board of Trustees, in writing, signed by a majority of the Committee.

CHAPTER XI.—Amendments.

The By-Laws may be amended at any meeting by a majority of the Board of Trustees, but any amendment so adopted shall be reported to the next meeting of the Club.

HOUSE RULES.

I. A berth will be assigned to each canoe, in which it must be kept when not in use. All sails, rigging, and other belongings, must be neatly stowed in or near the canoe to which they belong. Canoes shall be launched at once on removal from house, and shall be returned to their respective berths as soon as practicable after coming in.

II. No canoe shall be used by any one except the owner without express consent.

III. Members are at all times expected to leave the house in as good order as they find it.

IV. Each member must furnish his own bathing suit.

V. Every member shall be entitled to keep one canoe in the house. Should extra space be required for the organization of the house, a charge may be made for each additional canoe, in the discretion of the Board of Trustees.

VI. Each member is entitled to a locker.

VII. Members of the American Canoe Association shall be entitled to the privileges of the house for one week, and longer by permits on of Board of Trustees. The courtesy of the Club will be at all times extended to other canoeists within reasonable bounds.

THE GOVERNMENT OF THE A. C. A.

Editor Forest and Stream:

After discussing the matter with the present commodore of the Association, with the Atlantic Division, and with the other commodores and a large number of the officers and members of this and other divisions, I venture to ventilate a scheme whereby the affairs of the Association, especially those of a monetary nature, can be better managed than at present. Under our peculiar form of government the executive and financial officers serve for but one year; and while great care is taken (and successfully) to secure those whose interest is for the organization, yet it has occurred that in the large number who are permitted to expend money (committees, etc.) we have found some who have not duly appreciated the importance of economy; and we are to-day met with a debt of over \$500. Unfortunately this is not exceptional, for last year we were behind something over \$150, and unless some step is taken we are likely to meet a still larger one next year.

The cause of this deficit if found will suggest a remedy. Is it not traceable to the lack of interest after the term of office expires and the feeling that the incoming officers will arrange all matters? If so, then it is necessary for us to create some permanent body to take charge of the financial policy of the Association, to be called, perhaps, a council or a board of trustees. It has been suggested that each division, in the same year that it elects the commodore, should choose a member of the council to serve for four years; and, each division having one, they, with the commodore and secretary-treasurer, might form the council, six in all.

It would be the duty of the council to receive all moneys from the secretary-treasurer and safely care for it, appropriating so much each year for the running of the Association and the rest being a permanent body and small, its members could meet more or less frequently, and it also could act as a body of final appeal in such disputed cases as the Brazer-Palmer and Douglass-Archibald protests and appeals this year. The council would in no way interfere with the officers or with the present executive committee, which serves its purpose as a legislative body, but from its size is useless as an executive or appellate body.

This letter is written merely to set the members to thinking, but some one should take it in hand now and place the matter properly before the executive committee. A. C. A. No. 47.

NEW CANOES.—Com. Whitlock has on the stocks at Stevens's shop, Lowell, a new racer from a modification of the Gardner design of last summer. Messrs. Goodsell and Masten, of the Yonkers C. C. have received a design for a 15'3" racing canoe based on the 15'3" Guenn published in the FOREST AND STREAM of Jan. 5, 1888; and each has ordered a canoe from Stevens. Mr. Carter, of the Park Island Canoe Association, has ordered a new river canoe from Everson, a very handsome craft designed by the builder and smooth-bow. Everson is also at work on a 19'56 canoe-yawl for Mr. Lindner, of Bergen Point, a duplicate of the successful boat turned out last summer for Mr. Johnson.

THE CRUISING SNEAKBOX MOCCASIN.

Editor Forest and Stream:

As an increase of interest in small inland cruisers is noticeable in your columns I enclose an illustration of a member of the "sneakbox" or "spoonbill" family. I built this little cruiser during odd hours in the winter of 1889 and she has cruised and raced for two seasons in the waters of the New York inland chain of lakes. Moccasin was adapted from the lines of the Barnegat cruiser Seneca, which you have heretofore published. But while the bottom of Seneca was closely retained minor changes were made, notably an increased freeboard and higher bow was given, an added foot in length and a drop rudder. The approximate dimensions are:

Length over all	15ft.
Extreme beam	54in.
Depth of gunwale midships	15in.
Sheer bow	9in.
Sheer stern at center of crown	5in.
Combining	2in.
Cockpit	7 1/2 ft. x 30in.
Crown of deck, fore part of well	5in.
Draft loaded, about	7in.

The increased freeboard and additional length made the boat extremely seaworthy and afforded increased room for the accommodation of a companion and camp equipment.

I hesitated some time whether to adopt the balance rudder, such as was fitted on the FOREST AND STREAM cruiser, or the drop rudder, and finally gave the latter preference, as it seemed more serviceable in running before a crowning sea and more convenient in beaching. The item of beaching becomes an essential element in the consideration of small cruisers, and there is no model of boat equal to the "sneak-box" form in the same length and beam that one person can haul up so easily on shore. A full-modeled keel boat of the dimensions of Moccasin would try the soul of a giant to get it up high on shore and safe from a pounding surf. The keel craft would jam her nose into the gravel, depress her stern, perhaps break the rudder, and utterly refuse to be coaxed. But how different is the conduct of Moccasin. Her curved bow glides up on the shore quite a third the length of the boat, a slight lift places the midship on dry ground, and as the stern settles the drop rudder is hauled up above harm. The skipper then, instead of pulling away until black in the face, simply bears his weight with the bow, pushes to one side, and the boat swings around on an apparent pivot at the center of the cambered keel plank. By a succession of these lateral movements one person will project a loaded boat weighing from 400 to 600 lbs. high up on the beach.

As to the sailing merits of the "spoonbills," I have found them good enough to race them successfully against the orthodox keel boats. There is, however, one objectionable feature. The "spoonbill" rows hard against a head sea and wind. While easy and fast under oars in smooth water, it makes the arms ache in pulling against wind and waves. But then a person is supposed in the face of superior rowing qualities.

Moccasin was rigged with one balance lug sail of about 130 sq. ft. area, fitted with a single batten and reefing gear; and although the sail seems large for a cruising boat of her dimensions, yet she carried it with ease in any wind except a gale, her skipper usually sitting on a deck seat placed across the after part of the cockpit over center of room between the centerboard case and the after locker, while shelves and closets are arranged under the deck along the sides. The oars work on an arrangement devised to meet sundry wants. Two pieces of scantling extend from the combing to near the gunwale in the form of a triangle, at the apex of which is the carlock, and the space inclosed, therefore, becomes a handy receptacle for various articles when fishing or attending to the duties of the cuisine when afloat.

Nearly every skipper of a small boat entertains special notions as to what constitutes the proper qualities of a cruiser. A popular theory is that the single-ender should be rigged with a multiplicity of small sails. But I do not believe this practice essential, either to comfort, speed or even safety. A mizzen is frequently in the way during a blow or continued bad weather, and it also obstructs much of the cruiser's view in sailing. While the yawl and cat-yawl rigs are useful in narrow keel craft, I am inclined to consider the balance lug the best disposition of canvas for cruising in the "spoonbill" family of boats; and even in cruising it is not desirable to confine yourself to a mere rag, for every cruiser wants to get at times all the speed he can out of his craft, hence a liberal sail area is desirable.

There is also much dispute as to the proper ending of the lines at the boat's stern. Somehow I can not endorse the long overhang except on the score of appearance, and that is purely a matter of taste which is influenced by fashion. Undoubtedly the sharp canoe-shaped stern can not well be excelled for making good weather, and either this form or a narrow transom is much easier in running before a following sea, while certainly with an equal over all length the boat with a long overhang is the less powerful craft. Then again the overhang requires the rudder to be hung beneath and out of reach of the skipper, which is often perplexing when the rudder gets foul of weeds, lines or drift rubbish as it often will in exploring out of the way places and consequently needing cleaning. I know that I may be expounding rank heresy, but unless a better reason for adopting the lean counter on small craft is given than simply because yachts of large tonnage conveniently utilize it and therefore small craft should follow suit, I shall not abandon nor condemn either the sharp or clubbed form of stern with narrow transom. To the amateur builder the difficulty in getting a good design with a pleasing "eye sweetness" for an overhang, and the difference in constructing the different models will become apparent. The craft I have outlined has stood the test of use and survived criticism on the waters where she has sailed, but still I am open to conviction when the proof is forthcoming that a more serviceable and handy craft exists for the single or "dual hander" cruising sportsman and outer on landlocked waters. CAYUGA.

ROCHESTER C. C.—At the annual meeting of the Rochester C. C. the following officers were elected: Captain W. Stuart Smith, re-elected; Mate, H. D. McVean; Purser, Geo. H. Harris, re-elected; Measurer, Geo. W. Rugles; Executive Committee, Chas. A. Bruitt, Chas. E. Mody and H. M. Stearns; Regatta Committee, Fred L. Smith, W. C. Seward and Wm. H. Martin. The club intends adding a third story to its house on Irondequoit Bay this winter.

NEW YORK C. C.—The New York C. C. has selected June 18 as the date for its annual regatta.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price \$1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

Yachting.

Small Yachts. By C. P. Kunhardt. Price \$10. Steam Yachts and Launches. By C. P. Kunhardt. Price \$3. Yacht Canoes and Canoes. By C. Stansfield-Hicks. Price \$8.50. Steam Machinery. By Davidson. Price \$1.50.

Yachtsmen who do not see what they want under this heading will please look under the hatches of the Canoe, peep into the Kennel, squat down the barrel of the Rifle, open the Fish Car and Game Bag, inquire of the Sportsman, and if their yearnings are still unsatisfied, push their explorations into the Editorial and Advertising Departments.

A GOOD YEAR FOR CRANKS.—The coming year promises to bring out a good crop of cranks and fool navigators who can find no better use for their skill and daring than to risk their lives in useless ventures. The two who raced in dories across the Atlantic last summer are preparing for a new venture, this time in canvas boats; while the one who made the useless and foolish trip from New York to Boston in a 7ft. punt, proposes to start on Jan. 1 from New York for Florida in a 6ft. tub.

LAKE ERIE.—The new organization on Lake Erie now seems an assured fact, and with good rules and new yachts the Erie fleet should soon prove a friendly but formidable rival to that of Ontario.

CENTERBOARDS.—The two centerboards described in our canoeing columns this week are no less interesting to yachtsmen than canoeists, in fact one of the boards is shown as applied to a yacht.

THORA.

MONTREAL, Dec. 28.—Editor Forest and Stream: Will you allow me to correct the impression conveyed in your last issue regarding the type of Thora, mentioned in connection with the record of Valda.

In the article referred to she is designated a "St. Lawrence skiff" and "the fastest of the local skiffs." She has also been so reported to you on more than one occasion by your Montreal correspondents of the St. Lawrence Y. C. races. The Thora—a "Thousand Island cruiser" as called by her builder, Wm. Edwards, of Gananoque—is a strongly built boat with lots of body and stability. Her dimensions are:

Length over all	22ft. 11in.
Waterline	19ft. 10in.
Beam	5ft. 2in.
Lowest freeboard	1ft. 4in.
Draft (about)	8in.
Sail area	376sq. ft.

She has a rather heavy 3ft. counter that alone would make her differ from the St. Lawrence skiff type. Her owner, Capt. C. Newton, ordered her for his own family use (without pretensions to speed) and very kindly offered her to me to sail, thus enabling me again to enter our club races. From which skiffs last season were debarred. Her peculiar rig—a batswing yawl—led the sailing committee to make a special measurement, taking for the sail area the actual area, the square root of which, as in other rigs, plus water line divided by two equals corrected length. Thora's being 19ft. 10in. The Valda therefore sailed her but 5in. 28, for ten miles (the length of course on Aug. 29 special race), not 10 1/2 as in the account you publish. The Thora won from Valda by 1m. 39s. corrected time.

I may mention that on June 27, all classes, in a single-reef breeze, which you also refer to, Thora beat Valda on elapsed time one minute and some seconds.

It is not my intention, however, to draw attention to Thora's record, however creditable, beyond referring to the above two races.

She cannot be called "the fastest of the local skiffs," as she has never raced with that class here, being of such a totally different type; though in some friendly brushes the skiffs have of course proved the faster.

I may add, she is a jolly, comfortable craft, in which as good weather was made last season as by any other yacht on our lakes. Her heavy oak timbers are good enough for craft of larger caliber. She carries no ballast, her iron plate centerboard weighs but 70lbs., and her crew of four averaged about 147lbs. each. W. J. WALLACE.

LAKE ERIE YACHTING.

THIS is as it should be. A meeting of our Lake Erie yachtsmen was held at the Forest City House, Cleveland, O., for the purpose of taking preliminary steps toward the organization of a lake yachting association similar to the Inter-Lake Association, which came to an untimely death about a year ago. Nearly every city along Lake Erie was represented. Commodore George W. Gardner, of Cleveland, explained the object of the meeting in a brief speech. The outcome of the deliberations, which lasted until 7 o'clock in the evening, was the adoption of a series of resolutions recommending that an association, under the name of the Lake Erie Yacht Racing Association, be organized, and that the constitution be based on that of the Lake Ontario Yacht Racing Association. It was also resolved that it was the opinion of the meeting that the circuit system of racing be adopted. A permanent organization will be formed. Those present expressed great interest in the matter in hand; and the new association starts out with bright prospects.

The Globe Iron Works, of Cleveland, O., launched a magnificent 40-ton yacht Dec. 23, which is to be the property of Mr. L. M. Hanna, of that city. She will be completed in the spring, and will be among the number of floating palaces to be found at Chicago during the fair. She is named Comanche.

The well-known sloop Alert, of Cleveland, O., which was housed in a building owned by N. Tovat, on Whiskey Island, was burned with the building on the night of Dec. 21. The total loss will be about \$1,000. She was owned by Peter Martin. Another favorite boat, Gleam, owned by Saxe & Overbeck, was somewhat damaged. C. C. C.

ERIE, Pa., Dec. 22.

THE LORILLARD YACHT FLEET.—The pleasure squadron of evolution owned by the veteran yachtsman and sportsman, Pierre Lorillard, has now assembled in Florida waters for the winter; one at least of the fleet having experienced considerable danger and difficulty in reaching her destination. The large two-story houseboat Caiman, recently completed at Wilmington, Del., is rather an unwieldy craft for sea work, and when, after leaving Wilmington on Nov. 27, she met a gale on Nov. 27 she made very bad weather. After taking a tow for Norfolk, she was boarded by a steamer which carried away a part of the hull. After repairing at Norfolk, she continued through the inside passage to Morehead City and Savannah, where her owner was waiting with his steam yacht Reva. The latter had been out in the same gale, breaking both crossheads, and was awaiting repairs. After calling at Fernandina, the Caiman reached Jacksonville on Dec. 25, and will soon start for Indian River, where she will be joined by the Reva, and a launch, and a 40-ton boat, and a 40-ton boat, a steam flatboat specially fitted up for the horses and dogs.

LAWLEY'S YARD.—The keel and frames for the Gardner schooner are nearly ready, and the framing will begin early next month. The three small steam yachts are well advanced, and a 21ft. sailing yacht will be started shortly from designs by W. E. Waterhouse.

CORINTHIAN SWEEPSTAKES 1892.—The Corinthian Y. C., of New York, has announced its fourth annual sweepstakes for yachts of 50 to 60ft. c.l. to be sailed off Newport, probably, on Aug. 15, 1892.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

I. F. O., Windsor, N. S.—The rifle is suitable for moose and bear.

M. L. F., Jamestown.—The Florida quail and wild turkey open season is from Jan. 1 to March 1; the South Carolina runs to April 1; Georgia has different county laws.

C. G., Brooklyn, N. Y.—We think with you that the bird is a dove or little auk (*Alia alba*). This is about the southern limit of its winter range. It is uncommon here, but not very rare.

UNCLE LISHA'S SHOP.

Life in a Corner of Yankeeland.
By ROWLAND E. ROBINSON.

A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:
The School Meeting in District 13. Uncle Lisha's Spring Gun. In Uncle Lisha's Shop. Concerning Owls. Uncle Lisha's Courting. How Zene Burnham Come It on His Father. A Rainy Day in the Shop. The Turkey Shoot at Hamner's. Sam Lovel's Thanksgiving. Little Sis. Sam Lovel's Bee-Hunting. In the Shop Again. The Fox Hunt. Noah Chase's Deer-Hunting. The Hard Experience of Mr. Abijah Jarvis. The Coon Hunt. In the Sugar Camp. Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bees' Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, \$1.00.
